GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼ lb. and 1 lb. tins, labelled thus:—

JAMES EPPS & CO.,

HOMŒOPATHIC CHEMISTS,

48, THREADNEEDLE STREET, & 170, PICCADILLY.

Works—EUSTON ROAD, AND CAMDEN TOWN.

HAMILTON AND Co., in ordinary.

Medow Street, Bombay.

ESTABLISHED IN 1820.

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.)

CABINET MAKERS, UPHOLSTERERS,

BILLIARD TABLE MANUFACTURERS,

BY APPOINTMENT

To His Excellency the Viceroy and the Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh,

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible, and annoyances and inconveniences are done away with, and the interest in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge *for the* same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade Advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persa, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

LANTERNS.—For oil or kerosine, some for Railway use.

Priced and Illustrated Catalogues Post free on application.

F. & C. OSLER, CALCUTTA.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered.

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests these too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole *Manufacturer*—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.

CAMPBELL'S PLANTATION

HAVANAH CIGARS.

"No. 7," a large Havanah pattern Cigar, about 60 to the pound.

"No. 6," a smaller Havanah pattern Cigar, about 85 to the pound.

MESSRS. CAMPBELL & Co. have sent a stock of their Havanah patterns Home, and are prepared to deliver them free of all charges to any Railway Station of the United Kingdom at the following rates, duty paid:—

"No. 7" Rs. 80 per 1,000. | "No. 6" Rs. 60 per 1,000.

Prices in Bond in London.

"No. 7" Rs. 35 per 1,000. | "No. 6" Rs. 25 per 1,000.

"No. 7" costs therefore about 7 Cigars to the shilling anywhere in the United Kingdom.

"No. 6" nine to the shilling.

Orders for large quantities, or orders for supplies to England, should be addressed direct to

MESSRS. CAMPBELL & CO.,
PLANTATION WORKS,
Dindigul, Madras Presidency.

SPECIAL SILVER MEDAL

VIRO. DOCT
LJ. DE JONGH. M.D
OLEI
JECORIS ASELLI.
INTEGRITATEM
EMTORIBVS TVENTI
REX. D
MDCCCXLVIII.

PRESENTED BY THE KING OF THE NETHERLANDS

DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM

LIGHT-BROWN COD LIVER OIL

GOLD MEDAL OF MERIT

LEOPOLD I ROI DES BELGES

PRESENTED BY THE KING OF THE BELGIANS

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.,
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Scrofula" &c. "Tumours: their Nature and Treatment," &c.* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects, I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion on DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets*, from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

and Sundry other Property. Rates [illegible] Company on nearly every description of property Insurances are granted by this Company on nearly every description of property in Great Britain, in Foreign Countries and in some of the Colonies at moderate rates.

Mills, Factories and other hazardous risks will be specially surveyed at the request of the owner.

The duty on fire insurance has now entirely ceased.

KETTLEWELL, BULLEN & CO.,
Agents in Calcutta.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman of the Annual Meeting, 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY,
CALCUTTA.

PHŒNIX FIRE OFFICE.

ESTABLISHED IN 1872, UNLIMITED.

The importance of this Company's transactions with the public may be judged from the fact that since its commencement it has been able to pay 9,000,000*l.* sterling as losses under insured risks and without a single call on its proprietors whose liability is unlimited.

The undersigned are authorised to issue policies in Bombay and the Mofussil at the tariff rates of all the old established Company, which are as low as the nature of the risks can justify.

The rates on bungalows in the Mofussil, and Residences, Offices, and Godowns in Elphinstone Circle, have been lately much reduced. Particulars on application at the Agency office.

A. C. BRICE & Co.,
Agents.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policyholders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 40 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits :
The Medical Fee in all Cases Paid by the Society :
Premiums payable Yearly, Half-Yearly, Quarterly, or Monthly,
at Option of Assured :
Reduced Rates of Premium during Residence in Europe :
Participating Policies share in Profits after Six Years :
Lapsed Policies revived on Special Terms :
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service :
And at reduced Civil Rates during Residence in Europe :
Female Lives taken at Ordinary Civil Rates :
No extra Rate for unimpaired Whole-term Lives in India.

Available Funds ...	...	**£ 971,942 10 10**
Annual Income ...	...	**£ 169,497 15 8**

Claims promptly adjusted on proof of Death.

Total of Claims Paid Since 1834, £ 2,070,348 17 1

Copies of the last Report, Proposal Papers, &c., on application to the Society's Sub-Agents in the principal Mofussil Stations or to

GISBORNE & CO.,
Agents and Secretaries,
40, STRAND, CALCUTTA.

COLVIN, COWIE & CO.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example.

		With Profits.
A, aged 30, wishes to Assure Rs. 1,000.		
Annual Premium at Indian Rate ...	Rs.	36 0 0
Annual Premium at English Rates ...	„	23 10 8
Difference ...	Rs.	12 5 4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

D. McLAUCHLAN SLATER,
Fellow of the Institute of Actuaries,
Manager and Actuary.

The following elegant patterns are especially recommended to notice: they can be sold in any quantity required, to suit the convenience of purchasers:—

The "MILAN," pattern. The "WINDSOR," pattern. The "BELVOIR," pattern.

The "GRECIAN," pattern. The "STAR," pattern. The "CHATSWORTH," pattern.

The "VINELEAF," pattern.

A Full Set for 12 usually comprises—

12 Sherry glasses	12 Goblets	12 Jelly gls.
12 Claret „	12 Liqueur glasses	12 Finger „
12 Champagne „	12 Custard „	12 Tumblers

The following articles can also be supplied *en suite* with each Set if required.

Wine Decanters, Claret Jugs, Water Jugs, Water Carafts, Sugar Basins, Milk Jugs, Butter Coolers, Preserve Jars, &c.

Glass Dessert Services.

In cut and engraved glass; also in moulded glass neatly frosted and relieved with bright scrolls and lines.

A Set for 12 comprises—

A Centrepiece.

2 6-inch, 2 8-inch, and 2 10-inch Compotiers.

Round and Oval Dessert Dishes

TO MATCH THE DESSERT SETS,

ALSO

Ice Plates, Ice Bowls, Biscuit Jars, Glass Flower Stands for the Dinner Table, Glass Flower Baskets, Flower Troughs, Single Flower Glasses, Flower Vases, &c. &c.

MEAT CARVERS & GAME CARVERS, ea. pair	„	8 0

Cheap Stone Dinner Services.

Of a good durable quality and in several neat and elegant patterns.

From Cash Rs. 85 per set.

The Set comprises—

24 Dinner Plates	2 Vegetable Dishes	2 Sauce Tureens
12 Soup do.	9 Meat Dishes	1 Cheese Stand.
12 Pie do.	of sizes	2 Pie or Baking Dishes
12 Cheese do.	1 Gravy Dish	and
12 Hot Water do.	1 Salad Bowl	1 Fish Drainer.
2 Beefsteak Ds.	1 Soup Tureen	

Handsome Stone China Dinner Services.

These Sets are of an elaborate and highly finished character, and can be recommended for richness and elegance. They are made up of the same number of articles as those detailed above.

The prices range from Rs. 180 to 300 Cash.

Porcelain Breakfast Services.

In a variety of elegant patterns, comprising the "Blue Sprig," the "Green Leaf," the "Foliage," and other equally pretty patterns. Each set comprises:—

12 Breakfast Cups and Saucers	1 Sugar Basin	6 Egg Cups
12 Tea do. do.	1 Butter Cooler	1 Cream Jug
12 Coffee do. do.	1 Milk Jug	2 Flat Dishes &
12 Plates	1 Slop Bowl	2 Covered Muffin Dishes.
	2 Cake Plates	

From Cash Rs. 60 to cash Rs. 120.

Dessert Services.

In several of the newest patterns richly gilt, colored and painted, comprising:—

1 Centre-piece.	4 Corner Stands.
2 Side Stands.	12 Plates.

From cash Rs. 55 per Set.

An extensive assortment of useful articles in TERRA COTTA, WEDGEWOOD AND ROCKINGHAM WARES.

All at the most moderate prices for cash.

RENT UNIONS: BENGAL.

THE Rent Union is an institution peculiar to Bengal. In many countries, labourers are in the habit of forming leagues to secure high wages, but we know only of one in which tenants frequently combine to prevent the rise of the rent-rate. The institution is well established, having existed since the foundation of our Empire. Warren Hastings was much troubled by such a Union in the Rungpore district, and from his time to ours such combinations have always been common. Their number was probably increased by Act X of 1859, which gave every ryot an interest in the affairs of his neighbour, by providing that a tenant's rent might be raised to the prevailing rate. At present all over Eastern Bengal the Unions flourish in great numbers, and form the distinguishing feature of the agrarian position. It is quite impossible to understand the relation between landlord and tenant in that part of the Province, without a definite idea of the Union.

The popular element in every Bengal village is represented by the *punchayet*, or the assembly of five headmen, as opposed to the zemindary or aristocratic power. The Union is commenced at a meeting of this standing Council. When it is considered that it is expedient to fight out with the zemindar any contested point, this council or *punchayet* resolves to establish a Union or *Vidroti Dal* (literally an opposition league), and all the villagers are invited to join it. There is a great deal of personal independence in Bengal, and as a rule a considerable minority of ryots refuse to support the *punchayet*. Some of these are actuated by jealousy of the popular leaders; some hope to get a slice of their land if the zemindar should win; some are poor and fear the expense of litigation. These non-Unionists form a body apart, and the rest of the villagers give in their adhesion to the new party. Their names are taken down, and they are called on to pay a subscription. In many cases, they even sign a stamped deed of agreement, binding them under a specified penalty to stand by the party, and pay each his share of the expenses. These arrangements having been secretly made, they proceed to declare the combination openly, by a petition to the Magistrate, calling on him to protect them from illegal violence on the part of the zemindar. The Union has then to state its demands to the landlord. These are generally very unreasonable, being framed on the Yankee principle of asking for a great deal in order to get enough. The zemindar is always much troubled by the formation of a Union, as he knows that it will cost him money and discomfort to fight it, and that he will probably be beaten by it in the end. For most of the zemindars are in the actual receipt of more money than they are entitled to, and they know that if the facts come before a Court they will lose the illegal cesses. It, therefore, not unfrequently happens that after little negociation, the landlord makes a concession, abandons the proposed enhancement, or gives up an unpopular cess, on which amicable relations are renewed, and there is a general reconciliation.

On the other hand, the zemindar may feel that if he gives way in one village he will have to do the same in another, or his pride may be hurt by what is, in his own language, the rebellion of his subjects, and he may decide upon war. If he does this the ryots hold another meeting, and fix the rent for which they will stand out. This is generally the old rate, all the illegal cesses, and probably some recent enhancement of doubtful validity, being deducted. The law makes it incumbent on the landlord to commence any suit he may have to bring to contest the sufficiency of this offer, within six months: and at the end of that short period all proceedings are barred by limitation. If the landlord is honest he brings his case, claiming merely the rent and deposit and the disputed enhancement, thus foregoing the whole of the cesses, which are illegal, and cannot be recovered in Court. Thus, even if he gains his cause his income is reduced. Rather than suffer such loss, the zemindar often makes out false accounts, purporting to show collections at an imaginary rate, but these cannot stand the criticism of the lawyers whom the Union employs, and they generally damage his cause. Then if they are shown to be false, a decree is given only at the rate acknowledged by the ryots, which is generally too low. This may seem unfair, but it is inevitable. If a tradesman having sold only fifteen pairs of gloves fraudulently enters twenty as delivered, and sues for the price of the score, he will, if the falsity of his books is proved, get a decree only for the gloves which the defendant acknowledges that he has received: and if the defendant is a rogue too, these may be less than the fifteen. In any case the zemindar is bound to lose something in Court. The best he can hope is to come out with his bare rent, stripped of all cesses and perquisites, and this in his eyes looks miserable and attenuated. It is true that he may subsequently sue for a re-measurement, or for enhancement, and thus try his strength against the Union once again. But now-a-days the rents are already so high that the Courts are reluctant to raise them, and our zemindar readers will be able to bear us out in saying that it is much easier to lose money than to gain it by litigation of this kind. Such being the unsatisfactory prospect of regular and legal proceedings, it is not surprising that zemindars prefer to take more indirect measures against the Unionists. They try to create dissensions in the enemies' camp, and to buy over the headmen by promises of special privileges. The bad effect of the example of a headman thus gained is often, however, lost by the zemindar subsequently breaking his promises. Sometimes the cashier of the combination is got to go over with the money of the Union; but as this line of conduct exposes him to a prosecution for breach of trust, it is not very common. Then reports are spread that the headmen are embezzling the common fund, and as such statements are always probable and often true, they produce a great effect. Lastly, the zemindars get up riots. Formerly these were conducted by hired clubmen, generally brought from the Jessore district. Now it is more difficult to engage and use such bands with secrecy, and although their use has been by no means abandoned, the zemindar more frequently acts by engaging residents in the disturbed neighbourhood to act for him. The Unionists are generally more than a match for such hirelings in the field, and have little to fear from open violence. But a row in such matters is followed by complaints to the police and prosecutions before the Magistrate, and it is in these that the decided superiority of the zemindar shows itself. Each party has an equal command of witnesses and lawyers. The difference between them is that the ryots are attacked in their own persons, and if proved to be in the wrong their leaders are sent to jail. The body is then deprived of its head, and can act no more. On the other hand the ryots, if they speak the truth, can only say that some wretched underling attacked them, and the conviction of such a man does not affect the issue one way or the other. If they falsely accuse the zemindar himself, no one believes them. On the whole it may be said that where a Union is altogether worsted in a conflict, it is generally through the agency of the Criminal Courts.

The first question which suggests itself with regard to this subject is,—Are the Unions dangerous to the State? Combinations of all sorts have been looked on with suspicion by

autocratic rulers. It was a maxim of the Roman Empire that no combination should be permitted, not even the guild of a trade. The Emperor Napoleon III put down the societies of workmen. The old English law prohibited Unions of labourers. In fact union is strength, and the strength of subjects may be used against Government. But if in any part of the world, any combination may be permitted to exist without danger, then the Rent Unions of Bengal should give us no alarm. The Bengalees would never rebel against any regular Government, and if they did they would injure no one but themselves. Indeed, from a political point of view the combination of the zemindars in their local and central Association is more formidable. The effect of the spirit of independence shown by Rent Unions on the peace of a district is also favorable. Our criminal returns show that, though they lead to many collisions, they prevent a still greater number. It is where the zemindars have it all their own way, that riots are most frequent.

The most serious subject for consideration, and that directly raised by the present Bill, is whether the existence of Unions is an injustice to the zemindar. And here we must make a distinction. It may sometimes happen that ryots form a combination to withhold rent altogether, in order to put pressure on their landlord. Such action we regard as clearly unfair. A rent strike differs from a labour strike in this, that the workmen are not under any legal obligation to engage themselves, while the ryots are bound by law to pay their dues. A rent strike is not a combination, but a conspiracy, and in England it would be punishable by the criminal law. Debtors are not, and cannot be, allowed to conspire to ruin a creditor by withholding his dues. We therefore sympathise with those provisions of the new Bill that are intended to compel ryots to pay at the old rates, by summarily disposing of any objections they may urge to doing so, when united in a combination. On the other hand, we think that where Unionists deposit their rent *in Court*, and merely resist demands for enhancement, they deserve no censure, but sympathy and support. They are merely maintaining their rights, and carrying out the object of Government. We have made laws defining their rights, but these are generally nullified by the illegal action of the zemindars, and by the inability of the individual ryot to defend himself. The Union steps in, and gives effect to our laws, by enabling the weak to support each other. We should be grateful to it for the service. In the ryots themselves, it is not merely lawful for them to join such combinations, but on certain occasions they are bound in conscience to do so. Every man owes a duty to his children and his class, and should take the best means to protect their interests in an honest way. In particular, they are quite right in trying to maintain the old rent rates. If the zemindars find it impossible to alter these rates in the face of a combination, so much the better for the country. They should be aided in every effort to secure punctuality in the payment of legal rents, but should receive no assistance in their endeavour to disturb the minds of the people by enhancements. They have the law, and the Courts, and let them make the best of these. Why should Government go out of its way to increase the amount of money yearly transferred from the industrious many, to the non-productive few? That is a matter in which our present attitude should be one of non-intervention. If hereafter we should find ourselves obliged to interfere, it would probably be in the direction of preventing rack-renting. We therefore think that the clauses in the new Bill providing a summary method for rent enhancement, should be excluded from it.

THE POSITION IN SPAIN.

AT a time when mens' minds are harassed with vain conjectures about the future, when trade is uncertain and politics are unsettled in consequence of the vast armaments in Europe, and one country, almost the fairest among nations, is brought to the verge of destruction by internal dissensions, the question is naturally asked why Spain with a soil both rich and productive, abounding in the richest minerals, covered with noble forests and fertile valleys, and blessed with a population hardy and energetic, which once sent forth to the world all that was most honorable and chivalrous, should now be unable to throw off that terrible incubus which for the last four years has paralyzed every effort to close the chapter of her misfortunes? To enable this to be rightly answered, it is necessary to give a short history of the events which have distracted the kingdoms of the peninsula during the last sixty years.

Wellington having in 1813 cleared Spain of its French invadors and driven King Joseph Bonaparte across the Pyrenees, Ferdinand VII after many years of exile, was restored to his throne, as was at the same time Don John VI of Portugal. The decisive battle of Toulouse which followed shortly after, fought by Soult with the treaty of peace in his pocket, in the vain hope that a victory might at the last hour restore his great master, resulted in the final overthrow of the Napoleonic dynasty, gave peace to Europe, and a confident hope of restoration of prosperity to Spain and Portugal, after having been so long suffering from the effects of the usurpation against which the people had so gallantly struggled.* The Salic Law was at the time in full and powerful force. This law was a remnant of the old Moorish traditions, when those barbarians swarmed into Europe carrying everything before them until checked by the heroic Charles Martel on the bloody field in Tourraine. The law was adopted in the peninsula, after the union of Ferdinand and Isabella and their conquest of Granada and final expulsion of the Moors. It had for its purpose the total exclusion of females from the throne; and although the male descendants of female branches were eligible, no woman was permitted to reign. Don John VI of Portugal had two sons, Don Pedro and Don Miguel. The former having been sent to the Brazils, then a colony of Portugal, as Viceroy, rebelled against his father and proclaimed himself Emperor. Portugal, unlike England in her struggle with America, wisely submitted to the loss and recognized the new sovereign, but only on the express condition that Don Pedro should *absolutely renounce all* claim to the throne of *Portugal*. This he consented to do, but on the understanding that his daughter, Donna Maria, then a *child* of five years old, should be declared heir in his place. To effect this, the Salic Law had to be annulled, to the extinction of the rights of the younger brother, Don Miguel, who thus found himself deprived of his birth-right. In Spain, Ferdinand the King had married Donna Christina, the sister of the King of Naples and had two daughters only; so the Queen Christina, being one of the most haughty and ambitious woman of the day, seeing no prospect of her continuing in power after the death of her husband who was then approaching his end, obtained a decree abrogating the Salic Law, proclaiming her eldest daughter, Donna Isabella, heir to the throne, to the exclusion of the king's brother, Don Carlos, who thus stood in the same position to the throne of Spain as Don Miguel to the throne of Portugal.

The two Kings died: and Donna Maria was proclaimed Queen of Portugal and Don Ferdinand's daughter Queen of Spain, and were ackowledged both by England and France. Don Miguel, who was an exile from Portugal, accepted, or appeared to accept, the position, and consented to return to his country as Regent in the name of the Queen, whom he was to marry (although his own neice) when she came of age; which it was hoped would settle all heartburnings and political differences. On his arrival at Lisbon, however, he proclaimed himself King, and sought to secure the person of the infant Queen, who escaped being captured almost by a miracle, for he entered one door as she rushed out of another. Accompanied by one of her ladies, she jumped into a boat, was taken to an English ship in the Tagus, and fled to England, pursued into Falmouth harbour by two fast-sailing Portuguese ships of war, who but for the sanctity of the English port, would have seized her before she could land. In Spain, the Queen Mother was declared Regent by Don Ferdinand's will; and Don Carlos fled to Portugal protesting against the legality of the accession.

* It is reported that during the battle of Toulouse, Wellington and Soult at one time approached each other so close as to be able distinctly to recognize each other's features, but that they never met until thirty-five years afterwards, when they shook hands in the presence of England's virgin Queen at her coronation in 1838.

Thus things remained for about three years, when it happened strangely that Don Pedro the Emperor of Brazil, at whose instigation all the complications of succession in the two nations had been brought about, was himself dethroned by an insurrection of his people and compelled to fly the country and take refuge in France. It was now that he commenced, with the moral assistance of England and France and Spain, to endeavour to recover the crown of Portugal for his daughter. Aided by auxiliary forces from both countries, under such distinguished officers as Admiral Sartorius, Sir Loyd Hodges, the Count St. Leger, and others, he organised a force at the Azores, which had remained faithful to the Queen, collected a respectable fleet and putting himself at their head, sailed for Portugal with 8,000 troops of all arms, effected a landing and, after some hard fighting, in which he showed great personal bravery, took the city of Oporto. Here, being unable to make head against Don Miguel who had the nation at his disposal, he entrenched himself, determining to wait for reinforcements or a counter-revolution in his daughter's favour, which would enable him to march on Lisbon. Don Miguel, however, knowing that everything depended on the quick destruction of the invaders, brought up every man at his command and attacked the city with 75,000 on his natal (St. Michael's) day. The little army of the Queen, numbering about 10,000 men, fought with chivalric courage, particularly the English and French auxiliaries. This was the first time the two nations had ever engaged the foe side by side, and they emulated each other. But the slaughter was fearful; of the English alone who commenced the action with 209 men and 10 officers (the other portion of the regiment being absent on board the squadron acting as marines) 90 men and 3 officers, only came out alive, and of these a great number were wounded.* The French fought with equal bravery, and it was to the determined and desperate manner with which the auxiliaries held their position, that the Queen owed the defeat of the enemy and her *ultimate* restoration.†

Many acts of chivalrous gallantry were performed on both sides during the siege of Oporto; one in particular is deserving of being reported. King Miguel's troops in great force on one occasion attacked a position which was defended by the English who after being terribly cut up gave way, having lost all their officers. This being seen by a very young ensign, Mr. Wooldridge, who was suffering from wounds received in the previous great battle, and was with many thousands of the inhabitants spectators of the fight, he managed to get down amongst them and rallying the regiment had himself mounted on the shoulders of a Sergeant, hoisted his red jacket on his crutch for a flag, and on this novel charger led the gallant fellows back to the attack, and took the position amidst the deafening cheers of the thousands who witnessed the exploit.‡ The siege of Oporto lasted twelve months and was only at last raised after the gallant Napier had destroyed the Miguelite fleet and sailed up the Tagus. Then it was that Don Pedro marched through the country, and Don Miguel with Don Carlos surrendered, and were sent the one to Rome and the other to England, after having solemnly undertaken never again to interfere with affairs.

Peace being now re-established, and the two Pretenders expelled from the Peninsula, it was hoped that things would quiet down, but a year had hardly expired when, in 1833, Don Carlos left England, made his way through France disguised as the valet of the Baron de Cos Vallos, arrived in Spain and unfurled his standard in the Basque provinces, where he always had had numerous supporters. Then was formed the quadruple alliance between England, France, Spain, and Portugal for the pacification of the peninsula, and the firm establishment of the thrones of the two young Queens. England suspended her Foreign Enlistment Act which enabled that gallant old General, Sir De Lacy Evans, afterwards so celebrated in the Crimea, to form a legion 10,000 strong, and sent out a fleet, with marines and artillery. France also sent a legion of 6,000, men commanded by one of her bravest sons, the Duc d'Isly, and Portugal 6,000 under Xavier, Baron das Antress. But notwithstanding this assistance to the Queen of Spain's own army of 80,000 men, Don Carlos, secretly supported by the "Holy Alliance," held his own for three years, and would not then have had to succumb, but for the treachery of his General-in-Chief, Morotto, who sold him and his army. Obliged again to fly, he died shortly afterwards in exile, leaving his visionary throne to his eldest grandson, his own son being dead. This grandson, however, was not disposed to try his fortunes, and abdicated in favor of his next brother, the present Prince—Don Carlos now fighting under Holy Church in Spain.

Spain, after the expulsion of Don Carlos VI, remained under the sway of Donna Isabella, who lead anything but a quiet or respectable life, until she with her whole family were finally expelled by a revolutionary movement, and the House of Bourbon was declared for ever excluded from the throne. Then came a dictatorship under those remarkable men, Marshal Serrano and General Prim, the former of whom having made his way up from a Captain of infantry to a Dukedom owed his elevation to his good looks and handsome person, which did not pass unnoticed by his sovereign; and the latter from a private in an infantry regiment to be Regent of the kingdom.

The Spanish people are naturally monarchists, and tired of the Dictatorship they clamoured for a king. This was granted them in the person of Prince Amodeus of Italy, one of the most amiable men who ever sat on a throne. The Prince endeavored heart and soul to resuscitate Spain's ancient greatness by the institution of wise and liberal laws, until finding himself thwarted at every turn and surrounded with factious intrigues, he threw his crown at their feet and left his subjects to their own deserts. Then followed a Republic of the weakest and most imbecile description, and Don Carlos, who, knowing the aristocratic feelings of his countrymen, raised his standard as Legitimate King in the Basque provinces, following in the steps of his grandfather. He was joyfully welcomed by the mountainers, for the Basques have from time immemorial been in possession of certain privileges (*Fueros*) which exempt them from conscription, and the Government by the general laws of Spain, being governed entirely by their own institutions. These were guaranteed to them by Queen Isabella's Government when they laid down their arms in the former war, but the promise was broken and they were put under the ban of the national rule. This is their grievance and the cause of their ready acceptance of Don Carlos, who found himself also joined by numbers of officers and men from the Republican army who, without any particular affection for him, considered any King better than a Republic. But the generality of the people are faithful to the ex-Queen's party, who notwithstanding all her faults was popular, so that although Don Carlos has been three years at work and his troops have shown much bravery, he is unable to move one step out of the mountains, while his enemies are not able to approach a single yard nearer to him. It might be imagined that putting himself at the head of his forces, he might make a bold stroke for Madrid and stake his fortunes on the hazard. But he is powerless to do so, for his mountaineers will not follow him out of their own hills: they will defend them until the last man, but will not leave them.

The failure of the Republic and the recognition of Isabella's young son, Don Alphonso, as King, has been a great blow to the Carlist hopes. It has had the effect of inducing all the officers and men who left the Republican army to support a King, to return to their former ranks, and the country as a whole is in favor of Don Alphonso. But his position is very uncertain, and will depend principally on his choice of advisers. If, however, he shows a leaning towards that policy which dethroned his mother (as later accounts seem to imply), and truckles to the Absolutionists and the Priesthood, his reign is not likely to be a long one, for the Spanish people are becoming too enlightened to revert again to slavery. How this unhappy war will end or this unhappy country become

* In Charles Shaw's Memoirs.

† At the grand reception held by Queen Donna Maria on her arrival in Lisbon, in commemoration of this battle, one of the surviving English officers was specially presented to Her Majesty by the Emperor as "one of the brave English who on this day saved Oporto and the constitutional throne."

‡ Admiral Napier's History of the War in Portugal.

pacific, it would be vain to predict. It is said that the people are in favor of foreign intervention to put down Don Carlos, and by a protectorate guarantee them the full benefit of a constitution, and that England and Germany are willing to assist. In the name of humanity it is to be hoped something will be done to put a stop to so much bloodshed, but we think that both countries will hesitate to strike the spark which might set the whole of Europe, situated as it now is, in a blaze. Rome could stop the war if it chose, but it favors its prosecution almost openly.

THE KARENNEE DIFFICULTY.

THE *Pioneer* in a recent issue announced to its readers that it had been informed that the King of Burmah had been misrepresented by the local press and the Rangoon merchants in the Karen affairs. It would seem that the sole aim of that guileless autocrat was to obtain teak from the Karennee forests, and that he had no designs on Koonti's independence. It is somewhat extraordinary to come across a paragraph of this description in a paper generally so well informed, and which has only lately given a most detailed and lucid account of the N.E. frontier complication. In an article which appeared in the *Indian Observer*, in May of last year, we gave a brief sketch of Karennee history and the present aspect of affairs in that little State. We pointed out how the King's pretensions to suzerainty have long been resisted, and in 1854 would have taken the form of actual aggression had not Kyekphogyee, the father of the present Chief, applied to the English for assistance; and after concluding a treaty with Captain O'Riley, the Deputy Commissioner of Tounghoo, obtained a police guard from his new allies, and thus for the time baffled the machinations of his hereditary foe. In 1863, the district officer, Major Lloyd, had the guard removed as it had become a mere instrument of plunder in the hands of the chief. It was some time after this that the King renewed his encroachments, which resulted at last in Koonti's formally offering to cede his possessions to the English. In the spring of 1874, the Deputy Commissioner was deputed to visit and inspect the territory and, with the assistance of a forest officer and mining engineer, to report on its wealth and capabilities. He found it in a most disturbed state, and that Koonti's authority was barely titular and did not extend beyond the area of his own village. The Chief could afford no protection to his visitors, and consequently the objects of the Expedition were not attained. As might be supposed, the King of Burmah was considerably alarmed at the advent of the English, and summoned Koonti forthwith to attend as his vassal at Mandalay, while he positively forbad his visiting Tounghoo, a prohibition which the Chief systematically disregarded. The expedition came across a small Burman force, the commander of which sent them an insulting message, addressing them as English foreigners, though well aware of the rank and character of the party, but abstained from actual hostilities. However, shortly after their return to head-quarters, the King's troops actually invaded the country and besieged Koonti within his village. Peacock-flags, the well-known Burman insignia were brought down by Koonti's agents to show to the authorities at Tounghoo as a proof of the king's aggression, while at the same time they entreated our assistance, and pointed out how the English were the allies and friends of Koonti and his father before him, and that he had compromised himself beyond recall in their behalf. The Government of India delayed its ultimate decision and contented itself with sending him a letter with a big seal, which no doubt was of some protection to the harassed Chief. Koonti's nephew subsequently visited Tounghoo in person, and implored for a definite answer that Koonti might know whether to stick by the English or surrender to the King of Burmah's importunate pretensions. The affair, however, was still under the consideration of Government, and the last intelligence we have received is that Koonti's nephew has been seized by the Avan troops and conveyed to Mandalay.

It is manifestly absurd to deny the fact that the King of Burmah has constantly laid claim to suzerainty over the whole of Karennee. The eastern and southern portions, which are ruled by the descendants of two Burman adventurers who asserted their independence after the death of Nga Rai, the last absolute monarch, have long admitted their feudatory position. The King maintains that both the present Chief and his father have recognised his authority and despatched envoys to Mandalay with the customary feudal gifts. This Koonti denies, and it is certainly a debateable point, though a large amount of testimony can be adduced in support of the King's assertion. It must necessarily be acknowledged that our frontier policy in this direction has a somewhat dubiousaspect. We cannot abandon Koonti after all he has ventured and suffered on our account. We have tacitly encouraged him in his resistance to the Burmese, and it will be regarded as the grossest breach of faith if we do not interfere in his assistance. At the same time, our original negotiation with Kyekphogyee was certainly ill-advised, if the King's claim on him as a dependent vassal can be relied on, while our subsequent intercourse with Koonti the King is known to regard as a substantial grievance.

There is a further difficulty which ought to be considered. Koonti's chieftainship over Western Karennee, as we have stated, is purely nominal. The country is a mere congeries of independent villages more or less at war with one another. Sir Douglas Forsyth's negotiations will result in one of two alternatives being adopted—*i.e.*, either in our annexing the disputed territory, or in our securing Koonti's independence against Avan aggression. To render either scheme of any value, it will be necessary that the country be reduced to a certain degree of order or subordination. The present Chief would be completely powerless against his eastern and southern neighbours who, with or without the King's connivance, might crush him both secretly and effectually, as our nominal protection would be absolutely futile, amid scenes of anarchy and irresponsible disturbances intensified as they are at present by hunger and famine. And yet any active interference would at once be misinterpreted and would infallibly *lead to results wholly unexpected and undesigned. Altogether, it will require all the statecraft of Sir Douglas Forsyth, to bring his mission to a successful termination, and we confess we are awaiting with some anxiety the solution of this difficult problem.*

INDIAN SOCIETY.

IT is certainly strange how few things have ever been said in favor of Anglo-Indian society. Writers of all classes, from the Honorable Emily Eden to the literary Baboo of the native press, have flung stones incessantly at the ostentatious social structure we have erected in this heathen land, nor is it without some humiliation that we have to acknowledge the correctness of the aim in some particulars. The curse of Anglo-Indian life is its excessive selfishness. Whatever society we enter in this country, —civil, military, or mercantile—the conversation will always be found to run on self-aggrandisement, and we shall see the social Hall Mark only stamped on those men and women who are successful in the art of obtaining appointments or rupees. It is this undisguised admiration of pelf that disgusts both English and foreign travellers in the country with our society. They speak of it as something intolerably vulgar, and their judgment is accepted as true by hundreds of Anglo-Indians throughout the country sufficiently unprejudiced to see, and liberal to acknowledge the canker of the social circle in which they move. Certainly, we live in an age of Mammon-worship. We see it everywhere. In London, the golden calf is idol; in France, wealth is the very religion of the nation; in America the almighty dollar carries all before it; but the money-worship of other peoples scarcely strikes us as so hard and real as we find it here, probably because in India the splendours money can command when judiciously used, are entirely absent. The magnificence of wealth displayed in Rotten Row, the Italian Opera, great Picture Galleries, noble Cathedrals, &c. &c., are not seen in India. Whatever display riches make among us is of a mean and coarse description, and we see much more of that common-place coin, the rupee, than of taste in expenditure. Nor indeed is there much liberality in India now-a-days. The old era of the Newcomes and the Sedleys has passed away never to return. The greed for money that is now characteristic of our Indian social life is unrelieved by the open-house order of hospitality that excused many of the sins of our predecessors. Our Mammon-worship more closely resembles that of America

than of home, nor is this to be wondered at, seeing that Anglo-Indian society strikes every traveller as being a better imitation of that of New York than of London. Our men are all bent upon making their "piles" and lakh of rupees, or what will produce rupees, with an energy that never tires, while our ladies—the usual exceptions to the rule admitted—are wonderfully like their delicate, pretty, and it must be acknowledged, somewhat extravagant sisters of the Fifth Avenue, New York. Young ladies who come out to India with an independence of speech and action, born of boarding-schools and P. and O. steamers, that would have shocked their great-grandmamas, are nea rly counterparts of the American maiden who lives but for the fashions and for an establishment. The only difference between the one and the other is, that the one passes her butterfly existence on the Indian Hills, and the other about Broadway and Saratoga. The motto of each is, let us dress, dance and be merry, for to-morrow we die, and the reflection really seems to support these young things even under visitations of cholera. In the Indian mother we see, not the woman of Belgravia, but of Boston. Of course, it is natural for parents to desire to settle their children comfortably in life, and none but fools would quarrel with mama using her best endeavours to marry Clara or Belinda to money; but there is a delicacy in doing these things that is demanded of the parent, and when this is absent, what is otherwise innocent in itself, wears the appearance of vulgarity if not deception. There is a hardness about this sort of transaction in India that is more American than English, and it reflects little credit on the *pseudo* refinement of Anglo-Indian society that it should be so. How often do we hear the income of such and such a one, if a bachelor, openly discussed by ladies at balls, calls, or Badminton, and how seldom is any disguise thrown over our Indian duennas when in pursuit of prey for their daughters. In self-defence, they would probably say, that the manners and customs of the country do not admit of the delicacy observed in matrimonial transactions at home, a plea we quite admit, but the excuse does not make Anglo-Indian society appear the less American, or lessen its vulgarity to the fastidious observer.

The American element is becoming no less observable in our men *than in* our women. We are adopting, unconsciously, many American institutions as our own, finding them, no doubt, better suited to a hot country than those we were accustomed to in England. The American bar, with its ardent spirits and effervescing drinks and ice, is fairly established in India, as is also the American love of excitement, of sensation, and speculation. We have even flirted with the American love of mysticism, and there is more spiritualism, or at any rate practical atheism in *India, than is* generally imagined. Some are even bold enough to say that all this kind of thing is an improvement on the old. See, they say, the morality we have now! Native mistresses are rarely to be seen disgracing the Europeans with whom they formed connections, nor are "soakers" to be observed nightly, as in the old times, snoring under the mess-table. Well, we have improved in some things; but in others we are no better; thus the "flirtations"—as they are euphoniously called, between married men and married women, too often ending in separation and the Divorce Court, always a station or hill scandal—are as disastrous in a social sense as almost anything the old race of nabobs did in their worst days. It is unfortunately the case with some Anglo-Indians of distinction, that they are prone to forget that the wives of their friends are wives at all, but rather ladies to be won with the devotion a young man pays to his sweetheart. There are men among us who plainly make this description of seduction the business of their lives, and it is a heavy reflection on the tone of Indian society, that these men are commonly the most popular members of the community. Their happiness lies in compromising reputations, while the lady-killer of an Indian station is looked up to, and made much of; ladies themselves unhappily often ministering to this through pure rivalry, not unmixed with *ennui*. Whether this innovation is more American or Parisian, we cannot say; but wherever it comes from, it in no way tends to heighten the world's opinion of our social life.

When the late John Lang, Arnold, Pritchard, and others, drew some very harsh pictures of Indian social life in their novels, our defenders pointed triumphantly to the scenes of heroism displayed during the mutiny to contradict the asserted rottenness of the social structure. It was true that under the purifying fire of great sorrows and dangers, the noble English character showed itself, lustrous and undefiled as was expected of it; but it is equally true that the monotony and selfishness of life in India is but too calculated to cloud and obscure the good gifts of our countrymen and women here, and to develop all that is bad in us. It would be absurd to compliment people on gifts they do not possess, and it would be equally ridiculous to tell a society that is unduly engaged with money-grubbing and dissipation, that it is refined and admirable. Let any man or woman among us ask of his or her own heart what the one or the other does to the glory of God or the good of our fellow-creatures in the twelve month, and we shall probably be for the moment surprised to think how our talents be hidden in napkins. On the other side, it must be said that if we are sinners, we have excuses for our peculiar vanities unknown to other people. Our children are torn away from us and our thoughts dwell constantly on home. The heat and monotony of Indian life impels us to dissipation, and we are eager to make money in the country to get out of it. Such apologies are acceptable in a sense, yet they can hardly absolve us of the duties that every man owes to himself and his Creator. That we neglect these enormously we fear is certain, and that Indian society is far from that state of refined perfection some of its leaders would have us believe is its privilege, is a mournful fact. If any one doubts it, or points to society at this or that place as an instance of the reverse, let him observe Indian society afloat, and well mixed in all its elements, and then say as he steps ashore at Suez or Southampton, whether in all his experience of life he ever met so much selfishness, so much avarice, so little charity, or so little humility as on board the vessel that carried our social elements to their destination.

21 OR 25?

A PROPOSAL has been made to put all young civilians through a course of training at Oxford instead of in London, preparatory to their transplantation to this country. It appears to be a corollary of this plan, that the maximum age at which men will be allowed to compete for the appointments, will be reduced. We are among those who think that the older a man comes out to this country the better for India. Of course, the proposition is subject to qualification in the point of health. There is no doubt some age from which the danger of the change of climate begins to increase. Up to that point, the older a man is the better. Our grounds for this opinion are—

(1) that the more formed his character is, the less likely is a man to fall into Anglo-Indian ideas and Anglo-Indian *ways*;
(2) that the older you pitch the maximum age, the wider choice of men you get;
(3) that unless a man learns to know the world when young, he will never know it at all.

On the first point, every one must form his own opinion. We think that residence in a tropical climate, and contact with Asiatic surroundings is demoralizing to the European. Very few are able entirely to avoid contamination. The facts of every-day life in this country, if carefully looked at, bear out our assertion. We say further that every honest and candid man who has been some time in this country, will own that he is not the man morally or physically that he would have been, had he remained in Europe. On the second point, there can be no two opinions. But perhaps its importance is not at first sight apparent. There are classes in England, and also in Ireland and Scotland, the young men of which do not begin to think of a career till they have long passed the schoolboy age. The most notable instance is the class who send their sons to the Universities. These sons, as is well known, do not decide upon a profession until they have completed their University course. It is a bad thing that the classes who frequent the Universities, should be debarred from entering the Civil Service of India. In another respect, raising the age will extend the field of choice. Many men by 23 or 24 years, have lost the *couleur de rose* view of life, and have learnt that a certain salary—such as the Indian Civil Service offers—depending very little upon a man's own efforts, has great advantages. There are men who at 20 would not dream of accepting service in India, thinking themselves made for better things. Many good men for want of something better, take refuge in the Church. The third point seems also very obvious. A man comes from school to India where he remains perhaps ten years. He goes home when he is nearly thirty, and begins to learn. He is too old to make much progress during his furlough. Often he is wholly unaware that he has anything to learn; often encumbered with a wife and family.

Now, how does the proposal to put the young Civilian through a course at Oxford, meet these views. It meets the first point, in that men will come out older. It does not meet the second point, because the maximum age for competition must be reduced rather than raised. It meets the third point, in that men will come out older, and will therefore, have more time for learning the world than they now have; but by withdrawing them from the world

to the narrow sphere of University life, it detracts much from the advantage afforded by a longer life in Europe.

In one point, the proposal is distinctly prejudicial to the interests of India. There can be no question that the two years' residence in London now required of the young Civilian, has a most beneficial effect upon him. London is not the world, but still it affords many more opportunities of studying the world than Oxford does. What is to be gained by sending a young man to live at Oxford is not apparent. Oxford is known as a place where study is at a discount, and where athletics are at a premium. To those who have been brought up for a University life, it is a fitting crown to their school career. They continue the course of study or athletics which they pursued at school for a few more years, before being finally launched upon the world. Such a training has its advantages, but we much doubt whether the part of it of which Oxford is the scene is the most valuable part; indeed, we doubt if that part has any value whatever in itself, divorced from its proper antecedents. For an outsider whose parents and friends are not University frequenting people, who has not been brought up for a University career, who does not take part in the studies of the place, whose profession is already chosen, we cannot conceive that mere residence in a dull mediæval town can have any value.

So far as India is concerned, our desire is that young Civilians should see as much of the world as it is possible for them to see, before they are transplanted to this country; the object of the present proposal is to circumscribe and limit their sphere of experience as much as possible. The University authorities will, of course, be delighted to get 150 extra pupils: the more men in residence, the more grist to their mill.

CHAUCER AS THE SPRING-POET.

MR. RUSKIN declares he can feel no interest in a country that has no castles: for our part, we cannot greatly love a land that has no spring. No one moment when, from utter barrenness, all trees pass into fluttering green; and unfolding harmoniously the new year's beauty, unite at length in the song of full green leaf: "Behold the winter is past, the rain is over and gone, the flowers appear on the earth, the time of the singing of birds is come." These are days of departure from the old traditions; and even poetry is not guiltless of treasonable murmurs against the once beloved and sacred month of May. The dying splendours of autumn, the silent fall of faded leaves—these touch more nearly our poets, with their hearts enamoured of sadness and a pathetic beauty rather than of joy. Beloved, nevertheless, and sacred shall May still be; for her own sake, first of all, sweet spirit of eternal youth renewing by her love the old, old world; and then for the sake of our old poets; whose pulses attuned to nature's caught the thrill which inspires her; and whose songs, with the birds, sang in the season of the roses.

Before all poets of any time or country, Chaucer appears to us to be *the* Spring-Poet. His love is so true and intense a feeling, so removed from mere sentiment (not to say, the affectation of a sentiment) that, be his theme ever so quaint or fanciful, the vision of a May morning suffices to dispel all cloud and cloak of allegory; and even in the *Romaunt of the Rose*, and *The Flower and the Leaf*, our frail symbolical personages have to do as best they can with real "grass, moist and thicke and well liking," under their ideal feet; and over their ideal heads, real trees "with branches brode, laden with leves new—that sprongen out agen the sonne-shene—some very red and some a glad bright grene":—and what is more, with real showers, "causing the ground up for to give many an wholesome aire"—but soaking them, poor airly-clad abstractions to the very emblematic skin of them. Heine has said of Goethe that if the Creator had commissioned him to finish off the trees and birds and animals, the work would have been perfectly well done, and exactly as we now have it, this applies even more forcibly to Chaucer. He paints no picture for us; his genius is a mirror in which we have reflected the very truth of field and hedge side; a magic ~~mirror giving back the perfume as well as~~ the bloom and beauty of flowers, the songs as well as the forms and movements of birds; only with Chaucer for creator, it would have been always spring. Nor need we surmise that existence would necessarily have been monotonous; he has a thousand spring aspects for us, only alike in being delightful. It is spring when the Canterbury pilgrims start upon their travels:—

> "And smalle fowles maken melodie
> That sleepen alle night with open eye."

It is on a May morning when the sun—

> "With his streames drieth in the greves
> The silver droppes hanging on the leves"

That the lover Arcite goes forth into the woods, to "don his observance to May,"

> "And loud he sang agen the sonne shenne
> O May with all thy floures and thy greene
> Right welcome be thou faire freshe May;
> I hope that I some grene here getten May."

Again, it is a chilly spring dawn when "Faire Canace" succours the wounded hawk—

> "The vapour that fro the erthiè glode
> Maketh the sonne to seem rody and brode;
> But natheles, it was so faire a sight
> That it made all her hertè's light,
> What for the season and the morwening,
> And for the fowlès that she herde sing."

Here is another glimpse of May weather, at the commencement of the "Flower and the Leaf"—

> "When showres sweet of raine descended soft
> Causing the ground fele time and oft
> Up for to give many an wholesome aire;
> And every plaine was clothèd faire,
> With new greene; and maketh small flowres
> To springen here and there in field and mede;
> So very good and wholesome be the showres,
> That it reneweth that was old and dede
> In winter time; and out of every seed
> Springeth the herbe; so that every wight
> Of this seson wexeth glad and light."

But the most charming picture of all is in the *Cuckoo and the Nightingale*, one of the most delicious little idylls that ever issued from a poet-heart—

> "And then I thought anon as it was day
> I would go somewhere to assay
> If that I might a nightingale here;
> For yet had I none heard of all that yere,
> And it was tho the thirde night of May.
> And soone as I the day aspide
> No longer would I in my bed abide,
> But unto a wood that was fast by
> I went forth alone boldely,
> And held the way downe by a brooke side
> Till I came to a laund of white and grene
> So faire one had I never in been.
> The ground was greene and poudred with daisie
> The flowres and the greves right hie
> All greene and white was nothing elsè seene.
> There sat I downe among the faire flowers
> And saw the birdes trip out of their bours
> There as they rested them all night;
> They were so joyful of the dayes light
> They began of May for to done honours
> They could that service all by rote;
> And there was many a lovely note.
> Some song loud as they had plained
> And some in other manner voice y fained,
> And some all out with the full throat
> They pruynèd them, and made them right gay
> And daunceden and lepten on the spray
> And ever more two and two in pere
> Right so as they had chosen them so yere
> In Feverere upon St. Valentine's day.
> And the river that I sate upon,
> It made such a noise as it ron
> Accordaunt with the birdes armony,
> Methought it was the best melody
> That might ben y heard of any mon.

Chaucer's love of spring is associated with an equally absorbing tenderness for gentle and homely nature: the lane with its wild roses and white bramble flowers; the copse with its play of sunlight falling through the leafy cover upon green mosses and plumed ferns; the hay-field, with glimpses of golden dandelions, and pink tipped daisies, peeping through long fresh grass. We have no rugged nor wild grandeur of bare mountain crags, of angry storm cloud or of billowy sea. For the sea, in fact, it seems to us Chaucer must have felt a positive antipathy; there is such a strength of animosity in the speech he puts into the mouth of Dorigene, in the Frankeleine's Tale:—

> "Eterne God, that thro' thy purveance
> Ledest this world by certain governance
> In idle, as men sain, ye nothing make
> But, Lord, these grisly fendly rockes blake
> That semen rather a foul confusion
> Of werk, than any faire creation
> Of swich a parfit wise God and stable,
> Why han ye wrought this werk unreasonable?
> For by this werk north, south, ne east, ne west,
> There n'is y-fostred man, ne brid, ne best!
> Fsooth no good to my wit, but amazeth
> See ye not, Lord, how mankind it destroyeth?

This partiality and enthusiasm for the quiet beauty of an ordinary English landscape, is in keeping with by far the most remarkable characteristic of his genius. Shakespere is often called the Rembrandt of Poetry; as having first deigned to give us living men and women un-idealised, and in their workday garments. But in reality, Chaucer two centuries before Shakespere, had broken away from the classical and allegorical schools; and the "Father of English Poetry" may also be called the first "Humanitarian" Poet. The life studies given us in the Canter-

bury Tales are as vigorous, as truthful, as ineffaceable as even Shakespere's creations. Slow whilst time and men continue, should the figures of these Pilgrims pass away:—the "veray parfit gentil knight", with his mild courtesy and love of romance, and in garb all iron stained and mud-bespattered; his dainty son "a lover and a lusty bacheler," *his* garment "embroidered as it were a mede; all full of freshe floures white and red;" the well conditioned insidious "Frere," the "best beggar of his house," with his bright twinkling eyes, and his little lisp to make his English sweet, his presents of "piunes" for "faire wives," and his easy forgiveness for those who "instead of weeping and praieres" give silver to the "Poure Fraieres;" *the needy* Clerk of Oxenford who *would rather* have "twenty books at his bed's head" than rich robes or wealth, and who would "busily for the soules praie, of those who gave him where with to scholaie;" the gentle Manciple; the stout miller; the dainty Prioress, with her elegant manners and her sentimentality, "all conscience and tendre heart;" the wife of Bath (oh! garrulous, vulgar, immoral, delightful wife of Bath, with thy smart garments, thy shocking stories, thy five husbands at the church door and "other compagnie in youth"); the poor pious "Persone," "benign and wonder diligent," who sought to "drawen folk to heaven, with faireness, by good ensample." . . . . . here pass before us the whole company, and tell their stories, and prattle, and squabble, under the fresh sweet April sky; and every one of them wins from us a smile of recognition as he or she rides by.

To approach a Poet learnedly is always a literary "deadly sin," fruitful of perverse mischief. And Chaucer, especially, requires men to leave scholarship behind them, and to wander forth with him, whole-hearted, on his sweet May-mornings, to meet whom and what haply may befall. How much glossaries and erudite studies upon the language and versification of Chaucer may have to do with the comparatively limited appreciation he now receives, it would be perhaps ungrateful to surmise. But we may safely say that, whilst many have been scared thereby, few have by such means entered into loving intimacy with the great old Poet, whose large human sympathy, beaming humour, and, despite an inexhaustible fancy, unswerving fidelity to the truth of man and nature, should, one would imagine, make him a world-wide delight open both to the refined and simple. The difficulty of his dialect is after all quite easily surmounted. If the uninitiated reader will be guided by our counsel, he will religiously eschew all notes and glossarial index, at any rate until he has acquired so fair a familiarity with the original language that, whilst possibly unable to define every word apart from its context, the sense of no single passage will be obscure. And this familiarity he may obtain by the simplest method and at the cost of a few hours' trouble. Let him take Wordsworth's modernized *Cuckoo and Nightingale*, and Leigh Hunt's *Squire's Tale* (both versions being executed with an appreciative fidelity truly admirable); reading these side by side, and passage for passage, with the original will have a double advantage; not only in a very short time will the obscurity of the old dialect melt away, but its quaint and musical beauty, and its expressive power as contrasted with the modernized form, become so apparent, that the latter will swiftly be cast aside impatiently and Chaucer allowed to tell his own stories in his own tongue.

LONDON LETTER.

LONDON, MAY 14TH, 1875.

THE Emperors have met and embraced each other, but as yet not a single regiment has received marching orders for Paris. The "scare" described by M. Louis Blanc in his letter to the *Times* was, in my humble opinion, largely due to the leading article which appeared in the same number of that, too often dangerously, influential journal. Had the letter been published in any other paper, it would have been regarded as nothing more than the clever enunciation of the alarmist views of an individual or perhaps of a small clique. Its publication, however, in the *Times* gave it a continental importance and seemed to vouch for its thorough trustworthiness. That the situation was greatly exaggerated is only another form of saying that it was described by M. Louis Blanc, whose tendency to create giants for the pleasure of slaying them is too well-known to need illustration. At the same time no one can doubt that war with France would be very agreeable to the military caste in Germany, for a caste it is and nothing else. The pay of the German officer is too small to enable him to enjoy much pleasure, or even comfort, in peace time, notwithstanding the many privileges accorded to the profession of arms. War may bring promotion and plunder, and anything is better than the dull routine of a severe military drudgery. Then, Count Moltke is growing old, and may grieve to leave his work half-finished, which means, indeed, that some day it will have to be done all over again. Prince Bismarck, moreover, is endowed with the troublesome faculty of seeing into a millstone further than his neighbours, and, after the manner of such men, is prone to discover evil motives for the simplest actions and combinations. Not only is he gravely impressed, perhaps not unreasonably, with the mischievous character of Ultramontane aggressiveness, but he is also believed to have been much disquieted by the visit of the Austrian Emperor to the King of Italy, as though it foreshadowed an offensive and defensive alliance between the three Catholic Powers. There is apparently, however, no reason to apprehend any sort of concerted action for aggressive purposes between France, Austria, and Italy, and assuredly the Italian Government can have no desire to strengthen the hands of the priest party. Possibly, Prince Bismarck personally may not have entertained the serious apprehensions on this ground which have been attributed to him, but which he may have designed to inspire in others. It is one of the inconveniences of pursuing a tortuous course that a straight line comes to be habitually avoided, and every motive is accepted save direct honesty of purpose. Be that as it may, all kinds of rumours have been prevalent as to the moulding of future history that was to result from the meeting of the Russian and Prussian Emperors on the 10th May, and still more from the confidential conferences of two such patriotically ambitious and unscrupulous diplomatists as their two Chancellors. The semi-official press of Germany has happily been instructed for the present to proclaim peace from the housetops, and to disclaim all desire on the part of either Government for war and territorial aggrandizement. But, then, what assurance is to be placed on the declarations of autocrats? Who shall say what moment may appear opportune, what provocation sufficient, for the mobilization of these two immense armies? Suppose that France were called upon to desist from her self-imposed and terribly onerous task of reorganizing her military forces, could any French Government exist for a month after yielding to such dictation? Where even Russia and Prussia to offer to reduce their own armaments simultaneously, their aggressive power would be only held in abeyance, not diminished; whereas the French army, being in a transitional state, would be rendered useless for defensive purposes against a much smaller force than was employed to overwhelm her in 1870. The Germans, irrespective of the military caste, are undoubtedly in favour of peace and tranquillity. They are a comparatively poor people, frugal, simple, good-humoured, and industrious, fond of domesticity, and engaged in business of a retail character as compared with the more pretentious operations of English tradesmen. Such a nation as this can have no particular passion for a military career, especially as the rewards of victory are reserved for a privileged class. And yet were the official, or semi-official, press to announce that civil or religious liberty were imperilled by the intrigues of the Romanists or by the vengeful feelings of the French, this worthy peace-loving folk would spring to their arms as a man, and would follow their recognized leader with a fixed resolve to do or die. Thus, the question of Peace or War is in very much the same condition as previous to the interchange of imperial kisses and compliments. Under the happiest circumstances it is only an armistice that Europe can hope to enjoy for many a year to come. To quote M. Provost Paradol's oft-cited illustration, of the relations of France and Prussia previous to the late war, two express trains are preparing to start from the termini of a single line, and the only point uncertain about their collision is the precise moment at which it may occur, and the exact distribution of damage. How thankful we should be that our lot is cast in an era of such advanced knowledge and civilization. Time and space having been, so to speak, annihilated, it only remains to annihilate the human race.

What dweller in Sleepy Hollow will not wake up and stretch himself in ecstacy on reading the telegraphic announcement that the benighted presidency is to be honoured by the abiding presence of a member of the highest order in the British Peerage. Grandson of the noble spendthrift whose "selling up" at Stowe was the wonder of the day some few years ago, the present Duke of Buckingham and Chandos has had considerable experience on the practical administration of public affairs, and has the repute of being a good man of business, gifted with a fair share of common-sense. It is understood that after graduating in the least of the three presidencies, his Grace will be the successor of Lord Northbrook, and the first Duke associated with the Government of India in that country. Indeed, Madras has set the example not

only of the first Duke, but also of the first Marquis, though it is to be hoped that his Grace of Buckingham will prove a better illustration of his order than was the poor old Marquis of Twiddledum and Twiddledee.

Sir George Campbell, it seems, is not to be disturbed in his seat for the Kirkcaldy burghs, Mr. Harkin's committee having dissuaded that boisterous gentleman from taking any further steps in the matter. A question of greater importance to India relates to the future training of candidates for the Civil Service. There is a strong movement on foot for reviving the best points of the old Haileybury system, while avoiding the obvious defects inseparable from the virtual absence of competition. It is proposed that intending candidates should reside two or three years, as may be hereafter arranged, at the Oxford University, where teachers of oriental languages would be efficiently provided. Not only would this facilitate the acquisition of the highest degree of intellectual culture, but it would also bring the future administrators of British India into familiar contact and create a healthy *esprit de corps*, to say nothing of breaking down the utterly fictitious system of "cram" tempered by Music Halls and the Alhambra. The details of the projected innovation have yet to be worked out, but there is good reason for believing that no serious difficulties stand in the way of this great improvement. By the way, Lord George Hamilton intimated last night the intention of Government to introduce the Indian Budget earlier than usual, but then he added that previous Governments had had the same intention—a remark greeted with laughter. Lord Sandhurst has again contrived to get into hot water through his extraordinary want of tact and considerateness for the feelings of others. During the debate in the Lords on the Duke of Richmond's motion for the second reading of the Bill to sanction Regimental Exchanges by purchase, Lord Sandhurst declared that when he went out to India as a Captain in a line regiment, ten or twelve of his brother officers exchanged into other corps to avoid leaving England, and yet within eighteen months afterwards the regiment was engaged in active service on the north-western frontier. He thereby plainly insinuated that so many British officers had paid poorer men to incur danger and hardships in their place, as if they could have foreseen what would happen at the distance of eighteen months. By way of softening down such a serious charge, Lord Sandhurst explained that this happened in the age of sailing ships, when India could only be reached *viâ* the Cape, and no doubt the prospect of a long tedious voyage, going out and returning, may have co-operated with other causes to render an Indian career undesirable in the eyes of fashionable young men endowed with an aptitude for pleasure. As the purchase of regimental exchanges was then sanctioned by the military authorities and a matter of ordinary occurrence, no imputation of unmanliness should have been so much as whispered against these holiday-soldiers, who, we may be sure, would have acquitted themselves as Paladins in the stricken field, and who could not have foreseen any chance of actual warfare. What makes the matter worse is that the charge was a definite one, being levelled against Lord Sandhurst's own regiment, and not a mere vague insinuation of unsoldierly conduct produced by a pernicious system throughout the whole British Army. And that system is to be re-introduced for a season in spite of Lord Cardwell's powerful and exhaustive speech. Lord Derby has seldom appeared to such disadvantage as in his feeble attempt to combat the unanswerable arguments of the preceding speaker, and the Duke of Cambridge could only promise to exercise such strict supervision that in practice the apparent objections should all melt away. The fact will nevertheless remain that the officers of the British Army will be divided into two classes—the idle, wealthy loungers, and the poor hard-workers who will really make the army what it may be. Naturally enough, a great many officers, the poor as well as the rich, are in favour of regimental exchanges by purchase, but the question is not what they would like, as what is best for the nation, and on that point common-sense forbids any difference of opinion. The bad precedent has, besides, been established of a new parliament and ministry immediately undoing the work of their predecessors without allowing time to test the experiment, and there is a strong probability that when the Liberals return to office, one of their first measures will be to abolish for ever all pecuniary influences from the profession of arms.

That same night Mr. Gladstone did all that lay in his power to restore the declining preponderance of the Conservatives. His threatened attack on the Budget has done more harm to the assailant than to the party assailed. He certainly showed, what the Chancellor of the Exchequer afterwards admitted, that the promised surplus was of a very shadowy character, and quite likely to be transformed into a trifling deficit. But when he reprobated Sir Stafford's mode of dealing with the National Debt, and vaunted his own system of terminable annuities, he only afforded one more example of his marvellous talent for self-deception. Even Mr. Lowe evaded the task of supporting his late leader, and contented himself with censuring Sir Stafford's levity in referring to the possible substitution of a deficit for a surplus. The ordinary speakers on such occasions, Mr. Laing, Sir John Lubbock, Mr. Samuda, Sir George Balfour and others, were unmistakably in favour of the ministerial proposition, while the Chancellor of the Exchequer was singularly happy in his clear quiet refutation of Mr. Gladstone's "soft impeachment," and spoke with an ease and readiness that surprised as well as delighted his hearers. He has secured his own position at all events.

I do not generally allude to the musical world, but the production of "Lohengrin" at the Covent Garden Theatre is an event that must not be passed over in silence. The scenery, costumes, orchestra and chorus were as excellent as even Herr Wagner himself could desire. All the accessories were perfect, even to a crowded house and an enthusiastic audience. The music itself was, of course, highly scientific, but to the uninitiated it seemed monotonous. The want of melodies was a fatal omission. Twenty pages of heavy recitative are clearly too much for an ordinary opera-goer, harassed moreover by the discordant braying of multitudinous trumpets. For discord was the result of sixteen trumpets on the stage uttering shrill shrieks in a higher and sharper key than those in the orchestra. The enthusiasm of the house was traceable to the presence of Germans in overwhelming numbers who became ludicrously excited and made all sorts of hideous noises betokening delight. One fanatical patriot in the stalls shouted to a gentleman of the Hebrew persuasion seated a row or two behind him. "Ha Meester—(naming him)—You shall have no more of you d—d German Jew musics in London!" But that worthy German was mistaken. Herr Wagner's music will never be popular anywhere. It will be lauded to the skies with defiant rapture by a clique, but it will never displace Mozart, Meyerbeer, or Rossini. His *libretti* are undoubtedly poetic, but are lost upon those who cannot read them in their native tongue, for the English translation of Lohengrin at all events is unutterably bad. Very likely this opera may have a *good run*, and as it is announced also at *Drury Lane, it will be the "right thing" to go* and hear it once, but very few will care to sit it out a second time. And who on earth will go to Bayreuth next year and pay 500 thalers—£75—to hear a trilogy, "The King of the Nibelung," occupying three days. No advantages of scenery, no wondrous combinations of instrumental music will suffice to draw an *honest* audience to such an out-of-the-way place. Fashion, certainly, is a potent worker of miracles, and may possibly avail to make a pilgrimage to Bayreuth of greater merit than the ascent of Mont Blanc, and it must also be remembered that there are no gaming-tables left as the rallying points of the weariful wealthy. Still, three days with Herr Wagner will be a crucial test of human endurance in the pursuit of pleasure.

Signor Salvini's election as an Honorary Member of the Athenæum Club is a greater, because a more unique, compliment than that offered to Mr. Alexander Russell, Editor of the *Scotsman*, by the Reform Club. The Signor is partly indebted for this honor to the fact of his being a 'Foreigner', but it is nevertheless a graceful and well-merited acknowledgment of his remarkable talent as a delineator of strong emotions. The objection to his Hamlet, in my eyes, is that he is essentially not a dreamer, but far too full of power, vitality, and animalism. His portrait in last week's *Graphic* is a very fair likeness of the man, and I leave it to your readers to imagine the amount of "get-up" that was needful to convert such a face and head into any resemblance of the visionary Dane.

The *steward* and his odious piece of crockery have not yet been superseded by the *Bessemer* swinging saloon. The machinery is not in working order, and the *Bessemer* has an aptitude for rolling that is likely to destroy all pleasure in the elegance of the decorations. Worse than this, her length, 350 feet, is too great for the narrow entrance to Calais harbour with a cross-tide running. She has made a trial trip to Calais and in passing between the two long wooden piers that constitute the favourite promenade of the Calesians, her stern was caught by the tide and dashed against the southern pier, of which some 50 feet were shattered into splinters. Luckily the sightseers were all crowded on the opposite pier, so that no loss of life occurred, but the damages are estimated at 70,000 francs. Sea-sickness averted at the risk of shipwreck is a temptation by no means irresistible.

led by the Lord Primate (Beresford) and the Archbishop of Dublin (Trench) who are hostile to it in every form. An effort has been made to bring about a compromise by a new Preface to the Book, which would render alterations in the services unnecessary. The Preface is moderate in character, and is attributed to the Rev. Lord Plunket. In the event of the preface being adopted, however, extreme men threaten to leave the Church, while the altering of the Athanasian Creed has already induced some wealthy men to withdraw large subscriptions from their parishes. The time is not very far off, we *think*, when men will cease to do battle in this passionate way for creeds, and will discern more clearly, with Laurence Oliphant, that Christianity is not so much a creed—as a life.

***

WHILE the mill-owners of this city are wringing their hands in despair over the prospects of the jute industry, we hear casually of a great Scotch firm quietly transferring their machinery from the Clyde to the banks of the Hooghly. The *Scotsman* of 24th April tells us that the jute factory of Messrs Birkmyre and Co., Greenock, has just stopped work, and that the machinery is about to be shipped to Calcutta. Mr. Birkmyre came out to India in October last, to see for himself the precise conditions under which the jute mills of Calcutta were really working. He belongs to a wealthy firm of spinners in Greenock (now in their third generation), and was not here six weeks before he came to the full conclusion that the advantages which the Hooghly possesses over the Clyde, are such that the industry must gradually be concentrated here. He was fortunate enough, we believe, to obtain for a very small sum the splendid site on which he is putting up his new Mills at Rishera, about two miles this side of Serampore. The property lies along the water side, with a handsome residence and capital garden attached to it. It is the old river-side lodge in which Warren Hastings resided for a year or two, and Mr. Birkmyre gratifies the curiosity of his visitors, by showing amongst *his title*-deeds the signature of the great proconsul, whose "lodge" he has *come to dwell in*. That great extravagance and much unwise speculation have attended our jute mill industry is of course patent; but the enterprise is a sound one, and will endure. Mr. Birkmyre is now at home. He purposes, we believe, spending the cold season in India for some few years to *come, retiring to* England in the hot weather. He is an amiable and exceedingly well-informed man, and will be an acquisition to *the* neighbourhood of Serampore. He was Provost of Greenock we believe two or three years ago.

***

THE proposal of the Italian Cabinet to make military service compulsory upon Catholic priests and candidates for the ministry, admits of no justification but that of extreme national danger; and it is difficult to see how this can be pleaded unless the coming conflict in Europe is much nearer than is generally supposed. Petitions against the proposed law have been addressed it seems to the King, in most impressive terms; and these petitions, with the remonstrances of the Holy Father, have induced Victor Emmanuel to forbear signing the decree. The Committee in the Senate have rejected the eleventh article of the proposed law, which forbade the purchase of a substitute for the young cleric "conscripted."

***

ACCORDING to the *Osservatore Cattolico* of Milan, one petition alone against the Bill has received upwards of 25,000 signatures. The *Ancora* suggests that "every father of a family, every good "Catholic and good Italian should indite a letter to Victor Emma- "nuel, respectful and out-spoken at the same time, appealing to "his love for the Italian nation and to the traditions of his "family." It is bad statesmanship that raises questions of this nature, except under the pressure of strong necessity.

***

STRONG language is being applied by the Roman Catholic press to the German Government, for an incident connected with the Duchesne plot to assassinate Prince Bismarck. It is known that when Duchesne wrote to the Archbishop of Paris offering to assassinate the Chancellor, the illustrious prelate hastened to denounce the plot to the Belgian Government, which in turn informed the Prussian Ambassador. But what was not known, is that the German Ambassador took the liberty of proposing to Belgium "*to feign an answer as coming from the Archbishop of Paris.*" The proposal, we are told, was indignantly rejected by the Belgian Government, and does not require to be stigmatized by the press. The *Osservatore Romano* declares the suggestion to have been "infamous," and writes very passionately of the incident. We have never been great admirers of Bismarck, but we confess that we do not see the peculiar infamy of the proposal. We doubt if there is any police in Europe that would regard such a course as unjustifiable, if there were any doubt as to the precise nature and extent of the conspiracy. We can well understand that the Archbishop himself would have declined to adopt such a course, but the proposal was not made to him, seeming simply to have been a suggestion to the Belgian police. We should doubt if there is any police in Europe that would hesitate to act so in a case where room existed for suspecting that there might be others in the plot.

***

THE *Teheran Gazette* has of late given its readers some important news about the Government of Persia and the reforms of the Shah, who completed his forty-fifth year on the 13th of March. This journal tells us that "praises be to God," the revenues of the empire have this year—the article was probably written at the end of the last year—been paid so well that, after all the expenses are paid, there remain for the treasury £120,000. With this money it is intended to buy some Krupp guns and some mitrailleurs. "The coinage of Persia has ever been out of order; design, execution, and the writing upon the coins were always bad. A complete coining machine was bought some time ago and will be put up in the large and well-built factory (at first a cotton spinning mill) outside of the town. As there are no clever mint-men in Persia, one Austrian mint-master and an assistant have been engaged by the Government; they have arrived at Teheran and with the help of the Sipah Salár they will establish a mint so that the coinage of Persia may become like that of Feringistan. This will take place shortly." The engagement of two postal officials is also chronicled; and the word "post" is introduced into Persian. As pust house also means "skin house," and the name is not so inappropriate on account of the skeleton-like condition of the post-horses. The object of post-houses is stated to be that "letters, either private or Government, *will be* properly sent, and answers properly received." Telegraph lines are to be laid down from Muláyer to Nehávend, Hamadan to Senna, Astrábád to Sári and Barfurúsh, Khoi to Urúmieh, Míáneh to Ardebíl. These lines are to be completed in sixteen months. There is now supposed to be in every town a box for letters for the Shah. They are called "justice-boxes," and nobody but the King himself is supposed to receive their contents. In the words of the *Gazette*, justice-boxes are established as a means of checking the rapacity of governors, "that they may not put their hands on people's property, that they may not covet any one else's riches or goods;" and it is added that "if any one hereafter acts with injustice he will be severely punished."

***

FATHER LAFONT'S attack upon free-masonry strikes us as a little out of place perhaps in India, where the institution bears but a faint resemblance to the Secret Societies of the Continent, and particularly we believe of Italy, where, under cover of the Masonic name, very dangerous movements are made against the peace of society. The august captive in the Vatican, in speaking of this "worthy daughter of Satan," tells us that "the Church has warned it in vain; while many of those who should have stifled and crushed the monster have not been afraid to favor and foster it, so that now no human strength can avail against it." Free-masonry in India is a very common-place, inoffensive sort of thing; and simply serves as an excuse for a monthly banquet of the craft, after "playing at children" for an hour or two in lodge. The institution so far as India is concerned is hardly, we think, obtrusive enough to call for an elaborate attempt to storm it. Men will have recreations of some kind.

***

OPINION in India upon the landlord and tenant question in official quarters may be said to be not so much divided as undecided. We find it difficult to frame measures, because our policy is undetermined. On the one hand, we are drawn by the example of England towards a system of free competition for land, while on the other hand, our statesmen are fully aware that such a policy must be disastrous in a province like Bengal. The rate of rent under a system of competition, where the land is held by cottiers cultivating for a subsistence, depends on demand and supply; in other words, on the proportion of the population to the arable land. Now in Bengal we have the densest population in the world, and if we allow unrestricted competition, rents must go up to rates

that will leave the ryot a bare subsistence in ordinary years, and to the State support in seasons of scarcity. As long as we are undecided, as to the principle to be adopted, there can be no satisfactory legislation on the question. Only undecided measures can find acceptance with those who are themselves undecided. We hope the time is not distant when Government will approach the subject with the confidence and determination, begotten of clear conviction: and we are glad to believe that Sir Richard Temple is feeling his way to this.

***

THE introduction of the new Rent Procedure Bill has been the signal, as we foresaw, for re-opening the whole question, and it is clear that while it is before the Council the agrarian position will be reviewed in its entirety, and the expediency of making very great changes will be canvassed. The State has hitherto avoided the consideration of a policy for Lower Bengal, on the principle that it is not good to disturb what is quiet, but we shall have to give our attention to the subject, as it is fast becoming a burning question. The object of the present Bill is simply the pacification of disturbed estates, which it proposes to effect by giving Government power to appoint a revenue officer for deciding in a summary manner disputes that are likely to lead to breaches of the peace. The finding of the revenue authorities is to be final, and the rent-rates fixed by them not to be altered for ten years. Certain facilities are provided for making a number of ryots parties to the same action. The Bill, is therefore, but a small measure, dealing with a part of the question only, and handling that in the most tender manner. The change in procedure even is smaller than might be supposed. For the revenue officers are to be guided in their enquiries by the provisions of Act X of 1859, which enjoin all the forms of an elaborate trial; and though no appeal is allowed as of right, full power of control is left to the Commissioners and to the Board. Any one who has watched the working of these tribunals in settlement and partition cases, must have noticed that they err on the side of excessive caution and delay, not on that of over-haste. It is not an uncommon thing for a partition case to last thirty years, and yet these disputes are tried much as those between landlord and tenant will be. We do not attach much importance to the Bill in its present shape.

***

OLD Indians are valuable "leaven" wherever they go. The Rev. J. E. Carlyle, whom some of our readers may remember as pastor of the Free Kirk in Calcutta for a few months in 1873, is now minister of the Free Kirk Colony in Natal, and has been directing the attention of the colonists, we notice, to the village system of India, which interested him a good deal when he was in Western India 14 or 15 years ago. "One can scarcely have an idea," he says, "how perfect is the organisation of an Indian village. It has its headman, its police, its agriculturists, its herdsmen, its carpenter, and blacksmith, even its barber. Each has his place, and is entitled to his dues and perquisities. Its autonomy is remarkable and complete. In Germany, in some old quaint village—say in the Black Forest—you may find traces of the same system. To be a headman in one of these villages, is no ordinary honour. I have been told that Holkar prides himself almost as much on being the old headman of the village whence he sprang, as on the princely domains and sovereign rights he now possesses. To introduce this system in its completeness among the Kafirs would be, I fear, hopeless; but something in this direction might be attempted. In mission stations it is, I believe, being carried out, but of course there is present there the civilizing and Christian element. It would seem, however, specially deserving of consideration if we are to continue introducing, as I presume we shall, an increasing coolie population into Natal, how far such a system might be worked among them." Speaking of the Cornwallis settlement in these provinces, he writes:—

> The village is still the basis politically, but the rent is paid to the zemindar, who has a power of raising it, while, at the same time, he only pays the price fixed at the perpetual settlement by Lord Cornwallis. The system has two disadvantages, it deprives the Government of their share in the increased value of the land, and it presses often cruelly on the ryot. The amount of misery which, with good intentions, Lord Cornwallis inflicted on some sixty millions of people, can never be told. Thanks to Lord Canning, Lord Lawrence, and Sir George Campbell, the old rights of the ryot, so long ignored, have been more clearly recognised, and the same injustice cannot again be inflicted.

Mr. Carlyle is a warm admirer of the Bombay system, concerning which he says "that, probably, no better system of land tenure exists in any country than the ryot-warry. It has engaged largely the attention of political economists. The lease is for 30 years, but the tenant cannot be removed if at the end of that period he is willing to pay the new rent imposed. The rent is based on custom as opposed to competition. The land is every 30 years carefully surveyed and classified, according to its grain and fruit bearing qualities. The average is struck of the value of provisions as afforded by proximity to market towns, roads, canals, &c., and a rent is fixed that does not charge the ryot for any improvement made by himself".

***

LORD SANDHURST appears to be in a fair way of becoming as much disliked in the House of Lords, as he is in the Army. The discussion on the Regimental Exchanges Bill elicited from him a most injudicious speech. He was perhaps speaking on the right side, but seems to have been betrayed into imputations upon the honour of a regiment which he accompanied to India in early life, that provoked the Duke of Richmond and other members of the House into some unusually caustic comments. The imputations themselves, moreover, proved to be unfounded, as his lordship himself when driven into a corner was compelled to admit.

***

THE revelations made in the recent discussions at home on the "Vivisection" Bill have produced an indignant revolt against the pleadings of "scientific" men for the continuance of the cruel experiments that have shocked the country. Another result of these discussions, Major Osborne tells the *Statesman*, is that the blind faith in scientific professors has been rudely shaken. The arrogant tone they have thought fit to adopt, has awakened a healthy spirit of contradiction. The word "science" and the guesses of a professor will no longer be supposed to be quite synonymous. There have been few recent influences more harmful to vigour and independence of thought, than the cowed and abject submission conceded to any one who called himself "a scientific man." We agree with Major Osborne that a generation hence, people will look back on the speculations of the Huxley-Tyndal school, and marvel how they ever commanded the adherence of thoughtful men, for the truly gigantic assumptions on which their conclusions rest. In so far as they are revealing to us facts of the material world unknown to us hitherto, they command our utmost respect and attention; but the philosophy they so boldly rest thereon, is not worth the serious attention of any man.

***

OUR good ally the Ameer of Kashghur, is entering upon troublous times. China has for a considerable period been making preparations for invading his territory, and they are on a scale which shows that the Pekin authorities are much strengthened by the overthrow of the Sultan of Yunan. Corn is being largely stored for the army's wants, transport cattle have been purchased or pressed, and bodies of Calmuck Tartars bribed into the imperial service. The troops are at present reported at 20,000, already actually gathered on the frontier, and 100,000 more on the way from the interior of the empire, of whom half are destined for a direct invasion of Kashguria, and half for the more northerly enterprise against the Dungani tribes, occupy the countrying between Kokand, Kashguria, and the southern frontier of Siberia. Probably early reports of these hostile gatherings, may have had something to do with the friendly reception of our last mission to Yarkund. Certainly the Russian journals ascribe to the dangerous situation of Yakoob Beg the elaborate civilities with which their mercantile convoys have been treated; the goods sent having been disposed of at Kashgur under his ostentatious protection, and the traders accompanied to and from that city by an escort of his troops. The Mandarin of Kowloong, Colonel Pang, ordered some time ago a quantity of mitrailleuses from Prussia through a German firm, and these have recently arrived from Europe. A trial made at Kowloong gave great satisfaction. It is supposed that the mitrailleuses are intended for use in the operations in Kashghur.

***

THERE are no fewer than six thousand five hundred fairs held annually in European Russia, and new ones are constantly springing up. At the twenty largest fairs, four-fifths of the merchandise is of home production, the remaining fifth being half European and half Asiatic. Tea, which formerly was the most important article of all, still has a large sale at Nijni Novgorod. The entire stock never reaches Nijni at the same time, a large proportion being frequently delayed until within a few days of the closing of the fair. The Russian tea trade is extremely complicated, and the commodity passes through many hands before it reaches the consumer. It is brought in the first instance to Kiachta by Chinese merchants, who exchange it for Russian goods. The buyers sell it to merchants in Moscow, Irbit, and Nijni, and these again dispose

THE ENGLISH MAIL.

PARLIAMENT continues to pursue the sleepy tenor of its way. "The Regimental Exchanges Bill" has passed through the Upper House, by large majorities, but not without a great deal of vigorous debating. The amount of talking which this Bill has evoked has been really remarkable, and not the less so, that neither defenders nor opponents appear to understand the purport or the necessity of the Bill. It is invariably represented as a concession to rich officers, as an indulgence granted to them; it is in point of fact a concession to the poor. It is spoken of as an arrangement to retain rich men in the Army; it is in fact an arrangement to retain poor men without increasing the Military Budget. Every one knows that the rates of military pay in England are such that no officer, not having private means, and far less if he have a wife and family, can remain free from debt. Every one knows, too, that in India or the Colonies the rates of pay enable him to remain in the army unincumbered with debt. But without this power of exchange, the poor man could not be brought to the good allowances which are absolutely essential to his subsistence; nor the rich man to the small allowances with which he is content. Of course, in this way, the man of money does get a certain advantage; but it is one inherent in the possession of money, like the power to drink champagne daily or to keep half-a-dozen hunters. He gets quartered where he wishes to be quartered, but he has to purchase this privilege from a brother officer who, as much as he, gets what he too wants—a sum of ready money and larger allowances. The only alternative is for the nation to increase the English pay of officers to such an extent that exchanging should be no longer a necessity.

***

WE are told on the authority of the *Deutsche Allgemeine Correspondenz*, that "the expediency of mobilizing the German forces was seriously discussed at Berlin at the time of the visit of the Emperor of Austria to Venice. However, as Austria and Venice do not at present seem inclined to join France, the apprehensions formerly entertained in that direction are fortunately allayed." From this and other signs of the times, it is easily seen that the sword hangs over Europe suspended by a single thread. The Emperor of Russia is for the *moment master of the situation*; and he is on the side of peace. Any further expansion of the German power might lead to a claim to incorporate his Baltic provinces, as being peopled by Germans, into the fabric of German unity. So long as his co-operation is not granted, so long as there exists a *doubt whether* he will not throw his sword into the French scale, Germany must remain quiescent. She cannot contend with success against France and Russia united.

***

THE rapid recovery of France from her recent disasters is the subject of European wonder. And this process of recuperation has been going on with increased rapidity since the passing of the constitutional laws. These have had precisely the effect which M. Gambetta predicted they would have. The Legitimist and Bonapartist *propaganda* have ceased to be agitations not merely legal but expressly sanctioned and encouraged by the provisional character of the Government. They have become, what in truth they always were, conspiracies against the Government adhered to by the majority. The friends of peace and quiet are now mustering in every part of France to stand by the legally constituted Government. Even in the heart of the most Legitimist districts, societies have been formed for this purpose, to the exceeding distress and surprise of the Legitimist papers. More than one Legitimist member of the Assembly has addressed his constituents to the effect that nothing now remains for an honest man but to frankly accept the situation. The Imperialists, as a public party, have disappeared but they live by agitation, and draw their subsistence from the troubles of the nation which has the misfortune to harbour them. They had disappeared from the public gaze only to work with greater safety underground. But even this is an admission that, for the present at least, there is no Imperialist party in France. Last but not least, the great speech which M. Gambetta recently delivered to his constituents of Belleville shows that even there—the very home and abiding place of the fiercest democratic principles—the spirit of political compromise has contrived to penetrate with healing on its wings. There is hope for France, when a French democrat has been brought to see that people have a right to live, even though they are guilty of solving political problems by a different method than that which he applies to them. The general feeling of confidence expresses itself by an equally general revival of trade.

INTERESTING details of the late ministerial changes at Constantinople are brought by the last mail. Never has the practice followed during the present reign of making such changes suddenly and unexpectedly been more glaringly illustrated than on this occasion. Only the day before the Grand Vizier was dismissed he deemed himself so confident of continuing in power that he developed his plans with regard to the improvements he wanted to make in the Army, and notably the great Camp of Instruction which he was preparing in the plain of Adrianople. A military man, and having come into notice during the last war in Montenegro and the insurrection in Candia, he had kept the post of Minister of War when he became Grand Vizier. It was chiefly through the confidence the Sultan had in him as a military organizer that he succeeded in maintaining his position, and it is more than probable that all the efforts made from various sides to bring about his fall would have failed had there not been a flaw discovered just where his strength lay. A contract made for supplies to the amount of 8,000 had passed into the accounts as 58,000, and this was reported to the Sultan. The effect was instantaneous, and when the Grand Vizier, suspecting nothing, came next morning to the Porte, where the Council was assembled, the messenger was already waiting to announce to him his disgrace and to summon Essad, the Minister of Marine, to the palace. The scene which followed is described as highly interesting. For more than three hours the excitement was intense. From the windows of the Porte the reach of the Bosphorus is distinctly seen where the Imperial Palace stands, and in this direction every eye was directed to watch the departure of the State caique which was to bring the new Grand Vizier. From time to time a swift caique came with the last news that Essad Pasha had thrown himself at the feet of the Sultan begging to be excused, making the heart beat quicker of many of those present who might by chance be called in. Now, again, the news came that some outsider had already been called in, until after more than three hours of expectation, the State caique was seen to leave the steps of the palace, and soon after the new Grand Vizier, accompanied by the Sheikh-ul-Islam, came up in state.

SCANDALS are still being brought to light by the Foreign Loans Committee. After having exposed the practices with respect to Costa Rica, the Committee passed to Paraguay. Of course, it is a defaulter; but Mr. Charles Waring thinks that if a gunboat were sent to Assuncion to collect the missing dividends, there would be no difficulty in getting the money. The history of the Paraguayan loans of 1871 and 1872 was the old story. The prospectus of the former contained huge inaccuracies. The total loan of 1,000,000*l.* nominal was issued to the public at 80; but the Syndicate of contractors, consisting of Messrs. Waring, Messrs. Brothers, and Mr. Laing, were to account to the Government at only 64, so that merely 640,000*l.* went to Paraguay. In the case of the 1872 loan of 2,000,000*l.* nominal, only 470,260*l.* reached the Government. In both instances the Syndicates worked up the price by purchasing large quantities in the market.

***

THERE has been a strange case of mutiny on board the *Jefferson Borden*, which lately left Boston for London. Three men—a Russian Finn, an Englishman, and an American—who had shipped at New Orleans, whence the ship sailed to Boston, moved apparently by a strong belief in the captain's wealth, mutinied, and began by killing the two mates, who were both relatives of the captain, his brother and his cousin. The captain, who had his wife on board, had only the cabin-boy, a Swedish sailor, and the cook to be faithful to him. But he had firearms, and the mutineers had not, and he first drove them to the round-house on deck, nailed them up there, and then fired at them occasionally till they gave in and consented to be put in irons, the mutiny having lasted thirty-six hours. At this time the ship was 1,200 miles from England, and it had to be brought over with the three wounded mutineers in irons, and of course without any help from them. The voyage lasted for seven days. At the entrance of the Channel, they got a man from a Norwegian barque to help them navigate the vessel, and at the Nore they procured additional assistance, but a more exciting and perilous voyage has seldom been safely terminated.

***

DR. KENEALY has at last admitted that "all meetings on behalf of Tichborne are now useless and must come to an end"; and abandoning "poor Tichborne" he intends to concentrate his energies upon the Magna Charta association. "Let Kenealy," he cries, "before the year ends have a million enrolled members" in this association.

The *Englishman's* attacks on the "other horrid newspapers" continue. The *Times* is roundly stigmatised as an "unblushing liar," and, again, as the "leading liar." But this is polite *badinage* compared with the words in which Dr. Kenealy expresses his contempt for the press generally. "The English mind throughout the country," he says, "is directed by half-a-hundred starving, shirtless, shoeless scribblers." "All our readers know what these town and country 'gentlemen of the Press' are. They are the most loathsome vermin in the land." "But though loathsome, they can work mischief. The general public do not know that these creatures will write anything for anybody who gives them a half-sovereign." "At present England, Wales, and Scotland absolutely swarm with these wretches. They are polluting and perverting everything. But their last hour is near. The Magna Charta societies, which are springing up in thousands, will set their face against all newspapers which employ such scoundrels, and labour for the development of honest and truth-telling journals to take the place of the horrors by which we are now encompassed."

***

THE *Univers* complains that Bismarck has a whole legion of spies in France to take plans of the fortifications and draw up lists of the inhabitants of every hamlet, to furnish accounts of the resources, and, if required, to send in detailed reports of everything to the head-quarters of Count von Möltke. "Daily arrests of these gentry are made by the French police. It is, as every one knows, the Prussian system to leave nothing to chance. They will not make war until they have done everything to make success an absolute certainty; for the object now in view is not merely the conquest of France, but the suppression of the Catholic religion. You may be quite sure that our own military authorities cherish no illusions as to the intentions of Prussia. They are doing all that is possible to be ready for the crisis when it comes. Do what we may, however, we cannot hope to be as strong and well prepared as our opponents; but God will be on our side, and that thought gives us comfort."

***

THE *Bessemer* has proved a failure, and the fond anticipation of being able to cross the channel in one's drawing-room has gone for the moment. The swinging-saloon would not work, nor would the hydraulic helm answer. But it is only a deferred triumph. Our children will cross the channel without sea-sickness though we may not.

***

DR. MAURICE DAVIES tells a story of Mr. Moody in *Sankey's Magazine*, that should go far to remove the unpleasant impressions we have received in India of their respect for aristocratic sinners. The story is told by Dr. Davies of Mr. Moody's meeting with the West End clergy in one of the ante-rooms of the Opera: Having summoned them to consult with him as to his plan of operations, and Mr. Marston, of St. Paul's, Brompton, being voted to the chair, Mr. Moody sat by dandling a big umbrella, and to all the entreaties of those who begged him to devote some evenings as well as mornings and afternoons to the West-end, answering bluntly, "I wun't." Lord Shaftesbury argued and Mr. Samuel Morley remonstrated, but to no effect; and when Mr. Marston suggested in a stage whisper that Mr. Moody should leave himself in the hands of the meeting, he only sucked the handle of his umbrella, and said doggedly, "No, I wun't leave myself in the hands of no meeting nor no committee." A timid young minister at the back suggested that perhaps, if Mr. Moody could not come, Mr. Sankey might; but he still rejoined, "No, Sankey wun't." He could not, he said, come to the Opera House with a clear conscience, leaving ten thousand people behind in order that he might preach to five thousand. A poor man's soul was as good as a rich one's in the sight of God; and though Lord Shaftesbury bore witness to Mr. Moody's ~~almost superhuman~~ power, which he said was so exactly calculated to tell on the upper classes, and bade him remember that if he converted a rich man, he turned all his wealth and influence into a channel for doing good, still it was throwing words away; Mr. Moody had no answer but the epigrammatic "I wun't." And we think a good deal the better of him that he *would* give no other.

***

THE Oxford University in congregation have adopted the following resolutions affecting the examinations for the Indian Civil Service:—

"1. That it is desirable to make arrangements enabling selected candidates for the Indian Civil Service to reside at the University.

"2. That it is desirable to provide University teaching in certain branches of study specially required by the selected candidates.

"3. That it is desirable to make arrangements which may bring the degree of B.A. within the reach of such candidates before they proceed to India."

The resolutions were introduced by Professor Smith and supported by Monier Mathews, who pointed out the serious nature of the undertaking. Teachers in various branches of law in many languages, &c., would have to be provided. He would suggest to the Indian Government a kind of Indian Institute at Oxford, a sort of resuscitation of *Haileybury*, the abolition of which had been recognised as a mistake. But why at *Oxford and not in London?* Because of the rich endowments to start with. The professor quoted a letter from Professor Cowell, of Cambridge, as to the Oriental tripos, of which he spoke hopefully. Hitherto there had been no candidate, but "pupils were coming in."

***

REVIEWING the present electrical condition of Europe, a correspondent asks: "Is it not a monstrous thing that the fate of millions should be made to depend upon the ambition or the greed of two or three men like the Emperors of Germany and Russia, and Prince Bismarck?" Of course it is very monstrous, and the end of it all cannot be very far off. Europe will throw off the yoke, as England long since did, and its great military monarchies be converted into Republics, or, what is much the same thing, Constitutional Governments, in which the will of the people is supreme. The Continent seems to have been on the very brink of war by the tenor of last mail's advices, and the preservation of peace is attributed solely to the attitude of Russia.

FOREIGN NEWS.

GERMANY.

IN alluding to the war panic which has been so *prevalent* on the continent a correspondent observes *that* "*There has* been a real belief widely diffused at *Paris that the* Czar *holds the peace of Europe in his hands. If* when *visiting* the Emperor of *Germany* at Berlin he *did not show himself unfavourable* to the project of still further disabling France, the German war-party, it was supposed, would have its own way, and would demand the possession of Belfort, the limitation of the active French army, and possibly a huge sum of money, with the intention, if necessary, of enforcing these demands by another siege of Paris. The existence of these alarms is a simple matter of fact, and it would not be wise to pronounce them wholly unreasonable. There are certainly German journalists, and there are probably German statesmen, who think it expedient for their purposes to frighten France, even if they do not intend to hurt her. The Czar, not long after his arrival at Berlin, paid a visit to Prince Bismarck, who was confined to his room by illness. He has thus, perhaps unintentionally, given a little help to politicians who wish either to alarm or be alarmed."

PRUSSIAN legislation on ecclesiastical subjects is running its course with little interruption. The bill for the suppression of religious orders has passed its second reading in the Lower House without amendment; and Herr Petri, the Old Catholic Deputy, has obtained a third reading for his bill with regard to the rights of the Old Catholics in Church property. The *Post* hears that, in the face of the impending adoption of the bill for the suppression of religious orders, the Prussian bishops have decided to dissolve beforehand even such orders as will continue to be tolerated, in order to prevent their being placed under the supervision of the State.

THE Emperor of Russia arrived at Berlin on a visit to the Emperor William on May 10th. His Imperial Majesty was received at the railway station by the Emperor, all the Royal Princes, the Grand Duke of Mecklenberg-Schwerin, Field-Marshals Count von Moltke and von Manteuffell, and the chief dignitaries of the court. The greeting between the two monarchs is said to have been exceedingly cordial. The Emperor Alexander wore a Prussian uniform, and the Emperor William wore the uniform of a Russian general. The town was decorated with German, Russian, and Prussian flags, and the Emperor Alexander was loudly cheered by the crowd. The two sovereigns went first to the Imperial Palace, where the Empress Augusta received the Emperor of Russia, and they then went to the Russian Embassy. About three o'clock in the afternoon the Emperor Alexander drove to the Foreign Office, and paid a visit to the Imperial Chancellor. His Majesty was afterwards entertained privately at dinner by the Emperor and Empress of Germany. Late in the afternoon, after the visit of the Emperor, Prince Gortschakoff paid a visit to Prince Bismarck. The review held at Potsdam in His Majesty's honour was a splendid success. Upwards of 5,000 men were drawn up in line. The two Emperors, all the Princes and Princesses, the Grand Duke of Mecklenburg, and Field-Marshals Von Moltke and Von Manteuffel were present. The Emperor William led the first regiment of the guards, and the Emperor of Russia rode at the head of the Alexander regiment. At the conclusion of the review the Emperor Alexander, placing himself again at the head of his regiment, ordered it, as a mark of

T. CHARLES GILL, BILL & STOCK BROKER, *Brokers' Exchange, CALCUTTA.*

News of the Week.

THE Government has ordered Sir Douglas Forsyth to suspend opening negotiations with the King of Burmah, relating to the Karennee boundary question, till that potentate has given an explanation of his conduct with reference to our avowed foe, Lee See Tahee.

CHINA is making extensive preparations for an attack on the Ameer of Kashghur. Mitrailleurs will be employed.

THE contest for the Blue Ribbon of tea racing has begun, six steamers having started.

THE installation of the young Gaekwar of Baroda has been postponed owing to the unfavourable prognostications of the local astrologers.

CANNONS, it is reported, are being turned out at the rate of three a week, by Italian engineers engaged by the monarch of Mandalay.

SEVERE gales have been experienced in many parts of Bengal during the past week: but the monsoon does not appear to have really set in, except at the southern extremity of the peninsula, and at Carwar. Agricultural prospects are generally favourable.

THERE have been riots amongst the peasantry in the Bombay presidency, and troops had to be sent to quell one rising.

IT is stated that Colonel Hamilton, who recently lost his life while attempting to capture a party of Peguan dacoits, had been warned beforehand of their ferocious character, but decided on advancing in the direction of the enemy, before he knew where they really were.

THE news from Achin is meagre, and not at all in favour of the Dutch, who, it would seem, have grown tired of the contest. Re... rcements, however, are being sent.

HIS Chinese Majesty is suffering from measles.

THERE have been several attacks on foreigners in China lately, the American Missionaries at Kiu Kiang having been assaulted and their houses entered by a mob, while the local authorities were looking on.

JUTE stocks are still falling, but shareholders decline to sell out in anticipation of a better state of things shortly.

THE Mikado has established two new deliberative departments of State to the great joy of the Japanese press, which speaks highly of this and other reforms, and asks for more of the same kind.

MULHARAO and his Ranees are leading a peaceful and pleasant life at Madras.

THE ex-Gaekwar's solicitors complain that the Supreme Government will not allow them to communicate with their client, and have telegraphed to Lord Salisbury about the matter.

BOMBAY has begun to arrange for the reception of the Prince of Wales. Doubts are expressed, however, that His Royal Highness will find it impolitic, if not impossible, to stay away from England for six months.

A PLAGUE of rats is over-running the coffee plantations of Ceylon.

RIOTS have occurred amongst the Moors of Trincomalee.

SEVERAL daring and well-known dacoits have been captured near Rangoon.

THE Burmese Mission was expected to arrive at Mandalay on the 10th, Thursday.

THE oppressive heat which has characterised the present hot season continues, notwithstanding occasional heavy showers. The people of Madras appear to have suffered most severely.

A GRAND elephant-fight has taken place at Baroda in the presence of Ranee Jumnabaee, the Gaekwar and Sir Richard Meade.

MR. EASTWICK his come to India with the intention of obtaining support for the East India Association and re-writing *Murray's Hand-book of Bombay.*

SIR RICHARD TEMPLE has been on a visit to the Bhootan frontier. He is expected in the plains during July, together with Bishop Milman.

THE famine in the Karen hills is assuming a sterner aspect. Many thousands of people are without food, notwithstanding the help already given by Government.

General Summary.

LADY HOBART has, we learn from a Madras contemporary, compiled a biography of the late Governor of Madras, which is now in the press, and will shortly be published. Among other things, it will reproduce all the writings of the late Lord Hobart on matters of public interest, both at home and in India.

THE little port of Chandbally is evidently progressing, as the Lieutenant Governor has announced the intention of Government to take up some fifty acres of adjoining land for the public purposes and roads. A steady trade in rice exporting has been gradually springing up at Chandbally, and its convenience as a place of embarkation for Ooriya coolies travelling to and from their native villages to Calcutta has given the two or three steamers that weekly visit the Dummera, a large and profitable deck passenger business. We are afraid the location is not sufficiently elevated and is too much surrounded by jungle to be a very healthy one, but even in this respect it may prove upon trial better than we anticipate, and of its usefulness as a port there cannot be two opinions.

THE proposed visit of the Prince of Wales to India does not grow in favor with the home public, and from the cautious language of Mr. Disraeli, it is even thought that the visit may not take place after all. There are objections to the Heir Apparent being absent from the country for nearly six months; and it would not surprise us to learn that the proposal had been abandoned. India will give the Prince a hearty welcome if he comes, if it is not made too costly to the people.

WE hear that a short time ago the Hon'ble Mr. Justice Markby addressed a letter to the President of the Law Faculty attached to the Calcutta University, in which he proposed to dissociate the law education from the Presidency College, and to form it into a separate branch by itself, as in England. In order to carry out this project more effectually, *he suggested that six* professors should be appointed, whose salaries would be paid out of the tuition fees. If the latter were raised to Rs. 10 per mensem all round, irrespective of the class which the students attended, and calculating three hundred students as the lowest number on the list, the proceeds of the fees would amount to Rs. 36,000 annually, a fund sufficient for keeping up the required number of professors who would have to lecture in the University Hall, and not in the College building as at present. The Lieutenant-Governor of Bengal, in a letter addressed to the Senate of the University, does not approve of the idea of dissociating the legal education from the Presidency College, but at the same time expresses his willingness to follow out the plan when matured. A committee, consisting of five members, has been appointed to consider the matter and report thereon. The report is looked forward to with great interest by the public generally.

DISPUTES arising in cases of breach of warranty on horses, either with reference to their soundness or their capacity to do work, are subjects of peculiar interest, and decisions of courts in such cases are generally watched with great attention. It is said that a man who brings a horse case before a court is really a public benefactor. Not long ago there was a very amusing case tried at the Calcutta Small Cause Court, which created some little sensation at the time. A gentleman had sued a horse doctor—who considered he had as much right to call himself a Veterinary Surgeon as a man who had received a diploma—for the value of a horse which he had entrusted to him for treatment. The owner, it appeared, had eight horses, and the doctor was generous enough to undertake to treat and shoe them at the unprecedentedly low figure of Rs. 2 a month for each. The owner had soon reason to repent of the contract he had made, and the doctor was not slow in showing his appreciation of its very liberal terms. One of the horses, while being treated for a disease which horses are more or less subject to during the rainy season in this country, was attacked with a most virulent disorder which generally terminates fatally. This was not discovered

till another doctor had seen the horse ; and when the animal was sent for treatment to a first-class veterinary establishment, it was pronounced incurable and the owner was recommended to destroy it. At the hearing of the case, the doctor denied having assumed the title of Veterinary Surgeon, but the prefix to his name was V. P., which indicated that he was a veterinary practitioner. The judge could not be persuaded to believe that the doctor had wilfully neglected the horse, though eight annas a month was not a remuneration sufficiently tempting to impress him with a due sense of his moral obligation to discharge his duties as a skilful surgeon. The suit was dismissed, and the plaintiff took care to let the public know that he had taken the case to court for its benefit and not his own.

ANOTHER addition to the number of native periodicals has just been made. The new candidate for public favor is a Magazine in the Telegu language, entitled the "Janavinodini," and is published by the School Book and Vernacular Literature Society at Madras. It is to be issued monthly.

THE last *Calcutta Gazette* contains an interesting report on the agricultural exhibition and *mela* held at Fureedpore in the beginning of January 1875. The fair lasted for nine days. We glean from the report. that "the display of paddy was creditable," that "the flowers were of the most ordinary kinds to be found in gardens, but some of the *dalies* of vegetables were really magnificent." The show of potatoes was good ; mustard was poor, so was barley ; the tobacco leaves were tolerably large ; implements of husbandry were of the ordinary description ; cows and bullocks made a poor show, but fowls were better than usual. On the last day of the fair, prizes to the amount of Rs. 677-15-9 were distributed amongst the successful competitors. The report ends gracefully, like a schoolboy's letter, with a request for a Government donation of Rs. 250 towards the expenses of next year's *mela* and exhibition.

THE steamer *Goa*, now loading at Madras for Burmah, will, it is reported, convey some more troops to the scene of "complications." A number of tents, two 18-pounders, and about five thousand shells, &c., have already been shipped by the Ordnance Department. If, as the *Englishman* states, positive orders have been given that none of Sir Douglas Forsyth's party are to take off their shoes in the Royal Palace of Mandalay, it is evident that the Government of India has at last been roused to a sense of its dignity, and that the King of Ava can only avert punishment by undergoing a little—in his case wholesome—humiliation. The most serious question, however, is—How will His Majesty treat the embassy if he prefers war to concession and submission? And if he attempts foul play, is Sir Douglas's force strong enough to hold its own for a few days against all the might of Mandalay? We ourselves believe it is, if not taken by surprise.

THERE was a very general impression in Calcutta on Saturday morning, amongst the shipping, that a cyclone was approaching near our neighbourhood ; the barometer being very low and having been falling steadily for many days. The decline, however, plainly indicated nothing more than the near approach of the rainy season. There were no real indications of a cyclone, as was erroneously supposed ; but as the first heavy burst of the monsoon is generally accompanied by bad weather in the Bay, it is not unlikely that we shall hear of heavy atmospheric disturbances outside.

THE Chinese Government is actively engaged in making arrangements in Europe for the defence of the coast and rivers of the Empire. We may soon hear of a new loan being launched on the English market for a purpose which is so evidently intended to promote the interests of Great Britain. The *Morning Post* says, that "engineering works on an extensive scale, and supplied with formidable artillery, are about to be constructed at various strategic points, and the general system of defence has been confided to Major-General Ripley, formerly of the United States Army, but who went over to the Confederates at the outbreak of the late civil war. Major-General Ripley was in command at Charleston when hostilities commenced, and his defence of Fort Sumter, and its repair under the guns of the enemy, were among the most remarkable achievements of modern warfare. He is now in England, but will sail for China in a few days, preceded by other artillery officers, whose services the Government of China has secured." English patriots who may feel inclined to subscribe to the next Chinese loan, might not unprofitably ask themselves against what particular enemy China is now so anxious to protect her coasts and rivers. If they would further consider that the Chinese are more or less barbarians who would, if they felt strong enough, inaugurate a war by a general massacre of foreigners, it might occur to these patriots that in facilitating Chinese defensive operations by the loan of money, they were somewhat transgressing the bounds of legitimate commercial speculation.

ALL communication between India and Cabul will, it appears, soon be cut off. The Peshawur authorities have informed traders, &c., that the only safe route being *viâ* Koorum, they must use no other ; and it is further rumoured that the enterprising Nowroz Khan is intriguing with the Waziris to block up the Koorum route itself. The Foreign Office is to be congratulated on its energy in promoting and protecting our trans-frontier trade. The contrast between our policy in this respect and that of the Russians in their recently-acquired Central Asian territories, is not only gratifying to us, but must immensely increase the respect in which we are held by our Asiatic neighbours and well-wishers.

A LONDON correspondent tells a story of some people riding after a steamer upon donkeys and overtaking it! This feat was accomplished by some passengers of the P. and O. steamer *Deccan* which left Bombay on the 29th of last March. They had quitted the *Deccan* at Suez, intending to go *viâ* Cairo to Alexandria, when they discovered that the luggage of a lady with them had not been disembarked. In the meanwhile the *Deccan* was well on her way through the Canal. On discovering the loss, the party tried to engage a steam-launch in which to pursue the steamer, but on inquiry it was found that the Canal dues were so high as to be practically prohibitive. They telegraphed to the *Deccan* begging that it might be stopped long enough for the missing boxes to be identified and landed, but this was declared to be impossible, as the vessel was under the charge of the pilot. Finally, the whole party took the plucky resolve of pursuing the steamer upon donkeys, and after some hours' ride their energy was rewarded by the sight of the *Deccan* funnels not very far ahead. In short, they overtook the steamer, got their luggage, and a good champagne dinner to which the Captain's hospitality treated them, while the P. and O. agent at Suez liberally paid all the expenses of donkey-hire, a boat for bringing back the boxes, &c. Fortune favours the bold.

THE *Pioneer* draws attention to an appeal *case argued before* the Commissioner of the Umballa Division, the decision in regard to which will, when published, be highly interesting to traders and others in India. A certain Phunnam Lall, employed by the Rajah of Sirmoor, as his Umballa agent, for the sale and purchase of goods, sued the Rajah for a balance of accounts, etc., amounting to Rs. 3,800, and got a decree in a lower Court ; but the Rajah appealed on the ground that his status as an independent sovereign rendered him non-amenable to our Civil Courts. The other side pleaded, amongst other things, that as His Majesty "had become a trader in British territory, by keeping a shop, and possessing movable and immovable property in Umballa, he was therefore liable to our civil procedure *quoad* the shop and all transactions arising out of it." Precedents were quoted which tended to show that independent native Princes are rather apt to discharge their liabilities by reference to their sovereign rights, and if in this particular case the agent be pronounced incapable of recovering under British law, it would perhaps be as well to give the widest publicity to the fact that people who give credit to independent Princes, trading or purchasing goods in British territory, have no better—or no worse—security for their money than the honour of the sovereigns with whom they deal.

IT is reported that Shaik Abdul Rahman, whose conversion and death were prematurely announced a few days ago, is going on a pilgrimage to Mecca after the monsoon. His friends and relatives will doubtless be sorry to hear that he does not contemplate returning to India.

IF Mahomedanism were nothing more than a creed, the Government of India, which is sufficiently plastic to adapt itself to every religion under the sun—whether of gods or devils—would have no reason to lament or discourage the growing tendency on the part of our "loafers" to avoid the work-house by entering the mosque : indeed, it might congratulate itself on having been providentially preserved from the outlay involved in the deportation of troublesome vagrants. But, unhappily, there is in the faith of the Koran, as in the creed of the Ultramontanes, a powerful political element which does not operate solely by prayer and meditation. All who are without the pale—all who obstruct the progress of the faith—are accursed, and must either be converted or slain. In other words, the preacher has the Koran in one hand, the sword in the other ; and when he cannot brandish the carnal weapon openly, he conceals but does not lay it aside. Every good Maho-

medan, therefore, must be a politician as well as a worshipper, and the tendency of his policy depends on the creed of his rulers. Now, although a neutral Government, as that of India, would never be likely to rouse the martyr's spirit in the professors of any belief under the sun, there are mundane considerations which would have much weight in inducing the followers of the Prophet to long for a Raj of their own. Those who long would doubtless perform, if it were in their power to act; and the Government of India, therefore, without being unduly suspicious as to the loyalty of any of its subjects, should not be oblivious of the necessity of guarding against any great increase in the political influence and power of any class or race in the Empire. Now it is not to be supposed that Englishmen, who in their despair are driven into the arms of the Mahomedan native community, can entertain any particular affection for those to whom they rightly or wrongly ascribe their miseries and degradation. He who casts off his patronymic, his Christian name, and his country, in exchange for bread and sympathy, has, it may well be assumed, rage and bitterness at his heart; and although individually he may be powerless for evil, the qualities of the race to which he belongs might render him an unpleasant leader of a mob. If history teaches us anything, it is that Asiatics fight well under European leaders of courage and energy; and it was the want of such leadership that wrecked the fortunes of the mutineers in 1857. Whilst, therefore, half-a-dozen European perverts to Mahomedanism only excite in us feelings of contempt and disgust, a few hundred such perverts might prove dangerous rather than ridiculous.

PLAIN-SPEAKING, although it is considered little better than a crime in India, is not, we are glad to see, an extinct virtue in England. A virtue we call it advisedly; for it is often necessary, in the interests of society and morality, to call a spade a spade, and not weaken well-merited censure by diluting it to such an extent as to render it hardly distinguishable from praise. It is a remarkable fact, moreover, that blunt, though not vulgar, sincerity of expression is one of the most marked attributes of honesty, *ergo* the absence of such sincerity seems to imply a certain want of honesty. The tendency has been, of late years, in the direction of something other than plain-speaking, and although this may be proof of the greater politeness of the present generation, we venture to doubt it; for is it not a fact that the young men of the day are less polite to women and to each other than they were half a century ago? If there be any increase in politeness at all, it is confined to that particular form of politeness which seeks to gild or varnish vice and crime. In the old days, men studied the *convenances* in relation to each other and the weaker sex; they now behave more rudely to their neighbours, but more kindly and tenderly towards vice. This is hardly to be called an improvement in society, although we observe traces of it in the pulpit, the forum, the press —everywhere in fact. Latterly, however, public opinion on the subject has seemed to be veering round on this point. Otherwise unattractive preachers draw immense audiences, because their plain-speaking is in pleasant contrast with the unmeaning generalities the majority of their brethren deal in. The *World* and *Vanity Fair* are progressing for a similar reason. Men are in fact almost sated with flattery, and go about seeking a little truth for a change. It was long the fashion to deal tenderly with trashy unwholesome novels, etc., because, forsooth, they were written by ladies; but the fashion has evidently changed, as may be gathered from the following critique in the *Athenæum* on a certain new novel: "We refrain from pronouncing 'The Widow Unmasked' to be the silliest novel that could possibly be written, because its author may write another. The time is past when we might have wondered that such nonsense should find a publisher, and, therefore, presumably readers, and we have now almost ceased even to hope that that time may recur. But as the vilest things are said to serve some purpose in the order of nature, so this book may be useful in indicating the depths of human ignorance and vulgarity. The person who has written three volumes of printed matter must, we suppose, have received some sort of education, but her sentiments and her style it would be insulting to attribute to a barmaid." Let us hope that the age of sounding brass and tinkling cymbals is drawing to a close, and that we may live to hear the ring of sterling metal.

EVENTS IN THE EAST.

CHINA.

FORMOSAN affairs have assumed a quieter aspect, although the Chinese authorities continue to send detachments of troops across to Taiw-anfoo. It is not perhaps known in India that while the Japanese were on shore in the south of the Island, last summer, the Chinese authorities threw a garrison into Suaou bay on the East coast. Since the departure of the Japanese forces, the Chinese General charged with the administration of East coast affairs, has been busy pushing a road along the coast from Suaou to the southward, and by last accounts, his head-quarters were established not far from Chockeday. Till quite lately, the aborigines have remained passive, but it is now reported that they have closed in on the rear of the Chinese working parties and are harrassing them considerably. The General will probably retire on Suaou again, until he can mature plans for dislodging the aborigines and driving them across the first line of mountains. This will prove no easy task, as the undergrowth, in which the savages are perfectly at home, is difficult to penetrate, and attempts at firing it, owing to constant downfalls of rain, are not successful. The Keelung coal-fields are now being surveyed by a mining engineer whose services were engaged in England for the Fuhkien authorities. It is intended, we believe, to introduce machinery, with a view to procuring better fuel for the use of the Foochow arsenal, and the Chinese men-of-war. Machinery once introduced, the importance of Keelung will rapidly increase, and we may hope to see good China steam-coal in the treaty port markets generally.

THERE has been another attack on Missionaries, this time at Kiu-Kiang, the city magistrate apparently looking on unwilling to interfere. The facts of the case are these. A mob attacked the American mission premises and completely smashed the contents. No harm was done to individuals, nor does any ill-will seem to have been shown to the missionaries by the respectable inhabitants. Rumours of a pending disturbance appear to have prevailed for some days previous, and this, taken in connection with the curious way in which the row began, seems to imply that it was preconcerted. A man living hard by, whose son had been in the constant habit of running in and out of the school, asks the porter what has become of him. The porter does not know; the man says the missionaries are detaining him with the object of taking his heart and eyes, etc., according to the old formula. The porter pooh-poohs him: the man gets excited, and by-and-bye they fight; then the mob which has been collecting joins in and guts the buildings. It is curious that several officials live hard by but none interfered. They are said to have since shown some energy in bambooing offenders.

THE tragic death of two assistants in the Comptoir d'Escompte at Yokohama is remarkable in all its details. The dead defaulters were both in a good position socially, and ought to have been unembarrassed in their pecuniary affairs. They were in the receipt of handsome and increasing salaries, were employed by one of the wealthiest banking corporations in the world, and could reasonably look forward to certain and lucrative promotion in the future. Their immediate superior testified to their industry, good behaviour, and friendly relations with himself. One of the culprits at least is known to have been the son of a man of large estate, and to have relations in the possession of considerable worldly wealth. It has not appeared that either of the defaulters indulged in any extraordinary extravagances, or indeed in an expenditure unwarranted by his income. Future revelations may disclose some powerful causes which impelled them to the commission of so desperate and apparently so unnecessary a crime. At present it appears to be without reason and without excuse. That they felt their attempt was a desperate one, in which they must succeed or die, is evident from the deliberate manner in which they effected their embarkation and that of their stolen treasure, and the utter absence of anxiety they are alleged to have displayed when they saw that they must choose between death and capture. Rarely, indeed, in the annals of crime has been witnessed such a combination of want of apparent motive, consequent facility of prosecution, hardihood both of conception and execution, rapid failure, and tragic termination of the criminal undertaking. The *Yokohama Herald* has little doubt that the fears of M. Vouillemont, the manager of the Bank, as expressed at the inquest, that the defalcations are not limited to the amount of money actually stolen, will prove to be only too well founded. It may perhaps turn out that systematic fraud had been carried on for some time, and that certainty of approaching detection hastened the criminals to their final *coup*. Bail to the amount of $5,000 has been accepted for the appearance of George Withers, late Captain of the now ill-famed schooner *Iris*, charged with aiding and abetting in the recent embezzlement. The cash-box which, when first discovered on board the *Iris*, it was impossible to open, has since been opened, and found to be nearly full of jewellery. A further sum of $700 in gold has been found on board the vessel.

THE direct guilt of the death of Mr. Margary is being brought startlingly home to the Chinese. We are in possession of four documents, of which two give distinct evidence of the advent of a large force from Momein, with the object of attacking the English. One letter predicts the day of the attack, and warns a Burmese official in the English camp to quit it for his life, adding that the warning is given by order of the Chinese. Another mentions the arrival of the Momein force at Manwein, under the command of one Shoon—a nephew of the Lee See Tahee of whom we heard so much in connection with Major Sladen's expedition. Lee seems to have been at that time a sort of partisan leader, fighting for the Imperialists: he now holds the rank of Colonel, and is military commandant of the district. The inference clearly is that the attack was organised directly by him, quite possibly in collusion with the King of Burmah. A memorial fund is being collected in honour of the murdered man.

MUCH discussion has arisen respecting the nomination of a Chinese official named Sung Paou-hwa, by the Viceroy of Chihli, to accompany Messrs. Grosvenor and Baber to Yunan to enquire into the Yunan outrage. It is objected that he is of low rank and not nominated by the Chinese Government. It is now stated that

he is only to act as escort, but strong protests have been made against his appointment (as the *only* Chinese official sent) by every journal in China. It is stated on the best authority that Prince Kung neither apologised for, nor expressed any regret at, Mr. Margary's murder.

THE latest news from Tientsin is that Li Hung-chang is massing troops all round Tientsin. He has brought in a number of regiments of the so-called Southern Legion, and has even brought in soldiers from Shantung. New forts are also being constructed in the neighbourhood with a view to strengthening the approaches to the capital. This scarcely looks pacific. It seems very much as if the astute Generalissimo of Chihli was apprehensive that some movement would before long take place at the capital, against which it behoved him to provide. There is a Chinese report current at Shanghai, says the *Courier*, "that the Empress Dowager has handed over to Prince Kung what is practically the supreme power of that State. He is to occupy, according to this account, the Chiun-chi office, and he will in future wield the *vermilion pencil*, which, with the exception of two years during which the late Emperor used it, has remained in the sole hands of H.M. Tsze-An since the death of Hien-fung. The man who is invested with this power is to all intents and purposes Regent of the Empire; and it is said that other princes and high ministers at Peking are showing fear and jealousy."

THE only other news from the capital is that the Chinese were impertinent to foreigners at the Pekin Races, and that the young Emperor is afflicted with measles.

JAPAN.

THE desire which the Japanese have evinced during the past two years for something resembling the free institutions of the Western nations, has produced two very marked effects, both indicative of a growth of the national intelligence and an advance of the popular will. The first is the extraordinary development of the native press; the other is the institution of local assemblies where a comparatively free expression of opinion has been tolerated, and even encouraged, and the resolutions passed in which have been accepted and acted upon by the local authorities. Within the past few weeks a new step has been taken, two new deliberative departments of State having been established; and the following address to the Japanese nation has been issued by the Mikado: "On ascending the Imperial Throne, I assembled the nobles and high officials of my realm and took oath before the gods to maintain the five principles, to govern in harmony with public opinion, and to protect the rights of my people. Assisted by the sacred memory of the glorious line of my holy ancestors, and by the union of my subjects, I have attained a large measure of peace and tranquillity. So short, however, has been the space of time which has elapsed since the consummation of the late Revolution, that many essential reforms still remain to be effected in the administration of the Empire. It is my desire not to restrict myself to the maintenance of the five principles which I swore to preserve, but to go still further and enlarge the circle of domestic reforms. With this view I now establish the *Genro-in*, to enact laws for the Empire; and the *Dai-shin-in*, to consolidate the judicial authority of the court. Thus, by assembling representatives from various provinces of the Empire, the public mind may best be known and the public interest best consulted, and in this manner the wisest system of administration will be determined. I hope by these means to secure the happiness of my subjects and my own. And while they must necessarily abandon many of their former customs, yet must they not on the other hand yield too impulsively to a rash desire for reform. I desire to make you acquainted with my wishes and to obtain your hearty co-operation in giving them effect."

The native press praises unanimously this reform, one journal expressing itself thus: "Rejoice our 30,000,000 of brethren and dance with joy! Give thanks giving to the kindness of our Mikado, for having granted to us, in the Imperial Decree of the 14th of April, the means of raising ourselves to the level of enlightenment of European and American peoples. Japan is situated on the easternmost edge of Asia and is a neighbour of China, therefore all her customs and laws were originally derived from China, and her people are accustomed to an absolute monarchy and to live under a despotic administration. We have been perpetually humbled and have never received freedom of conscience, and such being the case have always proved unequal in power to Europe and America. It seemed, indeed, as if, like China, humiliation was to be our lot. Recently, however, the errors of our administrative system became manifest, and we have introduced such reforms as seemed advisable; but the old forms of despotism still lingered, and Japan was like a convalescent slowly recovering from a tedious illness. There are among us those who alleged that an absolute rule was a good form of Government, and that in seeking to change it our people were unnecessarily anxious. But H.M. the Mikado in his benign wisdom, penetrated with the excellent governmental systems of other peoples, has consulted with his advisers, and by the decree which we now celebrate has conferred happiness and satisfaction upon the people of his Empire. Henceforth our nation will grow in zealousness, in power and wealth. We shall not be deemed inferior to European peoples, and the lineage of our Emperor will be rendered everlasting."

A SOMEWHAT amusing paragraph respecting the symbolic meaning of the word Dragon as applied to the Japanese Emperor appears in a native paper published at Hiogo. The writer wanted to know how it comes that the name of an animal "between a crocodile and a poisonous snake" (a new pedigree, by the way) should be applied to so exalted a personage as the Mikado. Unable to satisfactorily settle the question, he made enquiries of a "learned man."

The answer was that the words were derived from the Chinese, and mean "Awe inspiring." In China several cruel Emperors have reigned, and Confucius says that a tyrant is more cruel than a strong tiger. That which is more cruel than the strong tiger is fitly represented by the crocodile and poisonous snake—and so the people called the tyrants "Dragons." The writer then asked the learned man how it was that these cruel Emperors were contented to be called by so expressive a name, and was told that so long as they had the supreme and invincible power of the dragon they did not care for the name. The writer says that this refers to China, and as there have been no Emperors in Japan so tyrannical as to deserve the title, it does not belong to Japan. Why do not the great men and the editors of the papers (some of whom, if they lived in the United States, would surely come to be President) see to this?

AN interesting question has been raised by a Japanese priest. Alarmed at the spread of Christianity amongst his countrymen, he has presented a memorial to the Vice-Minister of the Department of Public Worship, stating that many Japanese have deserted the faith of their ancestors and adopted the tenets of Christianity, and inquiring whether he is permitted to oppose the spread of the foreign faith. His objections to this latter are that it "inculcates neither respect to the Sovereign, nor the honour due to parents, and, as it involves laxity in the discharge of these civil and domestic duties, must prove injurious." The reply to this is probably more satisfactory to the memorialist than it will be to the foreign residents in Japan. The Vice-Minister's reply is "Memorial approved and permitted. But *excepting religion* nothing must be done to diminish the good understanding which exists between foreigners and the people of this country."

ACHIN.

THE following is a translation, from the Dutch, of a sketch of the state of affairs at present existent in Achin: "The situation at Achin may not yet be wholly satisfactory, nor can it yet be termed decidedly favourable, still of late a perceptible improvement in the same has been noticeable. In the state of health, which in February was still extremely disquieting, there has been a remarkable change for the better since last month. The number of sick is still indeed considerable, but the diseases are much less malignant, the deaths much fewer, and cholera does not appear otherwise than sporadically. The points which have had to be occupied to secure our main position have all been successively taken from the enemy, and afterwards fortified; whereby a continuous chain of outposts has been acquired, which fully protects from the enemies' attacks the territory of Great Achin conquered by us. On that territory important works have been, or are being carried on by us. An iron discharging and loading pier, and a railway are being constructed there; Kotta Rajah has been connected by telegraph with Oleh-leh and the roadstead. Amongst the troops an excellent spirit *continuously prevails*, notwithstanding the furious resistance of the enemy; and although *they had been visited by disease; in spite too* of the floods which took place in December 1874; *and of all the fatigues necessarily* attending a lengthy stay in the field. To invalid and replace wounded and sick soldiers, measures are regularly taken three times a month; while neither expense nor trouble is spared as to variation of diet, even in the minutest particulars, such as fresh bread, and ice, &c. On the other hand it has repeatedly become apparent of late, that the enemy's powers of resistance are decreasing significantly; and, from the reports received from the commanders of the men-of-war, regarding emigration of people from Great Achin to the petty states on the west coast, which must have taken place, it may be inferred that discouragement begins to prevail in the enemy's camp. Our influence is, above all, extending in the dependencies. The chastisement of Akih and Labuan Hadji in January last has struck wholesome terror, and has made a deep impression. The Rajah of Analabu has, by means of an embassy, paid homage to the military and also civil commanding officer at Kotta Rajah; from whence the members of that embassy, after having viewed with their own eyes the great works effected by us there, and the large force collected there, have returned to their prince, struck with astonishment. On the north coast, the Netherlands sovereignty has been acknowledged by the Rajah of Klumpang Dua, with the apparent approval of the whole population; and at Pasangan the newly succeeded prince of that place has received the station commandant in a way which leaves nothing to be desired. In conclusion, during the last month, the Netherlands flag has been accepted by Edi Kichil and Padawa Besar."

THE BATTLE OF PONTSEE.

A MEMBER of Colonel Horace Browne's Bhamo Expedition has written a graphic account of what may be called the Battle of Pontsee, in which a few score Sikhs thrashed several thousand Chinamen. The account has been sent to the *Times*, but we have been enabled to forestall the London journal. On the 22nd February, the writer says, a servant came in with a vague report that Margary and his servants had been murdered, and positive assertion that 3,000 Chinese troops from Momein in conjunction with the Tsarai and Pontsee clans were coming to attack us, and that they were close behind. In a few minutes we could see them passing along the crest of the hill above us. No time was lost in making preparations to defend ourselves. Some of the Burmans was placed as an outpost on the northern spur, a few on the road to Tsarai, and some more on the wooded knoll to the N.W. where the Tsaredawgyee stayed. The main body was posted to defend the Tsekaw road, and a little lower down our Sikhs were stationed behind a line of rock which formed an excellent breast-work. By the time we were in position, the enemy began the attack. Their men filled the jungle on the southern spur, and many of them came rushing out of the narrow road on to the open space in front, yelling and

waving spears and tridents, and shouting to the Burmans that they did not want to fight them, but only to kill the foreign devils. The steady fire of our Sikhs soon made this amusement too exciting for them, and they dodged behind trees and stones, only venturing from time to time to raise their heads or brandish their weapons, any such exhibition being promptly followed by a shot from our side. Even this was too much for them, and after about an hour of this work, a regular stampede ensued. They all rushed to escape by the narrow road, and as they were getting away the Siks gave them a volley with great effect, and we could see that many were wounded, and that one corpse was left behind on the path. Some of the Burmans, led by the Khyoung Oke, a Burman Shan village headman, ran out to secure the head, which they cut off with their *dahs* and brought into camp. Having performed a most extraordinary war dance round it, they hung it on a tree, the Khyoung Oke shouting out to the Chinese to come on, and share their comrade's fate, "for the Burmans here," cried he, "are none of your ordinary fellows, but servants of his Majesty the King of Burmah." All this time the Chinese were firing on us from the jungle; luckily neither their aim nor their arms were very good, and they did little execution. A Burman wounded in the neck, and an Indian servant who was grazed by a bullet which afterwards lodged in the leather of the cook's shoe, were the only two on our side who were hit. After a while we could see a considerable reinforcement of the enemy arrive, but none of them would venture very close to us, after their experience in the morning. While the fight was going on, the Tsawbwa of Won Kaw came up and significantly informed Colonel Browne that the Tsawbwa of Tsarai had promised him 500 rupees if he would join him and the Chinese. Colonel Browne at once offered him 10,000 rupees, if he would aid us and convey our baggage safely to Tsekaw. It took some time to make this barbarian understand what ten thousand rupees meant, but when it was explained to him that it was ten baskets of silver, he promptly closed with the offer. He set his men to work to burn the jungle, and as the wind was favourable and the long grass as dry as tinder, there was soon a magnificent blaze, and the Chinese then retreated as fast as they could, completely routed. As they went along the top of the hill we got plenty of shots at them with the 800 yards sight up, and notwithstanding the distance one or two of them were seen to fall. At four o'clock all firing, even from the guard stationed from the northern spur, died away; the mules were brought up from the lower part of the hill where they had been placed during the fight, and loaded faster than they had ever been before, and in half-an-hour we all started in good order, our trusty Sikhs bringing up the rear guard. As a parting insult to the enemy, the Khyoung Oke and one or two more of the Burmese officers executed a second war dance, and solemnly challenged their foes to come on from each point of the compass. We must say a good word here in behalf of our Burman allies. Notwithstanding their inferior weapons they stood by us and fired steadily and pluckily. The Tsa-re-daw-gyee himself fired one shot into the jungle, where it was impossible to see anything, but he stoutly asserted that he had hit a man in the arm. On reaching the village of Tse-te, some three miles from our camp, the Burmans proposed to stay there for the night, but the Colonel would not listen to the proposal for an instant, as the place was utterly undefended, and surrounded by jungle coming up to the very doors of the houses, so that the Chinese would be enabled to creep up close to us, and pick us off deliberately. We therefore chose a few mules to carry our beds and a few provisions, and continued our march back to Nan Peng, which we reached at ten o'clock that night, having left the Wong Kaw Tsawbwa to earn his ten thousand rupees by bringing on the luggage as best he could. The following morning he brought us word that the Chinese were following us up in force, and that we must leave everything behind us, if we hoped to outmarch them. He further brought a letter from the Burmese Resident at Manwyne to the Tsa-re-daw-gyee, to inform him of the opposition of the Chinese, and of the massacre of Margary and his servants in cold blood by them, and to advise him to throw the Europeans over and look to his own safety. We had to be off, and never expecting to see an article of baggage again, we set our faces for Tsekaw, 22 miles off. The road by which we travelled was not the one by which we had come, but one that passed through the village of Won Kaw, and joined the main road again at the third guard house. We met with no opposition or trouble, and slept that night in comparative safety at Tsekaw. Contrary to our expectations, our luggage was not seized by the Chinese, but was brought down to us in two instalments. The kakhyengs, however, managed to pilfer a good deal. The uniforms of Colonel Browne and Dr. Anderson were both stolen, and now probably decorate some filthy savage chief, or are hung up in his house as an ornament. We remained two days and a half in Tsokaw, waiting, in much discomfort, for our beds, and clothes, and other appliances of civilization. We noticed there that the Chinese of the village, who had previously been on very familiar terms with us, now avoided us like a pestilence, never showing themselves near the Kyoung in which we lived, if they could help it. From Tsekaw we went back to Bhamo, to which place steamers run from Lower Burmah, and so we are supposed to be once more in a settled and civilized town.

INDIAN INTELLIGENCE.

BENGAL.

THE Lieutenant-Governor of Bengal has been on a visit to the Bhootan frontier. It is said that he will descend to the plains in July, accompanied by the Bishop.

A WRITER in the *Delhi Gazette* says: "In your issue of the 28th May appeared an extract from the *Darjeeling News*, stating that Dalil Khan, the murderer of Major and Mrs. Holmes, and Dr. and Mrs. Gardner and child, at Seegowlie, in 1857, had been captured and tried. It may interest your readers to learn that this notorious villain has not only been captured and tried, but has been hanged also. He was hanged at Motecharee about ten days ago, and in sight of the graves and monument of his victims; but the event was kept so secret by the authorities that many people living in the station did not know that the wretch had received his reward until some days afterwards. It is reported that Dalil Khan was incorrigible and bloodthirsty to the last, and that a few moments previous to being suspended, and after his arms had been pinioned, he expressed his regret to the Collector and other European officials present that he could not die with his hands red with the blood of the *goralog*."

THE trial in connection with the indigo riot in Tirhoot is at last over. Mr. Manners of the Belsund Factory has been found guilty of being a member of an unlawful assembly and of criminal trespass, but not of culpable homicide, and fined Rs. 1,000.

A CORRESPONDENT of a Ceylon paper says that hundreds of coffee plants of a year old have been destroyed on his estate by rats gnawing their stems. To keep off the pest the coolies are made to parade the plantations all night beating tom-toms.

THE staff salaries of the Chief Inspectors of Musketry have been increased—in Bengal from Rs. 600 to Rs. 800 monthly; and in Madras and Bombay, from Rs. 400 to Rs. 500 monthly.

IT is stated by a contemporary that a young native gentleman who left for England in 1874, to study for the bar, has since become insane.

THE East Indian Railway Company is about to construct a railway carriage for the accommodation of His Royal Highness the Prince of Wales; it will be large enough to accommodate the Prince and a suite of twelve persons.

AT the tea sales held on the 7th instant, over six thousand packages were offered. The teas were from all the districts, and went off at better rates than have been realized at previous sales this season. This is said to be due in some measure to the present very low rate of exchange which induces those who wish to send funds to England to make use of tea as a means of remittance instead of banker's bills.

THE death at Mussoorie of Miss Seely, M.D., is announced. She was for some time connected with the American Mission Home in this city.

A FIFTH shock of earthquake, the severest of all this season, was felt at Darjeeling on the morning of the 1st of June.

DR. W. WAAGEN has been appointed Palæontologist to the Geological Survey, in room of Dr. Stoliczka.

THE beneficial effects of Agricultural Exhibitions in Bengal are yearly becoming more manifest. Though there has not been any visible improvement in the character of some of the principal articles of produce, the attention of both cultivators and proprietors has been greatly excited, and they seem to have taken to the cultivation of several articles of produce which they had hitherto been averse to. The annual intercourse of the proprietors and their tenants on the *mêla* ground serves also to promote amicable feelings between them, and the interest felt by Government is duly appreciated. The moral effects of the *mêla* are of as great importance as its material effects. The promotion of a friendly feeling between the ryots and their landlords has now become a matter of paramount importance. Their contact with people better clad, better fed, and, withal, better educated has gradually been teaching them to improve their own condition. With increased and improved roads and canals, the people would find better opportunities and means of selling their produce with advantage. The *mêla* shows them the great demand for their produce, both raw and manufactured; here they find a ready market, and they will here learn to value their produce properly: they will learn also to respect themselves. The ultimate consequence will be the spread of intelligence and the increase of trade.

NORTHERN INDIA.

MR. E. H. HARRISON, Officiating Registrar of the Chief Court, died at Simla on Saturday. He is much regretted privately and officially. Mr. G. W. Rivaz, his *locum tenens*, is likely to succeed him permanently.

THE Nawab of Bhawulpore is still seriously ill; the state of his health is most critical.

THERE have been two accidents on the new, and two on the old, route leading from Kalka to Simla this year, and three of these were due to the narrow and unprotected condition of the roads.

IT is believed that the following are the troops that will be present at the approaching Delhi Camp:—Four batteries R. H. A., six of Light Field Artillery, one Heavy Battery, one Mountain Battery, three regiments of Cavalry, ten regiments of Native Infantry, eight regiments of Bengal Cavalry, one of Punjab Cavalry, one of Central India Horse, thirteen regiments of Bengal Infantry, two of Punjab Infantry, and six companies of Sappers and Miners. A brigade each is expected from Bombay and Madras, and it is estimated that about 20,000 troops will be present altogether, with an average strength of about 500 to each regiment.

SUBSCRIPTIONS are being solicited for the aid of the sufferers from the Murree fire.

MR. RUSSELL, the Manager of the Central Asian Trading Company, has safely reached Leh, on his return journey from Yarkund.

THE condition of the Aboo School, as an elementary educational institution, may be judged from a report made by the Sub-Inspector of Army Schools, who held an examination in January last. After giving a detailed account of the classes examined, Mr. Cartwright states: "Before I conclude my report, I cannot avoid recording "the high satisfaction and pleasure which the performance of my "duty in the examination of the Aboo Lawrence School afforded "me," and he pays a well-merited compliment to the Headmaster and Mistress, Mr. and Mrs. Eaglesome, remarking, that the educational and moral status to which they have raised the school reflects upon them the highest possible credit. But there is no very high order of education attempted in the Aboo School. An acquaintance with Homer's hexameters or with the iambics of Horace, is not considered necessary as in some other "seminaries" for the class of children received. The three R's of course, are taught, with English grammar, composition, and English and Indian history. The first class also learn euclid, mensuration, and algebra. But here the education attempted in this school stops, the desire being, that the boys may be fitted for civil engineering, the subordinate medical service, for employ in the Electric Telegraph Department, or in public or merchants' offices. Neither would industrial work appear to be neglected, the girls making and mending all their own clothing and performing all kinds of household work. The school is supported partly by Government, and partly from subscriptions received from the general public. During the year Rs. 7,000 was thus subscribed for the benefit of the school, or nearly half the expenditure; the whole cost being something over Rs. 16,000. The average cost per child *per mensem* under all heads, food, clothing, and teaching, was Rs. 25. On this point, it may be remarked, that probably, even with the increased rates of home living, children of the class might be more cheaply fed and taught in England, and this without the necessity of patronizing an establishment of the "Dotheboys Hall" order. It was indeed at one *time* gravely proposed, that the children in our charitable educational establishments in India, should be sent home as the more economical plan of the two. But so long as each European regiment and battery arriving in India is allowed to bring with it a large number of children of all ages—one battery which arrived this last cold weather had sixty—it is folly to talk of sending the children to England for education. We must accept the position as it is forced upon us, and do the best we can for European children in this country. Disease will indeed always create a large number of orphans, for which such asylums as the Lawrence School are essentially necessary. Of the children now in the school the great majority are either motherless, fatherless, or altogether orphans. We, therefore, scarcely feel surprised at the long list of subscribers attached to the report. It is, however, very satisfactory to find so many private soldiers and Non-Commissioned officers subscribing to the Aboo School. Page after page of the report is filled with the names of soldiers who have given their mite to this institution. And although the sum-total thus received may not be after all very great, it is still an earnest that the soldiers appreciate the attempt being made for their benefit, as shown by that best of tests, the pocket.

BOMBAY.

THE crew of the steamer *Empress* mutinied at Kurrachee last week. The captain struck down the engineer, who advanced to attack him, and the rest of the men were soon subdued.

A EUROPEAN at Poona has been sentenced to three months' rigorous imprisonment for selling liquor to soldiers.

ORDERS have been issued for the release of upwards of two hundred prisoners in the Baroda city jail after the installation of the Gaekwar.

SOME four years ago a Committee assembled at Nagode, under the presidency of Colonel Gray, to inquire into the conduct of an officer of the Indian Staff Corps who had been dismissed from the Settlement Commission, with a view to the Commander-in-Chief in India being able to form an opinion as to whether the circumstances of the case precluded his being permitted to return to military duty. The officer who was called upon to defend himself was Lieutenant, now Captain, Gibson, Bengal Staff Corps. It may be remembered that the case was referred to by the leading journals both at home and abroad. Captain Gibson was everywhere allowed to have been treated in the most iniquitous manner, and after a full inquiry the Court before whom he was tried unanimously pronounced him "not guilty," a verdict in which the entire Indian Press concurred. The case, we understand, is still before the authorities at the India Office. Captain Gibson is now in England on leave, and he has wisely demanded a searching investigation of the facts, feeling convinced that such inquiry would prove unmistakably that it was the irregularity of others which had the effect of placing him in the disagreeable position in which he for some time stood. The injustice of his case was so apparent to all, that there is not the slightest reason to doubt but that the India Office will accede to his request.

THE Manchester and Bombay Spinning and Manufacturing Company contemplate an arrangement of machinery enabling them to spin a range of 20's to 40's, thus giving an average of 30's. The production per spindle of 30's may be taken at about 14oz. per week; the production of a mill of 20,000 spindles, taking fifty weeks to the year, would thus be 875,000lbs. The following are charges incidental to transit on actual transactions:—1¼d. per lb on cotton to England, 2 7-16d. on 30's to India, import duty ½d. These amount to 4 3-16d. per lb. charges and various expenses incurred on yarns spun in Lancashire for India, but which are avoided by Indian mills. Add to this ¾d. per lb. advantage to the Indian spinner from using unpressed cotton, with a less cost of production, and it is not overstating the case to say that the Bombay mill can sell 30's, or the cloths made therefrom, such as good 8¼lb. shirtings made from 28's warp and 32's weft, at the same price as English-made yarn, and make 5d. per lb. more profit. This 5d. on the 875,000lbs. before referred to gives a profit of £18,229, or something over 45 per cent per annum on 40's per spindle, and this does not include the ordinary trade profit made equally with the English spin.

THE *Bombay Gazette* says: "Since we last referred to the disturbances in the Deccan, caused by the attacks of the ryots on the sowcars, we have heard that it has been found necessary to send a military guard of 40 troopers to Tullegaum, as the rioters were expected to *loot* the court-house there. Of course, since the troops arrived, all has been quiet." We believe we may state with confidence that the question of legislating for the protection of the ryots from extortionate usurers is now engaging the serious attention of Government.

AN official account has been published of the naval attack of the British squadron under Captain Sulivan, of the *London*, on Mombasah, a fortress in the dominions of the Sultan of Zanzibar. Mombasah, or Mombaga, stands on a small island 130 miles northward of Zanzibar. Its Governor, Akida Mohammed Vir Abdullah, an Arab of high rank, received an order in August last to execute another Arab, a friend of his, from the Sultan; that Arab, from some political reason, having become obnoxious to the Sultan. Akida refused, and was therefore ordered to resign his command and repair to Zanzibar. Under such a despotic Government his compliance with this second order would have led to his own execution, Akida therefore determined to hold the fortress against his master. The Sultan had no force with which he could attempt the reduction of the fortress. Akida remained in possession, and to support his troops, about 400 soldiers, he has since made various raids on the adjacent country, and frequent fights have occurred between his troops and those of the Sultan. In these conflicts some wealthy and influential Indian Banyans, British subjects, have suffered. To put an end, therefore, to this inconvenience to them, Captain Prideaux, of the Bombay Staff Corps, and acting political agent applied to Captain Sulivan to put down the insurrection. The force used was the *Nassau*, surveying vessel; the *Rifleman*, double screw gun vessel; and the *London*. The *Nassau* and the *Rifleman's* cutters were used as rocket-boats. The fortress had forty-five guns, all obsolete 18-pounders. The naval force had a 7-inch six-and-half-ton gun, seven 20-pounder Armstrong guns, and the rocket-boats. On being summoned to surrender, the Abdullah said it was too great an honour to meet the British under arms for him to think of surrendering without exchanging a shot with them. In the bombardment that followed he had seventeen of his soldiers killed and fifty wounded. The British force had neither killed nor wounded. On the ultimate surrender, after three hours' bombardment, Akida, with his brother and some of his principal followers, were taken on board the *Nassau* as prisoners under British protection. The rest of the garrison, with their women and children have been sent to Muscat.

A NATIVE went up the steeple of Trinity Church at Kurrachee on Saturday, and threw himself from the top. His skull was smashed to atoms.

MUCH has been thought of Holkar's prompt measures in recognizing the selection of Syajee Rao. His presents, which are estimated at about Rs. 17,000, were received in special Durbar. Colonel Sukkaram Martand Bappoo Sahib was the fortunate bearer of them and received return gifts for Holkar from the Gaekwar, besides a handsome present for himself. Martand, generally called Colonel Martin by the European residents of Indore, is the Commander-in-Chief of Holkar's infantry, and a brother of the late Indore Dewan Bhow Sahib of 1857 celebrity.

THE men of the Baroda Field Force are discussing very warmly a question of great interest to themselves, namely, whether they will receive any batta for the six months' service they have rendered. The general impression is that the Government will, as it generally does in such cases, say that "The men have done their duty and that great thanks are due, &c. Government should, as a special case, allow these men batta, considering the numerous privations they have had to undergo in camp, and the signal service they rendered in quelling the Baroda riot, which, but for the timely measures adopted by Sir Richard Meade, and the hearty co-operation afforded by the troops, would have assumed a serious form.

THE monsoon burst at Carwar on the 6th.

MESSRS. JEFFERSON AND PAYNE have received the value of their costs and charges in *re* Mulharao the ex-Gaekwar of Baroda, and have expressed themselves as perfectly satisfied with the sum that they have been paid for conducting that case.

MADRAS.

LORD HOBART'S horses and carriages were sold on Saturday, the Duke of Buckingham having apprised the authorities by telegraph that he declined to buy any of them. There is no news of his Grace's movements.

A HYDERABAD paper presents a pretty picture of life in that city of armed desperadoes. One day week two Mahomedans had a dispute in a toddy shop, whereupon the proprietor interfered, and got his skull fractured. On Saturday, a scuffle took place between the police and a man carrying mangoes into the city. It appears that the peons attempted to levy blackmail, but that the man resisted, whereupon

he was severely thrashed and deprived of the fruit. The next day a sepoy purchasing some meat found the butcher had given him short weight. A quarrel ensued, and the sepoy struck the butcher. A hand to hand fight followed in which both combatants were severely wounded, knives having been freely used. And in the evening of the same day a number of *Gowlees* attacked a betrothal procession, and the Sheik in charge of the party was knocked down. The Sheik, on recovering himself a little, rushed after the *Gowlees* who were running away. Nine men were wounded in this affray, the Sheik being eventually overpowered and severely beaten.

THE *Ceylon Observer* publishes the following telegrams, dated Trincomalee, 28th May, 10-20 A.M: "A riot anticipated between the Moors of Nos. 4 and 10 Mosques regarding a burial. The Assistant Agent was requested by a number of Mahomedans to attend to prevent a disturbance, but he declines interference. The corpse has been upwards of 30 hours uninterred. No steps have been taken by the Board of Health. A mob has largely gathered in No. 10 Mosque since last evening. The police are in attendance. Another official would serve to give counsel in such cases of grave importance." Trincomalee, 28th May, 2-12 P.M.—"Great and continued excitement. A Mahomedan corpse lying two days unburied. At bazar Mosque they unlawfully refuse interment. The Assistant Agent advises interment elsewhere, and an action for damages. The police are there expecting disturbances, and apparently wishing to aid coast Mahomedans. A telegram has been sent to the Governor by some of the friends of the deceased, praying speedy orders to open mosque to allow the burial, to prevent nuisance and a stoppage of business. Matters should be settled speedily or serious consequences will follow. An enquiry demanded and necessary to enforce its decision. The bazar people refuse rights to others through grudge."

IT appears that the Madras Legislative Council is to meet shortly on the Hills, and that the non-official members may choose between making a long journey to attend the meeting and staying away altogether. The *Madras Times* regards this to be a gross violation of the spirit of the Indian Councils Act. That Act, without doubt contemplates the meeting of the Council at a place convenient for all the members, and the removal of the Council to a place that happens to be convenient for the official members, but that is most inconvenient for non-official members, is clearly not in harmony with its spirit. Such a removal, in fact, practically eliminates the non-official element from the Council, and enables the official members of the Legislative Council to pass measures without hearing the opinions of their non-official colleagues who may be detained on the plains. This question was thoroughly argued out between the Viceroy and Sir George Campbell, two or three years ago. Sir George protested vigorously against legislation at Simla, and the Viceroy apologetically explained that the Acts passed on the Hills were "*very little ones.*"

COLOMBO has only just been *freed from cholera when another attack* is threatened. A few deaths have occurred already.

AT Madras during the month of May, the minimum heat in the shade averaged 80·9 against 78·5, the average of former years; the maximum 100·8, against an average of 91·3; and the mean temperature 87·6 against 84·2, the average of previous years. The maximum temperature on the hottest days of each of the three Mays has been as follows: 1873, 102·2; 1874, 102·4; 1875, 109·8.

BURMAH.

A SHORT time ago, a most daring conspiracy among the convicts in the Rangoon Central Jail was discovered, only in time to save an outbreak. The ring-leader was to have been transferred to Madras, but he has since been found dead in his cell, having garrotted himself with the twine which supported his leg-irons.

FRESH light is still being thrown on the murder of Mr. Margary. The following translation of a letter written by the Agent of the King of Burmah in Manwyne forms important evidence as to the origin of the attack. It is directed to our Burmese friends in Momein. "The officials sent by the Won of Momyeng,—*viz.*, Bhwa Tsheng-tsheng-Shoom, Tsheng-tsheng and Lyo Tsheng-tsheng—have told us to write to you urgently to say that on the 3rd Labyeegyaw of Tabodwai 1236 (23rd February, 1875), you must not remain with the English Koolas whom you are escorting; you must either leave them and return, or you must stay in some place a mile or two miles from them. If you do not do so, and if in consequence thereof any of your men are wounded or killed, you must not blame the Chinese. As they have told us so we write. As soon as you receive this, write quickly to say whether you will remain or retreat. The Chinese said that if the Koolas follow you, you are not to receive them. The attack will be made at night on the 3rd Labyee-gyaw Tobodwai 1236. Above 3,000 and about 4,000 men are collecting and surrounding you. We think it will be wise for you to retreat." The following is the translation of a statement of Gna Hinaw, a Burmese scout sent with Mr. Margary to Manwyne: "I was sent from the fifth guard-house, with Gna Lwon and the Laya Pawmaing Maran to see what was going on in Man-wien. We arrived on the 14th Latshan (19th February) at the Tsarai Tsawbwa's house. We slept there, and the next day we went to Man-wien. On the 1st Labyee-gyaw Tabodwai (21st February) the Chinese officers killed Mr. Margary and five Chinese. The Chinese officers said to Gna Hpo Moung and Gna Oon—'You must send some one to tell the Burmans to separate from the Koolas;' and Gna Hpo Moung and Gna Oon accordingly gave me and Gna Lwon a letter to the Tsare-daw-gyee. We left Man-wein on the 2nd Labyee-gyaw (22nd February). At Tsarai we met Yoon-tseen-lweng and Yoon-tsheng-tsheng, and the latter asked me if I would tell the Burmans to separate from the Koolas. I said I would. Some Kakhyengs of Tsarai and the Chinamen wanted to kill me, because they said I had come from Man-wien; but Yoon-tsheng-tsheng ordered me to go at once and tell the Burmans to separate from the Koolas, so I ran away. On the road I met the Chinese officer, Shouk-goon, who said he was coming back from the fight between the Kakhyengs and Chinese and the English. I ran away, and came up with the Burmese force at Tsalee."

ASIA.

A PERILOUS and toilsome journey in the heart of the Himalayas was accomplished in the early summer of last year by the Moravian Brother Redslob. It was from the station at Kyelang, where he resides, to that at Poo. The missionary preached the Gospel as he had opportunity, and circulated the Scriptures and religious tracts. He had to do this last with care, for on inquiry, he says, "I learned that some of the natives, believing our books to contain more wholesome instructions than their own, are in the habit of converting the leaves into globules, and prescribing and swallowing them in cases of sickness!" A visit which Mr. Redslob paid to the large and important Boodhist monastery at Kyi is thus described: "I was kindly shown all the sacred rooms, so that I had an opportunity of seeing their large assortment of religious apparatus to the best advantage. Of these I will only mention one very large prayer-mill, about six feet high and four in diameter covered with gilt paper, on which the 'o mane padme hum' was painted in the most varied colours. The working of this mill is, of course, particularly efficacious. I was struck with the ability the lamas display in painting. The way in which many of their idols are decorated proves that their artists have not only great talent, but also understanding of the laws relative to the proper proportions of the human body, and the arrangement of drapery. The outlines of the faces were often very fine. Their ideas of beauty appear to be borrowed from the Caucasian rather than the Mongolian race. In all their pictures and idols attempts seem to have been made to give expression to the ideal state of existence—namely, that of 'perfect peace.' This has had the effect, in most instances, of imparting the appearance of an utter absence of intellectual power. The idols are formed of clay, and then painted; smaller ones in bronze are often very well cast. In visiting such sacred places as the idol-houses of this lamasery, scenes that I had witnessed in Roman Catholic churches were involuntarily revived in my memory, and this was especially the case in the principal rooms, where a female figure occupied the chief niche. On making inquiries as to its significance, I was told that it was a representation of the 'Great Mother.' I was naturally desirous of obtaining further information in reference to so interesting a coincidence, but I soon found that my guide, although the Gelong or abbot of the monastery, and priding himself on having studied in Trashilunpo, the seat of the second Boodhist pope, was unable to give a clear answer to any of my questions."

THERE is a very prevalent notion among the Chinese that the murder of Mr. Margary is fully condoned by the loss of native lives in the recent collision between the *Ocean* and the *Fusing*. "True," they say, "we have killed one of you English: but one of your steamers had been the means of killing fifty Chinamen, so no more need be said about the matter."

THE Russian Government has granted a concession for the construction of lines of railway from Tiflis to Baku, and from Tiflis to Djulfa, on the Persian frontier.

THE Hon. T. G. Grosvenor, Second Secretary of the British Legation at Pekin, and Mr. Baber have been chosen to proceed to Yunan with the Chinese Commissioner in order to investigate the circumstances attending the murder of Mr. Margary.

SHORTLY before starting for Germany the Emperor Alexander signed a Convention with Japan, by which the island of Saghalien, at the mouth of the River Amoor, is ceded to Russia. Saghalien was formerly held jointly by Russia and Japan, the latter occupying the southern and the former the northern portion of the island. Its extensive coal fields are to be worked by Russian engineers and miners, and it is intended, for this purpose, to employ a large number of the convicts from Siberia.

IT is reported from China that embarrasment has arisen between the Japanese Minister at Pekin and the Tsungli yamen respecting the allegiance of the Loochooans, who despatched in June last the tribute junk they have long been in the habit of sending to China an act for which they have incurred the displeasure of the Mikado. Now, the Formosan affair was undertaken to avenge the murder of certain Loochooans in the year 1871; and the Chinese, who admitted the justice of the act on the part of Japan, and paid certain monies to Japan as compensation, among other things, to the families of the murdered Loochooans, cannot with any show of right now go back upon this and demand the allegiance of Loochoo. The temper of China, however, towards Japan is not at this moment very complying; the Formosa affair rankles bitterly, and there may be some difficulty in adjusting the matter.

FROM Hankow the following vessels have left for England tea-laden: *Hankow* (Symington), *Fleurs Castle* (Jones), *Lotus* (Gray), and *Glenartney* (Guland). The *Glenearn*, which is regarded by some as one of the fastest steamers in the East, may also be laid on at Hankow, but this has not yet been definitely ascertained. Foochow will attract the following steamers: *Glenfinlas* (Wilcox), *Glenfalloch* (McBain), *Braemar Castle* (Marshall), *State of Virginia* (Moodie), and probably the *Viking* (Tannoch).

AN Agricultural Company, under the auspices of the Government, is now being formed in Macao to work up the resources of Timor. A line of steam communication, receiving a handsome

subsidy from the Exchequer, is to be established; all information that may interest those concerned has been given by a committee of investigation, and everything augurs a complete success. Timor is, politically, a province of Macao, which subsidises from its governor down to the last soldier. Timor is situated in Lat. 10.9 S. and Long. 123.6 E., and is an island in the Indian Ocean, and measures 250 miles long by 50. The Dutch took possession of part of it from Portuguese in 1613, and the British occupied the island in 1811, but soon afterwards were obliged to quit it in consequence of great mortality among the troops. Ponies, swine, poultry, and buffaloes (which are only killed for the sake of their hides and horns) are found in great abundance. Bees wax, sandal-wood, sapanwood, hemp of the finest quality, coffee, Indian corn, and all kinds of spices may be had in large quantities for a mere trifle. The climate is temperate, but the miasma emanating from the several ponds of stagnant water, makes it deadly to Europeans, especially those that are addicted to spirits.

IT is desirable under the present circumstances to take a retrospective view of our experience with Chinese authorities. Without going back to the treacheries, poisonings, &c., of the first war in 1841, we would recall to mind that there are two cases nearly parallel to that of poor Margary—*viz.*, the seizure, under a flag of truce, of Sir H. Parkes and his escort by order of *Sang-ko-lin-sin*, and the brutal torture and murder of all except Parkes and Loch. The authors of this outrage were never punished. The second was the Tientsin massacre where the French Consul went to the yamên of Chung How for protection and assistance. He was not murdered in the *yamên*, but outside, to save appearances, just as in Margary's case. Which of the mandarins was punished in that instance? None! A few coolies were beheaded for form's sake and their heads sewn on again.

LITERARY.

ALTHOUGH the compiler of the Bombay Gazetteer, Mr. J. M. Ferry, is making progress with the work, it is said that the whole will not be complete for four years. The Gazetteer will contain 'General Chapters' on Ethnology by Dr. Wilson, on Meteorology by Mr. Chambers, on Botany by Dr. Gray, on Manufactures and Industry by Mr. Terry, on Geology by Mr. Blandford, on Trade and Commerce by Mr. Gordon, on Archæology by Mr. Burgess, and on Forests, Education, and Zoology by authors who have not yet been named. Some of these chapters have been already begun. Mr. Terry has collected Deccan and Guzerat materials for his chapter, and Government have already sanctioned his visit to the Southern Mahratta country to make a personal acquaintance with the manufactures in that part of the Presidency. The work assigned to the collectors and other officers in the districts is to give some account of the domestic expenditure of the people, the manufacturers, traders and artizans, cultivators, labouring classes, and railways in each district, and finally to tell what they know about the business of money-lending that is carried on in every village. "For the present," the *Bombay Gazette* states, "it is not considered advisable to include Baroda, but the Gazetteer will probably not be completed without giving some information about that State, especially under its reformed administration. Aden belongs to the Bombay Presidency, but the Government of India have decided that the 'Gazetteer need not contain any information about Aden." This resolution seems to be a mistake, for Aden would not take up much space in the Gazetteer, its barren rocks support no cultivators, and therefore no money-lending, whilst its history is soon told. The preparation of the accounts of the Portuguese territories of Goa, Damaun, and Diu, have been entrusted to Dr. Fonseca, a Portuguese resident in Bombay, who will receive every assistance from the Viceroy."

THE *Athenæum* is very severe upon Colonel Malleson's "Historical Sketch of the Native States of India." Our contemporary remarks that when a writer modestly says that his book "must necessarily be of the nature of a compilation," that it "aspires to be nothing more," that he has "gone to the best authorities and has deliberately robbed them," and that he has "been the burglar of others' intellects," it may seem rather ungracious to express a wish that he had used his own intellect a little more, and had not trusted so entirely to scissors and paste. *Précis*-writing is all very well for official purposes, but something more may fairly be expected from one who professes to write for the statesman and the historian. The Marquis of Salisbury, to whom the volume is dedicated, will not be enabled, by any light from its pages, to correct one error or to clear up one obscurity in reports and dissertations where errors and obscurities abound.

THE India Museum, now housed in its temporary quarters at South Kensington, was to be opened to the public on the 26th of last month. Previous to this there will be a Conversazione, and also a preliminary exhibition. It appears that in the new spacious galleries the India Museum is likely to show fully its fair proportions and the intrinsic richness of the collections it contains. Hitherto it has been like "a talent hid under a napkin"; but it is hoped that, when the curiosities are properly exhibited, their peculiar value will be widely appreciated. The India Museum authorities are very zealous, and hope to make quite a surprising display Tippoo Sahib's emblematic man-eating tiger, Sivajee's murderous steel claw, and the pearl and emerald necklet from Travancore, said to be worth 8,000*l.*, will prove it is expected of general interest. It is reported that the India Museum has had lately several important acquisitions, about which much secrecy seems to be observed; these will, we understand, be first displayed to the public on the 26th.

GENERAL CUNNINGHAM is now in a position to be able to offer to European scholars full and accurate copies of the inscriptions of Asoka, which are preserved on the pillars, and rocks of India. There are five different texts of each of these classes of inscriptions now known, namely, on rocks,—I, Shâhbâzgarhi; 2, Khâlsi; 3, Girnar; 4, Dhauli; 5, Ganjam; and on pillars,—1 and 2, Delhi; 3, Allahabad; 4, Arâraj; 5, Lauriya. Besides these there are two short inscriptions of Asoka on rocks at Bairât and Rupnâth. Of the pillar inscriptions there are texts already reduced; and of the rock inscriptions the whole text of the Khâlsi version has been reduced, and about one-half of that of the Shâhbâzgarhi text. Copies of the Ganjam version have only lately been made, and they are to be reduced. "Of the value and importance of new and accurate transcripts of these inscriptions no one is better aware than myself; for though I do not profess to be able to translate them, yet my perfect familiarity with the characters in which they are engraved enables me to detect many errors in the copies which have already been made public. I may add that the two most valuable versions of the rock inscriptions are those of Shâhbâzgarhi and Khâlsi, as they are in a much more perfect state than any of the other texts. In both of them I find the names of the four Greek kings quite perfect, besides the mention of several geographical names which are of great interest. Thus the Shâhbâzgarhi text mentions *Andhra-Pulindeshu*, or the well-known *Andhras* and *Pulindas* which in the Khalsi text takes the form of *Andhaa-Pulindesu*." In the Dhauli version, made known by James Prinsep, there are two separate edicts, which are not found in the previously known versions. These two edicts are repeated at the end of the Ganajm text, but in inverse order, the first of Ganjam being the last of Dhauli. In the latter text also these two edicts are addressed to the people of *Tosali* through their *mahamata*, or governor; but in the Ganjam text his geographical name is changed, and instead of

Tosaliyam mahâmâta nagala

and

Tosaliyum kumale mahâmâta,

we find

Samâpâyam mahâmâta nagala

and

Samâpâyam mahâmâta lâja,

the *Samâpâ* would, therefore, appear to have been the ancient name of the district of Ganjam.

ECCLESIASTICAL.

A LARGE Government hospital has been established at Yedo and the well-known missionary physician, Dr. Hepburn, has been invited to take charge of it, the Japanese officials saying to him, "We want a Christian man, that he may also teach the people." The director of the Government college at Yedo, who dismissed all the foreign professors that were clergymen, and forbade even the teaching of moral science in the institution, has himself been dismissed, and the present director is a warm friend of the Christian teachers. He has restored the teaching of moral science, and appointed two Protestant clergymen to professorial chairs. "Requests also continue to come from various parts of the main island, and from some of the smaller ones, for missionaries to take charge of schools and preach the Gospel; and, better than all, there is a large increase in the number of converts in the missions at stations which, like Osaka and Yokohama, have been for some time occupied; and the missionaries write that the signs of the times indicate a still greater work of the Spirit as nigh at hand."

A CORRESPONDENT of the *Examiner and Chronicle* says: "Of all forms of Christianity the Greek Church seems to be the most popular among the official class in Japan. The ceremonial of the Greek Church is as dramatic and dazzling to the eyes as Boodhism, and finds great acceptance among these Orientals. Father Nicholas, the present head of the Greek-Russian Mission, is building a magnificent church—the finest in Japan—a favour that has been granted to no other nationality, and a proof of Russia's great influence here. The assistants are all natives; and his long residence here his wonderful skill in the language, and thorough knowledge of Boodhism, which he studied in a Boodhist convent for years, give him great influence, especially as he is backed up by his Government, which has secured for him full liberty of residing in whatever part of the empire he chooses."

THE Rev. G. M. Gordon (C.M.S.), who has been making tours through the Jhelum district, reports very favourably of it as an opening for evangelistic work. Among other things he says: "The villagers are a great mixture: Hindoos, Sikhs, and Mahomedans, bound together by sympathy of race amid much diversity of creed. The Mahomedan (whose ancestors were Hindoos) mingles freely in Hindoo festivals, and salutes faqirs; while the Hindoo shows no less respect for Mahomedan observances, and the boundary line between Sikhism and Brahminis is gradually diminishing. The outward harmony may be partly due to mutual dependence for the necessaries of life, the cultivators being all Mahomedans, while the shopkeepers are mostly Hindoos. Here, where the Mahomedans are in the majority, Hindooism appears under a very different garb from what one is accustomed to see in the South of India. There is none of that marked ascendancy of Brahmin over Sudra; none of that shameless exhibition of wayside idols; no colossal temples like those of Madura and Conjeveram. The Hindoo in these parts seems ashamed to confess to idolatry in the presence of a Mahomedan. His religious belief takes a more speculative turn, and he is generally a Vedantist or Pantheist. Among this class, and amongst the Mahomedan zemindars, there is generally a willingness to listen to the preacher; and I have often felt enlargement of heart and speech in delivering to them the Gospel message. In addition to the advantage of a patient hearing (which one embraces most thankfully of all), there are also other facilities for itineration, such as the comparative ease with which our two temporal necessities, fowls and milk, are supplied; and the civility of the headmen of the village, through whom a camel or a mule may often be hired for the journey."

homage, to present arms before the Emperor William. The latter thereupon, with much emotion, pressed the hand of his Imperial guest, and the Sovereigns embraced in the presence of the thousands of the assembled spectators, who burst into enthusiastic cheers. In the afternoon the Emperor Alexander visited Prince Bismarck at the Foreign Office, and Prince Gortschakoff was received in audience by the Emperor William. At a luncheon given by the officers of the 1st Regiment of Guards to the Emperor Alexander at Potsdam, the Emperor William, in proposing the "Health of the Emperor Alexander," said: "I rise as colonel of this regiment." The Emperor Alexander has constantly given the Prussian army numerous proofs of his great friendliness and affection, and has to-day again displayed these sentiments by his participation in our festivity. On my own behalf and in the name of the army, I desire to express the most profound thanks for His Majesty's proofs of affection, and hope he will continue to entertain them in the future. I therein find a guarantee of our mutual friendship and companionship in arms." The Emperor Alexander, in reply, drank to the health of the Emperor William and the gallant 1st Regiment of the Guards. The Emperors thereupon kissed each other. The Russian Imperial suite comprises Count Ablerberg, General Potapow, and General Werder, who journeyed with His Majesty from St. Petersburg. At Custrin Adjutant-General Count von der Goltz and Count Lehndorff joined the staff.

THE *North German Gazette*, in an article welcoming the Emperor of Russia to Berlin, says: "His Majesty returns to Germany as her best friend, the same as he has been for many years past. His faithful friendship, which has stood the test of joy and sorrow, fortune and misfortune, watching our hard struggles with kindly sympathy, and our victories and rise as a nation with sincere, ungrudging pleasure, renders him dear and precious to us. In unison with the rest of the world we award him our respect and admiration for his wisdom and energy, but he has a further claim upon us as Germans. Ingratitude has never been our national failing."

FRANCE.

THE *Volonté Nationale*, the organ of Prince Napoleon, publishes the following declaration: In case the son of Napoleon III. were to die, Prince Napoleon would never seek to restore the Empire for his benefit. Hereditary succession is, indeed, really and truly dead in France *de facto* as well as *de jure*. Since Louis XIV., not a King's son has succeeded his father. Napoleon I., who made the mistake of falsifying the true Napoleonic tradition by causing himself to be consecrated Emperor and King by the Pope in 1804, expired on a desert rock 2,000 leagues from the coasts of France. Napoleon III., after having dreamt of destroying the Mexican Republic and of restoring the temporal power of the Pope at Mentana, fell miserably at Sedan to go and die in a short time in a humble cottage at Chiselhurst. A third Empire which might aim at the restoration of Prince Napoleon or his nephew would probably end in the St. Martin Canal. It would be the end of the country. Moreover we have never doubted that France, even if directly consulted, would energetically pronounce in favour of the Republican form, the most compatible with the very principle of universal suffrage.

IN describing the political aspect in France at the present moment, the Paris correspondent of the *Times*, writing on May 12th, says: "The excitement of the last few days is beginning to abate. The peaceful assurances which come from Germany and which were re-echoed in the English Parliament, the protestations of the German press, the attitude of the foreign independent papers—all contribute to foreshadow a coming future free from fears. People hitherto have not considered that the irritation produced in France had a complex cause. First it proceeded from a feeling of susceptibility whereby the French press was exasperated against those who represented France as too weak to fight with her natural enemy, and it is always hard to hear such things said. This irritation, however, also arose from the fact that this warning coincided with the liquidation of certain French undertakings, and that it contributed to make this liquidation disastrous for its promoters. Of course all those who in consequence of this circumstance saw the millions disappearing which they imagined to be already in their possession, made a great noise, and attributed the basest and most shameful motives to those who gave the alarm. The most indulgent said that the excitement was the paid work of a foreign Power; others—and these were probably they whose pockets had been affected—saw in the matter only a Bourse manœuvre. The rise had deceived them, and they naturally concluded that others had profited by a fall which they had been the means of bringing about. Without the least hesitation the most infamous motives were attributed to those who had damaged the interests of one party and the susceptibilities of the other. No one imagined that those who had done this might have been actuated by the desire of making an appeal to the vigilance of Europe and had but one object in view, that of provoking those assurances of peace which are now flowing in on all sides."

SPAIN.

THERE is but little news of importance from Spain this week. Don Carlos has written a letter to his brother congratulating him on having been pursued by the hatred and persecution of the revolution. He says: "It is a precious glory and one of the most signal benefits of the holy cause we defend. The cosmpolitan revolution is logical when it fears and detests us. We are its irreconcilable enemies. They will never forgive you for having donned the modest uniform of Pontifical Zouave, and of having afterwards, as a general in Spain, placed your sword at the service of the legitimate king. Always and everywhere a soldier of right and faith, the fanaticism of an infamous sect deemed it necessary to sully your name, and through you to dishonour our history. Happily public conscience is not fallen so low in Europe as to confound the heroic conqueror of Cuença with a vulgar criminal, nor the chivalrous Infante of Spain with a wretched bandit. I confess I could not help blushing at the monstrous conjunction of Madrid, Berlin and Gratz. At Madrid your extradition is demanded, the Berlin Government orders it, and at Gratz there is a riot against you. How can I help blushing when a prince of the same name as you and the same blood as ourselves has made himself the accomplice of so scandalous a degradation? Pity this unfortunate, who by fate a child of the revolution, has agreed to be its king, and can only be its slave. He suffers the tyranny of those who surround him, but I, who do not, and will not suffer it, promise you solemnly, with God's help, and relying on assistance from on High, and the effort of my brave army, to reply to the low insults of Gratz with the glorious acclamations which will announce my definitive triumph at Madrid."

HOLLAND.

OFFICIAL despatches, dated Atchin, April 30th, announce that the Dutch troops have taken the enemy's fortifications at Lahong, between Mandarsapoeti and Longpatta. Loengeiraya, on the eastern coast, has submitted to the Netherlands authorities. Later advices state that the Dutch troops have occupied Lamteloe and Ketjel-Oeleyloe with but little loss.

IN the sitting of the Second Chambers, the supplementary credit for the East Indies gave rise to an animated debate respecting the resignation of Dr. Loudon, the Governor-General of Batavia, the appointment of M. van Lansberghe, and other questions concerning the East Indian possessions. The Minister for the Colonies said he would consider whether he should propose to the King to abandon the secresy observed with regard to the documents confidentially communicated to the States-General on the subject of the Atchin War. The credit was finally passed by 61 votes against one.

UNITED STATES.

THE preliminary work for the Exposition to be held at Philadelphia in 1876 is reported as making rapid progress. Thirty-one of the leading nations of the world have accepted the President's invitation to participate, and many of them have already appointed commissions to take charge of their affairs at the Exposition. The intention is to open the buildings to the public on May 10th, 1876. The chief building is the permanent memorial hall, which is to be used as an art gallery. It is 365ft. by 210ft., being constructed of granite. Already the walls are up, and a very large portion of the work is finished. Work is also going on upon the industrial building, which is the main exhibition hall, 1830ft. by 464ft, built in a series of pavillions. This is a temporary structure. There are also to be a machinery hall, 1402ft. by 360ft., with an annexe 208ft. by 210ft., which is to cost 542,300 dols.; a horticultural hall, 386ft. by 103ft., of beautiful design, which is intended *as a permanent structure*; and an agricultural hall, 820ft. by 540ft. There are thus five principal buildings, all of which are expected to be ready for occupancy by New-year's Day, and work on four of which is now progressing. These buildings are contained in an enclosure of about 236 acres in Fairmount Park, into which railway lines lead from the Pennsylvania and other railroads terminating at Philadelphia.

HOME NEWS.

IT is whispered that the Pope is really ill, and that Bismarck is giving himself much unnecessary trouble about his successor. The successor of Pius IX. is hardly likely to be more conservative than his predecessor, and he will never have reigned as a sovereign prince. He will therefore in all respects be more disposed to accept accomplished facts. But whoever is elected, the Prince must not dream that the resistance of the Catholic Church to his ecclesiastical policy will be in any way abated. Cardinal Manning, for instance, while anxious to come to some agreement with the King of Italy, would hear of no compromise on the subject of religious education in Germany. The Archbishop of Westminster, however, has been too often spoken of as the next Pope to have any chance of wearing the Papal crown. It is a tradition of the Sacred College to take the world by surprise in the selection of a Supreme Pontiff. He who is indicated by Royal or popular favour as the fittest occupant of the chair of St. Peter may be sure that he will never sit there. On the whole, the practice of the cardinals is a good one, for it discourages canvassing; and a clever man would be out of place at the Vatican, as he would be also at Lambeth.

Vanity Fair has received a piece of news from St. Petersburg which is almost too good to be true. An informant tells it that if England cannot be cajoled into attending the Conference of the humane Alexander, it will in all probability be abandoned. Possibly Count Schouvaloff has persuaded his astute diplomatic superior that Lord Derby is resolute in his refusal, and hence this sudden determination on the part of the Czar and his advisers. But though the Conference may be abandoned, Russian diplomacy will be certain to seek some other means of entrapping England.

THE lad O'Connor, whose public outrage on the Queen on the day after the public thanksgiving for the recovery of his Royal Highness the Prince of Wales, will be remembered by all, was taken in custody on the day of the Drawing Room on the 5th May, at the precise point near the railings in Buckingham Palace where he made his previous attempt and was arrested. It will be remembered that on the former occasion strong medical testimony was tendered of the boy's insanity. Had due weight been assigned to that evidence, O'Connor would have been placed in safe keeping and under proper care, and Her Majesty would not have been

exposed to the further risk incidental to the insane impulses of this lad, whose lunacy is now placed beyond doubt and who has now been consigned to Hanwell by the order of Sir Thomas Henry, based upon two medical certificates. It will be remembered that the sentence upon O'Connor, who presented a flint pistol at the Queen with one hand and a petition for release of the Fenian prisoners with the other, was sentenced to one year's imprisonment, and a whipping with a birch rod. The latter part of the punishment, it is understood, was not inflicted. On release he was sent to Australia, and has frequently since forwarded letters to this country containing unquestionable proofs of mental aberration. Recently he found his way back to England, and has afforded fresh evidence of insane tendencies and dangerous impulses. On the day of the Drawing Room he was recognized by detectives on duty in the neighbourhood of Buckingham Palace, at the very spot where his previous outrage was committed, apparently waiting for the return of the Queen from the Drawing Room. He is alleged to be the subject of both suicidal and homicidal impulses, besides other dangerous mental aberrations. He is a descendant of Fergus O'Connor, who died insane, after committing a dangerous assult upon a member of the House of Commons in the lobby of the House.

THE *Bessemer* on her trial trip damaged Calais Harbour, whereby there hangs a claim of 2,800*l*. The swinging saloon was not used.

THE visit of the Prince of Wales to India is the subject of constant paragraphs in the daily papers. The *Central News* says that it is authorised to state that the Prince, who will leave England in October, will be escorted to India by the *Narcissus*, flagship of Rear-Admiral Randolph, C.B., Capt. N. Bowden Smith. The London correspondent of the *Manchester Guardian* states that the Prince, during his tour, will visit at least the four principal seacoast towns of India and Ceylon—Bombay, Madras, Colombo, and Galle. Calcutta, too, will of course be visited, and it is understood that at each of those places there will be a succession of naval demonstrations. It is also reported that the admiral commanding the British fleet in the East Indies will accompany the Prince during some part of his voyages from Aden to Bombay, and from the Indian coast to Ceylon, and that it is hoped that six or eight men-of-war cruising in tropical waters will join the flagship of the admiral.

THE offer of Mr. Albert Grant to improve and lay out Soho Square as a public garden has been declined, but the inhabitants have resolved to remove the dilapidated monument of the Duke of Monmouth, to enclose the square with new railings, and to lay out the ground in ornamental flower-beds. The inhabitants will defray the cost of these improvements, and the square will be kept private, as heretofore.

THE chronological truthfulness of Cowper's oft-quoted line, "The flag that braved a thousand years, the battle and the breeze," can now no longer be questioned. This fact has just been made public by a correspondent of the *Times*. Speaking of the superb memorial presented by the City of London to the Duke and Duchess of Edinburgh, which contains a medallion portrait of Alfred the Great as the founder of the British Navy, he says: "In this age of commemorations, it is strange that somebody has not remembered that the first naval victory obtained by Englishmen was in the year 875, exactly a thousand years ago, when Alfred's ship defeated the Danish rovers."

A TERRIBLE disaster has occurred off the Scilly Islands. On the night of May 7th, the mail-steamer *Schiller*, on her voyage from New York to Plymouth, ran on the Retarrier Ledges during a dense fog, and in a few hours became a total wreck. There appear to have been upwards of 350 persons on board, though on this point accounts vary, and of these only about forty have been saved. The Scilly Isles is the name given to the cluster of rocky islands lying twenty-seven miles west-south-west of the Land's End, and forty-two from Penzance, the nearest port of communication with the mainland. About one o'clock on Saturday morning the look-out man at St. Mary's heard the firing of a gun. He did not imagine it was a signal of distress, and, believing that the *Schiller* had been unable to show lights in the fog, and had fired her guns as a signal that she had passed, telegraphed to this effect to Plymouth, where the tugboat and the Post Office officials got ready to receive the mail-steamer, which about ten they learnt was a wreck. The first that was known of the wreck at St. Mary's, the chief island, was the arrival about eight o'clock of the boat of Mr. Obadiah Hicks from St. Agnes containing seven men of the *Schiller*, who had been washed ashore. The first officer was amongst them, and he reported that one mast of the *Schiller* was gone and the other was crowded with people. The St. Mary's lifeboat was at once despatched to the scene, being towed out through Broad Sound by the steamer *Lady of the Isles*, amidst the greatest excitement. Meanwhile two fishing-boats, observing the wreck, hastened to it just in time to pick up seven men who had either dropped off or been washed off from the mast. Two of these were, however, either dead when hauled in or died soon after. Plenty of aid from all the islands was soon on its way to Retarrier, but ere it arrived the last mast had gone, carrying away scores who had endured the agonising suspense of the night. About ten o'clock the cutter Rapid arrived at St. Mary's with two men rescued from some of the rocks, and at noon Mr. Smith Dorrien, Lord of the Scilly Isles, came with the welcome news of the safe arrival at his island home of Tresco of twenty-six men and one woman in two boats, one of which had during the fearful night touched at Bryher, an island somewhat nearer the wreck. The next arrival was a St. Agnes boat, bringing the bodies of four men, two women, and a little boy and two bags of mails. This was followed by a boat bringing a man who had been picked up alive in Smith's Sound. He was floating on a piece of the *Schiller's* broken lifeboat, and must have drifted a very long way, for he was two-and-a-half miles from the wreck as the crow flies. The St. Mary's lifeboat, too late to save any on the mast, picked up twenty-five bags of mails. By eight in the evening forty-two men and one woman had been saved, and twenty-three bodies had been brought ashore, some having drifted four miles north of Scilly. The *Schiller* left New York on April 27th, passing the bar the day following. She carried 59 first cabin passengers, 75 second cabin, and 120 Steerage, 254 in all; her crew numbered 100, so there were 354 souls on board. In addition to the American mail, she carried an Australian and New Zealand mail, a total of 250 bags, and about 30,000 dollars in specie for Cherbourg.

THE whole of the Flying Squadron, it is now stated, will form the escort of the Prince of Wales on his visit to India in October. Lord Carington will accompany the Prince as his aide-de-camp, and Lord Charles Beresford as naval aide-de-camp.

THE two vessels to be employed in the Arctic Expedition, the *Alert* (Captain Nares) and the *Discovery* (Captain Stephenson) were almost ready to start on their voyage when the last mail left. They are coaled and provisioned, and the shipwrights and factory hands have been withdrawn. On May 8th Captain Nares delivered a lecture on life in the Arctic regions at the Portland Hall, Southsea. Admiral Elliot occupied the chair, and the lecture was given on behalf of the Seamen's and Marines' Orphan Schools. Captain Nares said the expedition would start on the 29th of May, acccompanied by the *Valorous* as far as Disco. They would then coal up, and after a parting cheer nothing more would probably be heard of them for two or more years. He had been censured for having stated at Winchester that the safety of the expedition had been reduced to a certainty, but he took the opportunity of repeating the assertion. At the same time he denied a statement which he had read in the magazines and newspapers that with steam all their difficulties had been removed. The fight with the ice was still as severe as ever, and while more was expected of a steamer, she was just as liable to be squeezed between the ice without being able to rise as a sailing ship.

MR. TILLETT (L.) has been unseated by the Norwich petition. Dr. Kenealy's son is a candidate for the vacant seat.

THE intention to petition against the retnrn of Sir George Campbell has been abandoned.

THE following letter has been received by Mr. Guildford Onslow, dated from Dartmoor Prison, April 30th:—"My dear Onslow—Thanks for yours of the 4th of last December, and the kind promises therein contained, which I feel sure will be carried out to the letter. Please send my kind love to my wife and children, and advise her on no account to attempt to come such a long journey, just to see me shut up in a cage for twenty minutes. I would fain not pollute the fair names of my friends by mentioning them in an epistle of this kind, so, therefore, as you know to whom I wish to send, send my kind regards. Please take it for granted and convey them, as, also, my kind remembrances to the tenantry and others in your neighbourhood. My reason for wishing you to wait until you heard from me is to remind you to get a special order, which will enable you to remain a much longer period than twenty minutes. I have suffered very much both mentally and bodily from the severe cold of this place and the insufficiency of food. I have lost no less than 148lbs. in thirteen months and ten days; and although I have not as yet been able to get more nourishing food or medicine to stop or alleviate this rapid consumption I am in. I saw the director yesterday, and asked him to have me removed. Please give my sincere thanks to the public for espousing my cause in the handsome manner they have. I feel sure the British public will never rest contented whilst an innocent man lays cast in gaol to pass his life amongst felons. Give my kind love to my children. God knows whether I shall ever see them again or not. I doubt it, if I am left here much longer. So good-bye, my ever kind and sincere friend. Write to my cousin, and tell him to look after his godchild, now that he is robbed of his father.—Give my kind love, and accept the same from yours truly, ROGER (THOMAS CASTRO)."

Amongst the deaths recorded this week are:—General Sir J. Atchison, G.C.B.; Admiral Sherard Osborn, C.B.; Admiral W. Walpole; Col. H. J. Day, Bombay S.C.; Col. E. S. F. G. Dawson, 99rd Highlanders; Lieut.-Col. P. Witington, late 7th Dragoon Guards; Mr. W. B. Gower, late of Ceylon; and Sir S. Graham, Bart.

SHIPPING.

THE following passages have been engaged by the P. and O. Company's Steamers:—

June 3rd.

FOR BOMBAY—Mr. and Mrs. A. J. Hughes. *From Venice*—Mr. H. P. Roberts, and Mr. Schmidt. *From Brindisi*—Mr. Werner, Mr. Cresswell, Mr. Ashburner, and Mr. Crowe.
FOR CALCUTTA—Mr. Scryongeour.
FOR MADRAS—Mr. and Mrs. T. G. Howell.
FOR CEYLON—Mr. A. Carmichael, and Mr. W. G. Inglis.

June 10th.

FOR BOMBAY—Capt. and Mrs. G. Croussmaker. *From Brindisi*—Mr. W. Lawrence.

June 17th,

FOR BOMBAY—Mr. Keelan. *From Brindisi*—Gen. and Mrs. Blake, and Col. C. Phillips.
FOR CEYLON—Mr. and Mrs. C. J. Scott.

EDITORIAL NOTES.

THE Foreign Office has had no direct intelligence of the state of affairs at Mandalay, but its informants do not send in assuring news, and we may yet have some difficulty before our relation with the Court of Ava is as satisfactory as we desire. That foreign intrigue is helping us to a war is nowhere believed in, and although it is stupid for the King to honour unpopular Chinese functionaries to annoy us, our real danger lies in our present inadequate means to impress upon His Majesty our importance and the wisdom of not provoking an unequal war.

***

OUDH has recently experienced a series of changes in its official staff. Six military men of long standing have either taken furlough or been reduced from the charge of districts, or remanded to military duty, and their places have been filled by civilians, and partly by uncovenanted men. The public will ask what does the State gain by the almost simultaneous loss of experienced men, and the advancement of untried ones. Probably nothing just now, and it is a question of moment whether the opportunity should not be used to import a few experienced civilians from the adjoining province. It is notorious that Oudh is undermanned. Officers of less than eight years' actual service are in charge of districts, and likely to remain so, and the Deputy Commissioners are pressing their claims for more help. The civilian in Oudh for some reason or other, does not avail himself of the liberal furlough rules to anything like the same extent as his military brother. In January, 1873, there were 37 military Judges on the Oudh staff and 26 civilians; and of the former 42 per cent were absent on furlough in England, of the latter only 26 per cent. It may be urged that this one year must be exceptional; so it was, but only in that the discrepancy was greater for the ensuing years:—

	Military men.	Absent on furlough.	Percentage.	Civilians.	Absent on furlough.	Percentage.
1874	.. 31	10	32	26	2	7
1875	.. 28	9	32	26	1	4

A period of three years and the area of an entire province, are sufficiently large data for deductions. The only one which we should wish to draw is, that the present system of recruiting for the Civil Service has succeeded in one of its objects, namely, in attracting to the country young men whose studies and tastes have so naturalised them in it, that they are willing to remain working at their posts when others not so selected are taking holiday at home. We are afraid there must be some other explanation; for if it is once admitted that so great a security for good administration has been gained: if we have really solved the problem of making the men like their work, we have been guilty of something so unlike John Bull, that every true-born Briton must blush at the success. Meanwhile it is hardly perhaps right that four young civilians should be put in charge of districts at a time when the administrative staff has been seriously crippled both by the ordinary hot weather exodus, and by the dismissal or resignation of a number of experienced officers. The obvious remedy is to draft three or four experienced assistants from the N.-W.P.

***

IT is complained, we see, that the landlords of Oudh are having it all their own way. Combinations of ryots have not yet extended to "the garden of India," and the Bills for the prevention of agrarian disputes can therefore be dispensed with for the present in that quarter. In the Lucknow division alone, notices of eviction increased from 5,281 in 1873 to 9,182 in 1874. In the single district of Hurdui, Seetapore division, there were 1,164 such notices, 420 and tenants were entirely ejected. The Commissioner of Seetapore thinks that these figures indicate nothing beyond the normal changes of a healthy agriculture; but what with evictions, cholera, cattle plague, and a philanthropic Commissioner, the ryots of Oudh may be forgiven if they fail to see and appreciate the blessings conferred upon them by an enlightened Government.

***

IF the *Bombay Gazette* were not somewhat prejudiced against the Land Settlement of Western India, we should read with still more concern than we do, our contemporary's account of the condition of the people in the Deccan. He tells us of threatened disturbances by the ryots in the districts around Poona, and that "these disturbances, though perhaps the political activity and growing importance of the Poona Sarvajanick Subha have had their effect in stirring the ryots to action, are in no way connected with the expulsion of Mulharao from the throne he had disgraced; but are due to the system which tacitly encourages the rapacity of stern and relentless money-lenders, who, taking advantage of the ignorance of the masses, fatten upon the misery and ruin of their plundered victims." There is, unhappily, far too good ground for believing these statements to be true. "To those," says our contemporary, "who are unselfish enough to give an occasional thought to the condition of the poor wretches who till the soil for the benefit of their richer brethren, it can be no matter of surprise that, groaning under the oppression of a system which practically hands them over to the mercy of ruthless sowcars, they should at last, after many years of patient endurance, have risen to rid themselves of a burden which has become too grievous to bear. It is strange that the Government should look on so complacently, shielding itself behind the platitudes of the easy creed of *laissez faire*, and thus allow a class of men, who, if properly treated, would prove a tower of strength, to become, perhaps, some day a source of anxiety and trouble."

***

IT is a curious fact that we have not a single source of revenue against which at one time or another a clamour has not been raised at home. The land-tax has been denounced for the last half century as an impost that crushes all enterprise out of the country. Every three or four years, our "abominable stamp-tax" is denounced; as for customs duties, men "cannot away with them," while our opium and abkarry revenues drive all the philanthropists of the land into a rage. What in the name of common-sense is the Government to do? Our critics carp at every thing, suggest nothing, and give us incessant abuse. Against each of our resources in turn, has all the force of uninformed clamour been thus brought to bear. Twenty years ago a great outcry was got up against the salt-tax, which was denounced in every note of the gamut. Some of our readers may remember the torrent of abuse John Company had to endure from honest John *Bull, who had taken it into his head, at the suggestion of the Cheshire* salt manufacturers, that the salt-tax was all that the land-tax was afterwards represented to be. For half-a-century, was the impression fully cherished, that the salt-tax was "*a great* iniquity." The manufacture of the salt was a "monopoly:" and a monopoly is of course a very wicked thing. The tax was a poll-tax, and a poll-tax is of course a very wicked thing. The effect of the tax was to deprive the poor man of the amount of salt necessary to keep his body from dwindling down to the size of the "radical" monkey from which it was developed. And those "wretched Molungees" whom our Moloch of a Government forced to manufacture salt in the Soonderbuns, how much doleful lamentation was got up on behalf of these miserables! The very penny-a-liners at home became familiar with the woes of the class, and it required a good deal of courage to say a word in defence of the salt-tax ten or twenty years ago. It was at last found out that, after all, it was about the only tax that reached the masses; and was paid in a manner that, at least in appearance, was voluntary and in a way free from oppression, being collected with less expense and greater certainty and less affliction to the people than any other tax that could be devised. But we have Sir Bartle Frere and Lord Lawrence attempting to re-habilitate the old delusions of Manchester on these subjects. Both men seem to have left the country with their eyes shut to every economic fact of its condition. Honour, conscience, love of justice all wide awake, but their eyes blinded to the fiscal condition of things.

***

THE home papers in noticing the labours and the death of the late General J. Briggs of the Madras Infantry, omit all notice of his excellent work on the Land-tax of India. They tell us, however, that he employed his leisure in oriental studies; and that his translation of Ferishta is still quoted with respect by scholars. He was a frequent contributor to journals and magazines on questions of Indian importance, especially such as bore on the interests of Madras. "Not many months before his death—and he lived more than ninety years—his pen was wielded in *Allen's Mail* in defence of the Madras Army," in whose ranks he had fought as a youngster in various campaigns against the Mahrattas.

***

THE *Pioneer* while admitting that Mr. Mills was suffering from fever, insists that it was sheer cowardice that kept him behind

the now historical *mhowa* tree. Suppose it was—Is it just to speak thus of an officer so suffering? Does the *Pioneer* not know what the effect of fever is upon the nerves, and what we call the "spirit" of a man? The moment the illness is admitted, you must modify what you have to say about the conduct. If, adds the writer, our "contemporaries blame us for agreeing with the Government in thinking that no language can exaggerate the mischief done or the blame that attaches to its authors—be they 'of thirty years' service,' or be they of three—why, let them."

We blame our contemporary for echoing the very strong language of the Resolution, without an instant's pause over a disclosure of facts that every generous mind instinctively takes account of. We know nothing of Mr. Mills, but we think that nothing but misconduct on some previous occasion—when there was no fever to plead—could justify the severe and uncompromising language of the Government censure. Conscience makes cowards of us all: and fever will unnerve a good many.

***

LORD SALISBURY is credited, not only with a wish to do away with competitive examinations for the natives of India, but with a desire to raise the age for English competitors to twenty-five, so that "men may be able to take their degrees at Oxford or Cambridge before being hurried off to India." The *Athenæum* is responsible, we believe, for these assurances, but strong doubt is expressed that Lord Salisbury would extend the limit to twenty-five, in hopes of obtaining University men. A youth who is unfit to compete at twenty-one is not likely, it is said, to prove a desirable candidate at twenty-five. "Twenty-one or twenty-two would be a good outside limit, but it might be well to raise the entrance from seventeen to eighteen or even nineteen, so that no Civil Servant should begin his Indian career before twenty-one."

***

THE testimony of the late Civil Service Inquiry Commissioners with reference to the pay and terms of service in large business establishments at home on the scale of public offices is most interesting. As regards the *initial* pay, the usual age of entry in banks and insurance companies is from 17 or 18 to 20, and the salary from 70*l.* to 80*l.* In the case of one insurance company, the age of admission is from 15 to 18. The solicitors also begin with boy-clerks, and the North-Western Railway and the Clearing-house have apprentices from 14 to 16. But the salary in these cases begins at from 25*l.* to 40*l.*, and the usual pay of a junior clerk between 18 and 20 may be roughly put at about 80*l.* Only one establishment—that of a firm of solicitors—speaks of the lowest salary of copying and general clerks being as high as 100*l.* The Bank of England with an establishment of 800 clerks, returns the age of entry for ordinary clerks as 18 to 25, and uncovenanted clerks 16 to 18, and the initial pay "about 70*l.* per annum." The London and Westminster Bank, with 443 clerks, returns the age of entry at from 18 to 21, and the initial pay 80*l.* per annum, except in the case of the juniors, who enter between 16 and 17 at 50*l.* per annum. In Glyn's, with 200 clerks, the initial pay is 75*l.* per annum, and the age of entry between 17 and 18. Mr. Newmarch, who was called on specially to give evidence respecting Glyn's establishment, also added that "75*l.* for a lad of 18 is by no means a low salary. Upon that point I can speak with considerable confidence. Taking the general run of clerical employment in the city, there are not many places where a lad of 18 would get 75*l.* a year." And Mr. W. T. Newmarch, who attended with him, stated that he "had some experience in the North of England, and there any one of the same age, namely 18, would certainly not receive more than 60*l.* and probably somewhat less." As regards *maximum* pay, the testimony is naturally more various, and the peculiar elasticity of the arrangement in private establishments adds to the difficulty of giving an account of them on this point; but it would be safe to generalise that about 350*l.* to 400*l.* a year in banks, and at the most, 300*l.* a year in other establishments, are the maximum amounts to which ordinary clerks, if they are possessed of merit—there being hardly any promotion except by merit—may look forward to. Thus, in the Bank of England, which seems to stand highest in the liberality of its ordinary arrangements, Mr. Hammond Chubb, the Secretary, stated that every clerk would rise to a "maximum" of 300*l.* about 41 to 44 years of age, and there is another mode of increase called an additional allowance, which would make that maximum 400*l.*; but "it is only if he shows aptitude that he will get the 400*l.* He must first get into an office which requires some ability, and then he must get some position in it." Practically, only about half the clerks receive more than 300*l.*, including all the higher paid appointments. To sum up—the characteristics of pay and service in the great private establishments for clerks of some merit may be defined to be (1) a salary of 70*l.* at the age of 18, rising to 200*l.* to 300*l.* between 35 and 40, (2) in return for a service of 8 hours, on the average, per day, and (3) with an annual holiday usually of a fortnight, increasing to three weeks after a long service.

***

THE *quid nuncs* of the great European capitals give us the assurance that the Emperor Alexander is bent on soothing the irritation that subsists between Berlin and Paris, and that Russia is honestly using her great influence to maintain peace in Europe. "To secure tranquillity in Europe, and to establish "an *entente cordiale* between Germany and France,"—such they say is the mission upon which the Emperor Alexander went to Berlin. It is remarked that the Czar occupies a singular and admirable position. Singular, because the line he now adopts is not the course that St. Petersburg has been wont to pursue; admirable, because it is the part which Russia can just now play with peculiar effect. If the great Northern Power is in earnest in the interests of peace, there will be no war for many years yet.

***

DR. MOUAT has returned we see to the question of insurance rates, and re-affirms his former conclusion, that "the rates levied in "England are sufficient to cover Indian risks in *carefully*-selected "lives." Thus guarded, his conclusion probably rests on solid grounds. The results of Dr. Cornish's independent labours point, it is affirmed, to the same conclusion. Dr. Mouat shows that, from 1861 to 1870, the death-rate among 24,524 British officers in India was less than seventeen per thousand from all causes, which tallies closely with the eighteen per thousand in the Madras Staff Corps, the fifteen per thousand in the Medical, and the eleven per thousand in the Civil Service of Madras, as worked out by Dr. Cornish. Of the general fact that European life has greatly improved in India in the last 20 years, we do not think there can be much doubt, but whether English rates are *therefore safe is another question*. That the old rates were too high, does not prove that the new ones are not too low; but the public still owe a debt to the *Positive* for the experiment it is making; and while 80 per cent. of the premia continue to be regularly invested in trust for the policy-holders, the expenses of the Company are rather a question for the shareholders perhaps, than for the insured.

***

MR. SCOTT RUSSELL the well-known civil engineer, has been lecturing on naval guns and gunnery. The long 32 pounder, the 65 cwt. 8-inch gun, and the 95-cwt. gun are still special favourites, it appears, amongst naval men. Mr. Russell stated that in the British service there was every bore of gun from eight to twelve inches, with every variety of weight from six to nearly forty tons, and yet he believed it was not at all clear that any of these could be accepted as the naval gun of the future English fleet. What sailors wanted were guns that would fire quickly, with great destroying power of shot to pierce the enemy, damage and sink him within a moderate range and with least waste to time. To secure most execution at a moderate and sure range seemed the essential quality of naval gunnery as distinguished from land gunnery. If twelve tons were accepted as the weight for a naval gun, much more practical good might be had from it by giving it a large bore of twelve inches than a smaller one of 8½ inches, because in the former the propelling power of the shot was equal to 144, and in the latter to seventy-two, or one-half. To turn this double propelling force to account it would be necessary to send out either a heavier shot, or the same shot with higher speed. The normal shot, according to the best practice, was 111bs. to each 112lb. of gun, which gave for the 12-ton gun 240lb. shot. Taking this weight in 8½ and 12-inch guns, there was in the one case double the powder power propelling the same shot, or pushing forward its base. Therefore the same weight would be discharged with much higher speed. Speed of shot was much more destructive than mere weight; double weight of shot had double penetrating power; double speed four-fold penetrating power; and, in these ways, the larger bore was more efficient than the smaller. By wise arrangement the larger bore gun of 12-tons might have more endurance than the small-bore gun of the same weight.

***

ONE of the earliest fruits of the disestablishment of the Irish Church, was an effort to revise the Prayer-book. A large majority of the laity and a small one in the clergy desire the revision very earnestly, but it is passionately opposed by the High Churchmen,

of it to traders who visit Nijni, purchasing hundreds of chests at a time. There are moreover, commission agents and middlemen, the latter of whom convey the tea from Kiachta to Nijni. As every one engaged in the trade levies his percentage, the tea is very dear by the time it reaches the consumer. Dealings are based exclusively on the invoices, which give so correct an account of the weight, class, and quality, that the purchaser never thinks of having a chest opened. Recently Canton tea has begun to compete with that from Kiachta. The transactions in commodities of all descriptions at the Nijni fair ordinarily amount to about 125,000,000 roubles, or £18,000,000 sterling.

THE WEEK.

THIS week has brought about the most serious *contretemps* in connection with the King of Burmah that has yet occurred. As we stated in our last issue this unwise potentate has been entertaining as a friend, and in a most ostentatious fashion, a Chinese robber-chief, name Lee Seh Tahee, who is believed to have instigated the attack on Colonel Horace Browne's late expedition to Yunan. Our Government regards the honourable reception of the Avan Court of one who is well-known to be an avowed foe of the British with great seriousness. Till the King of Burmah gives us a satisfactory explanation of his conduct, Sir Douglas Forsyth has been directed to proceed no further in the settlement of the disputed Karennee boundary question. Our countrymen in Burmah fear that the distinguished *personnel* of the mission will have the effect of pursuading the King still more of his own importance. He may very reasonably in future say, "When I have a difficulty with the Chief Commissioner, I can send up a clerk with an off-hand, and not very respectful letter to the Indian ruler. And he will send me one of his greatest *mengyees*, and we can talk over it," and he might add that his clerk—the head of the last Mission was only a palace-writer elevated for the nonce to the rank of an Assistant Commissioner—will be received with salutes, will sit in the presence of the English ruler, and possibly dine with him; whereas the great *English mengyee*, will be submitted to every covert slight, and will be allowed to double himself up on the floor of the audience chamber, and be stared at through binoculars by his betel-chewing majesty.

IN the meantime preparations for a conflict are being made on both sides. The Irrawaddy Steam Navigation Company is carrying large armaments of shot, shell and powder, and the vessels have been examined as to their capability for carrying cannon. The *Nemesis* is well armed, and the *Briton* will be stationed permanently at Rangoon till a settlement has been arrived at. The King is said to be equally busy. He has the Italians, of whom the Bombay papers were so afraid a few weeks ago, in his employ; and they are turning out "three cannons" a week besides gunpowder. They are also reported to be arming his steamers. "Forty thousand men" are at Minhla, and "twenty thousand" immediately beyond the frontier station of Tounghoo. The ninety-three Panthays rescued by Captain Cook from the wholesale murder of their nation by the Chinese have arrived in Rangoon. It has been suggested that these men, who are strong, active and brave, should be made into a company and sent onward with our army, if we need one. The merchants and traders, who are deeply interested in the matter, place little reliance on the proclamations recently issued by the King or under his authority. The reasons for arming which have been published in the *Royal Gazette* at Mandalay are extremely frivolous—too much so to impose on anybody, and anything but calculated to restore confidence in the merchants trading between Rangoon and the capital. Lee Seh Tahee, it is a said, went to Mandalay as a Chinese Ambassador fully accredited, being the bearer of despatches announcing the death of the late Emperor. The King of Burmah invested him with the Tsalway on the 20th May, Lee departing from the capital of Upper Burmah two days afterwards. Sir Douglas Forsyth and party arrived at Menlah on the 3rd, where the mission was received by a deputation of Burmese officials. Mandalay was reached on the 10th instant.

ACCORDING to information from Cabul a rebellion has broken out in Toorkistan, whose Governor was recently ordered to the capital, pending an investigation of his revenue accounts. Abdool Rahman Khan is said to be at the bottom of this disturbance, but it is more likely that the oppression of the Ameer's lieutenant has been the main cause. Ten thousand Peshawur rifles have been despatched to the disaffected province. All trade is stopped both in Toorkistan and Jellalabad, and Abdool Rahman, the King of Bokhara, and the Russians are equally blamed. Yakoob Khan is being watched most carefully, "as it is feared that he may escape by a subterraneous passage which may be prepared by his friends, and so raise dissatisfaction and rebellion throughout the country."

SIR MADHAVA RAO has hit upon a happy stroke of policy in letting the Baroda people know that he purposes selecting from among them the future principal administrators of the State. He is quickly winning their confidence, and possessing, as he does, the confidence of the British Government, he will find his way smooth. With Mr. Dadabhoy Nowrojee the case was different. He introduced outsiders on fabulous salaries, and entirely ignored the local talent, thus losing all hold on the confidence of the people. Although it was not so openly manifest, it is plain, that the British Government was very guarded with him, and as for the confidence of Mulharao, Mr. Dadabhoy did not possess one jot of that royal gift, so that he sailed in rather turbulent waters, and his favourities were an eye-sore not only to Mulharao, but to the people. The people seem to have great confidence in Sir Madhava Rao, and great things are expected from his administration. The first matter which has been settled upon is the re-organization of the Baroda police. The natives seem to think that a proper distribution of Gaekwaree troops is all that is needed, as the presence of police only germinates suspicion and intrigue.

THE final ceremony of the installation of the young Gackwar has been indefinitely postponed, in consequence of a report of the local astrologers that the season is not propitious. A grand elephant fight took place on the 4th, the Ranee Jumnabaee and other ladies occupying advantageous balconies of the upper-storey of the "marble" palace, and the Gaekwar with his attendants the lower. Three other claimants to the *guddee*, who have hitherto given much trouble, have intimated to Sir Richard Meade their willingness to take the oath of allegiance, and recognize the Viceroy's selection. Sir Madhava Rao is anxious about a number of cliques that are now forming, but everything is quiet. The people of Baroda seem to have returned to their usual avocations, now that they are satisfied that the *guddee* is at last occupied. They do not appear to care who is their sovereign, as long as the pomp and show so indispensable to a native court is sustained. Their youthful King on his part takes matters philosophically. He subjects himself with all the composure of a man of five times his age to the daily routine in the palace. He is eager to do everything that is told him, and seems pleased when he fancies he has anticipated the wishes of Sir Richard Meade or Sir Madhava Rao. The latter gentleman is trying to select a competent man to fill the post of tutor to the Gaekwar. Maharanee Jumnabaee has won the good opinions of all. She does not remain behind the purdah, but receives her visitors, shakes hands, and chats in the most charming manner. All charges connected with the late Commission are to be recovered from the Baroda State. Cholera has left the city, after carrying off two hundred and thirteen victims from about eight hundred attacked.

AN official account of the death of Colonel Hamilton in a skirmish with Pegu dacoits has now been published. The jungle near Payagalay is a favourite robber-haunt, and in the midst of the brushwood a hut had been erected wherein the dacoits ensconced themselves. After walking seven miles through a desolate waste, Colonel Hamilton and Lieutenant Raikes sighted the hut just before daylight and immediately fired into it. The dacoits responded by five simultaneous shots. It was too dark then to see the effect of the firing, but Mr. Raikes after vainly trying to induce some of his men to accompany him to the rear of the hut, shouted to Colonel Hamilton to do so. No answer was received, and shortly afterwards he found the Colonel lying dead, shot through the heart. The only man who saw him fall was his orderly, Gopal Singh. The weapons of the enemy consisted of three double-barrelled guns, which were taken by the police. It is said that the deceased officer had received warning of the desperate character of the dacoits, and the danger of coming to close quarters with them, from the people of an adjacent village who asked that they might make the attack instead; but Colonel Hamilton felt it his duty to proceed in person, and his death was the unfortunate result. It will be a long time before "Paddy Hamilton" is forgotten by his brother officers. He was originally attached to the Arakan Battalion, and on its dismemberment in 1862 joined the new police force then being formed by Captain Duncan. Nga Poung, the notorious leader of dacoits to whom we referred last week, has been captured, together with another man implicated in the death of Colonel Hamilton. It is also stated that three others connected with the outrage on Mr. Davidson have surrendered.

THE famine in the Karen country is assuming a sterner aspect. After visiting the hills Colonel Browne published a report of the scarcity and an appeal for subscriptions. He proposed that a Committee should be appointed for the relief of the Karens, the Deputy Commissioner seconded the motion and a Committee was accordingly constituted with the sanction and encouragement of Government, to supplement Government assistance. Upwards of Rs. 1,400 has been collected in Tounghoo alone, and three thousand Karens have been relieved, but the Committee again appeal for help towards enabling them to succour the distressed villages by providing a sufficient store of grain before the rains set in and communication becomes difficult. There are reports from the missionaries who distribute the funds at their disposal that, notwithstanding the active measures of Government, there will inevitably be a large amount of suffering, destitution, and even death in the more remote villages if the Indian public do not promptly come forward with subscriptions.

WITHIN the past few days Colonel Nuttall has published his report on the Naga Expedition sent to avenge the death of Lieutenant Holcombe and his men. The force comprised detachments of the 42nd and 44th Regiments of Native infantry, numbering in all three hundred and eight. They began their march at Debrooghur, a small guard being left in a stockaded position at Jaipore, Borwasallee, Hulwa, Kulun Mutun, and Bor Mutun to prevent any possible treachery on the part of a powerful tribe left in the rear. The country was found to be thickly populated, every advantageous hillock having its village, thoroughly stockaded and panjied on the sides liable to attack. Almost all the houses were found to be very large and commodious, the rooms being raised off the ground on posts. The Chief's house at Kamhna was ten feet in length. The land, too, in the neighbourhood of the villages was in many places admirably cultivated, whole hill sides having been cleared of every scrap of jungle, except the stumps of a few trees. The principal crops grown by the Nagas are rice and kuchoos; the latter, a species of arum, is very extensively cultivated, and forms the staple food amongst the people of the hills. On approaching Senwa, about noon of the 14th March, it was evident that though well-stockaded and holding a very strong natural position, the men of this village *did not wish to fight. Refusing,* however, to parley with them, the Rajah was sent for and after a little delay he came down the hill. He was at once called on to name the five or six men of his village who were concerned in the massacre of the 2nd February 1875, which he at once did, and his evidence has since proved to be perfectly correct. Colonel Nuttall then with the advanced guard of the 44th, and followed by the main body of that regiment, advanced up the hill towards the stockades, ordering Colonel Sherriff with his detachment of the 42nd to turn the whole position by a road running round the base and entering the village by the south. The result of this manœuvre would have been most decisive if the Nagas had fired a shot, for whilst anxiously engaged watching the 44th clambering over the stockades, and climbing the northern slopes of the steep ridges on which Senwa is built, the 42nd Regiment came in on their rear most unexpectedly, when the enemy fled in every direction. On the 15th March, the places of refuge of three of the men implicated in the massacre were discovered by our native scouts, and the men brought into camp and placed under a guard. The same day three rifles and Lieutenant Holcombe's gun were given up.

THE first real obstacle was met with on the banks of the Disang river, in front of Ninu. Two men of the 44th Native Infantry and three of Captain Butler's police swam the river, and a raft was brought over, but the second was swept away by the current, and as the river rose rapidly, it was impossible to get any more over. Every effort to get a rope across or to fell a sufficiently large tree to bridge the stream failed, and we regret to say that one of the men who had crossed (Sepoy Dhunbeer Rai) was drowned in attempting to return, in spite of every effort to save him. At last the bridge was completed under fire, and the force in two columns, aggregating two hundred and sixty men, rushed up the hills towards the large and well fortified town of Ninu. The roads were everywhere obstructed with stockades, and several officers and men were wounded with panjies, but in a short time the place had been won and the enemy were in full retreat. Here, and elsewhere, numerous proofs of Holcombe's massacre were discovered. Scouts searched out the participators from the depths of the jungle and from recesses in the hills, till every man was found and every stolen rifle returned. On the 3rd April the force began its return. The whole of the villages implicated in the massacre of the 2nd February had been attacked and burnt, and large stores of grain and cattle belonging to the enemy destroyed. Their loss in action must have been upwards of 50 killed. The remains of all the victims belonging to the Survey party were recovered; those of the late Lieutenant Holcombe were brought into Debroogurh and buried with military honours, whilst those of the natives who perished were either burnt or buried on the spot. Of the firearms taken from the Survey party, 17 were recovered, together with the most valuable portion of the private property. A great number of Naga arms were captured by the force, consisting of flint muskets, spears, dhaos, cross-bows, and shields. All the powerful villages in the country operated in, who were not implicated in the affair of the 2nd February, tendered their submission, assisting us in a manner quite unprecedented, even those far removed from our line of march, such as Dadun and Bhanpara. The party under Lieutenant Woodthorpe, R.E., were able to survey three hundred square miles of country, and fill in the details which were still required for a map of this portion of the Hills. In his resolution on the report of Colonel Nuttal, the Viceroy thanks him for his excellent arrangements and for the complete manner in which, while exacting due reparation and punishment for the murderous attack upon the Survey party, he carried out the intention of Government that no improper spirit of revenge should be allowed to prevail.

THE Bombay Municipality and the Bombay press are hard at work on the subject of the reception of the Prince of Wales, who may not, some tell us, come to India after all. The citizens of the western capital are willing to spend three lakhs on his Royal Highness. Mr. A. T. Crawford and Major Pendergast Walsh will probably act as President and Secretary of the committee. The latter gentleman thinks that if the Government contribute a fair sum, it ought not to be hard to raise a couple of lakhs by public subscription; but to do so he suggests that "we must solicit the co-operation and donations of up-country Rajas, Chiefs and native gentlemen of distinction." Another suggestion of the Major is as follows: "To address the Chiefs of this Presidency with success, we must invite them to be present upon the coming auspicious occasion, and in order to make the pageant perfect, we should ask the various Political Agents and Residents in *Native States and Collectors in* the mofussil to suggest to all high native personages that they should attend in state, and grace the occasion by coming with their retainers, their elephants, their camels and their horses. Such solemnity and pageantry would add to the grandeur of the ceremony, and cost the State nothing, while the Native Chiefs of this Presidency, even at their own cost, would be glad to do homage to the future King of England and Emperor of Hindoostan." Major Walsh does not propose "general" illuminations throughout the city, for if "the night is windy they will go out." *Native Opinion* rightly says that the intended visit of our future king should leave behind permanent landmarks and pleasing reminiscences in the breasts of the natives and the native princes. And if these effects are to be secured, they can be secured only by attending more to the native notions about these things, rather than by making the reception of the prince merely grand and expensive. If we are to profit by past experience, we should see, first of all, that native princes are not needlessly knocked about, and cause given—though, unintentionally—to create needless heart-burnings, as was the case in some instances on the occasion of the visits of the Duke of Edinburgh and Lord Northbrook.

OUR LIBRARY TABLE.

Augustine's Confessions.—There is about to be issued from the Mirzapore Orphan School Press an Urdoo version, in the Arabic character, of *Augustine's Confessions.* The translation, which has been made from the original, is the work of the Rev. J. Hewlett, B.A., of the Mirzapore Mission. No pains have been spared to render intelligible in Hindustance the intellectual and spiritual struggles of Augustine's great soul in discovering the truth; and that record of his deep experience which is, in many respects, a type of that of every true Christian. Every line of the translation has been gone over many times with a Moonshee, and various persons have been consulted about the rendering of difficult passages. A proof of each portion has also been handed to different natives of judgment and experience that they might look it over and give their suggestions. We do not expect that this work will take readily. It is too solid and too faithful to do so; but that it will live in Hindustanee as it has done in other languages, while thousands of other books have died out, we have no doubt.

Geological Records.—Shareholders in the Alpha Gold Company of Wynaad, will find an able essay on the gold-bearing capabilities of that district in the latest "Record" of the Geological Survey. The Malabar district has been famous for gold from time

immemorial. Gold is still washed for in the low country and in Wynaad; and was obtained in the old days from quartz 'leaders' in the hill country around Dayvallah and Nellialum. Two tribes of people obtain the gold. The *Pannirs* wash for it in the alluvium, surface soils, and river sands. The *Korumbars* dig down to and excavated the quartz leaders. Tradition says that large finds of gold have been made at odd times by the Korumbars. The Pannirs rarely find more than four annas' worth of gold in a day each man; and only wash now (in the Wynaad) in the off season when they cannot get work in the coffee gardens at five annas a day. In 1793 the mines of Malabar appear to have been noticed by the then Governor of Bombay, who tried to get information on the subject; and they were farmed by the Madras Government in 1803. Within the last year or so attention was again called to the occurrence of gold in the Wynaad. Some of the planters had lived in Australia previous to their coffee experiences, and being more or less acquainted with quartz and its associated minerals, they were naturally struck with the quartz in Wynaad, while they also knew that gold was, and is, obtained by the natives. There was, however, a want of capital, and no one had seen gold in the quartz until Mr. Withers, the present Manager of the Alpha Company, went to Wynaad. Mr. Withers, who knows how to wash for gold, and is acquainted with quartz reefing, prospected the country for a long time, until he felt convinced that nothing was to be done at alluvial and surface washing. He then explored the old pits and workings of the Korumbars and finally settled on a quartz reef in which he found gold visible. This reef and the ground alongside, had been extensively worked in old times by the Korumbars. In one of the numerous caves, he found the remains of one of these native miners, and thus the lode came to be called the "Skull Reef." The Alpha Gold Company was then started, the prospectus of which states on the authority of "the Company's Manager and two of the Directors, who have had much experience of quartz-reef mining in Australia," that the stone will yield about one once of gold to the ton of quartz. The most common mode of occurrence of gold in South-east Wynaad is naturally in the recent deposits, such as the surface soil on the hill-sides, the stream sands and gravels, or the true alluvial flats (Vayals or Veils) which are so frequent a feature in this upland as to have given it the name of the "land of swamps"; but in none of these ways does it seem that any large quantity of gold is stored up, except perhaps in the swamps which have as yet only been tried when they were found to be as poor as the rest of the land. The surface soils are generally very thin, and they are not extensive enough to justify any large attempt at washing by hydraulic sluicing. Still they are perhaps the favorite resort of the Pannirs who can always from known patches of ground produce a certain small amount of gold. Occasionally, however, they chance on richer finds. The largest known fragment of gold found within the last few years in Wynaad weighs over seven pennyweights, but it contains some quartz. It is of pale color, and is not much rolled; in fact it has evidently not been washed far from the present reef, and has thus not been subjected to that exposure and attrition which seem necessary for the production of the purer metal usually obtained from alluvial washings. In addition to this, a further small rolled fragment of good yellow gold without quartz, weighing nearly 11 grains, was lately found by the Pannirs of Dayvallah; and a larger one, weighing 21·9 grains, is in the possession of a planter. This gentleman has collected 8·1 dwts. of gold, amongst which is the small nugget mentioned. Out of this, 150·9 grains had to be collected by amalgamation and there were 21·6 grains of dust. The gold generally found by the Pannirs is in very fine dust, or in small flat spangles only collectible from the black iron-sand, finally left with them by amalgamation in the wooden washing dish or *murriya*; but at times there are somewhat larger pepitas.

Urjoon Sing.—This is an Indian drama written by a native graduate of the Madras University. The time is Jehanjeer's reign, and among the *dramatis personæ* are Sir Thomas Roe, Ambassador to the Moghul from James of England, and a bluff British sea Captain. The following conversation in Jehangeer's palace is a fair specimen of the whole :—

Jehangir.—Sahib Roe, what kind of people are you? Do you brave danger? Love your homes and friends? Hate a lie? Like war?

Roe (rising).—Sire, when dangers lour, we are a people solid and cool as the ice that blocks our streams; but mid our own dear homes and friends that we esteem, none so warm and melting: we Britons hate a lie as liars hate the truth, and when fight we we must, we fight for honor and seldom fail to win.

Jehangir.—Who be your neighbours?

Roe.—The French.

Jehangir.—Well?

Roe.—Sire, they are a people that for glory would go round the world and once catching it disburden Atlas, should he block their way. In temper, they are so blithe and bustling, that our wits and wags do often speak of them as a nation of Mercuries. As to their country, they love it and laud it much—aye, over Eve's paradise; and more than all, they are of great resource, and when worsted can put forth many a coil.

Jehangir.—Is there a country named Spana?

Roe.—Sire, there is.

Jehangir.—Well?

Roe.—Sire, it is the land of the vine and the orange; and from its Sierras blue, flows many a stream by whose silver tide, the gay Andalusian strings his lyre and pours forth his soul in chivalric song.

Jehangir.—Are the people your friends?

Roe.—Not much.

Jehangir.—Why?

Roe.—We profess a faith much purer than theirs. They bow to the Pope and count the Madonna great; but we to Jesus as Alpha and Omega, and were taught thus truth by Luther and his kind that for God's love and purity of faith battled against Rome and set high pontiffs at nought. Spana enraged thereat, threatened our isle with perdition; and one clear and merry eve, our lords and admirals at our southern port saw in the offing a grand array of frigates and fierce galleons, that like Neptune's wrath seemed to sweep our sea-girt homes away. But our virgin Queen, with more than human heart, braved the shock; and what she left undone, high heaven did; for tempest tost and wrecked, the Armada passed our northern capes; and not a decent deck was there when Philip saw them again.

Jehangir (turning to a Spanish Jesuit from Goa).—Well, Padre, what dost thou say to this?

Jesuit.—Sire, *Vox et præterea nihil!* The Britons our cavalier speaks of, are petty islanders that fish in their lagoons and sell the produce to us and the French our neighbours. The suits we cast off they buy and make their clothes of them. On the continent, we call them pedlars, petty tradesmen and men of Punie faith. In times of yore, Gregorius sent Augustime to them and made them due bondmen of the holy see. Long they were of the flock and longer would have been, had not the Devil under the name Martinus risen in the wilds of Almaigne and tempted Christendom to sin. Their own King Henricus did check, at first, the evil; but being soon possessed, died a heretic. Santa Maria, his child, restored the faith and by tender means for holy ends devised, redeemed the land; but her sister Elizabeth espoused the fiend and in deeds of dreadful sacrilege undid herself; for the holy might that sits on Peter's chair, sent her down to that same abyss, where her sinful dad had gone. True we sent the Armada; but the foul witch called up a tempest from the roaring seas and enveloped herself in wind and rain, till our ships passed around her isle. And witness this Alencon that lured by this Circe's charms, made love to her—when lo! of a night, he found her return from the Lofodens on a broom! Such fright took hold of his gallant soul that he breathed not till he got to Rome and received a blessing from the Pope!

Roe.—Holy father, the child Santa Maria, whom did she marry?

Jesuit.—Our most Apostolic Philip.

Roe.—Alencon, who was he?

Jesuit.—The brother of the French King.

Roe.—Sire, need I gainsay his statements.

[*Looking up to the Emperor.*

Jehangir.—No; his conclusion is against his beginning, and his middle has no connection with either. That two Queens of a slight fishing isle should marry princes, and those very princes whose cast clothes they should have worn, is indeed a bold truth (*turning to his smiling courtiers*). Padres, do you of Spana often deal in such wares?

The Bengal Magazine.—April. The present number of this Magazine contains a paper on the "Fighting Capability of the Bengalee," who is, of course, compared to the soldiers of Attila, the Ironsides of Cromwell and the Germans of Von Moltke. "Supposing," says the writer, "an army composed entirely of Bengalis, led by a skilful and able general, were to offer battle to an army of Russians, will the latter by sheer strength gain the day? Certainly not. If both were unprovided with arms of any kind, it is possible that the Russians might bear down an equal body of Bengalis. By conscription 2,674,274 Bengalis can be raised and disciplined. With such a force Bengal may stand up against any single power in the world. If it were not blowing one's own trumpet, one might say that the Bengalis yield to no nation in the world in point of intelligence; and though we are now among the most despised subjects of the Queen of England, on account of our supposed effeminacy, we might make as good soldeirs as any nation in the world by our superior intelligence. What we want is systematic effort to cultivate a military spirit among us. Unhappily the present rulers of the country throw cold water on all our attempts at enlisting, and what is worse still the people have been disarmed. During the Sonthal insurrection and the Mutiny, the people prayed to be enrolled as volunteers, and they were snubbed. Several persons with independent fortunes have applied to hold commissions in the army, but they have been refused. We have been made as helpless as the ancient Britons were when the Romans withdrew to defend their own country against the inroads of the barbarians."

POETRY.

SONNET.

The Mosquito.

NIGHT after night, with dart re-tipped by rest,
And wings once more upon the ether bent
The mosquito doth nestle in the breast
Of each pale sleeper, till the keen torment
Arouseth him from dreams of pillows cool
And curtainless; and then, midst dart and bound,
He striveth hard, half dazed and without rule,
To smite the lively messenger of sound
And midnight sorrow, with book or boot-jack,
Brush, old hat, or Ozokerit. 'Tis vain:
The educated gnat flees every whack
And its pursuit but gives thee further pain.

W.S.R.

LETTERS TO THE EDITOR.

THE COORG PLANTERS AND THE VICEROY.

To the Editor of the Friend of India.

SIR,—As your mind is constantly concentrated on matters political, has it ever been occupied with the thought of what will be the fate of Coorg when the Rajah of Mysore shall be of age and takes possession of his country? When that event takes place, Coorg will be bereft of a Chief Commissioner, a Chief Engineer, and a Judicial Commissioner. It seem to be a foregone conclusion on the part of Madras officials in high places, that Coorg will be handed over to the administration of Madras. It is pretty certain that such a change will be repugnant both to the Coorgs and the planters. For although there is much to complain of here, still we enjoy advantages under the imperial Government not possessed by our brethren in Wynaad. A Government so indifferent as is the Government of Madras to the welfare and wants of as earnest, intelligent and deserving a set of men as are the Wynaad planters, it would be impossible to conceive, and I am certain the Coorg planters and the Coorg people will oppose with all the power they possess, the consignment of their interests and welfare to such a Government. Yet there are difficulties, the solution of which the Government of India will soon have to occupy itself with, in managing affairs. In judicial matters no difficulty would be found; they could be under the management of Madras. The Resident of Mysore might probably be also Chief Commissioner of Coorg, and the head of the Public Works Department in Mysore might undertake also to be responsible for the progress of public works in Coorg.

Although a general tendency to complain may be found in what I have written, I have merely availed myself of the British privilege to grumble. The planters are, however, grateful to Lord Northbrook, for he has shown a disposition to sympathise with them and assist them in the difficulties surrounding this enterprise. In answer to a petition from the planters lately presented, in which they fully entered into their grievances, particularly the want of roads and bridges, urging that as the Government of India had refused to comply with their repeated memorials for a reduction of the land assessment, they had the right to expect, and pressed for the expenditure of a larger proportion of the revenues derived from Coorg in the country for the benefit of those who had been the cause of that increase Lord Northbrook gave a careful consideration to the representations of the memorialists, and a generous response by increasing the budget allotment for Coorg, half as much annually as it then stood at. An increase of fifty thousand rupees a year annually is sanctioned from 1875 to 1880, or 2½ lakhs of rupees altogether. Although this extra grant is inadequate to the wants of a country that can hardly boast of a road that is passable all the year round for want of bridges over its rivers, yet the planters are satisfied that in the present condition of the finances of India, Lord Northbrook has not been unmindful of the welfare of the planters, but has done all he was able to do; and when some time ago there was a talk of a visit to Bangalore, a deputation from the Coorg planters was arranged to wait upon his lordship, to beg his acceptance of an address conveying the thanks of that body. They may yet have the opportunity of personally conveying the views of the planters on his public proceeding.

A very serious question rises, however, and one about which the planters are very anxious, and that is the judicious, and profitable expenditure of the extra allotment by the Department of Public Works. Fortunately that Department has for its head in Coorg an officer of singular gifts, and whose energy, capacity for work, and rare professional ability enable him to take a clear and comprehensive survey of what is to be done. Without delay, after the extra money was sanctioned, he came forward with a plan showing how he proposed to distribute the money, and on what works, and his schemes have met with general satisfaction. Already considerable progress has been made, and it is expected that the most important of all works, that for which the planters are most clamorous—the bridge over the Cauvery river, with the road from it to the Coorg capital, Mercara—will be commenced in earnest, immediately after the rains in October. Traces have been completed, surveys and levels are being made, all the plans and estimates are to be prepared this monsoon, and everything ready for pushing on the work in earnest after the monsoon. Coorg has lost the services of an able and painstaking officer in Mr. Gramatzki, who has become principal of the school of Engineering at Bangalore. A fine field is open for his successor, a promising officer, and it is to be hoped he will earn what is always generously conceded by the planters to any really deserving servant of the Government—their cordial appreciation of real merit. More on topics of general planting interest hereafter.

J.P.H.

THE STEAMER "CHYEBASSA."

To the Editor of the Friend of India.

SIR,—Through your medium, the Company and the public will probably find the impressions of a passenger to London by one of their new steamers of interest, and perhaps profit; although there are some things open to complaint, and susceptible of improvement. I must confess to general satisfaction. The table is well found with good and wholesome food. The meat is of fair quality, and liberal in quantity; bread excellent, water good, but the supply of ice is insufficient—an important item in these sweltering regions. Attendance insufficient for the number of passengers. The cooking-room being so far away from the saloon and the absence of apparatus for keeping the dishes hot, is a drawback resulting in everything being served up cold; a half-cold mutton-chop served upon a cold plate is not tempting. The wines, malt liquors, &c., are charged at moderate rates, soda-water being an exception. Taking everything into account in connection with the table, one cannot but be satisfied, and admit that, for the moderate rates for passage-money, little can be complained of, and the general opinion on board is that in these respects the efforts of the Company to cater for the comfort of passengers will not suffer by comparison with those of any other Company, not even the P. and O.

There are, however, grounds for dissatisfaction which the Company would do well to take into consideration, if they hope to bid successfully for passenger traffic on this line. The first and foremost is the adaptation of the steamers for passengers. Here is a steamer with 45 first-class and 5 or 6 second-class passengers, loaded so heavily with cargo, that even in moderately fine weather the ports have to be closed, and when the weather is severe enough to drive the passengers down into the saloon or into their cabins the heat is very trying. If the Company desire to be successful competitors for passenger traffic on this line, the old model of steamer should be departed from, and that on which the *J. C. Stevenson* is built, adopted. The *Chyebassa* appears to have been built for cargo, with accommodation for passengers as a secondary consideration, should any offer. A ship so deep in the water is not tempting to passengers, and at Madras the feeling of disappointment on the part of the passengers was general on seeing the steamer lying so deep. Cabins on deck, with saloon if possible, and if not with accommodation for taking meals there during fine weather in hot latitudes, would be a great improvement. The whole of the Company's steamers seem to be built on one model, and although suitable for short voyages, it requires considerable modifications and improvements for a voyage lasting from 35 to 40 days.

A further important matter in a passage of that length is the selection of suitable commanders. A number of first-class passengers with varying position in the social scale, who have all paid the same rate of passage-money, expect, and justly too, that all should receive the same care and attention; otherwise, as is the case here, dissatisfaction is felt and expressed when partiality is shown. It is a common fault to find the captains in such cases expending all their care on those whom fortune may have favoured in the social scale, leaving some who are less favoured to take care of themselves, or left to the tender mercies of the servants. The servants are not slow to observe these indications of how attentions are bestowed, and to follow the example set them. Unprotected wives taking home children ought to be the objects of especial care on the part of the commander, nor can they be considered singular when jealous at seeing the favoured enjoying indulgences denied to them. Skill in a commander is not sufficient in the management of a human cargo; he should be a man of tact natural, and with a manner that would assure a timid lady that he is accessible. Whereas the opposite is often found. Men with high-flown notions, grand airs, intoxicated with the flatteries of experienced and politic travellers who generally cut them on land, frequently vain and conceited to an extent sickening, drawling, affected, I wont say what, yet men who have nothing in common with their subordinate officers who apparently are seldom taken into council, seldom spoken to, and if at all, as though they were dogs or natives,—that class of skipper may do for sailing vessels, but the Company should make careful selection for their passenger-ships in these days, if they hope to compete with the Companies who are candidates for patronage. That they have such in their service is well-known. The B.I.S.N. Company has kept faith with, and enjoys the confidence of, the public. It is a well-managed Company, and although not personally affected by the incidents herein described, I consider it may be an advantage to the Company to know what passengers think of their efforts. They are certain of support and I believe may depend on a very fair share of the passenger traffic between India and England; but they must avoid loading their passenger ships so that ports are closed in fair weather, or they must build ships on a different model, because no passenger here, I am sure, would a second time take a passage in a ship circumstanced in such respects as the one is from which I write, and that with much discomfort, off Aden, from whence this will be posted. They should alleviate the horrors of the heat in these latitudes by an abundant supply of ice, and by providing as cool and well ventilated accommodation as is possible under the circumstances. I ought to add that the steamer is a very fine one of her class, and her performances in all respects are satisfactory.

Aden. *J.P.H.*

MILITARY ORDERS.

BUCKLE, Lieut. E., to Dalhousie, to the 22nd September.
CARGILL, Capt. S., to officiate as Assistant to the Inspector-General of Ordnance and Magazines.
DAVIDSON, Surgn.-Major D. M., to England, to appear before a medical board.
DOWNING, Capt. A. E., furlough for six months.
FERGUSSON, Lieut. C. H., to England, for fifteen months.
FORBES, Col. W., permitted to retire with annuity.
LOWIS, Capt. R. F., furlough for ten months.
MACIVOR, Lieut. I., to England, to appear before a medical board.
MONTGOMERY, Lieut. W., to England, for six months.
ROBERTSON, Sub-Lieut. D. P., to England, to appear before a medical board.

CIVIL GAZETTE.

IMPERIAL.

CONOLLY, Capt. A., to officiate as 2nd in command Bheel Corps.
EDWARDS, Mr. J. C., Political Assistant of the 2nd Class, leave for three months.
HUGHES, Mr. T. W. H., to the 2nd Grade, Geological Survey.
KING, Mr. W., from the 2nd to the 1st Grade, Geological Survey.
MULVANY, Surgn. E , to officiate as Civil Medical Officer of Baraitch.
MALLET, Mr. F. R , Assistant, 2nd Grade, Geological Survey of India, three months' leave.
MCRAE, Capt. A. R. T., Meywar Bheel Corps, to officiate as Adjutant.
WATERHOUSE, Capt. J., to officiate as Deputy Superintendent, 3rd Grade, Topographical Survey.
WILLSON, Mr. W., to the 2nd Grade, Geological Survey.
WAAGEN, Dr. W., to be Palæontologist to the Geological Survey in the room of Dr. Stoliczka.

PUBLIC WORKS.

BEAHAN, Mr. H. R., Assistant Engineer, from Central India, to North-Western Provinces, Irrigation Branch
BINNIE, Mr. A. R., Executive Engineer, permitted to resign his appointment.
CANTOPHER, Mr. B. W., promoted to Assistant Engineer, 2nd Grade.
CROMPTON, Lieutenant C. A., appointed an Assistant Engineer, 2nd Grade, Military Works Branch.
JEWETT, Mr. T. H., promoted to Assistant Engineer, 2nd Grade.
MEIK, Mr. F. S., Assistant Engineer, from North-Western Provinces, *Irrigation Branch, to Central India.*

BENGAL.

BARROW, Mr. F. H., to have charge of the Soopoole Division, Bhaugulpore District.
BAYLEY, Mr. H., *Officiating Assistant* Superintendent of Police, posted to Gya.
CHATTERJEE, Baboo G. N., Sub-Deputy Magistrate, posted to Diamond Harbour.
FABRE-TONNERRE, Mr. C. E., *Assistant* Superintendent of Police, posted to Sarun.
GREY, Lieut. L. J. H., to act in the second Grade of Assistant Commissioners.
GAEL, Mr. J. D., *to act temporarily as* Cantonment Magistrate of Dum-Dum.
LAHIREE, *Baboo R. C., to be* Moonsiff of Moolfutgunge.
MASTERS, Mr. J., *District* Superintendent of Police, Jessore, leave for twenty months.
MOZOOMDAR, Baboo K. C., to act as Moonsiff at Diamond Harbour.
ROY, Baboo P. C., Sub-Deputy Collector, posted to Baraset.
ROY, Baboo S. P., *to act as Additional Deputy* Inspector of Schools, Dacca.
SMITH, Mr. W. F., Assistant Superintendent of Police, posted to Patna.
SEN, Baboo K. C., Deputy Inspector of Schools, transferred to Backergunge.

MADRAS.

BUICK, Mr. D., to act as Sub-Collector of Malabar.
HARDINGE, Mr. T. Von D., *to act as* Sub-Collector of Nellore.
LOGAN, Mr. W., *to act as Collector* of Malabar.
SMITH, Captain J. M., *Ganjam*, leave for three months.
SMYTH, Mr. E. C. Bowyer, Assistant Engineer, furlough for twelve months.
STUART, Mr. A. J., to act as District and Sessions Judge of South Malabar.

NORTH-WESTERN PROVINCES.

DANIELL, Mr. C. J., Magistrate, Cawnpore, three months' leave.
DALE, Mr. G. S. D., to officiate as Magistrate and Collector, Cawnpore.
GROWSE, Mr. F. S., Joint Magistrate, Muttra, three months' leave.
IRVINE, Mr. W., to officiate as Magistrate and Collector, Furruckabad.
LISTON, Captain J., to officiate as Deputy Commissioner, Luleetpore.
PASLEY, Mr. G. B., District and Sessions Judge, leave for two months and twenty-seven days.

PUNJAB.

ANDERSON, Mr. A., Assistant Commissioner, to the Kangra district.
BARKLEY, Mr. D. G., Deputy Commissioner, Jullundhur, leave for sixty-one days.
BEADON, Major C., to officiate as Deputy Commissioner of Jullundhur.
BROWN, Mr. C., to the 1st Grade of the 1st Class of Assistant District Superintendents of Police.
BROWNE, Mr. G. A. St. Barbe, to the 4th Grade of the 1st Class ditto.
KELLY, Mr. F. A., to the 2nd Grade of the 1st Class ditto.
MENZIES, Major O., from the 2nd to the 1st Grade of District Superintendents of Police.
MCANDREW, Mr. J., to be a District Superintendent of Police, 2nd Grade.
PLOWDEN, Mr. C. A. C., to the 4th Grade of District Superintendents of Police
STONE, Mr. S., from the 4th to the 3rd Grade ditto.
TAIT, Captain J. S., to be Assistant Inspector-General of Railway Police.
TUCKER, Captain L. H., from the 3rd to the 2nd Grade of District Superintendents of Police.
TURNBULL, Mr. D. N., to the 3rd Grade of the 1st Class of Assistant District Superintendents of Police.

COMMERCE AND FINANCE.

FRIDAY NIGHT.

THE decline of one per cent in the Bank of Bengal rate, which we noticed last week, was not followed by any further fall on Thursday morning, and the minimum rate still stands at seven per cent. In the Bazaar money is available on deposit of Government paper, at 5½ per cent. The statement of the affairs of the Bank of Bengal closed up to the evening of the 8th instant, shows the following differences as compared with that of the previous week :—

Deposits decreased ...	...	Rs.	2,25,020
Bills discounted increased	...	„	23,945
Treasury Balances decreased	...	„	15,01,725
Bank's investments decreased	...	„	10,540
Loans and credits decreased	...	„	4,53,795

The cash balances have fallen Rs. 11,40,420, which is explained in the foregoing figures; the reduction in the Treasury balances will account for the principal part of the amount. The minimum rate in Bombay still stands at the high figure of 10 per cent, and the last published statement of the Bank of Bombay does not appear to be favorable towards a reduction, there having been an increase of Rs. 13,70,500 in the amount of Loans, against an increase of Rs. 1,61,590 in Deposits, and a decrease of Rs. 2,17,870 in Bills discounted. The cash balances show a fall of Rs. 7,66,720. Business in this market has been inactive throughout the week, owing to the high price of money, and the near approach of the issue of the new loan, on the 16th instant. There is, however, a good prospect for the future; the price of silver in Europe is now reported as low as 55, and it is anticipated that bullion will be attracted hitherward by the new loan, in which case it is more than probable that there will be cheap money in Calcutta as soon as the acceptances have been announced. Money is now said to be flowing in steadily from the mofussil, and a large amount of local capital is also kept in hand, pending the issue, the greater portion of which will immediately become available for other investments, when acceptances are declared. The general tone of business may be stated to be one of expectancy all through the market, which will no doubt find a relief when this event is over.

Exchange has suffered a further fall since our last report, owing, in the first instance, to the low rates realized at the last biddings for Council bills. The opening of business for last mail was at 1*s.* 10⅛*d.* for 6 months' Bank Bills, but only a small amount was done at that figure, the rate having declined to 1*s.* 9⅞*d.* almost immediately, which is perhaps the lowest ever reached.

Some recovery has since taken place, and quotations are now as follows :—

	s.	*d.*		*s.*	*d.*
Bank Bill at 6 months' sight	1	10	to	1	10⅛
Do. do. at 3 months' sight	1	9⅜	to	1	9⅞
Do. do. on demand ...	1	9½	to	1	9⅝

The prospect for remitters is still very discouraging.

Government paper is necessarily influenced, until the new loan is issued, by the fluctuations of various conflicting interests, but it is thought probable that prices will rise. There is a firm feeling in the market, and the tendency is rather towards an advance, than the reverse. The following are present quotations :—

4 per cents ...	...	Rs. 102-8 to 102-12
4½ per cents (1872) ...	...	„ 103-2 to 103-6
5½ per cents ...	...	„ 109-2 to 109-6

Transactions in the two latter descriptions have been limited, business having been chiefly in four per cents, which is the most marketable class of paper, and is generally considered a more certain investment.

There is no improvement to report in the share market. Tea *stocks still hold their position, and Jutes are, if anything, further* out of favor, although manufacturing prospects may be said to be somewhat improved. Bank shares are in fair demand, and Nationals have experienced a considerable advance in price.

In the Freight market an improved demand is reported, and the total unfixed tonnage in the port shows a very inconsiderable increase, notwithstanding the numerous recent arrivals.

Some large auction sales of Indian Teas were held on the 7th instant, at which 6,134 packages were offered, and 5,656 found purchasers. There was a good competition, and prices showed an improvement in all the better qualities. The weather reports from most of the districts are favourable, and in Darjeeling the yield up to the present has been unusually large.

The Produce market generally is quiet, with the exception of Seeds, some descriptions of which have been in good demand. Jute is comparatively out of the export market, although balers show more disposition to come to terms with shippers.

Imports are also inactive, but all goods are firm at their present quotations. Piece goods are improving, owing to the reduced shipments from the home markets.

LATEST TELEGRAPHIC NEWS.

5TH JUNE.

St. Petersburg, 2nd June.

The Telegraphic Conference opened here to-day.

London, 3rd June.

The troopship *Serapis* is fitting out to convey the Prince of Wales to India.

The War Office announces some alterations in the regulations in gaining commissions, whereby successful candidates at the periodical examinations will no longer be commissioned, but must enter Sandhurst for one year's instruction as cadets, after which time, if qualified, they will be gazetted. The first examination under this system takes place in December 1876.

Subscriptions are invited for a loan of half a million for the Nizam's State Railway.

London, 4th June.

In the House of Commons last night Mr. Leith, the member for Aberdeen, asked whether the expenses of the Prince of Wales' visit to India would be charged to the Imperial or Indian Government. Mr. Disraeli replied, it was more fitting to reserve such questions until a definite proposition was introduced.

Lord Carnarvon communicated a despatch to the House of Lords proposing a Conference of delegates from the Colonies and States of South Africa for the consideration of a scheme of confederation of South African States.

7TH.

London, 5th June.

IN consequence of the death of General Aitchison, the following Brevet promotions take place: Lieutenant-General Sir E. W. F. Walker to be General, Major-General R. N. Phillips to be Lieutenant-General, Colonel F. O. E. Burton to be Major-General, Major G. W. Muriel to be Lieutenant-Colonel, Captain W. G. Alexander to be Major. In consequence of the Field Marshal promotions last week, Lieutenant-Generals T. A. Drought and Charles Stuart to be Generals, Major-Generals G. P. Whish and Sir George Malcolm to be Lieutenant-Generals, Colonels William Gordon and G. H. S. Wills to be Major-Generals, Major James Dalgleish and John Dawson to be Lieutenant-Colonels, Captains Henry Hallowes and James Stirling Mould to be Majors.

Earl Howe, Earl Dalhousie, and Viscount Grey de Wilton have been created Peers.

The Sultan of Zanzibar has landed at Lisbon. He was received with princely honors, and had an audience with the King.

8TH.

Paris, 6th June.

THE race for the Grand Prix de Paris was won by Salvator, the English horses not having been placed.

Brussels, 6th June.

THE Belgian Minister of Justice has issued a circular in which he requests the law officers to proceed severely against instigators and perpetrators of religious disturbances in Belgium.

9TH.

London, 8th June.

IN the House of Commons last night Lord George Hamilton in replying to a question on the Nizam's Railway loan said that though not illegal the Indian Government would not be responsible for payment of the money guaranteed nor would the Imperial Government interfere to enforce its payment.

11TH.

London, 9th June.

COLONELS W. D. AITKEN, C. W. Younghusband and George Shaw have been gazetted Colonels in the Royal Artillery. The following brevet promotions are also gazetted in consequence of the death of Major-General Buchanan :—Colonel John H. Lefroy to be Major-General ; Major De V. I. C. Tupper to be *Lieutenant-Colonel.*

DENTISTRY.

MESSRS. CORFIELD & CO.,

May be consulted daily upon all cases of Surgical and Mechanical Dentistry.

THEIR IMPROVEMENTS IN

Artificial Teeth and Painless Dentistry

Afford the following advantages :—

First.—Extreme lightness, being completely self-supporting.
Secondly.—Moderate charges, extreme simplicity of construction, the highest class of mechanism, and the best materials.
Thirdly.—Absolute immunity from pain.
Fourthly.—Nature so closely imitated, that detection becomes an impossibility.
Parties residing in Calcutta and the Suburbs attended at their own residences if desired.
Teeth supplied by other Dentists not having proved satisfactory, or old cases *that have become out of order through absorption* of the gums and other causes, can be remodelled on Messrs. Corfield's system on moderate cost.
Artificial Teeth repaired and returned by following post.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼ lb. and 1 lb. tins, labelled thus :—

DISSOLVED PERUVIAN GOVERNMENT GUANO,

PREPARED BY

OHLENDORFF & Co.,

LONDON, ANTWERP, HAMBURG, AND EMMERICH-ON-RHINE.

GUARANTEED TO CONTAIN

Nitrogen equal to 10 per cent. of Non-Volatile Ammonia.

20 „ Soluble } Guano Phosphate.
4 „ Insoluble }

Price £14 per ton for 30 tons and upwards.
„ £15 „ under 30 tons.

Delivered Free at any of their Depôts in the United Kingdom.

TERMS.—CASH.

THIS Manure is prepared from *genuine Peruvian Government Guano.* The result of its special treatment is, that the Ammonia is fixed, the Phosphates in the Raw Guano rendered soluble, and the Manure brought into the condition of a free dry powder.

It loses nothing from exposure to the atmosphere, or to the heat of the sun. It is offered to the Planter with a *Guarantee* of its composition, and is, in fact, the richest, and, considering the quality, the cheapest *Guaranteed Manure* at present in the market. Its fertilizing properties are such as will enable the consumer to derive the greatest economical advantage from the use of Guano.

APPLICATION OF DISSOLVED PERUVIAN GOVERNMENT GUANO TO COLONIAL PRODUCE.

INDIGO.

Dissolved Peruvian Government Guano will give the plant greater strength to resist unfavourable influences and the Planter in thus developing the crop will be amply repaid the cost of the manure by the increase and superior yield of Indigo.

Dissolved Peruvian Government Guano is a highly concentrated Manure offering a large and guaranteed percentage of fixed ammonia and soluble immediately available phosphate of lime, and may therefore be recommended with the utmost confidence for Indigo plantations. A quantity of about 3 cwts. per acre will be found materially to benefit and increase the crop. This quantity may be increased with advantage if the land be impoverished by previous crops.

RICE.

We would strongly recommend the use of 2 to 3 cwts. per acre for Rice; for, although irrigation is generally solely relied upon as a means of producing a good crop of Rice, there can be no doubt that, in addition to irrigation, 2 or 3 cwts. of Dissolved Peruvian Government Guano per acre will be highly beneficial.

TEA.

We are confident that Dissolved Peruvian Government Guano will be highly esteemed as a Manure for Tea, and we recommend, say, 3 cwts. per acre, mixing the Dissolved Guano first with vegetable ashes or dry soil so as to secure its uniform distribution. If the land is very poor, and exhausted by previous cropping, more Guano may be used with advantage.

SUGAR-CANE.

Dissolved Peruvian Government Guano produces heavy crops of well-matured Canes, rich in juice, yielding a high percentage of crystallizable sugar, without detriment to the soil. From 3 to 4 cwts. of Dissolved Peruvian Government Guano per acre is a good dressing for Sugar-cane. A few trials of Dissolved Guano in comparison with other manures will soon convince the Planter that no manure yields so large a profit in the increased production of sugar as Dissolved Peruvian Government Guano.

COTTON.

Dissolved Peruvian Government Guano meets the requirements of the Cotton Plant, inasmuch as it furnishes all the elements of fertility which are calculated to promote the luxuriant growth of the same. If the increase in quantity be made the chief object, 4 to 5 cwts. of Dissolved Guano per acre will prove most advantageous; but if greater care be given to the fine quality of the Cotton, the use of 2 to 3 cwts. of Dissolved Peruvian Government Guano, together with 2 to 3 cwts. of mineral superphosphate, per acre, will be found to answer better.

JUTE.

3 to 4 cwts. Dissolved Peruvian Government Guano cannot fail to materially increase both the quantity and quality of this crop which is becoming of more commercial value every year.

RAPE AND LINSEED.

Colza and Flax exhaust the land very rapidly, and for this reason require liberal treatment with manure. Experience has shown that Dissolved Peruvian Government Guano, is the most efficacious manure that can be used. Mixed with diluent as we recommend sow the Dissolved Guano broad-cast, and harrow it in with a light harrow about a week or a fortnight before the rape or linseed is sown. 4 cwts. of Dissolved Guano is a fair dressing per acre on land of average fertility. On poor soils 5 to 6 cwts. will give a more profitable return than a smaller dose.

REMEDY FOR INSURANCE PANIC.

THE NEW SYSTEM OF RESERVING & INVESTING FOR POLICY-HOLDERS IN GOVERNMENT SECURITIES THE ENTIRE NET PREMIUMS.

THE ONLY EQUITABLE SYSTEM OF LIFE ASSURANCE.

THE POSITIVE GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, "LIMITED."

CHIEF OFFICE: 53, BEDFORD SQUARE, LONDON.
CALCUTTA OFFICE: 6, OLD COURT HOUSE STREET.

This Company has passed the probationary period of development, and has now become a well-established office, doing a larger business than was ever before transacted in the same period of time by any Life Assurance Institution, and possesses a current annual premium income of £50,000.

THE GREAT QUESTION OF THE DAY IS—

How can I assure my life with a certainty of the policy being paid at death?

THE ANSWER IS SIMPLE—

Only let the net premiums be reserved and safely invested at compound interest, exclusively to meet claims under policies, and the fund will so rapidly and enormously accumulate as to make the provision for payment as certain as is death itself.

AN EMINENT ACTUARY SAYS:

"To make the system of Life Assurance complete, it has yet to be recognised that an Assurance Society is, in its very essence, less a "trading company for profit to shareholders, than an institution with purposes of trust for policy-holders, the trust being to receive and "husband the premiums till such time as, by the discharge of the member's claim, the trust is ended as far as such member is concerned. "To this end *it should be enacted that every office shall each year put apart in a 'Trust Fund' a proper proportion of its annual premiums*, to "meet assurance, risks, and claims only, and not to be touched in any way for expenses, which, if need be, should come out of the share-"holders' capital. The Trustees of the Fund would take care that it is productively invested, so as to obtain the best rate of interest con-"sistent with safety."

This is exactly the system adopted by the 'Positive,' THE ENTIRE NET PREMIUMS being invested at compound interest in trust for policy-holders, and hypothecated exclusively for the purpose of paying claims under policies. The investments are made, in England, in Consols, yielding interest at the rate of about 3¼ per cent. per annum; in India, in Indian Government securities, yielding about 4 per cent.; in Canada, in Dominion Stock, yielding fully 5 per cent.

POLICY-HOLDERS IN THE 'POSITIVE' HAVE THREE DISTINCT LINES OF SECURITY:

1. The Guarantee Fund of over £51,000 Consols (one-fifth part of the paid-up capital).
2. The Net Premiums invested at compound interest as above.
3. The Capital and other property of the Company.

THE POLICY-HOLDERS' FUNDS

AMOUNTED, ON THE 31st OCTOBER 1874, TO OVER £125,000.

(ACCUMULATED SINCE COMMENCEMENT OF LIFE BUSINESS IN 1872.)

FURTHER ADVANTAGES OF THE POSITIVE SYSTEM.

POSITIVE POLICIES ARE UNCONDITIONAL, INDISPUTABLE, AND NON-FORFEITTALE.

1. Unconditional, being free from all conditions of every kind restrictive of the assured, except the due payment of premiums.
2. Indisputable, as no objection whatever can be raised on any ground after the Policy has been issued.
3. Non-forfeitable, because every premium purchases a fully paid-up Policy, or Positive note, for the relative proportion that the premium bears to the sum assured, which Positive note never lapses, but remains in force till death, whether subsequent premiums are paid or not.

SURRENDER VALUE AND NEGOTIABILITY OF POSITIVE NOTES.

The Positive note is a negotiable document, payable 'to bearer,' and bears a cash value of 40 per cent of the premium paid, which may be obtained at any time on surrender of the note, without forfeiting the balance of the sum assured, or may be taken as a loan bearing interest. The cost of probate or legacy duty is avoided by the Positive system.

PROSPECTUSES, AND ALL INFORMATION REGARDING THE COMPANY, MAY BE HAD ON APPLICATION TO

THE MANAGER,

6, OLD COURT HOUSE STREET, CALCUTTA.

CALCUTTA METAL MART.

THE undersigned have a large stock of Machinery, Metals, and Miscellaneous Articles of all descriptions, and are prepared to give estimates, or contract for the supply of any materials which they have not in their godowns.

They are also prepared, for a moderate commission, to import any articles from England at actual cost, and are in a position to get the best quality at the lowest possible price.

The following are generally in stock or on the way :—

Portable Engines.

Clayton & Shuttleworth's

Prices, with Single Cylinder .. .. Rs.	4 H. P. 2,700	6 H. P. 3,250	8 H. P. 3,900	10 H. P. 4,500	
Do., with Double Cylinder .. .. Rs.	10 H. P. 4,750	12 H. P. 5,000	16 H. P. 6,250	20 H. P. 7,500	

Reversing Gear.

Extra, at Rs. 200 to Rs. 400, according to size.

Stationary Engines.

Tangye's (suited for Tea Gardens), with vertical boiler mounted on base plates, occupy little room, and are well adapted for use with Tea or other machinery requiring small power. Fire-places are constructed to burn either wood or coal.

Prices .. .. Rs.	2 H. P. 1,400	3 H. P. 1,500	4 H. P. 1,650

Fire Engines.

Holman's, with suction and delivery hose complete.

Centrifugal Pumps.

Gwynne's—are largely used all over the world where a rapid discharge of water is wanted.
A 6-inch pump worked by a 6 H.P. Portable Engine will discharge about 700 gallons of water per minute.
A 7-inch pump worked by an 8 H.P. Portable Engine will discharge about 900 gallons per minute.
An 8-inch pump worked by a 10 H.P. Portable Engine, will discharge about 1,100 gallons per minute.
Prices, with pipes and other fittings complete.

Rs.	4 in. 460	5 in. 600	6 in. 750	7 in. 900	8 in. 1,050.	10 in. 1,300	12 in. 1,500.

Centrifugal Pumps.

The same sizes, but of slightly different shape, may be had mounted on wheels, and will be found useful by Contractors and Engineers who require Portable Pumps.

Special Steam Pumps.

Tangye's, are very compact and simple in construction.

Disintegrators.

Norton and Hawksley's for grinding to a fine powder artificial manures, ores of all kinds, shale, asphalte, lime, chalk, coal, coke, clays, barks, myrobalans, leather, drugs, sugar, seeds, and grains of all descriptions, besides many other articles.

Prices.

No. 1, Rs. 450; No. 2, Rs. 1,050.

Extinctures.

Dick's—can be carried by one man, and always kept ready for instant use in case of fire. They have proved very efficacious at Home; and in Warehouses, Mills, and Ships; as well as for Private Dwellings, they form a great safeguard against damage by fire.

Prices.

No. 4, Rs. 100; No. 5, Rs. 125.

Charges for ditto supplied extra, at Rs. 4 per tin.

Steam Road Rollers.

Aveling and Porter's, 5 ton and 8 ton.

Stone Breakers,

Marsden's	Rs.	3,000
ALBION DRILLING MACHINES	„	325

Steam Hammers,

3 cwt., with fittings complete	„	1,250

Soorkee Mills,

with 6-feet pan and rollers complete	„	1,025

Injectors.

Giffard's—are much superior to Pumps as Boiler feeders, and are very simple in their construction.

Prices .. .. Rs.	No. 4. 70.	No. 6. 90.	No. 8. 135.	

Wire Tramway.

Hodgson's. These Tramways are well adapted for carrying produce and minerals over hilly ground, or in any country where good road or water carriage is unavailable; and as feeders for railways, their use might be extended.

The undersigned will be happy to furnish Catalogues and particulars on application.

J. NICOL FLEMING & CO.

W. NICOL & Co.,

BOMBAY METAL MART.

Bombay Saw Mills and Waggon and Carriage Factory.

BYCULLA IRON WORKS.

AT THE METAL MART WE HAVE ALWAYS IN STOCK THE FOLLOWING MACHINERY, TOOLS, &c. :—

Clayton and Shuttleworth's Portable Engines.

J. & H. GWYNNE'S Centrifugal Pumps, Contractors' and Deep Well Pumps. SHAND and MASON'S Hand Fire Engines, SUGAR MILLS of a cheap and simple construction, &c. BLACKSMITHS', CONTRACTORS', and ENGINEERS' Tools of all kinds GAS AND WATER PIPES of all sizes. Steam and Water Valves and Cocks, Gauge Mountings, &c.

VAL DE TRAVERS ASPHALTE for Verandah, Barrack and Godown Floors. This is the same Asphalte that has been used so successfully in the City of London and on the Bombay footpaths, where it has stood the climate admirably.

Francis Morton & Co.'s Galvanised Wire Fencing, Netting, &c.

We have always on hand a large stock of the best kinds of Ironmongery and Brass Foundry, including Brass Hinges, Locks, Oak Door Handles, &c.

We would draw the attention of steam users to a 20 H. P. Roots "SAFE AND SURE" Boiler we have in use at our Iron Works. It is very economical, can be used with wood fuel, is easily transmitted over rough country, as the heaviest part does not weigh over one hundred weights and can be worked to any pressure.

We have lately imported a simple Machine called the VELLIPEQUE ROCK PERFORATOR for drilling blast holes in Rock. In some cases it has reduced the cost of Rock Cutting 20 per cent., and in making the Tunnel for the Toolsee Water Scheme these Machines drilled a 1¼ hole 12 inches deep in 2 minutes.

We beg to draw attention to a length of HODGSON'S WIRE TRAMWAY we have in operation at our Byculla Works. This system is well adapted for the working of Quarries, Collieries, Coffee Plantations, &c., &c.

We are prepared to enter into contracts for the supply from England of all kinds of Iron Work, Bridges, Roofing and Machinery of every description, Artificial Stones Marbles, &c. The gentleman at the head of this Department in our London House is a practical engineer, and all Indents are carefully inspected before Shipment.

BYCULLA IRON WORKS.

This branch of our Iron business is *conducted by European Engineers. We have introduced the use of English moulding* sand and loam, which enables us to make castings of a superior quality.

We are prepared to contract for the construction of Wrought and Cast Iron Girders, Iron Roofs, and Bridge Work, Pumping Machinery, Mortar Mills, Cranes' Iron Waggons, Road Rollers, all descriptions of Contractors' Tools, Hammers, Drills, &c., and all kinds of general Iron Work. We also make Brass Castings of every description.

BOMBAY SAW MILLS,

AND WAGGON AND CARRIAGE FACTORY.

At our Steam Saw Mills at Tank Bunder we have always in Stock a large quantity of the best Moulmein Teak Timber, in Squares, Planks, and Boards, also Jungle Woods, Pine, and other Timber.

We are also prepared to undertake Railway Waggon and Carriage building in all its branches.

THE FOLLOWING ARE OUR PRESENT QUOTATIONS :—

Best quality Logs up to 30 feet long, and 20 inches square, from Rs. 110 to Rs. 130 per ton of 50 cubic feet. Above these sizes special rates, Boards, from Rs. 110 to Rs. 125 per ton of 50 cubic feet.

Scantlings prepared to specification, of ordinary size, for House building purposes and Bridge Works from Rs. 2-12-0 per cubic foot.

Planing and Plain Framing for Floors, Door Frames, Roofs, &c., from Rs. 0-4-0 per cubic foot.

TEAK.

1½ inch	Panel Doors or Window	Rs.	0	13	0 per square foot.

LIFE DEPARTMENT.

The Life Funds are free from any liability to the Fire Department by the Company's Acts 33 and 34 Victoria. Session 1869-70,

Accumulated Funds irrespective of the Paid-up Capital £2,551,589-16-7

Annual Revenue from Premiums and Interest 360,625-18-9

At the last Quinquennial Investigation and Division of Profits for the period ending 31st December 1870, the Surplus Fund divided amounted to £182,274 5 2

The value of the loading reserved for Future Profits and Expenses amounted to £601,554 0 0
Besides which there were reserved for Contingencies, &c. .. 33,925 6 2

Making a Total Reserve of £635,479 6 2

During the five years preceding 1870, the Company transacted the following new business:—

NO. OF POLICIES ISSUED.	SUMS ASSURED.	PREMIUMS.
£4,567.	£4,132,141.	£133,279 16 5.

A Bonus was declared upon the Policies of the Company on the Participating Scale, at the rate of £1 5s. per cent. per annum, which in many instances was equal to £1 19s. per cent. per annum, on the original sum assured, the principle of division being to declare the Bonus not only on the original sum assured, but also on all previous Bonus additions.

THE RATES OF PREMIUM are moderate and generally LOWER than those of other Offices.

REDUCTION TO ENGLISH RATES without Medical Certificate or fresh examination, *from the date of leaving Alexandria, or Port Said for Europe.*

NINE-TENTHS OF THE WHOLE PROFITS in the Life Business are divided amongst the assured in the Participating Scale every FIVE YEARS.

THE NEXT DIVISION OF PROFITS WILL BE MADE AT 31ST DECEMBER 1875.

All Policies on the Participating Scale opened on or before that date, will share in the Fund then to be divided, which will consist of the Profits made during the previous Five Years.

The following Gentlemen have been appointed, with all the usual powers, as

Local Board of Directors:

F. S. Collis, Esq., Officiating Administrator-General.
Capt. H. P. Lovell, Supdt., P. & O. S. N. Co.
R. A. Lyall, Esq., of Messrs. Lyall, Rennie & Co.
E. T. Roberts, Esq., Solicitor.

MEDICAL OFFICER.—Dr. J. Ewart, Surgeon to the General Hospital.

Insurances are granted by this Company on nearly every description of property in Great Britain, in Foreign Countries and in some of the Colonies at moderate rates.

Mills, Factories and other hazardous risks will be specially surveyed at the request of the owner.

The duty on fire insurance has now entirely ceased.

KETTLEWELL, BULLEN & CO.,
Agents in Calcutta.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit."—Extract from the Speech of the Chairman of the Annual Meeting, 7th August,* 1874.

HOBSON AND COMPANY'S

FRAGRANT ROSILINE MOUTH-WASH.

A DELIGHTFUL preparation, invaluable for cleansing the mouth, preserving the palate, and purifying and sweetening the breath. It readily dissolves all tartarous incrustations on the teeth and causes their firm adhesion to the gums, at the same time imparting to the teeth a pure and pearl-like whiteness.

PREPARED ONLY BY
H. C. HOBSON & Co.,
London Dispensary, Umballa.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policyholders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 40 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, Quarterly, or Monthly, at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

Available Funds ...	...	**£ 971,942 10 10**
Annual Income ...	...	**£ 169,497 15 8**

Claims promptly adjusted on proof of Death.

Total of Claims Paid Since 1834, £ 2,070,348 17 1

The financial position of the Institution on 31st December 1873, was as follows:—

Proprietary Capital		£1,000,000 0 0
Annual Life Income	Premia	76,900 0 0
	Interest	24,300 0 0
Realized and Invested Funds		560,332 0 0

RETIRING PROVISIONS.

Policies are issued by which these may be secured, and at the same time a surviving family be protected in the event of premature death.

ASSURANCES BY TERMINATING RATES OF PREMIUM.

Under this system, Assurances can be effected for the whole term of life, the annual premia for which cease after a given number of years.

FREE POLICIES.

Assurances by this system can never altogether be forfeited by non-payment of Premia.

CLERGY FUND.

One-tenth of the Proprietors' Profits is periodically set aside for the purpose of aiding Clergymen and Ministers to assure their lives for the benefit of their families.

INDIAN LIFE ASSURANCE COMPANY, LIMITED.

COMBINING LIFE ASSURANCE AND PENSIONS.

Funds *entirely* in GOVERNMENT SECURITIES AND REMAIN IN INDIA. Policy-holders can appoint an Auditor.

Established 1869

ON NEW, SOUND AND POPULAR PRINCIPLES.

(Preliminary expenses including Establishment of 44 Agencies Rs. 2,066 only instead of Rs. 50,000 and upwards!)

REGISTERED UNDER ACT X. OF 1866.

Capital Rs. 500,000 Fully Subscribed.

Paid-up Rs. 100,000 only (to leave a large surplus to Policy-holders) as advised by the Actuary, J. Hill Williams, Esq., Vice-President, Institute of Actuaries, London.

HEAD OFFICE: MEERUT.

BRANCH OFFICE: BOMBAY.

Advantages of Assuring with this Company.

(1) ECONOMICAL MANAGEMENT. (2)* ENTIRE DIRECTION IN INDIA (3) NO AMALGAMATION. (4) FUNDS in Government Securities only. (5) REDUCTION OF PREMIUMS. (6) POLICY-HOLDERS entitled to appoint an *Auditor*. (7) REDUCTION TO ENGLISH RATES from date of leaving an port in India, Ceylon or China. The first Company which granted this complete concession. (8) NO RESTRICTION ON TRAVEL. (9) INDIAN RATES of Premium charged while in India. English Rates on leaving for Europe. Assurers who do not contemplate spending a *life time* in India or other tropical climates, will find that the rates of this Company compare *favourably* with *enhanced English Rates*. They have the advantage of *consistency*, as it is *proved beyond doubt* (by the various Civil and Military Funds) that English Life is of less value in India than in Europe. (10) ASSURANCES EFFECTED on lives of EUROPEANS, EURASIANS, PARSEES, AND HINDOOS. (11) CLAIMS PAID three months after satisfactory proof of death. (12) POLICIES for the whole term of life. Short terms of years certain, or payable during life time. ENDOWMENT ASSURANCES combine the advantages of Personal and Family Provisions. They are made payable to the assured themselves on attaining a specified age, or to the representatives at death should that happen sooner. A PROMISSORY NOTE GRANTED for every PREMIUM PAID. (13) HALF CREDIT SYSTEM. (14) NON-FORFEITABLE POLICIES BY LIMITED NUMBER OF PAYMENTS. Should payment of premium not be continued, a paid-up Policy in the form of a Negotiable Promissory Note payable to bearer is given for every Premium paid, which Promissory Note cannot lapse, and is payable on the death of the assured or may be converted into cash during his lifetime to the extent of 30 or 40 per cent. of the premium after 1st or 2nd years paid, *without* forfeiting the balance of the sum assured. *Thus*, the assured receives full value for his money for although he can only withdraw 30 or 40 per cent. of the amount of his premiums paid, he receives value for the *remainder by being* assured. In this way he has *full* control of his money, the Premiums paid becoming to him equal to a current banking account withdrawable at will. (15) LIBERAL SURRENDER VALUES. (16) SUMS PAID under Promissory Notes exempt from all charges. (17) PREMIUMS are payable monthly, quarterly, half-yearly, yearly, in five, ten, fifteen or twenty payments, or on the half credit system. (18) LAPSED POLICIES may be revived at any time on production of approved Medical Certificates and payment of arrears of Premium, with interest. (19) LOANS ON POLICIES. (20) EXCHANGE OF POLICIES by the substitution of Lives. (21) PENSION BRANCH. *The Rates are more favourable than those of any similar Fund in India.*

THE TWO GRAND INDUCEMENTS TO POLICY-HOLDERS MUST ALWAYS BE

Unquestionable Security; and as large Profits as the System of Life Assurance admits.

Forms of Proposal, Tables of Rates, and any further information may be obtained on application to the Company's Agents, or to

D. LANCASTER, *F. I. A.*,

THOS. B. BATEMAN, ESQ., Manager of the Fire Department.

LIFE DEPARTMENT.

This Corporation has granted Assurances on Lives for a period of nearly One Hundred and Fifty Years, having issued its first Policy on the 7th June 1721.

Two-thirds of the entire profits, without any Deduction for expenses of management, are alloted to the Assured.

The profits are declared at the end of every five years, and the share of the Policy-holders may be appropriated either in increase of the Sum Assured, or as an immediate Cash payment.

Assurances may also be effected without participation in profits, at reduced Rates of Premium.

The premiums have been computed from the most recent information on the subject of European mortality in India, and they will be reduced to the corresponding English rates on the return to Europe of the persons whose lives are Assured.

Premiums may be made payable either yearly or half-yearly.

Policies on lives of Military Officers in civil employ issued at the Civilian Rates.

Risks on Male Parsee and Eurasian lives, under 40, accepted at European Rates.

Medical Fees and Stamps are paid by the Corporation.

THE FAMINE.

IT may be asked, and not unfairly, whether we who have criticised so freely the measures of the Government for the relief of the people in the famine, have any views of our own as to the way in which it should be administered. Thus appealed to, it would be wrong were we not to avow that we think it very doubtful whether we are not on the wrong tack altogether, when this disaster overtakes the Behar province. We say the province of Behar, because it is in meeting famine, the physical, the climatic, the economical, and the commercial peculiarities of the district must largely determine what the mode of relief should be. To meet a famine in the Punjab may, and indeed will, necessitate a course of action altogether different from the course which it may be necessary to adopt in Behar. Now these Behar calamities come upon a people so peculiarly situated, that it is worth careful reflection whether we have yet hit upon the right mode of meeting them. At the very moment, when we knew of 20 millions of people being in imminent danger of starvation, we allowed half-a-million of acres of the finest rubbee dil of Behar and the adjoining district of Benares, to be put under opium. Now, this land is all *irrigated* land, and if in drought a crop is possible at all in these districts, it is on these opium lands. To persist then in sowing them with poppy when this calamity threatens the people, may be a serious error; for we might otherwise have by April a harvest of food grown and distributed on the spot, for the rescue of the people from the fate impending over them.

We watched with great concern the course of this drought from the first, the subject having burnt itself in upon our mind deeply in past years, and we think that there is always a disposition at the outset to *under*-rate the danger. The spirit of what the Government did was admirable, but it was not quick enough, and the way in which things were done was doubtfully wise. With the prospect that millions of the people would be starving at the time when the fields were waving with a harvest of poppy that might have been *wheat*, we still went on sowing poppy. Now upon the recurrence of a calamity like *this*, were Government to forego in spite of all financial opposition, its opium sowings for the year, and to direct the whole of the arable soil of the province to be put under wheat, the fear of the people starving would largely disappear; for half-a-million acres of irrigated land successfully sown with wheat, would yield food enough by April to maintain five millions of people for three or four months, until the rain-crops of September came to their rescue. By allowing the land to be put under poppy, at such times, we take a heavy responsibility upon ourselves. The task of inland carriage and of distribution of food is so immensely difficult, that if we were to put the opium lands under wheat at such times, we should greatly lessen the danger to the people. We doubt therefore, whether we have as yet hit upon the right course of meeting famine in Behar, and whether our views upon the subject do not require to be altogether changed. In Behar in October 1873, there was the strongest reason to fear that the food reserves were almost *nil*, while the difficulty of importing food was almost insuperable, and yet there is the broad fact that we allowed half-a-million of acres of irrigated rubbee land to be sown with opium that might have been wheat.

The fact, we think, must be admitted that the question of our procedure at these times has still to be settled. The step which we have made in advance, however, in this famine, is more important than any that can follow it, and involves them all. *We have met famine for the first time in the right spirit. That* is the all embracing and honorable fact. We may reasonably hope that a failure of harvests so complete as we had to meet in this instance, and in some of the most densely peopled and poorest districts of the province too, is not likely to occur again for a generation of years. We have met it, and carried the people through it successfully, and this single consideration dwarfs into insignificance every criticism upon the means by which the rescue of the people was accomplished. Whether the precise course that was followed was correct or not, is a minor consideration altogether. The State met the calamity, we say, for the first time in the right spirit. It resolved that let it cost what it might to save them, the people should not die. It may be as we have insisted, that Lord Northbrook erred in not stopping the export of rice; but in bringing these articles to a close, we should not be honest if we said that we are *quite* sure he erred. For we are not. The subject should pass under the most careful and full governmental revision that can be given it. *Primâ facie* again, it was a strange error that ignored throughout, the vast machinery of private mercantile enterprise that was at the command of the State, and that attempted so much by purely Governmental machinery. But on this point also, it would be untruthful to say that we are *quite* sure that an error was made. What was done, and done successfully though at heavy cost, now that all is over should pass under the closest, most attentive, and most comprehensive review that can be given it, for our future guidance. No attempt has yet been made to do this in any quarter, and we have been somewhat disappointed that nothing has been said by our contemporaries, so far as we know, in impeachment of the conclusions that we have ourselves urged upon the public mind. For it would be wrong in closing this series of articles upon the subject, if we said that our reasonings were altogether satisfactory to our own mind.

There is much to be said in defence of the course that was taken, and that it is most necessary should be said: and unless we are anticipated in the matter, we shall probably recur to the subject in a future issue, to state as clearly as we can considerations in favour of the Governmental policy that require to be carefully weighed. We would make, indeed, an earnest appeal to Government itself—and with the success achieved it can afford to meet it—to get the whole question impartially reviewed by some one in possession of the full history of what was done. The task of review will not be easy, but it ought to be possible to arrive at a definite and settled conviction, both on the question of stopping the export at such periods, and of doing everything by governmental machinery. We say frankly that we do not feel *quite* sure upon either point; and having written as forcibly as we could on both, and somewhat influenced opinion it would seem in the matter, it is incumbent on us to make this avowal. The one point on which we do feel sure is this—that when these calamities occur in Behar, what is coming may be foreseen with certainty by the end of October. *That* is the one point, we say, on which we feel a strong conviction that a serious mistake was made. When the middle of October passes by without rain, the calamity is certain; and from the climatic peculiarities of the province ever will be so, under similar circumstances.

And here we might stop, but for the painful and growing consciousness in our mind that we were very unjust towards Lord Northbrook personally in much of what we said three or four weeks ago, with reference to his relations with Sir George Campbell. An esteemed correspondent takes us to task upon the matter, elsewhere in our columns: and we feel he is right, in common with those of our contemporaries who have

protested against our having been unjust towards the Viceroy in those articles. We *were* unjust to him, and feeling that we were, it is right and necessary to say so. That there was a want of complete cordiality between the two Governments is true, and that it affected the tone of their relations, and increased the evils that ever attend a double Government is also true. But it was unjust to Lord Northbrook, and it was unworthy of ourselves, to say that he came down from Simla with any but the purest compassion towards the people and sense of duty to the State. We do not seriously believe that it was jealousy of Sir George Campbell that brought him down, but a strong sense of public duty, and we are sorry that we should have said what was so unjust. There was little personal sympathy between the two Governments, but we feel that it was unjust to lay all the blame of that upon Lord Northbrook. For invaluable a man as Sir George is, he is not easy to work with, either as a colleague or a subordinate, for in spite of his great qualities he provokes opposition and dislike. It was unjust, therefore, to lay all the blame of the coldness between the two Governments upon the Viceroy. Sir George Campbell should undoubtedly have a full share of the honors which Her Majesty may be advised to bestow in connection with this famine, but it is the special praise of Lord Northbrook that he is the first Viceroy who has dealt with famine in the right spirit. The success with which his resolution that "the people should not die" was attended, will mark a distinct era in human progress; and that his name will be linked therewith for all time, is a distinction so honorable and so blessed that it may well be envied. We have now tried to do more justice to Lord Northbrook than we did before, and to set our conscience at rest upon the point.

As to the veto of Dr. Smith's apppointment, we still think the step was unwise; but, it is only fair and honest to recal that the Viceroy was simply reflecting a strong public feeling, a feeling that he himself no doubt shared. It would have been more dignified, we think, and certainly more magnanimous to have allowed the appointment *to pass without notice; but Governors* are human as well as journalists, and Lord Northbrook no doubt believed that he was administering a wholesome check to what he thought was mischievous journalism, when he refused to allow the nomination. It was a mistake we still think; but it was hardly perhaps fair to say so, since so many sympathized with it at the time and thought it justifiable. That the relations of Government with the Press in India want review, is still true. The question is almost as full of difficulties as the question of our procedure in time of famine; but we are not without hope that in spite of our having been, as we feel keenly, unjust to Lord Northbrook in many of the things said by us in our opening articles, both questions will be helped forward a stage, in spite of our faults of temper in their treatment. We should gladly open our columns to a defence of the State procedure towards the famine on both the important points we have ourselves discussed. Neither of them ought to be dismissed at the present stage, for they are undoubtedly still open questions.

THE SCARE IN EUROPE.

THE influence of the London *Times* is certainly exerted at intervals, in the most disastrous manner. Almost every one can remember how completely it misled opinion in England during the American war, by systematically suppressing every fact in favor of the North, and representing the Southern cause in every light but the true one. The guilt of the journal was very great, for the consistently dishonest course pursued by it from 1861 down to the last month of the war. In its hatred of the North, it set itself from the first to mislead the nation as to the causes of the war, and followed this up by systematically falsifying its events. We should not speak thus strongly, but that being in England at the time we had full proof of the truly mournful manner in which the mind of the country was misled by the paper. While the *Daily News* was making the most heroic but heart-breaking effort to counteract its influence, and make the country aware of the issues involved in the conflict, and the real course of events as the war progressed, the *Times* invariably used its great resources to falsify both. Had the nation plunged into war on behalf of the South, we do not hesitate to say that the guilt of the step would in the main have belonged to the great English journal.

We do not recal the fact to fix a stain upon our contemporary for a moment, but it is absolutely necessary that the principles on which the *Times* is conducted, should be better remembered than they are. For it was the *Times*, be it remembered, also, that applied the only spark that was wanting to kindle the great Franco-German war in July, 1870. Every one, we suppose, remembers the interview at Ems between the Emperor William and Bernadotti. Up to the telegraphing of that story all over Europe, there was hope of peace, but the use to which it was turned in the *Times* made peace impossible from the fury into which it lashed both nations. And now again if war had broken out in Europe, it would apparently have been this journal that produced it. We do not believe for a moment that Germany was contemplating war against France, but that the Czar brought an olive-branch with him. The belief is, we are satisfied, without foundation. The Germans were *not* about to strike. They thought about it, and talked about it; and that they talked about it is "the best evidence that can be afforded that there was no real intention to strike."

The truth is that the *Times* is able to persuade men 'on Change' anything it pleases. It is a grave misfortune for the country and for Europe, that our city men, the men of the great money market of the world, are under a course of the journal from one year's end to another. There is hardly one city man in ten who as he comes in from the suburbs with this paper in his pocket, does not by noon reflect and propagate the views he has just been reading. Unhappily for the country, the *Times* seldom sets itself with high and enlightened purpose, the purpose begotten of conviction, to disabuse the public mind of the delusions of *the time*. Its policy is to reflect them; and so *skilfully* does it seize *the moment for so doing*, that while it *seems to create* opinion, what it really does is to discharge it like a thunderbolt, when every man is ready to say "*that* is exactly my conviction." The thing is of comparatively small moment in ordinary times, but it is a *political danger* of great magnitude when the times are *electrical*. But one thing is needed to make the London *Times* the greatest political power of the age. It wants conviction, conscience. Instead of losing anything by adopting a higher editorial *morale*, it may reasonably be believed that it would gain indefinitely both in power and public respect. For it has got the position, and everything necessary to maintain it. That it will endure upon its present basis, we do not believe.

RELIGION AND INTELLECT.

THE author of the *Intellectual Life* in a letter addressed to a friend who seemed to take credit to himself for the nature of his religious belief, "takes exception to associating together the ideas of Protestantism and intellectual superiority." His position is that religious belief is not necessarily of consequence as affecting intellect, because though it "protects this or that subject against "intellectual action, it does not affect the energy of the intellectual "action upon subjects which are not so protected." Religion, he urges, may be absolutely inoperative on intellect. An Empère may be a great chymist though eagerly accepting transubstantiation. A Sydney Smith or a Thomas Arnold profound critics of everything but the Bible which their Church forbade them to criticise; a Comte or a Sainte-Beuve is intellectually neither less nor greater by reason of his atheism. While accepting Mr. Hamerton's warning that religious rationality is not necessarily associated with intellectual superiority or *vice versâ*, it may be questioned whether he is justified in assuming, as he seems to do, that all religion must protect something from intellectual action. If it is true, we are logically led on to the position he repudiates, that the less the religion, the better the intellect. If he is not justified in making this assumption, may it not be that some religions are more favourable to intellectual progress than others, so that the eminent Swiss was right whom Mr. Hamerton reprehends for saying, "The people here are very superior; they are Protestants."

Religion is said to protect a thing from intellectual action by putting it forth as something to be accepted without exami-

THE ENGLISH MAIL.

IT is a comfort to know that the English public at last understand the case of the Gaekwar. The opinions of the Commissioners and the report of the Government of India upon them, have satisfied the press that substantial justice has been done, and it blames the Home Government for not having published the contents of these documents, and so saved much misapprehension and a considerable amount of censure. Upon the inconsistency of the course adopted the general opinion remains unchanged; but we do not observe that the share which we suppose in this country to have been taken by the India Office in the matter has attracted much attention. Lord Northbrook is credited with the Proclamation as well as the Resolution; it is probably considered that the former document being issued in his name there is no need to consider its source, though the use of the words "Her Majesty's Government" instead of "the Government of India" certainly implies its home origin. The opinions of the Commissioners *pro* and *con*, and the conclusion formed thereupon, will, the *Times* says, "go further to confirm the substantial justice of Lord Northbrook's decision than any defence of the Indian Government yet published." But in saying this the *Times* bears in mind that the Government had reserved to itself the right of forming an independent judgment, and observes that "in the course of the investigation so much doubt was thrown upon a great part of the case for the prosecution as would have justified a jury in a Criminal Court in giving the accused the benefit of the doubt." Our London contemporary severely sums up the previous mistakes. "Why," it asks, "was the real ground of the deposition kept carefully out of the Proclamation and hidden away in the resolution? It is true that the adoption of a direct course in this matter would not have got rid of the worst consequences of the former blunders of the Indian Government. The premature arrest of Mulharao with his practical deposition—which was nothing more nor less than punishment before trial—was the first error in judgment. The second was in allowing the character of the Commission as a mere board of inquiry to be concealed under judicial forms, with the probability that the native members of the Court—for so it was spoken of throughout—would regard themselves as judges. The danger of a state of things in which, as it actually happened, the Government of India might be compelled to set aside the judgments of those whose help it had invited ought to have been seen long before the Baroda trial was allowed to become the talk of all India."

***

THE *Pall Mall Gazette*, as heretofore, is more severe. Regarding the retention of the official documents the writer says: "But we are bound to say that the connection between the Viceroy's opinion and his policy is so remote that he has lost nothing by the delay. Rather it may be said that the overland mail has demolished a defence of the Viceroy's action which the telegraph wire had left possible, and that the Government resolution has only served to show more clearly the lame and impotent conclusion of the Viceroy's proclamation. For the definition of the limits of the authority delegated to the Baroda Commission, which now reaches us for the first time, renders still more inexplicable and indefensible a line of action which could only be explained and defended upon a different theory of the Commissioners' powers. They were not, Lord Northbrook says, a 'judicial tribunal,' and yet he has held himself bound by their decision." It was not likely that inconsistencies of this kind, and the reasoning which they suggest, would be passed over by the English press. The *Pall Mall*, like the *Times*, is not satisfied with the evidence. "The English Commissioners," says the writer, "hold one opinion upon it, and the native Commissioners another; but, the evidence to the affirmative effect being of a highly questionable character, it is at least a point in the Gaekwar's favour that we are not bound to believe it from mere lack of any other means of accounting for the facts of the case." And he adds presently in conclusion, that "the Commission *was* a judicial tribunal—that its very constitution cannot be explained on any other hypothesis. And does not this again show how grave was the Viceroy's error in appointing to such a tribunal men whose decision, if favourable to the Gaekwar, it would be judicially improper to reverse and politically impossible to confirm?"

***

UNDER the auspices of the East India Association Mr. J. Farley Leith has presented to the House of Commons a petition signed by nearly 22,000 native inhabitants of India, residing in different parts of the Deccan, complaining that the affairs of India receive but little attention at the hands of the British Parliament. Questions of the most vital importance, affecting the well-being of 200,000,000 of Her Majesty's subjects, seldom enter into its deliberations, or at best are dragged to the fag-end of the session, when they are disposed of with little or no attention. The few members who devoted their time to Indian topics in the last Parliament lost their seats at the recent election, and there exist no me ans whereby the grievances and wants of the people of India can be efficiently represented. The petitioners therefore urge that it has become a political necessity that India should have direct representation in Parliament, and they point to the entire success of a similar experiment in respect of those parts of India which are administered by the French and Portuguese Governments. The petitioners repr esent that about sixteen members elected for the whole of India would at present suffice in the following proportions: Four for Bengal, four for Bombay, four for Madras, two for the North-Western Provinces, and two for the Punjab; and the electoral qualification might be the payment of fifty rupees as annual rates and taxes.

***

LORD SANDHURST said in the House of Lords that British officers were apt to be wanting in courage and honour. Being tackled by the Commander-in-Chief and the Duke of Richmond, he feels that perhaps he has too rudely exposed the characteristics of our army. Prudently, therefore, he comes forward and says in the words of *Vanity Fair*: "My Lords, I only used the expressions complained of in a Pickwickian sense. I was quite "justified in illustrating the baseness of the anti-Cardwellian "officer by stories of w hat my most cherished friends did; but "after all, when I said black In meant white. In fact, I meant "nothing at all."

***

MR. BRIGHT'S oratory is a subject of discussion in the papers brought by the last mail. *Vanity Fair* holds that the member for Birmingham has no equal or second among living statesmen in purely oratorical qualities. Mr. Disraeli is a clever epigrammatist who amuses but never moves. Mr. Lowe is Mr. Disraeli weighted with an unfortunate knowledge of political economy and statistics, Mr. Gladstone can make a lucid statement and quote Virgil happily: occasionally, too, he is in earnest with his subject, and will utter a few passionate phrases which rise to the sublime. But he too often sees that there are several sides to a question, and he has even had the courage to admit that he had been convinced by the arguments of an opponent. His candour leads him into explanations and distinctions which make his oratory diffuse and at times tedious; and he is apt to forget the practical issue of a discussion in an examination of its remote bearings. As Mr. Gladstone is too much of a thinker to be a statesman, so he is too much of an essayist to be an efficient speaker. Mr. Bright, on the other hand, never seems to conceive that anybody who is at once honest and sane can hold views different to his own on any subject whatever. This narrowness of mind is of immense advantage to Mr. Bright, for it leaves him at liberty to assail his adversaries in whatever way he may deem best without taking the trouble of answering their arguments—which in all probability he has never seriously examined." In other words, one reason of Mr. Bright's success as an orator is that he is extremely ignorant. He thus readily accepts a plausible and popular view of any question, puts it into excellent English, and makes it his own. Mr. Bright has also a fine sense of the use of pathos in rhetoric; nor in the expression of this sentiment has he ever transgressed the bounds of good taste. Indeed, he is so discriminating in this respect that one-half doubts whether his pathos is sincere. A man who feels is sometimes carried away by his feelings. Burke, after thirty years' experience of the House of Commons, could perpetrate the ridiculous dagger scene; and Pitt, in the twentieth year of his Premiership, was almost moved to tears in pleading for his friend Lord Melville. However, if Mr. Bright's pathos be ever assumed, it is a piece of masterly acting before the most critical audience in the world."

PUTTING aside the swinging of the saloon, the *Bessemer* is pronounced far superior to the ordinary channel steamer, nor when her captain and crew have thoroughly made the acquaintance of the harbour is there anything to prevent her going into Calais as surely and safely as any other vessel. The late accident arose solely from their not having yet had the opportunity to make this acquaintance so thoroughly as is necessary for going into a narrow port with a strong tide setting across the entrance. The *Bessemer* indeed has a defect

which seriously affects not only her speed and handiness, but also her power of passing over Calais bar, on which there are sometimes not six feet of water. It is that she is eighteen inches deeper in the water than she was intended to be, or ought to be. This has been caused by the apparatus connected with the swinging saloon being 150 tons heavier than was bargained for. The remedy is simple: to take the swinging machinery out of her and let the saloon be fixed. When this is done, and she is thus restored to her proper draught, she will be a splendid vessel, and will make the passage between Dover and Calais with less than half the usual motion, and in little more than half the usual time.

WERE Germany to engage in a war with France she would be able to place a far larger number of landwehr battalions in the field than was the case four years ago. The moveable landwehr battalions can under the new organization be partly attached to the divisions and brigades of the regular army, while the fourth field battalions will be available for reserve and commissariat duty. These 148 battalions, which are only to be called out in case of war or mobilization, will consist of 2,664 officers, and from 118,696 to 148,296 men, with 6,000 horses, thus raising the total force of the German army when on a war footing to 1,032 battalions, 745 of which, under the new increased establishment of 29 battalions for each of the 22 corps d'armée, would be available for service in the field. The artillery equipment of the fourth field battalions is already provided; 300 field batteries and 54 reserve batteries are set apart for them, which would allow 16 batteries, or 96 guns, for each corps. A writer in the *Cologne Gazette* states that it is very probable that the landwehr artillery will be largely increased. As to the yearly contingent, that of the German army is far smaller than those of the Russian and French armies. According to the last returns, based on the census of 1871, the number of young men of twenty on the lists was 502,000. Of this number, 96,000 had been by mistake entered twice over, 42,000 had emigrated or had otherwise become unavailable, 14,250 were qualified as one year's service men (einjährige), 240 were "morally disqualified," 25,000 were "totally unfit for service," 5,500 "not sufficiently fit for service," 232,000 "not sufficiently developed physically," 10,600 were exempted for family and other reasons, and 400 were in prison or under trial. The original number of 502,000 men was thus reduced to 76,000, to which were added 90,000 men who for various reasons had not joined in previous years, making a total of 166,000 men. Of these, however, the number actually taken into the service was only 145,550—*viz.*, 143,050 for the army and 2,500 for the navy.

***

IN his speech to his constituents at Elgin Mr. Grant Duff takes, as is his wont, a bird's-eye view of the universe, and delivers himself of a few platitudes in reference to the most important matters that are at present being transacted under the sun. Then he comes to India; on our Indian administration he pours a copious stream of eulogy. There is absolutely nothing to alter, hardly anything to improve. The Indian Empire is founded upon a rock. "Not only is the need of us at this moment great and overwhelming, but he could not see under what circumstances India was in any time one could look forward to ever likely to do without us. He believed that if we were only true to ourselves; if, that is, we went on steadily conforming our practice to the conclusion of our best and theoretical guides, we should, as it seemed to him, be necessary to the good of India for an indefinite period." On the Baroda business he expressed himself as follows. Putting aside matter irrelevant to his present purpose, the state of the case was this: "The Gaekwar was, by the admission of all, one of the worst rulers in the Indian peninsula. He was so bad a ruler that if it had not been for our enforcement of peace and order everywhere throughout India, his own subjects long ago would have made short work with him."

***

ON the subject of the Native Army, Mr. Grant Duff observed that, "after hearing a great deal of grumbling and alarmist talk from persons, each of whom knew something about his own little corner and no more, he went over the whole question with the Commander-in-Chief and other persons at the head of Indian military affairs, and came to the conclusion that in their opinion, the Native Army, although like most human institutions susceptible of a good deal of improvement, was on the whole more fit for the uses for which it was intended, than it ever was at any period of our history. . . . . As to the regimental officers whom he came across, and they were many, he could testify to the admirable spirit and interest in their work with which they were animated, while it would certainly need very good European continenta troops to cope with the native regiments he saw at Peshawur." Regarding the men competitive examination was sending into the Indian Civil Service, Mr. Grant Duff considers them "a distinctly higher average of men than they had in the old Haileybury days. It had been said that the men who were entering the service now were inferior in *physique*. It had been said they were inferior in social position, and so less calculated to command the respect of the natives. Both these statements were entirely erroneous. There was hardly a case of a man having entered the service by competition who had not satisfied the best medical authorities in London that he had at least the average strength of body, while the great majority rose far above the average standard in that respect. As to social position, the men who entered by competition came, with very rare exceptions, from precisely the same *strata* of society as their predecessors." From the Governor-General down to the youngest officer in the Staff Corps, the Indian administration is one entire and perfect chrysolite without spot or wrinkle or any such thing—no, not quite—Mr. Grant has observed one defect among "the officials of India." It is "a certain deadness of the observing faculties: their education has been too purely literary or mathematical; they do not take in nearly enough by the eye; their curiosity as to a great many things about them has not been sufficiently stimulated." If Mr. Grant Duff passed a few hot seasons in the plains, he would perhaps discover how this "deadness" is brought about. It exists to a far greater extent in the people of India, and is undoubtedly due to the same cause—the mental lassitude engendered by an exhausting climate. "It is the hard grey weather which breeds hard Englishman;" a residence in a tropical climate of a necessity transforms this hardness in a greater or less degree into an oriental langour.

***

THERE is an attempt being made at present to obtain sufficient funds by public subscription for a memorial to Lord Byron. Mr. Disraeli is President of the Committee, and Mr. Tennyson one of the members. It it a national disgrace that there is not a single grand or striking monument to any of the many great poets who have made English literature the unequalled thing it is. Even Shakespeare is unrepresented.

FOREIGN NEWS.

GERMANY.

IT is authoritatively announced from Berlin that there is no foundation for the report recently published that some weeks ago Prince Bismarck sent a circular to the representatives of Germany abroad, in which he stated that the new law upon the French army seriously endangered the peace of Europe.

IT is stated in diplomatic circles at Berlin that both the Czar and Prince Gortschakoff, on their arrival there, were still in doubt as to the real character of the political situation, and inclined to regard it as critical. It was only at Berlin that they were fully satisfied by the positive assurances of the German Government that there were no troubles to be apprehended. Upon this, by order of the Czar, all diplomatic agents of the Russian Court were immediately telegraphed to and advised that the prospect was entirely pacific. Russia had first offered its mediatorial offices should there be any serious complications. The Court of St. James made a similar offer. The Governments of Austria and Italy likewise inquired if their interference would be needed.

FRANCE.

INFORMATION having reached the French Government that some pocket-handkerchiefs were being sold, on which were illustrations calculated to excite the hatred of Prince Bismarck, the articles were at once assimilated with political engravings, and orders given to confiscate all offered for sale, and to prosecute the vendors. A provincial comic paper has at the same time been suppressed for publishing a political caricature against the German Chancellor.

THE Paris *Moniteur* has an article praising the attitude of the English Cabinet. "England," the article says, "by raising her voice for the purpose of maintaining and ensuring European peace, which appeared to be menaced, has naturally recovered the authority and influence to which she has so many claims. Praise is due to the British Government for its intervention, which was not only timely, but was offered under circumstances the best adapted to the nature of England's policy and the place she holds in the international equilibrium. The Cabinet of Mr. Disraeli has thereby acquired a degree of authority and strength which will justly procure for it the grateful remembrance of Europe." The article concludes: "France has witnessed the firm and correct attitude of the British Cabinet with the greatest pleasure. This country being simply and invariably attached to the maintenance of peace, we are justified in stating that England renders us the best possible service by endeavouring to remove external complications from the political arena." A Berlin telegram to the *Cologne Gazette*, however, says that the reports which have been circulated about offers of mediation by the European Powers

nation at her command. And that command is virtually disobeyed, though the thing is accepted if it is so only after it has been examined and approved by the intellect. Mr. Hamerton implies that Romanism and Protestantism are each as bad as the other. If one, for instance, bids you accept transubstantiation, the other insists on the infallibility of the Bible. Now undoubtedly and unhappily in practice, this is very generally so. But it is so only because Protestantism has deviated from its original principles and taken up with the dogmatism it originally revolted from. Not only do men insist on the verbal inspiration, *i.e.*, infallibility of the Bible, but on the correctness of opinions which they bid you refuse to entertain at your peril. This is neither true Protestantism nor true Christianity. Free inquiry goes on, for the authority of the Church once rejected there is no rational ground for prohibiting it. The controlling power must be the inquirer's own conscience. Nothing is protected by real Christianity from conscientious inquiry. As a matter of fact, Arnold did not accept Adam and Eve in the literal sense to which Mr. Hamerton would have us believe every clergyman is bound down (vide *Sermons*, Vol. V., sermons 1 and 2, *Misc. Works*, p. 100).

But where the authority of the Church is recognised, the case is very different. The true son of the Church cannot lawfully exercise his intellect on subjects she has forbidden him to touch. The matter of transubstantiation is hardly in point, since by the nature of the theory, as Mr. Hamerton admits, chemical analysis can neither prove nor disprove it. But supposing Empère had been an historian, could he have applied the laws of scientific investigation to the doctrine of papal infallibility? Either that would have been protected from the action of his intellect, or he would have disobyed his religion. Mr. Hamerton's notion of the relations of religion and intellect are vitiated by the error of thinking that the former is essentially of the character forced on her by man. Thus we find him saying, "the religious life is based on authority, the intellectual life on personal investigation." Our contention is, that while the protective action of religion against the intellect is part of Roman Catholicism, it has only been introduced into Protestantism by the tendency of mankind, on the one hand to submit to, on the other to enforce, obedience to authority. Free inquiry is the true spirit of Protestantism, and free inquiry is but another name for intellectual action. True religion thrusts herself on no one. She offers herself to all, if they will have her: *but they must accept her of their own* free will,—as freely as any scientific truth. Religion is a concern of all men in a way that philosophy is not; and the many are obliged to take on authority much that they have not leisure or learning to investigate *personally*. But in herself, religion is no more protective than science; if the reverse of the case put were possible, we might just as well see Mr. Hamerton earnestly warning religious men that the effect of science on religion was to shield a part of it from inquiry, without affecting the keenness of the religious feeling as to the rest.

However brilliant may be the exceptions, the probability is that sincere Protestants will have greater freedom for intellectual action than Romanists. It is possible for the former, impossible for the latter, to have no subject defended by his religion against his intellect. At the same time we are not compelled, because we urge the potential superiority of Protestantism over Romanism, to apply a similar scale to the relations of the former to atheism. For since true religion allows inquiry to be absolutely free, it can be no freer, though it may be equally free where there is no religion. These observations are not prompted by any fanatical No Popery desire to exalt Protestantism above Romanism. Indeed we use the former name only because Mr. Hamerton uses it. For, as commonly developed, Protestantism is almost as unlike true Christianity as Catholicism. It is only the inner and original spirit of the former which is preferable; for however it may have become fossilised in practice the principle of Protestantism is free inquiry. These observations were first suggested by sorrow at the thought of what the condition of Christianity must be, how small its chances of doing its work, when it presents itself to beholders like Mr. Hamerton as a system whose first requirement of its followers is an unscientific credulity; a system to which scientific investigation must, however unwillingly, do vital injury.

Oh! for some great preacher who, while convincing men of sin and of their need of Christ with the power and zeal which the American revivalists now in England are reputed to possess, could present religion to the multitude in its true simplicity; could show to all who wished to know that to be a Christian does not compel belief that Joshua made the sun stand still (as Mr. Hamerton seems to think it does); does not necessitate acceptance of doctrines blasphemous of the Almighty. Christianity is the revelation of God to man as their Father, and of men as potentially made to be His children. To be a Christian, is by the aid of the Spirit to fit ourselves for being God's children by the means pointed out to us in the life and death of His Son. Methodists and Revivalists have got hold of the right thing—surrender of self to Christ,—willingness to receive the Spirit; but their understanding of it is vitiated by the old error that a particular scheme of doctrine is the only means by which salvation may be obtained. They will not believe that a man may be a Christian, although his belief and his method of showing it are not precisely their's. Until religion is divested of accidents which now pass themselves off as essentials, we have little hope of more than transient success for preachers even at home, and not even of that in this country. And the difficulty of the work of divesture may be gauged by the inability of a man like the writer we have ventured to criticise, to see that these accidents are not the essentials they feign to be.

SOCIAL ADVERTISERS.

THE satirical papers at home have of late been somewha severe upon what they call Social Advertising, that is to say, the kind of advertisement that brought Bar, Bishop and Physic to the feet of the great Mr. Merdle. Men advertise themselves, their wives, and their daughters, say our contemporaries, by living on their capital instead of their income, and as it is a well-worn aphorism that the world accepts you at your own price, society is, of course, more or less taken in by people whose business it is to live up to appearances. As a rule, however, we should say that the world is wilfully blind to an imposition that it is its own interest not to detect. Certainly, this is the case in India where, although the social advertisement is just as well posted as at home, there are many facilities peculiar to the country, of discovering the quack in the advertiser, if it is any one's desire to do so. There is something admirable, indeed, in the audacity with which certain people advertise their social wares in India. Many of them, whose incomes can be calculated to a fraction by the pay-list of the Army or the Civil Service, will endeavour to impose a much larger income than they receive on society, which, with an amiable smile, affects to accept the imposture, well knowing that its purposes are served through its condescension or credulity. We should have but few *burra khanas*, balls, Badminton, or even social gatherings of a humbler sort than these, if people did not deem it necessary to advertise themselves in public; but the amusing part of the whole thing is this, that we affect not to see that there are walking advertisements among us, when in fact we know them by heart, quite as intimately as the Waverley pens, or Holloway's ointment. When Jackson, the acting Collector, breaks out in an unusual flow of hospitality we all know that he is advertising himself for the *pucka* appointment. He is bidding for popularity to the extent of his income, or beyond it, and he will probably gain what he wants. If he spends enough money, society ignores the design altogether, and affects a pleased surprise at the liberality of Jackson; but in private Johnson and his wife, whom we may take as representing society here, are very plain-spoken on the subject of Jackson's 'little game,' and only countenance it because it brings them in dances and dinners, with opportunities for advertising their own daughters. Perhaps, the advertisement of the latter is the most worn and familiar of the lot. In London society, it is difficult to gauge correctly the dowry of a girl, or the income of her parents, but in India this is the simplest thing in the world. If it is given out that she has any fortune whatever, you may divide the sum by three, and doubt the remainder. The malicious will multiply the young thing's dowry for the sake of the disappointment it will cause her suitors, parents, and herself; and friends of the family will of course act with the usual good nature of friends of the family, which is always doing the family some injury. Suitors in India are not usually mercenary, and are willing enough to take an advertised pain-killer, as our ancestors used to say—in her smock. Perhaps they know that it is vain to expect any store of coin with the daughters of men who find it hard enough to keep themselves in these days of high prices; nevertheless they dare not abate one jot of the social sham that impels parents to affect a greater income than they have, so long as there are marriagable daughters in their homes. Society would be outraged if the poor Indian mother did not encounter an unusual display of wealth as the penalty for philo-progenitiveness. If she were a mean white, that drove a one-horse shay in former days, it is now absolutely necessary to advertise herself and offspring in the Anglo-Indian's alternative for merit—a barouche and pair. For horses and servants represent in Hindostan, what great fortunes

or great talents do in other countries. The Indian world knows as well as the Army List that the aspiring dame has only, say, five hundred a month, with deductions—on which to rival the richest man in the place in the cause of her daughters; but it pretends blindness, and malingers, in short, the better to get all it can out of the unfortunate woman, who is ruining herself in advertisements. We say "ruining" advisedly, for this kind of advertising does not suit the pockets of poor people, and yet they must advertise or they are lost. For the poor, the practice is a dubious but attractive species of public lottery. They put in their all to the whirligig of Fortune, and they may draw a Collector or a Sub-Lieutenant as they are lucky or luckless in the matter. Possibly, the training for the wares thus dealt in is not the best in the world, since it familiarises the youthful mind with debt and lack of principle, but such as it is, 'tis what the nineteenth century world approves of, the said century being exceedingly selfish in its morality.

All our social advertisements in India have, in fact, the disadvantage of being too transparent for one's gravity. There is the ritualistic Chaplain who advertises himself to a strong connection, with albs and crosses. The Low church padre, who appeals to his constituents with plain whitewash. The popular General, who in Napoleonic orders of the day, heralds his own excellencies to the world by belauding the military virtues of the troops he commands. The active Civilian who follows suit in the general run for place, by perpetrating some pitiful economy that will bring him into notice with the Government. There are a thousand indirect ways of advertising oneself that never appear in the newspapers, and as advertising is the spirit of the age, of course the age which is fleshly, cannot do without it. Some of our Indian standing advertisements are very amusing. Thus "the hills" are little better than gigantic posters with us. It is an advertisement in itself to go to the hills in the hot season. To do so is to bring oneself prominently under the notice of the Viceroy, the Commander-in-Chief, heads of departments, those in fact who deal in such articles as appointments, advancements, or promises. The advertisers bring beauty, music, dancing, agreeability, and every thing high or low, small or great, that they may possess, to the great exchange mart of the hills, and some profitable trading is done each season, by those who have the *gift* of advertising to advantage. For the thing is an art. Take up a newspaper and see what a variety of style there is in advertising? There is the comic, the impudent, the deceitful, the true, the beautiful, and many other varieties, and all these will be found in social as in commercial life, and just as often on the Rialto or the Mall, as in places where merchants most do congregate. Besides this, a trip to the hills in the season means money, very much. Houses at Simla, Mahableshwur, or Ootacamund are costly indulgences, and the man or woman who goes to these sanitaria in the season, has paid for a draft on the consideration of the world, which society honours at sight. So do the *nouveaux riches* dazzle Rotten Row, or the Opera with their equipages, or their diamonds: the only difference is that here the ticket is one for the hills, and there for Covent-garden.

A good standing advertisment for any man, is a sinecure if it is a good one. We all purchase the Scavenger-General, or some such official, at his own price, because he *is* the Scavenger-General. The man may not have an intellect above dead dogs or he may be as vulgar as the redoubtable Boffin, and not half so good, but we are attracted by the gold lace on his trousers, his cocked hat, his office, his dignity, and, as Dogberry has it, every thing handsome about him. This is a kind of advertiser that can sell the world literally what he pleases, for he deals in success. His pain-killers go off his hands like magic, and into the bosoms of Brigade Majors, Head Assistants, and senior partners. His sons are absorbed in the Staff Corps, and will be Colonels with off reckonings in the next army muddle. His uncles, and possibly even his aunts, are all in the employ of a truly paternal Government; and the more the world regards this apparently great personage, the more it is tempted to swallow him like a specific of the advertising quacks. There is no better advertisement to a man in the world, than the occupation of a good post under the Government of India; it is only a pity that in England it counts for nothing, or discounts at a serious loss to the occupant.

Now, the man of honest mind is naturally enough disgusted at the social shams and swindles he clearly sees around him; but *cui bono*; they are all comprised in human nature. All is vanity, said the preacher: and can we doubt that in the days of Solomon, the Jews and the Jewesses were not as mean and as mercenary as the Christians of to-day? The good woman whose price was above rubies, exists now as in Solomon's time, but is the exception to the rule. As a whole, we should say that the book of Proverbs is no unfair commentary upon Indian Society as it is to-day. Men and women die and pass away; but human passions continue ever much the same, and will flourish in luxuriance in the most congenial soil, despite the scorn of satirists, or the more kindly touch of the humourist. Shameless advertisement of one's wares is as old as the Scriptures. Did not Jezebel paint her face and tire her head and look out at the window, as Jezebels will do a thousand years hence if the world lasts so long? It is not the advertisement of the day that we *quarrel* with so much, as the manner in which it is done. Respectable journals will not admit indecent advertisements to their columns, and Lord Campbell's Act forbids the publication of what is indelicate; but society is restrained by no laws but its own, and when these are so elastic as to outstep decorum, the satirists have a right to complain. If the social advertisement is a thing but lightly clad in London, in India it may be said to be completely nude, not having, indeed, so much as a rag to cover it.

ISAAC CASAUBON.

"ALL I desire is to learn." These words of Isaac Casaubon in a letter to an old Genevan friend, to whom he was describing his mental troubles and anxieties, may be taken as the motto in which is concentrated the whole aim of his life. It is too late perhaps to have them inscribed on the monument placed over his grave in Westminster Abbey, by the English Bishop who revered his memory; but all who read the story of his life as it has been written by the Rector of Lincoln College, Oxford, will fasten upon the phrase as the one which will best enable them to recall the life of laborious study, to which the great scholar of 300 years ago devoted himself, and as the one which reveals how in mental disposition he was akin to the foremost inquirers of the present day. He was one "born out of due time," in a sense somewhat different from that in which the words were penned by an apostolic hand. He was born long before it was thought possible for an earnest thinker to do other than ally himself to one or other of *the great* theological camps which divide the Christian *world*, and having so allied himself, *to do other than fight in its* behalf with uncompromising persistence. He was *Huguenot from beginning* to end of his days; but as he grew-up towards middle life, he shrank from committing himself to the narrowness and dreariness of the Calvinism in which his earlier days had been passed; and while resisting all the worldly beguilements which were put in his way to induce him to be reconciled to the Roman Catholic Church, he nevertheless did not hesitate in giving full expression to his convictions that Rome cultivated and clung to truths neglected by his countrymen who had left her pale. All he desired was to learn. And of course his desire was coupled with a longing for liberty to embrace as truth whatever his enquiries satisfied him he ought not to reject. He would not servilely adopt a proposition, because of its traditional connection with the Protestant system of doctrines; nor would he, from a timid fear, lest his consistency should be called in question, reject everything not included in that system. He was a Christian eclectic of the true and brave sort, in days when the eclectic habit of mind was almost unknown.

Casaubon was born at Geneva, February 18th, 1559. His father, Arnold Casaubon, was a Huguenot pastor. He and his wife were natives of Gascony; and took refuge in Geneva from the dangers threatening them in their own land. A persecuting spirit had been aroused in the Catholic populace. Had they not fled to Geneva, Arnold Casaubon would have been burned by a Gascon mob. The persecution subsided for a while, and when Isaac was two years old, his father returned to France to take charge of a small congregation at Crêot, a town on the Drôme, a tributary of the Rhone. Here they lived in quietness for a few years, and Isaac was working at the Greek grammar with the help of his father, when a fresh persecution broke out, and the pastor and his family had to flee to the hills. They took shelter in a cave in one of the beautiful upland valleys of Dauphiné, and there the Greek lessons were resumed. And up to his twentieth year, Isaac's studies had to be carried on amidst many hindrances. His father nearly every year was turned out of his home. When he returned to it, he always found it sacked. The pastor's troubles were very heavy. When at twenty years of age, Isaac went to Geneva to study at the Academy founded by Calvin, he devoted himself perseveringly to the study of Greek. His teacher was a native of the isle of Crete. Three years after Casaubon's arrival at Geneva, the Greek died, and Casaubon was thereupon chosen to

carry on his master's teaching. His remuneration was very slender, £10 a year and rooms in the college. Nevertheless, he at the end of a year ventured to marry. His wife, however, died eighteen months afterwards, leaving him with a little daughter. He married again in the course of the following year. His second wife was the daughter of a printer of some renown, Henri Estienne, who was also the possessor of many rare and valuable old manuscripts. The year which followed were troubled ones for Geneva and its academy, and the young Greek professor had to encounter many trials. He had to bring up a young family on means alarmingly scanty. Wondrous was the thrift of the good housewife. In spite of the slender allowance her husband could grant her for household expenses, she was able in 1604 to present him with a birth-day gift of 100 golden crowns, the savings of eighteen years. But the daily hardships of life were such as Casaubon could not refrain from complaining of. His diary abounds with laments that his pay should be so scanty; that the books he wanted were beyond his reach, that the leisure he desired never came; that food should be so high-priced; that his college rooms should be so small, and his study so near the playground, in which the noisy students assembled. When he had spent fifteen years as professor at Geneva, Casaubon accepted a similar position at Montpelier. The professorship of Greek at Heidelberg was at the same time offered to him: but he preferred to go to his father's country. At Montpelier he had better pay, but his troubles did not cease. With increased prosperity came an increased number of friends, and these had no notion of the value of a scholar's time. To friends at a distance he had to write letters, and how he begrudged the time! Friends near would come and waste away his hours with their idle trifling talk. His wife's occasional absence from home, would draw from him such an exclamation as this which appears in his diary, "Deliver me, my "Heavenly father, from the miseries which the absence of my wife "and the management of my household create for me." He was not at Montpelier more than three years. The Catholic clergy quietly got the whole of the college into their possession, and then announced that no professor could continue in office unless he were willing to attend mass. Casaubon therefore turned his back upon Montpelier. He is next at Paris, having gone there on the invitation of King Henry IV., and though strenuous efforts were made, on the one hand, to keep him as a Huguenot from any office at Court, *and on the other to win him over to* the faith, he remained true to himself, and the King did not desert him. He was appointed in 1601 to the post of royal librarian, and held this till 1610, when Ravaillac's murderous hand put an end to the life of Henry IV., and the Huguenots of France found it necessary to look out for places of safety. Casaubon took refuge in England. James I gave him a kindly welcome, and the Archbishop of Canterbury (Bancroft) became his friend. He was made a prebend of Canterbury; and so found at last a position of ease and emolument. This, however, he only enjoyed for four years. The unrelenting toil of his former life—from his student days at Geneva to his later days in the King's library at Paris—had left its mark upon his bodily frame. The studies of his last years were carried on while he was suffering acute pain. He succumbed at last to the disease which had fastened upon him, and died one summer's day shortly after one of his children had read to him, at his own request, the touching words of the "Nunc Dimittis."

IN MEMORIAM.

II.

WE have seen that the first twenty-one stanzas give expression to the deep sense of present loss. The poet mourns for his departed friend and will not be comforted, because he is not. His philosophy, however rich in promise of future good, can neither fill nor conceal the present void. The bodies of our dearest dead may, indeed, be our "stepping stones to higher things," but comfort cannot lie in such a faith while the grass is not yet green upon their graves. But the grass does at length grow green, and the fondest mourner cannot always linger by the tomb. To all his children, the command of Time—a command that cannot be gainsayed—is that they "go forward," and so in Section XXI we have the last scene at the grave:—

> "I sing to him that rests below,
> And, since the grasses round me wave,
> I take the grasses of the grave
> And make them pipes whereon to below."

The growth of sorrow now reaches its second stage. The mourner no longer seeks the living among the dead. He does not yet draw much consolation from the future, but a step is gained when his mind ceases to brood over its present loss, and finds a pleasure, however sad, in recalling the day before Death "broke our fair companionship." The feeling of hopelessness may still remain, but he begins to look at death from a different point of view, the attainment of which marks a healthier state of mind. Hitherto indeed, death, as such, has not been the source of trouble—not death, but his own bereavement. But, now that his mind has turned away from the dead remains, and has, in fancy, resumed the living companionship, a third object of thought presents itself,

> "The shadow feared of man
> Who broke our fair companionship."

Death caused the bereavement, but is he not also the discloser of secrets? Keeps he not the keys of all the creeds? Has he not brought us face to face with those mysteries that the human soul longs to solve above all others?

We have already noticed the complete absence, up to this time, of all consolation derivable from religious hope or any faith in immortality. Under the painful sense of present loss the heart seems to turn away from such sources of comfort. There is, as we observed in the earlier sections, an intentional non-denial of a future life, but that is all. Now, however, the bare mention of the creeds, and of Death as solving their mysteries, marks an altered position of mind. There is an express acknowledgment of a mystery beyond the grave, and an implied wish to see into it. "Out of the eater cometh forth meat:" from the earnest contemplation of Death men have attained to the conception of immortality, and to the hope that, in spite of its terrors, Death is but the shadowy night between the twilight of our earthly life and "that deep dawn behind the tomb." For a time, however, his thoughts regarding a future life are the under-current in the poet's mind, and, while the wild conflict is going on between Fear and Hope, Doubt and Faith, he sings only of what comes to the surface. A less perfect master of the poetic art than Tennyson might here have introduced a surging tumult of half-formed thoughts, crudities of scepticism, and "phases of faith." There is no doubt that at this stage, he, like the subject of his poem, is "with many a subtle question vext," but if he must for a time "touch a jarring lyre," its discords shall reach no ear but his own. And so, while the turmoil lasts, he continues silent as to the future, but there breaks forth at intervals a sweet song of the past. And it is no longer a song of unmingled woe. For as he *meditates on the love which was the basis of the past* friendship and the source of its happiness, and reflects that, though his friend has gone from him, the love in all its strength remains, he is led to acknowledge that death has not taken everything, but has left a priceless good in his possession still:

> "I hold it true, whate'er befall;
> I feel it, when I sorrow most;
> 'Tis better to have loved and lost
> Than never to have loved at all."

It is while in this state of mind that Christianity finds him, and there is not a little art in the way in which this great subject is introduced. The sun does not burst forth unheralded upon the night, but sends the dawn to warn the sable goddess that she may have ample time to gather round her her gloomy skirts and retire with becoming majesty. So the poet does not directly introduce Christianity with its sublime teaching. Its coming is heralded by the pealing of the Christmas bells, and is thus accompanied by a train of associations of the tenderest and loveliest kind, that, by their gentle, yet powerful, influence restores to the heart of manhood something of the meek docility of the little child, which is as necessary to the reception of Christianity now, as when its Founder declared that only as little children can we enter the kingdom of heaven. It is not our business to defend Tennyson's claim to originality, and we may notice here the resemblance that strikes us between his manner of introducing Christianity and that solemn scene in Faust, where the suicidal hand of the heart-wearied philosopher is suddenly stayed by the sound of the Easter chorus. The severest study of theology and the sciences, left him wretched and void of faith. Theological arguments had lost their power over his sceptical mind; but just at the moment when he is about to rush into the great darkness, comes stealing on his ear, through the pealing of the bells that greet the rise of the new, glad morning, a sound of voices singing of "the resurrection and the life." He listens; memories of a childhood before the first chilling touch of doubt was felt, flow sweetly over his soul, and "thoughts of childhood rule the full-grown man." Tennyson is of a far gentler spirit than the Faust of Goethe, but though he would not rashly spill his own life, he had almost wished to die:

> "This year I slept and woke with pain,
> I almost wished no more to wake,
> And that my hold on life would break:
> Before I heard those bells again."

With him, too, as with Faust, the new power, that wins him back to the love of life, is not faith but early memories :

" But they my troubled spirit rule,
For they controlled me when a boy;
They bring me sorrow touched with joy,
The merry, merry bells of Yule."

Most of us have experienced critical moments in our lives, when an almost forgotten childhood has suddenly risen up and subdued our manhood. We all are what our past has made us, and those are among the good moments of life when the period of the past that rules us most powerfully, is the time of boyhood. And whatever be the course of our future life, we can never get altogether beyond the influence of a pure religion imbibed in childhood through an atmosphere of love. Such an influence, stirred by the Christmas bells, now sways the mood of the mourner and soothes and softens his grief; and a holy calm comes over his spirit as he seems to listen to the heavenly tidings of

" Peace and goodwill, goodwill and peace,
Peace and goodwill to all mankind."

" How dare we keep our Christmas eve ? " How many of us can recollect such a Christmas eve, or other occasion of a family gathering, when the usual observances were attended to from respect to Use and Wont, but under

" An awful sense
Of one mute shadow watching all ! "

This section, describing the first Christmas-eve after the bereavement, is in itself a complete, and exceedingly beautiful poem. How finely it mounts by the most natural gradations, from the low, tremulous tones of human sadness, to the ethereal sublimity of faith and prayer. The mourner, with trembling fingers, weaves the holly round the hearth, while rain-clouds brood over the earth like the cloud of sorrow over his spirit. Then, with a sad pretence of gladness, he mingles mechanically in the pastimes, once so dear, while the mind's eye sees in the vacant place of the departed one, the living spirit, unseen but " watching all." The spell of the voiceless presence is too solemn to bear. They break it with a merry song, in which *he* had joined last Christmas-eve. But forced mirth avails not, and the aching heart finds relief in a gentler song :—

" They rest, we said, their sleep is sweet
And silence followed, and we wept."

But they are healing tears that flow. Grief has run its course. The heart has ached for the lost one, has trembled under a sense of his invisible presence, has learnt resignation to the Supreme Will, and drawn comfort from the faith that it is well with the happy dead. And now, submission being learned, a loftier faith supervenes. Not only is death not terrible to the dead, it is something more blessed than even the sleep of peace; rather, there is no death, but a sublime immortality,

" —They do not die
Nor lose their mortal sympathy,
Nor change to us, although they change ;

" Rapt from the fickle and the frail
With gathered power, yet the same,
Pierces the keen seraphic flame
From orb to orb, from veil to veil. "

After this high triumphant flight, the mourner's muse, happy in faith and bright-eyed with hope, folds her wings in peace and trust at the feet of the Father of life and Lord of death.

Already, then, the poet begins to " find in loss a gain to match." The " interest of tears " is not so far-off as at first it appeared. No more dancing with death ; no more " cruel fellowship " with the " priestess in the vaults !" The loved and lost one sleeps in peace,—nay, sleeps not, but soars seraph-like from world to world. And from the high heaven fall words of peace, and in the depths of the heart are springing up the first tender shoots of faith and hope, and " Prayer kneels drinking at the Fount of life ! Henceforth, though sorrow will send forth at times a plaintive wail of regret, the poet's song is not of death and loss, but of glory and immortality.

We can imagine some stern religious inquisitor stepping forward at this stage, and putting the poet to the question as to the basis of his faith, " But do you believe this, that, and the other essential doctrine ? " And it is quite certain that the poet has no intention to give categorical replies, and just possible that he could not if he would. Some fanatics make too much of religious feelings ; many dogmatic religionists make too little of them. Whether or not the poet would reply with Faust,

" I have no name by which I might denote it ;
Feeling is all in all ;
Name is but smoke and sound,
Enshrouding heaven's glow, "

it is at least certain, that there is a stage in religious growth, when it is easier to sing the feeling that sways us, than to give logical utterance to the creed on which it rests. It is the poet's vocation to do the former ; the latter, he does not yet, in the least, attempt. Something more definite in his confession of faith we may meet ere long ; in the meantime let us remember that, when the Master finally ordained the impetuous fisherman to be a pastor over his flock, the confession demanded of him was simply this, " Simon, son of Jonas, lovest thou me ? "

EDITORIAL NOTES.

TIME was, we are told, when Dr. Leitner's name carried terror throughout the Punjab. The duties of a college Principal ill sufficed to occupy a mind so active, and even *Anjumans* and model universities, merely filled up a few of his leisure moments. Nothing less than a newspaper it seemed could exhaust energies so restless. The *Indian Public Opinion*, however, though a Punjab paper, was never a true Punjabee ; and far from catching the provincial twang of self-laudation, the new journal revelled in onslaughts upon its men and measures. No one knew when his own turn might not come, for no one was clad in armour so complete as to be unassailable. Even the Government, it is said, winced, and efforts were made to suppress the *enfant terrible*. At one time, the Doctor was made the subject of vivisection by a Commission, which declared that in editing a newspaper he was devoting to literature what was meant for dockets and red-tape. The severity of the stricture was somewhat lost in the admission that the occupation would have been blameless had the paper been but official. Later on, the provincial Director of Public Instruction made war upon his subordinate. Armed with a " time-table" which he had " conveyed" from the college, Major Holroyd undertook to prove that the doctor neglected his professional duties. Unfortunately however, he had got hold of an incorrect copy ; and the internecine *struggle ended in a way* that was far from comforting to the Major. A hollow peace *lasting so allied himself, to do when it was hoped that the* ...ed till Dr. Leitner left India ...bled by the disturber of its Punjab might never again be trou...e. hope grew stronger ; and quiet and self-complacency. ***

A WRITER in a Rangoon periodical who somewh... ostentatiously proclaims his full access to official correspond...ce, charges us with partisanship of the Avan Government, on account of our having in an article entitled " Bhamo and Beyond" criticised the policy of a late Chief Commissioner. We said that General Fytche had obtained the King of Burmah's assent to the treaty of 1867, by secretly guaranteeing to the latter, the free importation of arms and munitions of war. The *Rangoon Mail* describes the matter differently. It informs us that the Burman ministers did not like that portion of the treaty which allowed them to purchase arms and ammunition, only with the consent of the Commissioner, and that they were told by Colonel Fytche that it was " a mere form." They asked him " to give it them in writing, that consent would always be given." Colonel Fytche accordingly wrote officially to the minister, " that approval would never be withheld, so long as the two countries remained on friendly terms." Surely it is idle to deny that this letter was a modification of one of the most important clauses of the treaty. It formed ostensibly no part of the agreement ; and was not published in conjunction with it. How then can it be regarded otherwise than as a secret guarantee ; so secret in fact, that the majority of our readers had probably never heard of it, till we told them. The writer in the *Mail* does not go so far as to say that the English Government has always acted up to the promise, but contends that it was justified in refusing its consent to the importations of munitions of war, since the demand for them could hardly be interpreted as a friendly act, and therefore the two nations

were not on friendly terms. It would be waste of time to expose the sophistry of such reasoning. So long as our Resident stays at Mandalay, we are friends and allies of the King. We are neither a partisan nor an apologist of Mounghou, and we cordially approve of the present decisive measures of Government, which we trust will result in the final abandonment of the humiliating position we have hitherto occupied at the court at Ava. At the same time, it would not be consistent either with justice or policy, to disguise the exact state of our diplomatic relations with Mandalay.

***

SIR JOHN STRACHEY'S latest advice to the officials of the North-West is to "boil down" their reports, and thus lessen the cost of printing. Sir John tells them that it has been a subject of complaint for years past, throughout the province and throughout India, that these annual reports have become lengthy beyond endurance. "The uses which an annual report is meant to serve, if rightly apprehended and kept in view, point clearly to the limits it should be allowed." Last year the printing and publication of nineteen departmental reports, cost the finances nearly twelve thousand rupees.

***

A FEW years ago one of the most common topics of discussion in the Indian press was the adoption of a gold currency for India. The serious fall in the value of silver in the last eight years, has put the question out of the range of practical statesmanship altogether, and we were surprised, therefore, to find an article in the *Indian Statesman* advocating the change. "If," says the writer, "we "coined gold into sovereigns, and made each sovereign by law "equal to ten rupees of the weight of the English florin, the pur-"chasing power of the income of every man would be increased. "However the balance of trade might fluctuate, it could never "be depreciated beyond the cost of the transmission of gold to "England." We are not quite sure that we understand the meaning of this. If we made gold our standard, and converted our present liabilities in silver into sterling money at the rate of 2*s.* per rupee, we *should add 10* per cent to every money obligation in the empire. Such a decree would be hailed of course by the whole creditor class of the country, and by men dependent upon fixed incomes, with acclamation. But what about the other, or debtor class, the men who have to pay, who would find 10 per cent. suddenly added to their liabilities by legal enactment. It must not be overlooked that there are two causes at work in lowering the value of the rupee. The *exchange* value has been falling steadily for years under the influence of the Home charges; while its *intrinsic* value is falling at the same time, from the demonetization of silver in other countries and the increased supply of silver from the mines. Silver is falling steadily in value intrinsically as a metal; and it is better for industry that it should do so while it remains our currency, than that it should rise.

***

A CORRESPONDENT writes to us from Singapore under date of 21st May: "You will find Sir Andrew Clarke a clever man, with lots of tact, but very impressionable. He is also very hospitable. He commenced official life as private Secretary to the late Sir W. Denision in Van Dieman's Land, and once acted as Colonial Treasurer there, when he carried the estimates through Council without opposition. He will either be a great success in India, or a great failure. Lady Clarke is Calcutta born I think."

***

THE *World* in an article on the "business of society" gives a sketch of the day of an "idle woman of fashion," from which it is evident such a one works as hard as any cab-horse. The following is an extract from the article in question: "Let us attempt to sketch one day of the life of such a social butterfly, as we are contemplating, and let the moralisers on idleness confess that, whether useful in their opinion or not, actual energy is not lacking. The morning's post brings manifold letters requiring speedy answers, the *Times'* articles must be skimmed, the various paragraphs of it and of the *Morning Post* glanced at, and the fashionable intelligence of the latter carefully perused; any reviews of books must be sufficiently studied to give a tolerable idea of their drift, and the remarks on concerts and picture galleries must be by no means overlooked. The difficulty of assimilating this mass of heterogeneous information, is much increased by an interruption from the cook with the *menu* for a dinner-party, by various notes requiring immediate answers, and by a necessary interview with a dress-maker. The papers dismissed, Prince's claims attention; but it is first necessary to despatch notes of invitation for a dinner party, a duty, as we have endeavoured to show, to be by no means lightly or unadvisedly undertaken. At Prince's she has not only to observe the proceedings of her own girls, but, if she would be *au fait* of all that is going on in the world, keep her eyes open to those of others while she lends her ears to the current gossip of the hour. At luncheon she entertains those friends who may 'drop in,' or those young men who have been invited in the girls' interests. Luncheon over, a fresh toilette has to be made, a list constructed of visits which must be returned, cards which must be left, and shops which must be visited; and by the time this is achieved, and sundry morning visitors have departed, the carriage is at the door, and besides the written programme, sundry kettledrums are probably 'done'. Then another hour of Prince's 'for the girls,' a rush home to dress in haste for a dinner where the literature criticisms and gossip of the day are carefully reproduced; then a progress to drum, concert, and ball, till the morning sun warns the dancers to desist and allows the weary chaperone to seek her well-earned repose. Is it not almost mockery to talk of an 'idle' woman of fashion?"

***

IN a recent notice of the Punjab judicial scheme we credited the Supreme Government with an interference which deprived the measure of much of its usefulness. We hear on good authority that, on grounds not known to the profane world, Sir Henry Davies alone is answerable for the abortive measure which is to redress the wrongs of a province. The Home Government, under one of those fits of generosity which the resources of a great empire renders it so easy to indulge in, promised to consider as favorably as means would permit, a broad measure of judicial reform which the altered circumstances of the Punjab rendered necessary. Lord Northbrook was prepared to recommend anything in reason, which the Punjab Government proposed for the benefit of the judicial department of the province. Everything was in his favor, and Sir Henry had only to make a reasonable demand, and it would have been met in a generous spirit by the Government of India. But Sir Henry instead of taking advantage of such auspicious circumstances, and anticipating the wants of the province for the next twenty years, is said to have crippled the recommendations of the Committee.

***

THE transport *Serapis* is to bring the Prince to India and is being fitted up at Portsmouth for the purpose. The squadron will consist of the *Narcissus* (flagship), Commander Alfred Jephson; *Doris*, Capt. Hon. Edmund R. Fremantle, C.B.; *Immortalité*, Capt. Francis A. Hume; *Newcastle*, Capt. Robert G. Douglas; *Raleigh*, Capt. George Tryon, C.B.; *Topaze*, Capt. Arthur T. Thrupp, and will be commanded by Admiral Rowley Lambert, C.B. The squadron will meet the *Serapis* at Gibraltar, and proceed thence, *viâ* the Suez Canal, to Calcutta, where the vessels will remain until the return of the Prince. His Royal Highness, it is anticipated, will be back in England by next May. It is hardly likely, we think, that the programme should have been definitively settled thus early. If the Prince is to visit Bombay, it will be, we should think, on arrival.

***

"TEN years of Her Majesty's rule," Lord Metcalfe once said, "would ruin the Indian Empire." A vague feeling of a similar kind is at present abroad in English society. The trial of the Gaekwar and its attendant circumstances have brought home even to English indifference the unsatisfactory feelings with which the people of the country regard us. The comments of the Native Press on the recent proceedings, have found their way into the English papers very freely and English people groping about timidly in the dark have fixed upon the Civil Service as the criminal requiring reform. If a country is discontented, it must be the fault of those who govern it; and as the civilians govern India there must be something wrong in the selection and education of these gentlemen, which causes them to convert the pure benevolence of British intention into actual gall and bitterness. The people were fond of British rule so long as Haileybury existed; the destruction of Haileybury must, therefore, have brought about the present unpleasant posture of affairs; let us, therefore, construct a new Haileybury at Oxford or Cambridge, or both; all then, it is be hoped, will go right again. This will destroy the malignant race of "crammers," and substitute for the vicious and degrading influences of London the humanizing atmosphere of our old university cities. Of course, as a remedy for the deep-seated evils of India, any such change would be almost without effect. The best Government that ever existed could do little for a country under the blight of Hindoo and Mahomedan institutions.

THE German Government has found out the mistake made in circulating its gold coins before the proper time, and they are now held back with the utmost care in the exchequer and all the banks. The gold crowns which have come into circulation are still being carried out of the country, or are being melted in gold manufactories. A new mistake has been added to the old. Instead of coining silver, nickel, and copper pieces as rapidly as possible, putting them aside for a while, and then, with the aid of gold crowns, withdrawing the 300 million thalers of old silver currency at once, the Government goes on coining slowly, and gives the silver and nickel pieces out as soon as they are coined. Now the new silver coins having a legal value of 1-10th less than the old silver currency, the same proceeding takes place which followed the issue of the gold coins. Adroit brokers buy up old silver currency pieces with the new silver, and melt the former. The circulation of notes has consequently increased.

***

WE wish the girls would not let the men have it all their own way in the Press. Sinners ourselves, in allowing them to be represented in our columns, as selfish, and worldly, and mercenary and we know not what else, we do not believe a word of it, but let the slanderous creatures have their say, knowing that the girls can do what they please with them when they choose. But we should certainly like to see the tables turned, and the *jeunesse dorée* of our clubs, and the fast men of our messes described with the same delightful candour with which their sisters are discussed. We are afraid the climate has something to do with it. At all events from time immemorial, men in India have ever given a bad character to women. Ancient Manu is particularly hard upon them, complaining almost *ipsissima verba* of a modern leading article of their mutable temper, their want of settled affection, and their perverse nature, and that "let them be guarded in this world ever so well, they soon become alienated from their husbands." The choice of a wife seems ever to have been a matter of peculiar difficulty in India, and the same law-giver warned the young men of his day against girls "with too little or too much hair, girls who are too talkative, girls who have a disagreeable name, or who have no mother!" *But this is dealing with negations only. On the positive* side, the bachelor is warned that his choice must rest upon a girl, "who has an agreeable name, whose hair and teeth are moderate "respectively in quantity and size, whose body has exquisite soft- "ness, and who walks gracefully like a phenicopteros or a young "elephant." We wish we were "Caro" for five minutes. To be serious, there are grounds of complaint against the manners and customs of the young people of our day, but held fairly in the balance, the girls are better than the men. Will no fair correspondent tell us of our faults, with the same considerate candour with which we analyze those of our sisters, wives, mothers, and daughters?

***

THE *Indo-European Correspondence* is not fair, when it replies to our challenge concerning the validity of Gordon's first marriage as follows:—

> The writer of the articles in the *Friend of India*, which we found necessary to refute some weeks back, returning to one of the points of that discussion, asks us to answer, in our present number, a very unsavoury question. We decline to discuss the matter in that crude form in the columns of any journal. But we may inform the writer, in reply, that his question besides being very unsavoury, is one that is perfectly idle, and to which we have given an *a priori* reply. However, we have no objection to tell him that the question is wrongly put, "the taking up with another," in the form in which he puts it, did not exist: there was a second marriage duly celebrated. The crime, or would-be crime he mentions, could not exist objectively as the first marriage was *ab initio* null and invalid.

If our contemporary had complained that our question was inconvenient or unfair, we could have understood him, but we do not know what he means when he calls it "unsavoury," unless we are to understand that all questions concerning marriage are impure, and not to be named *without* offence. *Our* enquiry may be "perfectly idle"; but we venture to renew it. Gordon, by our contemporary's own version of the matter, was a Protestant and married a Protestant at the British Embassy in Brazil, and lived with her as his wife for 25 years. He came to England and became a Roman Catholic and, forsaking his wife, claimed the right of marrying a Roman Catholic lady, on the ground that as the Tridentine decrees were in force in Brazil, any marriage contracted in that State between professing Christians was null and void, unless performed in accordance with the requirements of those decrees. When the case came before the English Courts, Gordon relied upon the fact that the Holy Inquisition at Rome had advised him that he was guilty of no adultery in what he had done.

To say that we have "put the question wrongly" is simply to say that we have put it very inconveniently. It is hard to believe that the conductors of the *Correspondence* do not themselves look upon the man as *morally* guilty of adultery, while their system forces them to hold that he is not. We bring the matter to this 'crude' issue, to show precisely where the shoe pinches. Rome claims jurisdiction in purely civil matters; and Europe is driving her within her own proper limits. While Englishmen from their defective insight and sympathies, can see little in Mr. Gladstone's *Vaticanism*, we learn by the last mail that the Italian Parliament has been expressing very freely its admiration of the work. Quotations from the essay we are told, were read, and received with great favour in the Italian House of Commons, and the Prime Minister—Minghetti—stated, amid great cheering, that being sure of the opinion of the House, he had transmitted to Mr. Gladstone the nation's thanks for what was a service to the national cause. The Prime Minister of Italy, without even consulting the House, at once sent the "nation's thanks" to the ex-premier of England for the blow struck by him at the pretensions which Rome is renewing in our days against the civil power. The pressure hardly touches ourselves, and so we have no sympathy with those who endure it. It is not for the Church to determine what persons are married and who are not; to legitimatize this man and to bastardize that; to call this one wife, and that concubine or harlot—but for the State. And the Church will have to give way, as she has been giving way for centuries. She did good and useful work by her pretensions in days gone by, but must now consent to see her tribunals superseded in matters of civil right, by institutions of an order better fitted to secure the welfare of society.

***

FATHER LAFONT is hardly dealing fairly with the Masonic oath when he suppresses the fact that before it is proffered, the neophyte is assured that the oath binds him to nothing that can possibly become a snare to his conscience in any way. The oath is simply a very antiquated symbol by which the candidate binds himself never to divulge the secrets of the craft. And it is assumed by all parties to the transaction, that the secrets are of an innocent description, as indeed they are. At the same time, we like to see the Father protesting against the religious aspect of the institution. If it really is not lawful to the Mason to name the Saviour's name in Lodge, we would not ourselves enter it. We have been assured, however, that the difficulty resolves itself into the question whether it is lawful for Christians to join in acts of religious worship with men of other creeds, on the understanding that Almighty God alone, the great architect of the universe, is addressed without the intervention of the Divine name of the Saviour.

***

A FORMER Secretary of State for India once asked us, whether we thought the missionary had done any real good in the country whatever. The question was asked in a tone that plainly implied a belief that he had not. If any of our readers are disposed to the same conclusion, let them make acquaintance with the *Indian Mirror*, as a fair specimen of the writings in which, take the following admirable remarks from its issue of the 13th instant, the theme being "The inner religious life": "Theology "supplies the place of spiritual life in religions which are old. "Men feel an ease of conscience, and a cheerfulness of hope "in being able to believe orthodox doctrines. And the decline "of orthodoxy means in most cases the decline of all religious life. "The creeds and catechisms of the world have a practical reality "of meaning which is unexplored and unfelt by us (the Brahmo "Somaj). They are, as it were, the solid and rocky strata of the "inner world upon which the whole surface of human society rests "in all its beauty and order. Unthinking men may ridicule rules, "dogmas, and rituals, and find their glory in breaking away from all "that mankind have held sacred for ages. But these rules, rituals, "and formulæ conceal within them a mine of spiritual progress and "experience, the value of which is only known to those who have "acquired them."

The writer goes on to lament, with a mournful sincerity that is very touching, the want which the Society feels of a definite religious creed, and to insist on the wisdom of trust and submission therein where such creeds have been preserved: "The best and most beneficial course for those who do not want to deify their own intellect, is quietly to submit to them and trust to their leading. It is such submission and trust that constitute the life of religion at a certain stage. This is the test which the earnestness and fidelity of every man have to undergo amidst the uncertainties, difficulties, and deep doubts of spiritual life."

It is not yet a century since the only newspaper in Calcutta was the rag known as *Hickey's Gazette*, while there is an interval of a thousand years between the English press of Calcutta in 1780 and the *Indian Mirror* of 1875. And who has accomplished it but the missionary, whom the statesmen of two generations back would fain have kept out of the country altogther? Christian men should take care we think how they look coldly on the Brahmo Somaj.

***

NOTHING could be more characteristic of Sir Richard Temple than the expedition into Sikkim from which he returned on the 8th of this month. Uninvited, unannounced, and almost unattended, he made a dash into that little frontier State, pushed through the valleys, more hot and insect-haunted than any part of the plains, climbed the hills, and before the Rajah could hear of the honour done to his principality, the raid was over, and Sir Richard had regained Darjeeling. The journey resembled the venture of Fitzjames in Roderick Dhu's territory, rather than the progress of a Lieutenant-Governor through a foreign though friendly State. And we are tempted to ask, not whether he was drawn, like the Scotch King, by—

> "A falcon flown, a greyhound strayed,
> Or merry glance of mountain maid,"

but if the tour was designed merely with the view of getting subjects for water-colour paintings. We believe that it had a much more serious object. Indeed, when we consider the importance of our relations with the Himalayan States, we wonder that former Lieutenant-Governors paid so little attention to them. Thibet in particular we have permitted to remain in absolute isolation. Turning to the report made by Mr. Edgar, Deputy Commissioner of Darjeeling, and published last year, we see that he was prevented from crossing the frontier on a diplomatic errand on the express ground that no European had ever been permitted to do so. The Chinese officials, who practically rule Thibet, had even the assurance to write to the Rajah of Sikkim in the name of the Celestial Emperor, reproaching him with his alliance with us, and threatening that "if he continued to behave in this manner, it would not be well with him." Now, it is certainly a matter of policy with us to establish friendly relations with all frontier States, and we have particular reasons for wishing to have free access to Thibet. In the first place it is on the high road to China, and, if we were on good terms with its Rajah, we should gain our great object—an overland route to that Empire. And then, from its peculiar circumstances, Thibet can support a trade far larger than would be supposed. Its high table lands offer rich pasture to immense herds and flocks: these yield a great supply of ghee and wool, which are now almost wasted for want of a market. The mutton of the Thibet sheep has been much praised, and, if travellers have not greatly imposed on us, it must be really excellent. Turner says it is the best in the world. Mr. Edgar declares that it surpasses in flavor and delicacy anything which he has tasted in India; and when we consider the advantages of the Thibet grazing lands, we can well believe these statements. On the other hand, the Thibetans require our broadcloth as a protection against the cold of their climate, and also covet the tobacco and other luxuries of the plains; indeed, the two countries, Bengal and Thibet, present the very ideal of commercial neighbours. They represent the north and the south,—extreme cold and extreme heat; the wealth of flocks and herds and mountain produce, and that of tropical plains. Even at present, in spite of all obstacles, no inconsiderable trade is carried on, for, though our subjects may not enter Thibet, the inhabitants of that country visit us freely, and take back with them our cloth, cotton, tobacco, lac, madder, indigo, ivory, and rice, in exchange for their cows, sheep, ponies, yak tails, tea, and gold.

***

COLONEL KEATINGE is rapidly improving the "Garden of Bengal." He has done what he can to shorten the present voyage from Goalundo to Gowhatty, and the Government of India proposes to subsidize an improved line of steamers, from which measure Colonel Keatinge expects much good. At the Chief Commissioner's suggestion, Dhoobree will shortly be declared to be a place of embarkation, and an opportunity will thus be afforded emigrants of avoiding the parts of Lower Bengal where cholera is distinctly endemic. The new trunk road through Assam is progressing; especially work on the unfinished portion between Dhoobree and Goalpara, which has hitherto barred the passage of emigrants, is being pushed on. The improvement of the navigation of the Surmah is also under consideration.

IT appears to be a fact that religious enthusiasm is going out of fashion in the East just at the moment it seems to be reviving in the West. The annual gathering round the car of Juggernath at Serampore partakes more of the character of a fair than the terminus of a pilgrimage, while the same religious *insouciance* may be witnessed in connection with the pilgrimage to Mecca. Writing of the return of the pilgrims to Damascus, a correspondent says: "Next came the great object of attraction, the *mahmal*, the gilded case in which the *kisweh* is taken to Mecca. Over it hung a golden canopy, and it was borne by a magnificent camel covered with embroidery, who, at the end of the pilgrimage, is exempted from all future work, and treated royally all the rest of his days. The people went rather mad over the *mahmal* and its canopy, and the attendants had to endure much hugging. Still, there was nothing like the religious enthusiasm I expected over either the *mahmal* of the pilgrims." To touch this canopy used to be esteemed an inestimable blessing, and Mahomet said of the pilgrim: "God pardoneth the pilgrim and him for whom the pilgrim imploreth pardon." In the old days a mad crowd struggled and fought to touch the fringe, and each pilgrim was beset with the incessant cry, "Pray for pardon for me, O pilgrim." There has not been a new mosque built in Damascus for the last twenty years, and there are literally scores lying in ruins in and about the city. Formerly it was *de rigueur* for rich men to make large gifts to the churches, and many mosques are rich in the presents of departed devotees. Such donations have now quite gone out of fashion. But fanaticism and the habit of prayer remain as strong as ever. A few months ago the English consul was attacked by a fanatical Moslem, and only a month ago a fierce onslaught on English Protestantism was made in the official journal of Syria. When the *muezzin* calls to prayer, the shopkeeper still leaves his bargain, and even the rider will often get down from his horse and fall to his prostration and prayers with all the regularity of immemorial custom.

***

THE North-West and the Punjab have lately experienced trying weather. With an uncommonly hot March there was a very fair April and almost an agreeable May, while the first week of June was hot and oppressive to an extraordinary degree. Cholera, which showed itself in several places in both provinces, has disappeared; small-pox is cropping up in very awkward places, and the Sanitary Commissioners are watching the progress of this dreadful disease. In the North-West as well as in the Punjab, the "frontiers" are the worst off, but especially those of the Punjab. Thus, Rewaree on the Bikaneer, and Peshawur on the Cabul, frontier are suffering more severely than any of the other principal towns, and they seem to maintain this unenviable importance from year's end to year's end. Both Sir John Strachey and Sir Henry Davies are anxious observers of the health of the people they govern, and it would be impossible to get together a body of public servants more thoroughly devoted to their work than the medical officers of these provinces.

***

THE Chinese "lekin" or war taxes are still being imposed to meet the expenses of late rebellions, notwithstanding the return of peace. And if we may judge from memorials in the *Pekin Gazette* and the evidently crippled state of Chinese finances, exactions have reached a point at which they defeat their own object and cause an actual falling off in receipts by checking trade. That a country like China should need to borrow the paltry sum of £2,000,000 sterling, in itself indicates that all ordinary and extraordinary sources of income must have been drained, and even the preparations which are being made for the re-conquest of Turkestan will not suffice to account for such embarrassment. The expenditure on arsenals and shipbuilding has, undoubtedly, been great, but there are many indications that excessive taxation is greatly to blame for the evident shortness of revenue.

***

THERE is little news this week about the progress of Russia in the East, except a statement that when a short time ago certain Kashghur commissaries appeared at Tashkend to settle the pecuniary demands of a Russian merchant who complained of injuries received at Kashghur, they were instructed to telegraph to the Turkish Envoy at St. Petersburg for protection and advice in case of difficulties arising between them and the Governor-General. There is also a rumour that in return for the Ameer of Kashghur recognizing the suzerainty of the Sultan, and allowing him to appoint a successor, the Sultan has engaged to take the Ameer's part in all

differences with the Russian Government. At the beginning of April the garrison of Tashkend was reinforced by two rifle companies coming from Petroalexandrovsk, in Russian Khiva. They performed the distance on camels, marching by way of Minbulak, Tambi, and Djisak. It would appear that the pacification of the Turcomans has made it so much easier to cross the steppe between the Caspian and the Amou that troops to Tashkend are now sent by the Caspian instead of the ancient Orenburg route. The Yomud tribe, living on the western borders of Khiva, has been visited by the Khan of that semi-dependent principality, when the wild horsemen of the steppe, remembering the chastisement inflicted a few months before by Colonel Ivanoff, hastened to comply with every requisition. They not only consented to pay the ordinary taxes and water excise of the Khanate, but also acquiesced in the decree that they shall look after their own canals and not expect them to be kept in order by the Usbeks or townspeople, as hitherto. "In recognition of their praiseworthy meekness and malleability, Colonel Ivanoff thought it advisable to recommend to the Khan to treat these penitent sinners with clemency and kindness. Both the Khan and the Turcomans continue paying tribute to the gallant Colonel, and though the instalments do not exceed a few thousand roubles or so, the habit of obedience inculcated will, it is hoped, insure absolute submission before long. Besides the crushing force of the rifle and rocket gun, the beneficial activity of the Russians in irrigating fresh portions of the steppe seems to incline the inhabitants to acknowledge their rule." The extensive works begun last autumn for fertilizing the Hunger Steppe between Tchinas and Djisak have been resumed, and in a short time are expected to create plenty of arable land, of which each of the neighbouring tribes is eager to secure a portion.

***

MANY of our home contemporaries seem to think that the Duke of Buckingham has no career before him in England: though he has been President of the Council and Secretary of State for the Colonies, he has dropped completely out of the political race. He began responsible labours in politics while still scarcely more than a boy, and had menaced and preserved Ministries when he had not long completed his majority. For it was he who, as Marquis of Chandos, led the attempted defection of a wing of the Protectionists from the ~~main body under Lord George Bentinck to save~~ Sir Robert Peel from the defeat with which he was threatened on the Irish Coercion Bill in 1847. "A very interesting chapter in Mr. Disraeli's Life of Lord George narrates this political episode in language of which it is not easy to say whether it is meant to be magniloquent or satirical. When the Tory party was reorganized in 1852, the Marquis of Chandos took office under Lord Derby as a Junior Lord of the Treasury. His subsequent Ministerial career is well known, and if it was not very brilliant, it was not disfigured, either at the Council Office or at the Colonial Office, by any serious blunders." When Mr. Disraeli was called last year to form a new Ministry, it was thought undesirable to place so many of the most important Ministers in the Upper House; and the Duke of Buckingham, like the Dukes of Marlborough, Montrose, and Buccleuch, waived his claim to high political office. And in undertaking the duties of Governor of Madras, the Duke of Buckingham shows that he is willing to render useful rather than splendid service, in the opinion of the *Pall Mall*.

***

THERE was one remark in Mr. Lowe's by this time celebrated speech on the Indian Civil Service, which is not likely either to gratify the members of that service, or to flatter the people of this country. The right honourable gentleman, in justifying his opposition to the proposal that candidates should be university men, observed that the service being "the endowment of the poorer classes" ought not to be taken from them for the behoof of those who were able to afford a university career. This is turning the flanks of the enemy with strange audacity. The adversaries of the present system of competition object to it, among other things, that it has an unfortunate liability to prevent the administration of India being sometimes entrusted to young men who have had no training in self-control, nor experience in controlling others. "Oh!" cries its clever advocate, "that is just what we want. It is the endowment of the poorer classes." To the Hindoo, with his exaggerated views of the value of caste and breeding—realities in their way—it cannot be a pleasant reply to say, "We mean that you should be governed by intelligent pariahs of an inferior social standing to barristers and schoolmasters." If any one objects that the present training is not likely to give the candidates knowledge of the world, he argues in the spirit of what we may be allowed to call "cynical optimism." The struggle of the law courts and the London streets, gives much more knowledge of the world than the life of a country-house or a university. Mr. Lowe's ideal Civilian would appear to be "Pleesman X."

***

THE Church's identification of itself with the cause of Don Carlos troubles the Brahmo Somaj a good deal, and may well do so. If we ask why Don Carlos is dear to Rome, there is but one answer: He represents the past, blind submission to ecclesiastical rule. Don Alfonso, the Constitutional Monarch, is better than a Republic, of course: but Don Carlos is the man for the Church.

THE WEEK.

SIR DOUGLAS FORSYTH has had an audience with the King of Burmah, but the result is not yet public. Opinion is equally divided on the subject, both amongst the officials and the merchants. The natives, and especially the Chinese, are positive that there will be war, and a large number of Chinamen have quitted Burmah, after-disposing of their affairs, for home. At present, all military leave is stopped; the impression is that a force of 2,000 men is sufficient to annex Upper Burmah, and also to destroy Momein, besides giving the frontier tribes at Manwyne a lesson. The Karens are still uneasy in the Khontee's country, as the Burmese are in force on their frontier, and they expect to be attacked as soon as Sir D. Forsyth has returned to India. While the mission was *en route* to Mandalay, rumours of opposition on the part of the King were circulated daily. At first it was stated that the *Nemesis* had been stopped, and that her passengers had been fired upon "by the troops at Minhla; the troops who formed the escort almost entirely cut up, Colonel Duncan taken prisoner, and Forsyth, and a few of the survivors turned back." It so happened that on the day on which this report was circulated, and for two days preceding it, the telegraph line was interrupted. The interruption soon became known as a positive fact, and the tattlers being thus foiled, they averred that the King had had the telegraph line cut as soon as the attack took place. Telegraphic communication was soon restored, and the delusion dispelled by the fact of the temporary stoppage of the *Nemesis* at Minhla being attributable to the breaking of her rudder; and instead of the British mission and their escort being fired upon, they were received most cordially at the frontier, and *fêted* in an extravagant style.

THE final instructions of the Government of India appear to have been telegraphed to Sir Douglas at Thyetmyo on the 3rd instant. From that date to the 7th instant, telegraphic communication was interrupted at a point about eighty or ninety miles distant from Rangoon. Warlike rumours are being fed by the arrival at Rangoon of large quantities of rockets and other "diplomatic" agents. Everybody is anxiously awaiting some solution of existing difficulties, and a local paper feelingly observes that "large luminaries revolve but slowly. Week after week goes by and dwellers in Burmah, condemned to inaction, with bazaars half closed and trade at a stand-still, experience an amount of impatience which residents at Simla fail to realize." The Mandalay correspondent of the same journal announces that the Woonduck, who was recently the King of Ava's ambassador to Calcutta, has been sent to the frontier to receive Sir Douglas with "smiles and betel-nut." Our Envoy's spirit was to be soothed on his way up with Burmese concerts and theatricals. The suite were to be royally lodged in sheds in the Residency compound, "with kitchen, and *Poay* stages on all sides;" the King having heard that meat and music were potent charms which no Englishman could long resist. His Majesty, having found that bullying and boasting about fortifications and artillery failed to frighten the Government of India, now wishes us to believe that he never dreamt of opposing our will in anything; but the correspondent we have referred to warns all concerned that "unless Sir Douglas Forsyth be firmly resolved on taking away from the King all power for future mischief, the danger to our persons, trade, and policy, absent as long as British troops may be kept in readiness at both Tounghoo and Thyetmyo, will appear and become imminent again as soon as Sir Douglas and his force have gone back to Madras or Calcutta."

THE Rangoon papers state that "one of the King's sons, the Thebo Prince, a young man of seventeen, with a harsh and repulsive appearance, has successfully passed his examination in the Burmese Scriptures," the knowledge acquired consisting mainly

in interminable Pali words which neither the priests nor their disciples can understand. For his meritorious diligence the student was rewarded by the grant of an escort, in the shape of all his brothers, who were ordered to ride behind him when he went abroad. This has disgusted the elder brothers, who believe the King intends to make the student his successor. The royal goldsmiths have been busy preparing presents for Sir Douglas and his suite. It is evident that the King has entirely abandoned, for the present, the idea of resisting the British Power. His Majesty's principal weapons will probably be delay and evasion, and it will be Sir Douglas's duty to obtain for the fulfilment of diplomatic engagements, some better guarantee than promises.

PEACE reigns in Baroda. The disappointed claimants to the *guddee* have acted well in bowing to the decision of the Viceroy. They will probably receive amongst them Rs. 5,000 a year and a village worth another thousand, and they are to be assisted in liquidating the debts incurred while prosecuting their claims to the throne. Gujanund Vittul, it is said, will receive a village worth Rs. 750 annually, and Akbar Ali and his son Abdool, each a jageer worth Rs. 500. There is now no trace of recent affairs in the celebrated bungalow, except some clever cartoons of Serjeant Ballantine, Sir Lewis Pelly, Colonel Jacobs, Sir R. Couch and others, drawn on the verandah wall. The troops at Baroda will now stand as follows, and are likely to remain so till after the monsoon: 1 squadron of Lancers, half battery of Artillery, 250 men of the Fusiliers, 9th Regiment N.I., and 22nd Regiment N.I. The Gaekwar troops remain as they are, mustering nearly 1,500 men of all arms, and under the care of Sir Richard and the Dewan. The chief officers of the new administration are Sir T. Madava Row, Dewan; Mr. Kasi Shaboodeen, Chief Revenue Officer; Mr. Muckonrai Munirai, Chief Justice; Mr. Venayek, Chief of the Department of Police and Jails; Mr. Cooverjee Cowasjee, Chief Magistrate; Mr. Pestonjee Jehangheer, Alienation Settlement Officer; and Mr. Motiram Goculdas, Chief of the Finance Department. The quiet now prevailing in Baroda is not yet the order in the districts. Only a few days ago there were rumours in the city that the Sir Sooba of the Northern Division had been shot, and that the *ryots were being incited to resist* the authorities in the collection of tribute. These are mere rumours certainly, but where *they exist* the *germ of discord* exists also. *It is a fact that* the *cultivators* of a village not far from Baroda refuse to till their grounds, unless some very *perceptible* reduction of assessment is made. "There have been very grave disputes for the last few years between the cultivators and the assessors, and nothing less than the payment back to the ryots of the excess taxation of past times will satisfy them now. There is not much danger, however, of a serious row, as the troops and the police arrangements in the vicinity of the disaffected villages are quite sufficient to crush any eruption." What the constitution of the Government will be it is still hard to say, but there is no doubt a regency will be the form, with Sir T. Madava Row at the head. There is a report to the effect that Sir Richard Meade and Sir Madava Rao are not working cordially together; and the latter, it is further stated, has threatened to resign. The installation of the Gaekwar in Mahratta form took place on Wednesday last. The ceremony was imposing and complete in every respect.

THE neighbourhood of Poona is still disturbed by differences between the Marwarees and ryots. A number of the former have fled to the city, "as they are afraid to remain in the villages while the ryots are in such an excited state." Disturbances are threatened in the Seroor Talooka, where the peasantry seems thoroughly aroused to resistance by the extortions of the moneylender.

NOWROZ KHAN is still in the field, but arrangements made by the Ameer are likely to put a stop to his raids near the Khyber. Dhaka—an important strategical position two miles beyond the pass and opposite to Lalpoora—is being garrisoned by troops and supplied with stores. Dhaka is only forty-five miles from Peshawur, and was, we believe, occupied by us in the Affghan war. An agent of the Ameer has received the rifles which our Government has presented to Shere Ali, who intends to use them in opening up the trade routes closed by the attacks of the rebel mountaineers. The old allowance of Rs. 22,000 a year has been granted to the Khyber clans. This, with the authorized tolls from traders, backed by the presence of the Ameer's well-armed troops in permanence, can only result in peace and benefit to caravans. The rebels have had hard times since the closing of the Pass, and the cessation of tolls and annual allowances.

Later intelligence from Cabul informs us that the Ameer has received a despatch from the camp of his generals at Lalpoora to this effect: "Nowroz Khan Mohmund has sent his vakeels several times with a request to have matters settled with the Ameer, but we have not given him any reply. The Mohmund Chief is willing to send his son as hostage to Cabul, and to pay for all the losses the merchants have sustained. Nowroz Khan does not wish to be appointed Khan of Lalpoora, but to live as one of the subjects of the Ameer." There is thus a probability of the trouble in Affganistan coming to an end for a time.

PESHAWUR refuses to receive relief for the benefit of the sufferers by the late fire on the ground of the self-reliant and provident character of its citizens. The loss of property is estimated at £400,000, over a thousand dwelling-houses and eight hundred shops having been burnt. It is believed in Peshawur that sixty hours would have sufficed for the total destruction of the town but for the admirable assistance afforded chiefly by the troops, and it is equally believed that had not the wind lulled when it did, the whole town must have been burnt in spite of all exertions. The demolitions were carried out with considerable judgment, and with all possible consideration for house-owners. The question of compensation has yet to be dealt with: it is receiving full attention. Owing to the high wind and the unusual dryness of the town from the absence of the winter rains, the fire had from the first everything in its favour, and spread with unusual rapidity, causing such a general panic that, with very few exceptions, the towns-people of the quarters neither affected nor immediately threatened fled with their property during the first night of the conflagration, so that little or no aid was afforded by those most concerned in the extinction of the fire. Peshawur will probably be rebuilt in blocks separated by streets sufficiently wide to prevent the rapid spread of flame from one portion to another.

NOTWITHSTANDING the descent of the "Chota Bursat" the weather during the past week has been extraordinarily oppressive. Simla has suffered like the rest of India, and at Umballa the thermometer has stood at ninety-six degrees under a punkah at 10 A.M. Several deaths have occurred in railway carriages, a soldier dying on the Saharunpore, and two natives on the Jullundhur, line. Several instances of apoplexy have also occurred in cantonments.

THE natives of the Punjab have decided upon contributing two lakhs of rupees towards the cost of the Prince of Wales' tour in that part of the country. Bombay is already beginning to make arrangements, but no certain plan of procedure has yet been decided upon. Some of the suggestions made are on a par with those of the now celebrated Mackenzie of Kintail. This gentleman has found a disciple in Major Pendergast. "On reaching the landing stage a royal salute should be fired, and on the finish of the compliment the Prince should step ashore amid a flourish of trumpets," advises the Major. The dockyard is to be made a "marvel of art." The ground should be "covered with red cloths bound and crossed with gold tinsel tape. Every kind of Indian tree and plant capable of being transplanted in tubs should be placed in rows." A double line of elephants is to be drawn up "to give an Indian effect to the scene," and the Major thinks that "some of the princes, chiefs and native gentlemen might be mounted upon them." "A few miniature mosques and minarets might be constructed of the same materials as compose the taboots, or of some other light stuff, and these would serve as models of Indian architecture, and would look very pretty hid away in the green and umbrageous foliage of the trees and plants." In addition, a mounted escort of "gentlemen of the city should be in attendance as a volunteer body-guard of honour, and it should be their duty to attend His Royal Highness on this occasion and during his stay in Bombay." This volunteer body-guard should "appear in white clothing, gold shoulder-cords, helmets with gilt chain, and breeches with jack-boots, white gloves to be worn, and a blue scarf as a cross belt might be worn on which should be worked in gold the Royal arms to fit over the left breast." The Major "would not have a dinner, but light and elegant refreshments with plenty of good champagne." When the banquet is over the Prince is to proceed to Parell in great state, and under a number of triumphal arches. "Fireworks for which the people of India are so celebrated" are to be discharged, thus, as the Major truly says, "illuminating the darkness of the evening and lighting up the countenances and dress of the vast assemblage." The troops should be allowed to "toast their future King; they might be well entertained on the occasion, for a very few thousand rupees would suffice to give the soldiers roast-beef and plum-pudding and to wash them down in beer"!

SOME interesting torpedo experiments have been made near Tientsin. The Chinese, having decided to provide for the

defence of their ports and harbours on the latest civilized principles, recently sent to Denmark for two engineer officers to teach them how to make and fire torpedoes. These engineers, it appears, have arrived at Tientsin, to gether with four large and twenty small tropedoes, which were intended simply as musters to show their explosive force. The ammunition to explode them came on in a subsequent vessel. On the 19th April, Captain Hoskioer of the Royal Danish Engineers, and men connected with the great Northern Telegraph Company, arrrived to erect a line between the Sin-ching, Taku and Pietang forts, so that the Chinese Government might, in time of war, be able to keep up telegraphic communication between the Sin-ching forts, where the General-in-Chief would be stationed, and the Taku and Peitang forts. Captain Hoskioer, during his stay of a week at Taku, also superintended in the presence of a number of military Mandarins, the exploding of some of the torpedoes. The result of the trials was so satisfactory that the Chinese have since ordered a large quantity of these machines from Europe, so that when our gun-boats next have occasion to go up the rivers of China on other than peaceful errands, they will have a warmer reception than they have previously met with.

It is rumoured that Mr. Wade has received a telegram from the Home Government, announcing the relegation of the Yunan difficulty by the Home Government to the Governor-General of India. The *Shanghai Gazette* concludes that, if the rumour be true "telegraphic advices have convinced our Government, of the implication of the King of Burmah." If the idea of relegating the matter to the Viceroy has really occurred to the Home Government, it is certainly a happy one as regards British finance, but ought not to be regarded with much favor by unfortunate Indian tax-payers. Whatever may be the connection of the King of Ava with the case, it is at least evident that Chinese officials of Manwyne were directly interested in the murder of Mr. Margary, and that the troops which attacked Colonel Brown's party were Chinese and led by a nephew of the Chinese Commandant of the district. If, then, the duty of punishing the culprits, and of avenging the national wrong were left to Lord Northbrook, India would have to pay not only the cost of military operations in Upper Burmah, but also that of an invasion of a portion of the Chinese Empire. Commenting on the facts, the *North China Daily News* says: "If the Burmese King's complicity can be proved, so much the better. His deposition and the advance of the British frontier to the borders of Yunan would be a great political gain. But whether or not the instigation can be traced to Mandalay or Peking, it is clear that Chinese officials for whom the Peking Government are responsible were the chief actors in the outrage." It is by the Chinese that a British officer travelling under imperial passport has been murdered, and it is by the Chinese that a British expedition, similarly protected, has been attacked. It may well be that the whole affair was planned between Momein and Mandalay, that the Yunan authorities committed the outrage on their own responsibility, and that the Government knew nothing of the project. That conclusion would intensify the guilt of the officials, but would detract nothing from the responsibility of the Central Government for the act of its subordinates. Under any circumstances the question is an Imperial one, and the natural desire of the Home Government to keep British tax-payers in good humour would hardly justify the meanness of imposing on India the cost of vindicating British honor and dignity in Chinese territory. Unless outrages like the one perpetrated at Momein were fully avenged in some way, it would be impossible for British trade with China to be carried on with security to life and property; and as English trade with China vastly exceeds in value the trade between India and China, a proportional amount of the cost of exacting due reparation or inflicting due punishment should, in strict justice, be paid out of the Home *revenues.*

LONDON LETTER.

(FROM OUR OWN CORRESPONDENT.)

LONDON, MAY 21ST, 1875.

LORD DERBY is accredited with a circular to the representatives of Great Britain at Foreign Courts, dictated in the interests of peace, and the German press affects to be pleased to see England once more taking part in the affairs of Europe. That Lord Derby would spare no fair words to arrest a continental war may be readily believed, but what many would like to know is the policy he would support in the Cabinet, were hostilities actually to break out. Would he in that case side with the party unjustly assailed, or would he stand aloof, an impartial spectator, with his arms crossed upon his breast? The question is not unfrequently mooted, and the most frequent conclusion seems to be, that we should issue a protest against the barbarous practice of national duels, and then quietly take a nap until the din of artillery came unpleasantly near to our own shores. For a moment, the near horizon is tolerably free from clouds, though we know from bitter experience that out of a speck no bigger than a man's hand may be developed a most fearful war-storm, carrying terror and desolation over one-half of Europe. At the same time, the Belgian "incident"—to use the phrase of the day—is hardly yet wound off the reel. Prince Bismarck is understood to be still bent upon forcing the Belgian Government to introduce measures to restrict the liberty of the press when hostile to Foreign Powers, and the German Chancellor is endowed with a dogged tenacity of purpose that imposes its will upon weaker minds. It would, however, be a very injudicious act to drive Belgium to a closer union with France. The Belgian army may not be very formidable in the field, but the task of keeping it in check would paralyse a considerable German force, while the invasion of Germany would be facilitated along an extensive frontier, simultaneously with an attack upon the newly acquired provinces of Alsace and Lorraine. These considerations, indeed, are not likely to be lost upon Prince Bismarck, and from all sides come assurances that for the current year, at all events, the peace of Europe will be maintained. The Emperor Alexander is believed to be entirely opposed to a renewal of the struggle between France and Germany, and is ready to regard the first who has recourse to arms as a *hostis humani generis.* It is the priest party, however, who constitute the real danger to peace and liberty. Last week Count Münster, the German Ambassador, being entertained by the National Club, a strongly Protestant institution, dwelt with much earnestness on the aggressive character of the Ultramontanists all over Europe, and even ventured to warn England against the machinations of the Irish Catholics. This was, obviously, an error of judgment on the part of a Foreign Minister; and last night in reply to a silly question from Mr. Sullivan, Mr. Disraeli admitted that Count Münster's speech was scarcely in accordance with diplomatic usages, though, for his own part, as a British statesman, he was not disposed to discourage the utmost freedom of speech. The German Ambassador, he continued, would very possibly visit Ireland in the course of the autumn, when he would be able to judge for himself that there is no real analogy between the heads of the Catholic Church in Ireland and similar dignitaries in Germany. In the latter empire, there is positive antagonism between the Liberals and the Papists. Among the former must be numbered all the enlightened Catholics speaking the various dialects of the German language, while side by side with them are combating the most illiberal and intolerant of Prussian Protestants. The danger, if exaggerated, is real, present, and enduring,—so long, at least, as the Papacy endures.

Misfortunes and adversity have produced their usual fruits at Rome as elsewhere. Since the See of Rome has been deprived of its temporal power, there has been a revival of its spiritual influence. The combativeness of the Churchmen has once more been aroused, and nothing will be left unattempted with a view to recover their waning ascendancy, that can be designed by keen, subtle intellects, working with infinite tact, patience, and discernment, unchecked by scruples or remorse. Pio Nono himself has quite recently celebrated his eighty-fourth birthday, and though enjoying a hale green old age cannot be expected to last many years longer. Who, then, is to be his successor? At one time it was thought that Cardinal Manning had a good chance, but that idea has pretty well evaporated, and now almost every one looks for the election of an Italian of the Italians,—one prepared to do and dare all things in the name of Holy Mother Church, and to embroil every nation in Europe in war, in the hope of winning back some of the fat temporalities as dear to churchmen as to worldlings. And now Victor Emmanuel himself is reported to be seeking reconciliation with the Pope. Though neither particularly religious in his opinions nor severely moral in his conduct, the Royal Hunter of the Alps is not devoid of the superstition that has in all ages characterised the Italians. To die without receiving the last Sacraments, is a prospect fraught with terror to men of clearer understanding than the soldier-king, so that we can hardly wonder that after depriving the Pope of his power and pelf, Victor Emmanuel should wish to make friends with St. Peter's successor before he departs to a world in which, perchance, that Saint's intercession may yet avail something. Reparation is, of course, out of the question, except in the fatal way of strengthening the social and educational influence of the priests. More than that, Rome herself need hardly ask, for it would virtually again give her the dominancy over Italy. It is in this manner that Rome has insidiously gained such a broad footing in our own country, and established the foundations of a structure that threatens

to rival the National Church. Of the formidable difficulties that obstruct the path of Prince Bismarck and the German Unionists, it would be hard to form an over-estimate, however much we may be disposed to criticise the harsh and almost oppressive policy that comes naturally to a military oligarchy. It is at least reassuring to the rest of Europe, that the German Chancellor is both too courageous and too cautious to rush into war in order to maintain peace—the Irish not yet having claimed him as a fellow-countryman by virtue of descent from one of their long-forgotten kings.

France is happily standing at ease for the moment, the war-cloud having passed over without bursting. The French are now busying themselves about the forthcoming elections, which are nearly certain to confirm the Republican form of government—bearing, however, in its bosom the germ of its future destruction in the shape of a senate, with its inevitable predisposition for a Monarchy and a Court, whether Imperial or Constitutional. Luckily for MacMahon, he is merely a unit, and is not personally involved in the political movements that gravitate around, but not towards, him. A sun that gives neither light nor heat, he is nevertheless the centre of the system, and could not be suddenly displaced without dire confusion and chaos. The cry for vengeance has also died out, in a great measure, and every year's delay is a gain to the human race.

What shall I say of Spanish affairs, except that they are worthy of the country and its degraded people? "Ye, who would more of Spain and Spaniards know, go, read whatever is writ of bloodiest strife." And yet there is not much blood-shedding to record, save in useless skirmishes that make widows and orphans without advantage to either party, and still leave unanswered the question asked half-a-century ago

> When shall her olive-branch be free from blight?
> When shall she breathe her from the blushing toil?

Mr. Grant Duff, not content with having favoured the *Contemporary Review* with the result of his researches into the natural history of India, has condescended to bestow upon his Elgin constituents, and through them upon the world at large, his views and opinions *de omnibus rebus et quibusdam aliis*, and especially upon the latter. He fears that Germany is eager for war, but rejoices to think that she prefers peace. The French are disquieted in many ways, but they are nevertheless serene and tranquil in mind. They are still apprehensive of change, but are satisfied of the stability of the present order of things. The Conservatives came to power, because they had practically been converted to Liberalism; their tenure of office, however, is likely to be brief, because Parliament will soon grow weary of Mr. Disraeli's jokes. The English nation are proud of the great legislative triumphs achieved by Mr. Gladstone, and testified their gratitude and just appreciation by declining to have him any longer for their Premier. With the exception of Portugal, Mr. Grant Duff had visited every country in Europe before he began to read much about them. After spending a week or two in each of their capitals, he opened his Murray and his Baedeker, and thus acquired all the knowledge which he yearly doles out to his admirers in the far north. With India, however, it was different. A distant relative having, many years ago, written a book about the Mahrattas, he was of course intimately acquainted with all that belongs to that wonderful country, before he visited it in person last cold season. His opinions having been formed beforehand, he had no occasion to form any new ones, or to change the old; still, he had been surprised to find that there was really a very considerable difference between the natives of Hindostan and the people of this country. Nor did he believe that they would ever be exactly alike, or that the Indians would outstrip us. Everything in the British administration was as good as it could be. Even the native army was admirable for every purpose required of it—at least, so he was assured by the Commander-in-Chief, and by others who ought to be better authorities than writers in the newspapers. The regimental officers, too, with many of whom he affably conversed quite on equal terms, seemed satisfied with things in general and with their own lot in particular. As for the Civil Service, he did not regard the competitive system as infallible, but he was certain that the new order of civilians are quite as tall as their predecessors, and would weigh as much, if put into the opposite scale. And as they are examined by medical men before going out to India, it must follow that they are as good administrators. Touching the famine, Lord Northbrook was justified in believing that it would not assume the terrible proportions assigned to it in some quarters, and Sir Richard Temple was equally justified in believing quite the reverse. The rightest of all was himself who agreed with them both, and who knew from the first that the famine would come to an end sooner or later, for if it did not, the people would all perish and then the famine would cease of itself. In any case, the survivors would outlive it, and his prophecy had naturally been verified. Reading hurriedly between the lines, I have now faithfully reflected the impression made upon my own mind by Mr. Grant Duff's instructive discourse, to the extraordinary individuals who gather together every year to listen to his dissonant voice and see his beard wag.

The *Indu Prakash* has had honours thrust upon it that will, I fear, disorder what little common sense has hitherto belonged to its conductors. An ex-editor of the *Madras Athenæum* having sent to the *Times* the translation of an extract from that native paper to the effect that the British Government is not the paramount but only the leading Power in India—as Prussia in Germany—nearly every morning paper, has published a leader upon this illustration of the freedom of speech and thought allowed to the press of a conquered people. The gentleman who dragged the paragraph in question out of its congenial obscurity, was disposed to use strong measures to curb and repress such unorthodox expressions, but our London journalists take a more rational view of this petulant outburst. They contrast the liberty accorded to the native press in India, with the restrictions imposed upon every press in Europe save our own and that of Belgium, and they claim for the British Government the credit due for calm courage and impartial justice. They might perhaps have gone a little further, and recommended a little outlay in disseminating among the lower orders of the population correct intelligence as the best antidote to ignorant or malevolent misrepresentations. To a certain extent indeed, the *Indu Prakash* is right enough. It is the hegemony of the States of India which has fallen to the lot of the British Government, and in accordance with which the general peace is maintained and public disorder prohibited. The example of Prussia is, in some respects, quite analogous. How long would the Government of Berlin submit to insult from Saxony or Bavaria? How long would it suffer the Dukes of Darmstadt or Saxe-Cobourg to oppress their peoples, or to afford a scandal to on-looking Europe? The parallel so far holds good, and the *Indu Prakash* merely exhibits the ignorance of details inseparable from pupil-knowledge and conceit.

It is to be hoped that none of the native powers will be misled by the speeches of Lord Elcho and Mr. Holmes, to underrate the strength and efficiency of the British land forces. A very slight effort would avail to land such an overwhelming host at Bombay, Kurrachee, and Calcutta, as would crush like an empty nutshell all the relics of Sikh, Maharatta, and Moghul military parade. The very recruits of whom Lord Elcho speaks with such foolish contempt, would suffice as the besom of wrath to sweep away anything that Sindiah and Holkar united could array against them. Not that I would for a moment insult those excellent princes by the slightest suspicion of their loyalty and prudence. It would be well, however, that their subjects should be brought to understand that too much importance must not be paid to the vapid declamations of sciolist journalists, and that the British Government is strong to rule as well as to protect.

At the risk of being esteemed a churl and a cross-grained curmudgeon, I must take leave to enter my protest against the four Bank holidays instituted by the Legislature in the interests of the Licensed Victuallers. The glorious weather at the end of last week tempted many thousands to leave town by the various excursion trains, and to exchange metropolitan for provincial tippling. Some little advantage may have been derived by these "*bona fide* travellers" from the comparatively purer air of the country or the sea-side; but on the other side must be placed the dissipation of whatever savings may have been accumulated since Easter, and the indulgence of habits of unthrift and improvidence. But it is chiefly in the rural suburbs, that these holidays exercise the most perincious influence. The mere distruction of hedges and flowering shrubs, is a smaller matter to set against the exuberant enjoyment of the multitudes cooped up in narrow streets from one week's end to the other. Even drunkenness would not be worse at Twickenham or Greenwich, than in Holborn or Whitechapel, were it not that in these "outings" the men are accompanied by their womankind, who become as debased and wicked as their male companions. Obscene and filthy language, ribald songs, shouted and screamed at the top of the voice, dances as indecent as, and far coarser than, the *Can-Can*, kicks and cuffs freely administered—these are the outward and visible signs of British mirth and humour, as illustrated on the festival days of our Holy Mother Church. The confusion of tongues was doubtless illustrated after a fashion last Whitmonday, but it was the unintelligible gibberish of the builders of Babel rather than a reminiscence of the polyglot feast of Pentecost. Then, th

unfortunate animals doomed to drag crushing loads of human flesh for ten, twelve, or fourteen miles out at a trot, ever and anon breaking into a hand-gallop, with the return at a hand-gallop only occasionally relieved by a trot when exhaustion threatens to supervene—together with the free use of the lash and constant chucking of the reins—surely this misery should be deserving of the notice of the Society for the Prevention of Cruelty to Animals. Until past midnight on Whitmonday, every thoroughfare leading into town was a scene of wild, reckless driving, and of hideous uproar and blasphemy. Far better would it be if our enlightened tradespeople and costermongers would recede to the usages of their forefathers. True, bear-baiting, dog-matches, pugilism, and cock-fighting have passed away with rare exceptions, but as a set-off, we have the new pastime of wife-beating, of gouging our neighbours' eyes, and of biting off ears and noses: so "gay" have we become in this age of progress. The Crystal Palace, though it still drew together some 40,000 more or less rational beings, was forced to give way to the superior novelty of the Alexandra Palace, backed by a concert in which Titiens, Mr. Santley, and above all, Mr. Sims Reeves, were announced to take a part, and, incredible as it may appear, our popular English tenor actually did sing three songs. Sydenham, however, was grandly avenged in the return home of the ninety odd thousand individuals who were enticed to Muswell Hill. Somewhere the other side of Holloway, an engine broke down and in consequence the line was blocked for upwards of four hours. About midnight, the passengers were turned out of the long string of trains that had gradually became linked together, and were told that they must find their own way to their respective homes. Of course there were no cabs in waiting, but it was a fine cool night, and with wonderful patience and good temper, thousands of sobered men, sleepy women, and larky youths and maidens set out, to tramp many a weary mile before they could take final leave of their great Spring holiday.

On Wednesday a very pleasing ceremony took place in Dudley House. In the presence of the Duke of Edinburgh and a large gathering of singers, composers, musical conductors and amateurs, the Earl of Dudley presented a very handsome silver table service to Sir Julius Benedict, the favourite pupil of Weber. The Earl had travelled all the way from Italy to discharge this loving duty, in which he acquitted himself with great tact and genuine good feeling. The old man was for a brief space quite overcome, and could hardly suppress the grateful sob. The affair terminated most agreeably in a saunter through the stately rooms and galleries, followed by a light and well harmonised luncheon.

GOSSIP.

MUSSOORIE.

[FROM OUR OWN CORRESPONDENT.]

I FEAR I have been a little remiss in my duties, but I am only just recovering the fatigue which I have undergone during the last fortnight in your service. I have been, Sir, to two balls, one fancy-fair, three dinner parties, one private theatrical performance, and I do not know how many nights I have not dined at the club and watched the billiard handicap there in order to spot the winner.

The two balls were good in their way. The first, more of a dance than a ball, was held at the municipal hall, and all, or nearly all, footed it merrily till a late hour. The second, "every inch" a ball, was held at the club, and given by the members. It was very well attended, and I thought was a success, though the wall-flowers found it slow, as they had to congregate mostly at the head of the stairs. It was certainly not lively for them, but then what did they there, and why did they not recoup themselves by taking it out of the iced "christopher." As I announced in my last, I was going to do my duty at those two "hops," and I did it. There were no regular dancers, and "your own" managed eighteen each evening to his great discomfort on each morrow. It is great fun to watch the couples dancing too. Here an unhappy wight with an unfortunate partner who looks imploringly round like a second Andromeda for a second Perseus, careers blindly round the room, quite ridiculous, and bumps and thumps against every one, eliciting muttered blessings from the men and eye-glances from the women which are equally expressive. Here comes Smasher, whose motto is that you can't go fast enough tearing round the room, and we thought so; down he goes, and his partner too; and the first fall of the evening is recorded. Then look at some of the men, why should they make such faces. But enough, let us turn away, though before leaving the topic of dancing, I will tell you a little anecdote about a ball I attended at Lowestoff years and years ago. A young lady, a great friend of mine, had been chosen as a partner by a young Crœsus of the neighbourhood, who was very bashful, '*gauche*' and *bête* indeed. I watched him dancing a valse with wonder, in which the desire to laugh was stifled by genuine pity for my fair friend. At last the millionaire got on a little pace and arrived close to where I was standing. His partner was quite worn out and stopped, but he had got so much steam on that he let go her waist, made three or four twirls by himself, cleft through the ring of lookers-on, and plumped into the lap of a fat old chaperone in blue who was sitting half asleep by the wall. Of course there were roars of laughter, which I must say Crœsus took very well. He did not, however, try another 'foot,' that evening, and my charming young friend danced all night in peace.

The handicap at billiards witnessed on Tuesday night last the knocking out of "the S. C.," who was in very poor form indeed, and was therefore walked all round by 'Little Alf' who is now easily first favorite for the stake. "The Meerut Major" having been also disposed of, there are only the "Old Stager" and "Little Alf" left in for the scratch lot, and second ties having been drawn I expect there will be some good play and some very tight games. The C's have a dark division, but their best horse was not entered, as his owner conceiving that there is a specially unfavorable providence to him in handicaps, refused to handle the pencil. The fancy fair was slow and had it not been for Tommy Dodd, would soon have been deserted, for it is not a peculiarity of the Mussooriens to waste money on puffy dolls and impossible nick-nacks. The dwellers of these heights are, however, gamblers, gambling being an indigenous mania, and so Tommy Dodd prospered and waxed fat exceedingly to the great benefit of the Cave of Morpheus. The legal world have plunged *in medias res*, and this month is a busy one. The Body-guard case comes on for hearing on Wednesday, and it was expected at the close of the first day's proceedings that the case would not, to use an expressive native word, "chul," but the next day the Judge intimated that he would go into all the oral evidence that each side could adduce, and the case will, therefore, proceed on its merits, which *will be much more satisfactory* than its collapsing on some abstruse point of law. The great Mussoorie case of the Delhi Bank *vs.* Clarke and others, comes on again next Monday, and as the whole week has been set aside for it, it is hoped that by next Friday the whole facts will have been gone through and the matter be at an end. Last Monday witnessed the finale of one of the biggest cases up here, *viz.*, Cornelius *vs.* Powell. This was a claim for a legacy which had twice before been disposed of on legal points and twice remanded by the High Court; after the last remand the whole facts of the case were gone into, and after a very long hearing, protracted over several days, judgment was delivered on Monday and the claim cut down by some Rs. 2,000.

There is a rumour that the bi-weekly paper here, the *Himalaya Chronicle*, intends appearing in Court and proceeding against the *Pioneer* for libellous matter contained in a letter from the latter's correspondent here. The libel alleged is that the *Himalaya Chronicle* indulges in "personal abuse and scurrilous scandal." Hard words, my masters, and though the *Himalaya Chronicle* certainly admited a letter in its columns which was *outrée* to say the least of it, still I hardly think the paper merits as strong language as this, and as in many respects the journal is an able one, and contains matter both well written and well worth reading, I hope it will improve its tone on some minor points and succeed. The Editor's red rags are the *Pioneer* and the Landoura case, and all here who read and take in the papers are tired of the perpetual tearing and trampling inflicted on them by his contributors. If these ghosts were laid and all bandying and bickerings stopped, I should enjoy my half hour after breakfast on Wednesday and Saturday. As it is, each of these days I murmur *Quousque tandem*. In conclusion I will tell a short story for the Editor's edification, which I think is, on the whole, to the point. They were playing the drama of "Sancho Panza" in Paris, and that worthy's name occurred and re-occurred *ad nauseam* and the whole play was made unutterably wearisome thereby; at last the Duke said he was getting tired of Sancho Panza "*et moi aussi*" said a wag in the *parterre*, taking up his hat, bowing to the audience and departing. Roars of inextinguishable laughter followed and the piece was hopelessly damned. We may get tired of the Landoura case, and cut, not Mussoorie, but its paper. *Verbum sap.*

BLAS EL MATADOR.

OUR LIBRARY TABLE.

Assyrian Discoveries.—George Smith. Here we have the most precious historical treasures that have been brought to light during the past half century. Tiglath Pileser, Sergon, Sennacherib, Esar-haddon—all the familar names of Scripture, including the Jewish Kings Azariah, Menahem, Pekah, Hoshea, Hezekiah—recur again and again ; and the great Assyrian hero of Grecian history, Sardanapalus, gives a long account of his own reign under his proper name of Assurbanipal. He commemorates, in particular, in a passage that will rejoice the students of Herodotus, the submission of " Gyges, king of Lydia, a district which is across the sea, a remote place, of which the kings my fathers had not heard speak of its name," and tells how, after he had withdrawn from his allegiance, " the Cimmerians, whom by the glory of my name he had trodden under him, came and swept the whole of his country." The series goes down, though with less fulness, through the Babylonian kings Nabopolassar and Nebuchadnezzar to the Persian Cambyses and Darius, and even into the later Parthian monarchy. But the chief of all the discoveries relates to the Chaldæan legends of the Deluge. The story of the flood is very striking. The great gods reveal their will to Hasisadra through the lord of Hades :—

" I his will was hearing, and he spake to me. Surippakite son of Ubaratutu . . . . make a ship after this. I destroy the sinner and life. . . . . Cause to go in the seed of life, all of it, to the midst of the ship. The ship which thou shalt make, 600 cubits shall be the measure of its length, and 60 cubits the amount of its breadth and its height. . . . . Into the deep launch it. . . . . Into it enter, and the door of the ship turn. Into the midst of it thy grain, thy furniture, and thy goods, thy wealth, thy woman-servants, thy female slaves and the young men, the beasts of the field, the animals of the field all, I will gather and I will send to thee, and they shall be enclosed in thy door."

Then follows the account of the building and plastering over with bitumen, in words which singularly recall the Scripture narrative ; and after that a brilliant poetical description of the Deluge itself. It lasted six days only : "Six days and nights passed, the wind, deluge, and storm over-whelmed. On the seventh day in its course was calmed the storm, and all the deluge, which had destroyed like an earthquake, quieted. The sea he caused to dry, and the wind and deluge ended. I perceived the sea making a tossing, and the whole of mankind turned to corruption. Like reeds the corpses floated. I opened the window and the light broke over my face. It passed : I sat down and wept ; over my face flowed my tears. I perceived the shore at the boundary of the sea : for twelve measures the land rose. To the country of Nizir went the ship : the mountain of Nizir stopped the ship, and to pass over it, it was not able. The first day and the second day the mountain of Nizir the same. The third day and the fourth day the mountain of Nizir *the same. The fifth and sixth the mountain* of Nizir the same. On the seventh day in the course of it I sent forth a dove and it left. The dove went and turned and a resting-place it did not find and it returned. I sent forth a swallow and it left. The swallow went and turned and a resting-place it did not find and it returned. I sent forth a raven and it left. The raven went and the corpses on the water it saw, and it did eat ; it swam and wandered away and did not return. I sent the animals forth to the four winds, I poured out a libation, I built an altar on the peak of the mountain ; by seven herbs I cut ; at the bottom of them I placed reeds, pines, and sugar. The gods collected at its burning, the gods collected at its good burning, the gods like flies over the sacrifice gathered."

Last Letters from Egypt.—Lady Duff Gordon. There is a great deal we should like to extract from the pleasant pages before us, but we have space only for the following strange bit of folklore : " Do you remember the German story of the lad who travelled '*um das gruseln zu lernen*' (to learn how to tremble)? Well, I, who never *gruselte* (quaked) before, had a touch of it a few evenings ago. I was sitting here quietly drinking tea, and four or five men were present, when a cat came to the door. I called '*bis bis*,' and offered milk, but puss, after looking at us, ran away. 'Well dost thou, lady,' said a quiet, sensible man, a merchant here, 'to be kind to the cat, for I dare say he gets little enough at home ; *his* father, poor man, cannot cook for his children every day.' And then in an explanatory tone to the company, 'That is Alee Nasseeree's boy Yussuf—it must be Yussuf, because his fellow twin Ismaeen is with his mule at Negadeh.' *Mir gruselte* (I shivered), I confess ; not but what I have heard things almost as absurd from gentlemen and ladies in Europe ; but an 'extravagance' in a *kuftan* has quite a different effect from one in a tail coat. 'What ! my butcher's boy who brings the meat,—a cat ?' I gasped. 'To be sure, and he knows well where to look for a bit of good cookery, you see. All twins go out as cats at night, if they go to sleep hungry ; and their own bodies lie at home like dead meanwhile, but no one must touch them, or they would die. When they grow up to ten or twelve they leave it off. Why your own boy Achmet does it. Oh, Achmet !' Achmet appears. 'Boy, don't you go out as a cat at night ?'—'No,' said Achmet tranquilly, 'I am not a twin, my sister's sons do.' I inquired if people here were not afraid of such cats. 'No, there is no fear, they only eat a little of the cookery ; but if you beat them they will tell their parents next day, 'So-and-so beat me in his house last night,' and show their bruises. No, they are not Afreets ; they are *beni Adam* ; only twins do it ; and if you give them a sort of onion broth and camel's milk the first thing when they are born, they don't do it at all.' Omar professed never to have heard it, but I am sure he had, only he dreads being laughed at. One of the American missionaries told me something like it as belonging to the Copts, but it is entirely Egyptian, and common to both religions. I asked several Copts, who assured me it was true, and told it just the same." It is a remnant of the doctrine of transmigration ! However, the notion fully accounts for the horror the people feel at the idea of killing a cat.

THE *Christian Intelligencer.*—June. In his popular "Notes on Mahomedanism" in this useful periodical, the Rev. T. P. *Hughes* has already described at length the different classes of Mussulman fakeers, together with their doctrines. He now proceeds to notice the system of Oriental mysticism, as taught by the Sufi sect. Sufiism appears to be but the Muslim adaptation of the doctrines of the philosophers of the *vedanta* school which we also find in the writings of the old academies of Greece, and which Sir W. Jones thinks Plato learned from the sages of the East. In Sufiism the disciple (*murid*) is invited to proceed on the journey (*tariqat*) under the guidance of a spiritual leader (*murshid*) who must be considered superior to any other human being. The great business of the traveller (*salik*) is to exert himself, and strive to attain to the Divine Light, and to go on to the knowledge of God. God, according to Sufi belief, is diffused throughout all things and the soul of man is part of God, and not from Him. The soul of man is an exile from its Creator and human existence is its period of banishment. The object of Sufiism is to lead the soul onward, stage by stage, until it reaches the goal—" perfect knowledge." The natural state of every Muslim is *Nasut*, in which state the disciple must observe the precepts of the law or *Shariat*, but as this is the lowest form of spiritual existence, the performance of the *journey* is enjoined upon every searcher after Truth.

The following are the stages (*manzal*) which the Sufi has to perform. Having become a searcher after God (*a Talib*) he enters the first stage of *Abudiyat* or service. When the Divine attraction has developed his inclination into the love of God, he is said to have reached the second stage of *Ishaq* or Love. This Divine Love expelling all worldly desires from his heart he arrives at the third stage of *Zuhd* or Seclusion. Occupying himself henceforward with contemplation and the investigations of the metaphysical theories concerning the nature, attributes, and works of God which are the characteristics of the Sufi system, he reaches the fourth stage of *Ma'rifat* or Knowledge. This assiduous contemplation of metaphysical theories soon produces a state of mental excitement, which is considered a sure prognostication of direct illumination from God. This fifth stage is called *Wajd* or Ecstasy. During the next stage he is supposed to receive a revelation of the true nature of the Godhead and to have reached the sixth stage *Haqiqat* or the Truth. The next stage is that of *Wasl* or Union with God, which is the highest stage to which he can go whilst in the body, but when death overtakes him, it is looked upon as a total re-absorption into the deity, forming the consummation of his journey and the eighth and last stage of *Fanar* or Extinction. That stage in which the traveller is said to have attained to the Love of God, is the point from which the Sufiistic poets love to discuss the doctrines of their sect. The Salik or Traveller is the Lover (*Ashaq*) and God is the Beloved One (*Mashuk*). This Divine love is the theme of most of the Persian and Pushtoo poems, which abound in Sufiistic expressions which are difficult of interpretation to an ordinary English reader. For instance, *Sharab*, Wine, expresses the domination of Divine love in the heart. *Gism*, a Ringlet, the details of the mysteries of Divinity. *Mai Khana*, a tavern, a stage of the journey. Mirth, Wantonness and Inebriation, signify religious enthusiasm and abstraction from worldly things.

The eight stages which we have given are those usually taught by Sufi teachers in their published works, but in North India Mr. Hughes has frequently met with persons of this sect who have learnt only the four following stages. The first *Nasut* or humanity, for which there is the *Shariat* or law. The second *Malaqut* or the nature of angels, for which there is *Tariqut* or the pathway of purity. The third, *Jabruts*, or the possession of power, for which there is *Marifat* or knowledge. And the fourth *Sahut* or extinction, for which there is *Haqiqat* or truth.

The Indian Antiquary—June. Dr. R. Caldwell contributes some valuable observations on " Kudumi" or the tuft of hair which Hindoos are accustomed to leave when shaving their heads. Kudumi is the Tamil term for the tuft, the Sanscrit being "Sikha." There are many references in Manu and other ancient Hindoo books to the practice of 'tonsure,'—understanding thereby either tonsure leaving a tuft, which is the mode in ordinary use, or tonsure including the shaving off of the tuft, which is the mode prescribed for ceremonial defilements ; but with one exception, so far as we are aware, those books throw no light on the question on which the lawfulness of the wearing of the kudumî, or tuft, by native Christians turns. They merely enjoin the kudumî to be worn, just as they enjoin the minutest details in bathing and dressing, but they supply us with no explanation of the reason why it had come to be worn, or of the light in which other modes of wearing the hair were regarded. The exception to which we refer is contained in the following extract from the *Vishnu Purâna*, Professor Wilson's translation, page 374,—a passage which throws more light on the question at issue than any other with which we are acquainted : " Accordingly when he (Sagara) became a man, he put nearly the whole of the Haidayas to death, and would have destroyed the Sakas, Yavanas, Kambojas, Paradas, and Pahnavas, but that they applied to Vasishtha, the family priest of Sagara, for protection. Vasishtha, regarding them as annihilated (or deprived of power), though living, thus spake to Sagara : 'Enough, enough, my son, pursue no further these objects of your wrath, whom you may look upon as no more. In order to fulfil your vow, I have separated them from affinity to the regenerate tribes, and from the duties of their castes.' Sagara, in compliance with the injunctions of his spiritual guide, contented himself, therefore, with imposing upon the vanquished nations peculiar distinguishing marks. He made the Yavanas shave their heads entirely ; the Sakas he compelled to shave the upper half of their heads ; the Paradas wore their hair long, and the Pahnavas let their beards

grow, in obedience to his commands. Them also, and other Kshatriya tribes, he deprived of the established usages of oblations to fire and the study of the *Vedas;* and thus, separated from religious rites and abandoned by the Brâhmans, these different tribes became Mlechchas. Sagara, after the recovery of his kingdom, reigned over the seven-zoned earth with undisputed dominion."

It is unnecessary to hold it to be historically true that this mode of distinguishing the different races inhabiting ancient India was first introduced by Sagara. Though Sagara was one of the earliest kings of the Solar line, it cannot be doubted that the different modes of wearing the hair referred to including the Aryan mode, had already come into use, in accordance with the practice of all ancient nations to distinguish themselves from their neighbours by such external differences, and that what Sagara is represented as commanding the different races to do is merely what they had already been in the habit of doing. The Tatars, or inhabitants of Central Asia, called Sakas by Sanskrit writers, have always been in the habit, as Professor Wilson remarks, of 'shaving the fore part of the head, gathering the hair at the back into a tail, as do the Chinese.' This mode of wearing the hair is identical with the kudumî of the Aryas, with the exception of the length of the tail; and as it has prevailed from the earliest times to the present day amongst three contiguous races, the Tartars, the Hindoos, and the Chinese, and as it is certain that the Hindoos had their origin in Central Asia, it is much more reasonable to suppose that the Hindoos brought the kudumî with them from their original abodes, like the horse-sacrifice, the worship of fire, and various other usages, than that they invented it after their arrival in India. This makes no difference, however, with respect to the light in which differences in wearing the hair were regarded in India in ancient times. Whether those differences were introduced by king Sagara, or whether they had already been in existence, we learn from the passage quoted above that they were regarded as 'distinguishing marks,' not of religion but of nationality. The kudumî was the 'distinguishing mark' of the Aryas, and the other modes described were the 'peculiar distinguishing marks imposed upon the vanquished races.' It was regarded as intolerable that the outward and visible sign of Aryan civilization and 'twice-born' respectability should be assumed by vanquished nations, much less by aboriginal barbarians. Each of those races, therefore, was required to assume, or to retain, a fashion peculiar to itself, exhibiting to the eye the distinctiveness of its nationality.

It is a fact deserving special notice that Sanyasis, or professed ascetics, though the most intense Hindoos to be met with, never wear that which is represented as being a sign of orthodox Hindooism. They either shave off the kudumî, leaving the head bald, or they allow their hair to grow to its full length, like the ancient Rishis, plaiting it into a sort of tiara on the top of their heads, ~~or letting it hang down their backs.~~ *Under either circumstance,* no one ever heard of a Sanyasi, though without a kudumî, being precluded from entering the temples. *Their* reason for not wearing the kudumî is intelligible enough, whatever may be the reason of the bankers. They regard it as a sign of a secular mode of life, unbefitting persons who profess to have abandoned the world. They class it with gold ornaments and fine clothes, and would stare if they were told that what they reject as a vain beautification of the perishing body, is regarded by persons who know better as a sign of their religion, which they ought to cherish.

POETRY.

"LA JOCONDE" OF LEONARDO DA VINCI.

(LOUVRE GALLERY.)

IN her eternal beauty she stands there
Among the gods for ever. At her feet
I see the hopes of men uprise, and beat
Like crested waves, joy sparkling and most fair;—
I see the Artist with his laurelled hair,
Rapt in his wonder-world; the Thinker, meet
To track shy truth to her last still retreat;
The Statesman, strong of will to do and dare,
A king of men; the Lover in whose breast
The sweetest twilight dawn is flushing fast;
The Saint, whose prayer is turned to praise at last;
The Mother musing by her babe at rest—
How bright they flash a moment! She, the while,
Looks down upon man with the same calm smile.

FRANK T. MARZIALS.

LETTERS TO THE EDITOR.

THE VICEROY AND THE FAMINE.

To the Editor of the Friend of India.

SIR,—Every one must rejoice that you have done Lord Northbrook some justice in your editorial of the 22nd May last, and trust that many of the charges preferred against him are mere ebullitions of temper that will pass away. Surely the man who blanched not from the helm when the storm was wildest, must know and feel that "he who ruleth over men must be just, ruling in the fear of God." And there is this also to be said for the Viceroy. Great and eminent as are Sir G. Campbell's qualifications, he is intolerant, overbearing, and unsympathetic to a degree, with a strong dash of the spoilt child in him, so much so, that if he does not get his own way in everything, he sulks, and is far from loyal to the Government whose servant he is or was. I for one do not concur in his policy of stopping the exports during the famine. Such a proposal is totally subversive of modern economical science, and it is easy enough to explain the disastrous results that would in all probability have certainly followed if that policy had been adopted.

If the export of grain had been prohibited, the possessors of produce would immediately have hoarded what they had, to force up prices. As soon as importers began to operate, holders of grain would have undersold them, and the merchants and traders, utterly ignorant of the quantities of grain yet in the country, would have restricted or abandoned their operations. As soon, then as the crisis came on, the Government would have been placed on the horns of this dilemma, extortion on the one hand, and the timidity and vacillation of importers on the other, and who can tell what the cost to the country would have been under such circumstances? Lord Northbrook's steadfast adherance to the principles of political economy saved the country from this great danger. That he was unfortunate in drifting into the famine, can be accounted for by the exceptional circumstances in which he was placed; Sir G. Campbell advising a policy wholly opposed to all modern English ideas of political economy on the one side, and old Indians recommending their disastrous game of waiting for something to turn up. It is not given to every one to win a field like Salamanca, and drive forty thousand Frenchmen out of the field in forty minutes by a single bold stroke *forward.* In an unhappy moment, the old vacillating policy was adopted, resulting in a heavy cost to the country; but I submit the Viceroy is but partly responsible for these consequences, and further, it is to little purpose to be crying over spilt milk. Let Lord Northbrook adopt the measures, which have rendered the repetition of the horrors of the Orissa famine impossible so far as human endeavour can do, and I venture to prophecy even you will not be angry with him long. But this he will never do as long as he maintains an erroneous belief in Railways in India. We have long been assured that these works are going to set the finances of the country all right. Having now been in existence over 20 years, is it not surprising to find then such an entry in the Budget, on account of famine expenditure, as an item for "Subsidies to Tenders and Railways"...£456,000. In addition to all the cost of carriage, &c., so that not only have these works failed to secure the land from ruin, but they must be subsidized to do their proper work when any great emergency arises. Is *this the way to* employ capital reproductively in India? There is another most objectionable item in the Budget for which credit is taken on account of the famine expenditure—*viz.*, £400,000 on account of the increased earnings of the railways during this time, which would otherwise have appeared in the deficit for guaranteed interest. This money was obtained by taxation and is a debit to Government to all intents and purposes; the railways did not secure the community from this expense, and it should appear against these works.

Whilst, then, there is a true deficit against the railways in the Budget of £1,532,000, "the receipts from the navigation of the Midnapore and Tidal Canal exhibit the gratifying increase of £20,948 against £10,386 in the previous year," more than a hundred per cent. increase in one year, while Lord Salisbury concludes that canals are a failure, and that we must trust to the extension of the Railway system to secure the revenue! Is it possible to come to any conclusion more lame or impotent?

B.

THE PRESS AND THE GOVERNMENT.

To the Editor of the Friend of India.

SIR,—Your article concerning the relations existing between the Government and the Press in India, has entered a crack in the armour. I know from experience that much of what you say is correct, and that you might have said more and not have passed the bounds of accuracy. It will perhaps interest you to hear that during the *régime* of Lord Mayo, an attempt was made, by letters and otherwise to seduce the———into publishing articles *written by members of the Government.* "Early intelligence" was offered, that traditional bait of an Indian Governor when dealing with an Editor, and even a more decided form of subsidy. The member of the Government who attempted to thus negotiate with Mr.———told him that the leaders would be strictly on political subjects, and that he must receive them without any questions as to their authorship. Mr.———was to have the right of private *entrée* at Government House, and early news from Cabul and the Gulf, where civil war was then raging. The editor politely refused the offer, and a large number of official essays on the politics of that time have consequently been lost. Again, Mr. Forbes, the *Daily News's* Famine Commissioner, was almost worried by those in high places when he first arrived. Notwithstanding their blandishments he stood to his own opinions. It was the same with the *Times'* Special.

IRIS.

THE JUDICIOUS HOOKER.

To the Editor of the Friend of India.

SIR,—Your note on Draper's History of the conflict between science and religion in your issue of the 22nd ultimo calls to my mind a passage of the great Hooker, particularly after reading that

"There is no such thing as Providence, for nature proceeds under irresistible laws" (by the way, from their effects here allowed, one would suppose an Almighty power only could establish such laws) "and in this respect the universe is only a vast automatic agent," This is modern destructive criticism. One grand old divine, on the other hand says, "Dangerous it were for the feeble brain of "man to wade far into the doings of the Most High; whom although "to know be life, and joy to make mention of his name; yet *our* "highest *knowledge* is to know that we know him not as indeed "He is, *neither can know Him*: and our safest eloquence concerning "Him is *our silence*, when we confess without confession that His "glory is ineffable, His greatness above our capacity and "reach. He is above, and we upon earth; *therefore* it behoveth "our words to be wary and few." The words breathe the spirit of him who endured as seeing Him who is invisible, and of the great apostle who knew in whom he had believed, and who finished his course with joy. Will any of our great modern critics tell us of a science to enable us to do the same? The great Hooker again says: "Moses in describing the work of creation, attributeth speech unto God," God said, let there be light; let there be a firmament. Was this only the intent of Moses to signify the infinite greatness of God's power by the easiness of his accomplishing such effects, without travail, pain, or labor? Surely it seemeth that Moses had herein besides a further purpose, first to teach that God did not work as a *necessary* but as a *voluntary* agent, intending beforehand and decreeing with himself, that which did outwardly proceed from Him; secondly, to show that God did then institute a law natural to be observed by creatures, and therefore according to the manner of laws, the institution thereof is described as being established by solemn injunction. "His commanding those things to be which are, and to be in such sort as they are, to keep that tenor and course which they do, *importeth the establishment of nature's laws.*" Again, "Touching this, their strict keeping of one tenure, statute, and law hath in it more than men have as yet attained to know, or perhaps shall ever attain, seeing how much the least thing in the world hath in it more than the wisest and able reach unto, they may by this means learn humility." This Mr. Draper declares is—what the illiterate call God! St. Paul on the contrary says knowledge puffeth up, and such knowledge as our modern scientific lights teach can do little else but puff; for if their doctrines are to be accepted, then "are we of all men most miserable," and "Christ died in vain." How is it possible to account for the fact that such men as Huxley and others can appeal to "the irressistible laws of nature" and be unable to see that all creatures in nature not endowed with reason, act according "to one tenure, statute, and law," which must have been impressed on them by an Almighty and Omniscient Power; and that man alone acts according to a will which all history teaches has been the chief cause of the misery in the world?

A.B.

THE FAMINE WASTE.

To the Editor of the Friend of India.

SIR,—In addition to the waste in grain in your account of the Famine expenditure, the following matters require attention:—

1*st*. The cost of the Famine steamers ordered from England in a hurry. They were never used on Famine work; and it is said that they are unsuited for Indian rivers, and badly made. Who passed them, and what has become of them?

2*nd*. Public Works connected with the Famine. It is said that each cubic foot of earthwork on the roads cost 4 annas, or about the cost of masonry.

3*rd*. Famine allowances and special appointments. Only a Commission will ever thoroughly ascertain the cost.

X. Y. Z.

May 26th, 1875.

NOTE.—We do not believe that it was possible to avoid waste in these operations; but the fuller the particulars which the Government lays before the public the better. The success of what was done condones all mistakes, but we want to know how to avoid them in the future.—ED., *F. of I.*

INDIAN INTELLIGENCE.

BENGAL.

ON Saturday morning last, a heavy storm of wind and rain, which lasted for some time, was experienced in Calcutta. This, taken in connection with the cloudy weather during the day, and the steady and continuous rain which fell during Saturday night and the early part of Sunday morning, may be considered as the commencement of the rainy season.

THE report of the death of Mr. G. S. Fagan, late First Judge of the Small Cause Court, at Suez, on his homeward journey, has, we regret to say, been verified. Mr. Fagan left Calcutta in the *Surat*, on the 8th April, in a very bad state of health. Before reaching Suez, his condition had become much worse. He was unable to proceed further, and died in the French Hospital there, on the 6th of May. Mr. Fagan was called to the Bar in 1844, and the whole of his professional career has been spent in this country. He practised in the Supreme and High Courts for some years, and afterwards held, in succession, the offices of Secretary to the Bengal Legislative Council, Magistrate of Police, and First Judge of the Small Cause Court.

THE Commissioners for liquidating the debts of the Nawab Nazim have settled the claims of the two principal creditors, Rai Dhunput Sing and Rai Luchmeeput Sing. The former is to receive Rs. 6,50,000, and the latter Rs. 2,03,000 for principal, and interest at 12 per cent.

A BHAUGULPORE correspondent tells us that all signs of the famine are well-nigh over, the surplus rice being removed at about the rate of one seer of dust and insects to one of grain. The *golas* where it was stored have been sold by public auction, and have gone to repair other buildings. "It is an ill wind which blows no one any good," says the proverb, which has been verified in this district as well as in other places, for passable roads instead of tracks, and tanks instead of muddy sloughs, have resulted from famine labor. Much more might be done towards the bettering of the condition of the natives of this part of the country, if some of the money vainly wasted on schools, which they neither appreciate nor want, was bestowed on encouraging them to plant a greater variety of vegetables and fruit than those grown all over this district. Gardens connected with jails and lock-ups would lead the van, if allowed and assisted, and medical men, who have the supervision of jails, will testify to the good which might be done to the health and general condition of the native constitution by a diet improved by a larger variety and better quality of vegetable food in addition to their never-ending rice and nurrooah. Every kind of fruit grows easily throughout the district, yet a *good* plantain tree, or a guava, or a custard apple tree is scarcely ever seen round the miserable homesteads of the cultivators of the soil. Government has granted a reward of four annas for every cobra killed in Bhaugulpore, and nothing more useful could have been done as this district swarms with reptile life. Had the reward, however, been extended to karaits as well, the boon granted would have been greater, as the karait is far more plentiful and quite as poisonous as the cobra. Though the effect of its bite is not quite as rapid as that of the cobra, it is quite as certain, death ensuing in the course of four or five hours. The idea prevails that the karait is deaf, and is on that account more to be feared than the cobra, which escapes at the sound of an approaching footstep whereas the karait lies still until the heedless foot descends upon him, when he turns and does his deadly work. The Kosi river, always a scource a fear and anxiety in this district, is being surveyed with the view of forming an enormous enbankment within which to confine its waters. Various opinions are entertained as to the practicability of the plan, and those who know the district best say it would be a useless waste of money. Were it possible no doubt it would be a boon. The river is so capricious in its habits that one can never tell each year when it will make its appearance. It rises when least expected, and so suddenly that the poor planter goes to bed and sleeps calmly, and awakes in the morning to find his indigo all under water. Wherever the sand of the Kosi is deposited the land becomes sterile, and wherever its waters recede the malarious fever with which this district is afflicted increases. Should the embankment *really* confine the waters it would *do good, but the volume is so largely increased in the* rainy season, that it is scarcely to be hoped for, and should the embankment burst, which is most probable, it would cause destruction, disease, and death to a frightful extent.

THE Bahadoors and Rai Bahadoors, made such for their services in the famine, have returned to their homes. "To him who hath shall be given, and from him who hath not shall be taken away even that which he hath." One of the zemindars, who out of his small means supplied his ryots, so that not one man was chargeable to Government, and who not only helped his own but others also, has received no recognition of his services, though in proportion to his means they have been greater than those of any other of the zemindars, one or two of whom have made the help they offered to their ryots in their time of nead, a means of raising their rents.

THE Soldiers' Industrial Exhibition for European and Native Regiments in the Bengal Presidency will this year be held at Mean Meer, Lahore division.

THE following is the latest intelligence from Darjeeling. The Lieutenant-Governor, says the local journal, is expected to leave about the 1st proximo, proceeding *vid* Doobree and Dacca to Calcutta. Rain is falling night and day with an objectionable constancy. "A real live shrimp has been caught on a tea estate in the district"—a sure sign of the silly season. "Diarrhœa is rather prevalent amongst the natives." The bad condition of the hill-roads has been delaying the mails. Coolies are busily engaged in stealing "either leaf or manufactured tea." The price of firewood is "going up" steadily, and it has been discovered that Thacker's Bengal Directory is full of errors.

ON the 1st of July the new postal arrangements, under which parcels posted in India for transmission to the United Kingdom may be sent at the rate of 8 annas per lb. (40 tolas), will come into operation. Prepayment in full will be, as heretofore, necessary, and all fractions of a pound will be charged as a whole pound, in lieu of the present rate of 3 annas per 10 tolas. On the same date the Indian parcel post system is to be extended to Germany.

THE gratifying results of the elective municipal system at Serampore have induced the Lieutenant-Governor to extend the boon to the town of Burdwan, which is to be provided with eighteen Municipal Commissioners, twelve of whom are to be elected by the rate-payers and six appointed by the Lieutenant-Governor. The qualifications required of candidates for election cannot be called prohibitive. Any man of full age, who lives within three miles of municipal limits, is a rate-payer, can read and write, and has not been convicted of a non-bailable offence, is eligible for the dignified post of a Commissioner. The township is, for elective purposes, to be divided into four wards, each of which will return three representatives. Any two rate-payers may nominate a candidate. Objections are to be lodged not later than the 6th March next. On the 10th March a final list of candidates will be hung up in at least one conspicuous place in each ward. The election will be held on some day not later than the 25th March. No rate-payer is to have more than one vote. The result of the

poll, after careful scrutiny, is to be published in the *Gazette* ; and all costs incurred during the elections—for drums, bands of music, playing "haste to the poll," and other stimulants for the benefit of reluctant electors—are to be paid from municipal funds.

THE following is the result of the allotment of the 2½ crores loan. Minimum 100. Tendered at and above minimum :—European, 3,56,15,800 ; Native, 1,85,45,100 ; total 5,41,60,900. Amount allotted :—European 1,07,33,500 ; Native, 1,42,66,500 ; total 2,50,00,000. Tenders at 102 receive 91·64 per cent. The average rate of allotment was Rs. 102-3-8.

THE Rajahs of the Orissa Tributary Mehals have agreed to abandon all restriction on the free passage and sale of either Ganjam or Orissa licit salt in their territories. Any trader is now at liberty to take licit salt anywhere without restriction through any of the Tributary Estates, and to sell licit salt freely, when and where he pleases, without payment of any dues to the Rajahs, and without restriction as to price.

NORTHERN INDIA.

MR. R. KEENE, the victim of the recent Sehwan outrage, is progressing favorably, according to *Public Opinion*, Lahore. The motive for the attack still remains to be explained, though there are several conjectured reasons for the crime. Amongst them it is thought by some that the man was instigated by people in Bhan, whose conduct Mr. Keene had recently brought to notice, and whose misdeeds he had shown up, and the perpetration of which Mr. Keene had been active in stopping. There are others, however, who believe that the treasure chest was the object primarily in view. The ruffian who attacked Mr. Keene is still at large. It was recently reported that he was found at Sukkur, but this fact requires confirmation.

THE last girder of the bridge across the Ganges at Cawnpore is now in position. The structure is half a mile in length, and will connect the railway system of Oudh with the East Indian line.

TWO hundred and nineteen houses, containing large quantities of grain, stores of all kinds, cloth, jewellery, and the other miscellaneous items of a hill station bazaar, were destroyed by the fire at Murree. The total loss was about three lakhs of rupees. The subscriptions will be in the first place distributed amongst those traders from the plains who had gone up to the station for the season and have lost their entire means, and are consequently in the greatest distress.

THE proposed camp of exercise at Delhi will conisit of the following troops :—Artillery : 4 Horse and 6 Field Batteries, 1 Heavy and 1 Mountain Battery, 12 Batteries in all ; comprising 1,340 men and 73 guns. European Cavalry : 4 Regiments, 1,400 men. Native Cavlary : 9 Regiments, 3,150 men. European Infantry : 10 Regiments, 6,200 men. Native Infantry : 15 Regiments, 7,500 men. Sappers and Miners : 600 men. There will be altogether 20,190 men and 73 guns. The troops will assemble on or about the 15th of December, and practise the evolutions of an ordinary Camp of Exercise until the date of the Prince of Wales's arrival.

LATER news gives the following particulars as to regiments and batteries :—A. C. D. Batteries A Brigade, and A Battery C Brigade Royal Horse Artillery ; A. B. F. Batteries 8th Brigade, A. C. F. Batteries 19th Brigade Field Artillery ; No. 1 Battery 23rd Brigade Heavy Artillery ; No. 6 Battery 13th Brigade Mountain Artillery ; 10th, 11th, 13th and 15th Hussars ; 6th, 8th, 12th, 39th, 51st, 62nd, 73rd, and 85th Foot ; Rifle Brigade, Head Quarters, and 6 Companies Sappers and Miners from Roorkee ; 4th, 5th, 6th, 7th, 10th, 11th, and 15th Regiments Bengal Cavalry ; one Punjab Cavalry Regiment ; Central India Horse ; 2nd, 11th, 15th, 26th, 28th, 31st, 32nd, 33rd, and 45th Native Infantry ; 1st, 2nd, 3rd, and 4th Goorkhas ; two Regiments Punjab Infantry.

AT Simla, as elsewhere, the heat has been excessive this season. A few nights ago the thermometer marked 82 degrees in the shade there.

THE mouth of the Attock river has been blocked up by a rock which has fallen from the mountain, and the people residing near the banks have left their houses through fear. It is believed that if it is not quickly removed, the water will overflow and cause much damage.

SIR ANDREW CLARKE arrived at Simla on the 15th and took his seat in the Viceroy's Council under the usual salute.

MR. RUSSELL has reached Murree. He has expressed himself satisfied with the results of his venture.

A MOVEMENT has been set on foot to get up amongst the natives of the Punjab, a provincial testimonial to the Prince of Wales. The proposal is to raise two lakhs of rupees for this purpose.

CAPTAIN OMMANNEY thus describes an exciting incident in the Peshawur fire : "One incident of the fire I must relate at some length, as it redounds so greatly to the credit of Mr. Christie and those who so nobly supported him. Most fortunately we have had little loss of life reported, and this is a case in which a life was saved. On the afternoon of the 14th instant, in a very crowded quarter to which access could only be obtained by a very narrow lane scarcely admitting of two men abreast, Lieutenant Nicholson blew up a house to check the progress of the fire. By this explosion one man was buried in the ruins of the house that was blown up, and a boy in the upper-storey of an adjoining house had his leg caught in the beams of the floor which opened with the shock and again closed, the roof then coming down on him. The man was got out, and, it is believed, uninjured, but every effort to extricate the boy appeared to be hopeless. The fire had approached, and was burning the houses on three sides of the small space filled by the ruins of the house covering the lad, and the flames were bursting across it. The limited space, moreover, did not admit of many men working, as they only pressed down the ruins, but the party employed in extricating the boy, namely, Mr. Christie, District Superintendent of Police, Booodh Singh, Havildar, 29th Native Infantry, Khairula Khan, Mirab, and Feroz, foot constables, persevered ; the flames gained rapidly on them, in so much so that men were told off to fetch water and keep pouring it on them as they worked, to prevent the fire catching their clothes, and it was at one time seriously considered whether it would not be better to ampatate the boy's leg, as all hope of releasing him otherwise seemed to be at an end, but the party still persevered, and at length by sawing the timber the boy was at the last moment released."

THE Jumna Bridge of 17 spans, of 142 feet each, for both the broad and narrow gauge, is now completed, the last girder having been lifted by hydraulic power on the 9th instant.

RUNDBEER SINGH, the notorious outlaw, and his entire gang of dacoits, were destroyed on the night of the 15th by the Assistant Commissioner of Lullutpore, with the loss of one constable only.

THE Maharajah of Jeypore is making great preparations for giving the Prince of Wales a magnificent reception in his capital. He intends constructing a race-course and introducing gas into his capital.

DURING the past week the Supreme Government has made several important and radical alterations in the system hitherto followed in connection with reproductive public works. The annual outlay, to be provided for by means of loans, has been limited to four millions, and new tables have been prepared on this basis, the forecast extending to 1879-80. The principal circumstances which have led to alterations in the present forecast as compared with that of 1873, are the following : The total annual outlay is reduced to four millions sterling with full effect from 1876-77. The estimated cost of the State Railways has been considerably affected by the decision to make the Indus Valley, the Punjab Northern, and the Scindia lines on the broad gauge, which necessitates a larger outlay of capital without a corresponding increase of traffic receipts. The outlay upon irrigation works is concentrated on fewer projects. The interest has been calculated at 4½ instead of 4 per cent. It is to be noted that interest is calculated on the entire sum charged under the head extraordinary, while no deduction has been made for receipts from Irrigation Works in Madras, Bombay (including Sindh), and Rajpootana, in consequence of *the manner in which* the receipts derived from irrigation are to be separated, from the *land revenue not having been finally* decided. No allowance is made for the probability that surplus revenue will be *applied* to the construction of reproductive works. It will thus be seen that a considerable margin has been allowed for safety in these calculations.

BOMBAY.

THE first wet dock "not only in Bombay, but in all India" has been lately opened in the Western capital. It is about 690 feet in length, and 300 in breadth, 40 feet from gate to gate, and has an area of nearly 200,000 square feet. The screw steamer *Caradoc*, 861 tons, of North Shields, was the first vessel to enter, which she did with flying colors.

A LONDON company has been formed to buy the waterworks belonging to the city of Bombay. The projectors desire to levy the full amount of rate, and guarantee a full supply.

ARRANGEMENTS are still being made for the Prince of Wales's visit to India. So far as they have at present been made, the following is all that can be said in regard to them. His Royal Highness will sail in the *Serapis*, whereon he will most likely embark at Brindisi, being joined by the Indian fleet outside Aden. There is, however, some talk of his sailing by way of the Cape, and it is not definitely decided that this cours will not be taken. It is expected that the Prince will arrive at Bombay in the second week in November, and that he will stay in India until April. Nothing can yet be said respecting his movements after he arrives at Bombay. Several routes have been proposed, but a correspondent of the *Bombay Gazette* has the best authority for saying that up to to-day nothing difinite has been determined upon. According to present arrangements the Prince will be accompanied Sir Bartle Frere, Dr. Fayrer, General Probyn, Colonel Arthur Ellis, Lord C. Beresford, M.P., the Duke of Sutherland, Lord Suffield, and Lord Carington. The great question of presents has practically been decided in favour of continuing the old system.

THE P. & O. Company's shares have lately fallen off in price, and the cause assigned is unprofitable working. The subsidy which their ship-owning rivals envy them so much is also by no means unalloyed advantage, as the fines for overtime are found very harassing in more ways than one. The Directors are now negotiating with the Treasury, as to the interpretation to be put on the clauses in their contract on this point. The Government, it seems, want to give the penalty a cumulative effect ; that is, if a steamer exceed her contract time by more than the twelve hours' margin, it is sought to inflict a separate fine for each mail thus delayed, instead of, as the Company profess to believe, was intended only one fine for the vessel herself. The decision on the point is of considerable importance to the Company, not merely on account of the sum at risk, but from the effect on the minds of their captains. The amended subsidy is worse for the P. and O. than the original one was, for it made allowance for unavoidable delay from natural causes, which the present agreement does not. We shall soon have American and Russian mercantile and military navies coaling at Saghalien, or at some neighbouring depôt soon, while the old P. and

O, still keeps up the time-honored tradition of burning fuel from Cardiff, conveyed to Galle or Hong-Kong, at a cost of £4 or £5 per ton.

THE Jam of Nowanuggur has been advised in a friendly way, on more occasions than one, to place the administration of his State on a more satisfactory footing, by replacing the Kamdar, who is thoroughly inefficient, and engaging the services of a competent official. H. H. has not thought fit to come to a decision as yet, but it is said he may yet be persuaded in forcible terms to comply with advice given him for his own benefit and that of his subjects.

MADRAS.

A HOME correspondent writes to the *Madras Mail*: "I understand that the Duke of Buckingham is in every way well fitted for your Governorship. He has excellent business qualifications united to considerable experience. He was Chairman of the L. and N. W. Railway for a time, and has a liking for Public Works in general, and Railways in particular. Some surprise is expressed that he should accept such an appointment, as he has already done much towards the building up of the fortunes of his house which were so impoverished by his father. Probably, as a stepping stone to the higher appointment at Calcutta, it may be worth his while." The following is from the London *Times:* "The best informed of our readers will probably be the most surprised when we announce that the Duke of Buckingham and Chandos has accepted the office of Governor of the Madras Presidency, vacant by the death of Lord Hobart. This is, we believe, the first occasion on which an Indian Governorship has been held by one of the highest order of the peerage, and it is the more remarkable, as Fort St. George, though the most ancient, is certainly the least important of the three Presidencies."

THE ex-Gaekwar had a narrow escape last week, a cobra having been discovered in his bath in Doveton-house.

THE Madras Government has allowed the use of a new port on the Indian Coast to facilitate the emigration of coolies to Ceylon. The voyage will be reduced from over twenty hours to nine, and wading through the surf to the vessels will be avoided. It may not be very well known that the Government of Ceylon spend nearly a lakh of rupees every year in making the journey to the Coffee Estates of Ceylon as pleasant as possible for the Indian villagers, Carpel and Menatchie, and their following of "pulies."

INFORMATION has been received to the effect that it is not unlikely that the Prince of Wales will pay a visit to Ceylon before coming to India.

LADY HOBART does not contemplate residing permanently on the Neilgherries. Her ladyship will return home very shortly, and Government has already sanctioned the necessary expenditure on *account of her passage.*

AN officer of the Public Works in Ceylon has lately shot a fine specimen of the *Pimbara*, or Ceylon *boa constrictor*. It measured eighteen feet in length, and was twenty-seven inches in girth at the thickest part.

A SAD accident has occurred at the Courtallum water-falls, not far from Kerandrum. A European visitor fell into the stream while endeavouring to ascend the rocks above. The body was carried over the falls, and picked up in a terribly mutilated state.

A CORRESPONDENT writes to us from Madras: The advent of the Messiah is not more earnestly expected or wished for than rain is by the inhabitants of this roasted city. The most pleasant tidings of the week have been the burst of the monsoon at Mangalore on the 4th instant. Four or five days after we have generally our share of the same blessing. Owing to the water-supply the weather has certainly wonderfully improved of late years, and the heat is more bearable now-a-days than it was before the water-works supplied our tanks with an abundant store. The mortuary returns show also a great improvement in the general health of the city. Air and water are in no country so necessary as in India. Are the natives cleaner for all that? When I was at school, they used to say that the cold was less felt by those who did not wash. Is the uncleanliness of the general population some preventive against the heat? The higher classes are no doubt out of the question, and if there had been a sanitary office in those days, Siva would certainly have been the Sanitary Commissioner. When the drainage of our town is completed, Madras will certainly be healthier than Bombay and Calcutta. Our harbour works are pushed on with great activity, and the Secretary of State has been most liberal in giving his sanction to the work. He seems to have fully appreciated the importance of such works, and the cost of the same is quite a secondary question.

THE following is a description by a Mysore *Shikaree* of bear-hunting by means of dogs: "It has long been an idea of mine that with six couple of thoroughly staunch dogs, bears or panthers might be tackled by a sportsman with a knife only, without much danger; but until lately I have never had any dogs of the right stamp to try the experiment with. However, a short time ago, I procured an imported dog, named Marquis, nearly pure bull (a remote cross of mastiff, showing chiefly in his weight, 40 lbs.), and a bitch, and three pups, their progeny. The bitch, Lady, and the pups, Bismarck, Viper, and Fury, weigh about 33 lbs. each. Marquis is a dog of indomitable courage, and no punishment makes him loose his hold. Bismarck and Viper, though only nine-month pups, are equally staunch, and Lady and Fury are not easily got rid of. Another dog, Turk, bull and mastiff, weighing 45 lbs., in whom I placed great reliance, made up three couple, but by an accident he was thrown out at the beginning of the tussle with the bear that I am about to relate, so that only five dogs were really in it. Two bears were marked a few mornings ago, into some rocks on a hillside near my camp; the hill sloped gently to the plain below, and was clear of bushes. We approached the rocks from one side; there was no cave; the bears were sitting on a table-rock, overhung by a larger one, enjoying the early warmth of the sun preparatory to turning in. Upon our appearance within fifteen yards they made off; I killed the female on the spot with my Express; she tumbled off the rock and rolled a few yards; the male jumped after her, and with howls made off down the hill. The dogs were with us in leash, and as soon as the bear was well started, they were slipped. Unfortunately Turk tackled the dead bear; the other five pursued the fugitive one. Marquis was up first, and sprang at the bear's head, and over the two rolled amidst fearful shrieks from the bear. I thought no dog could have held on under such summersaults as they turned, but when they stopped Marquis was fast to the bear's lower jaw. The bear now reared up, and would have punished the dog, but Bismarck at this moment annexed one ear, Lady, the other, and Viper and Fury his snout. From that time the bear was unable to rear, the dogs pulling him over sideways, or keeping his head to the ground, at each attempt. He tried hard, but in vain, to clear his head with his paws. I had expected he would cut the dogs up a good deal, but they kept his head down so much that he could not strike out, and at close quarters he could not tear them as a tiger or panther would do. In about ten minutes the bear was quite done, and two thrusts with my knife behind the shoulder settled him. The dogs sustained little damage."

UNDER the heading "Wanted a Plimsoll," a Madras paper complains of the unseaworthiness of the vessels owned by native merchants in the Vizagapatam district, and speaks of the great proportion lost, more especially of the native dhonies which are the usual passenger crafts for coolies from the coast ports to Burmah. This wretched state of things is, we suspect, very far from being confined to the Madras ports. We fear that the whole coast line of British India is as ill provided. It is notorious that native traders, the Arabs especially, buy worn-out ships, ships that should be condemned, and after patching them up put them into the coasting trade. For some time, if the weather lasts tolerably fine, they make trips more or less successfully. But on the first puff of a cyclone, nay, even of a rather stiff gale, and they and their crews are heard of no more. The recent case of the *Alabama*, waterlogged in comparatively moderate weather, and perforce abandoned, is one in point. The unfortunate part of the matter is that, of the majority of these shipwrecks we hear nothing, and of the actual amount of loss we have no record. The difficulty of reform in this matter we know to be great. When even shipowners in England have persisted so long, in spite of knowledge, in the practice of sending rotten ships to sea, we can hardly expect easily to get Orientals, with their placid resistance to innovation and deep-rooted fatalism, to give it up otherwise than slowly and under continued pressure. But it is not the less a duty, because difficult, to attempt a necessary work. And it is in grappling with and solving problems of this nature, that wise and beneficent statesmanship is best shown. Vigilant enquiry may do much in the collection of statistics which would form a ground-work for action, and, with proper data before it, Government could easily do something to abate this great evil.

BURMAH.

AT Tonghoo affairs are quiet. The Brigadier in command has the troops out frequently, and is said to be perpetually rehearsing the storming of Mandalay. The Elephant Battery is always kept a long distance from the other troops, and on the only occasion of its being in brigade, the elephants were so unmanageable that most of the Field Officers left their saddles.

IT is said that a large extent of the earthwork forming the fort that is being constructed at Minlah, Upper Burmah, close to the frontier, has been recently swept away by the unusually high rise of the river that has taken place.

THE *Rangoon Gazette* states that "the ringleader of the party who murdered Colonel Hamilton has been arrested by Mr. Stacey in Pazundoung. Great credit is due to the Inspector, who, single-handed and alone, entered the dwelling of this desperado, Gna Poung, and arrested him with knife in hand, which he would doubtless have used on Mr. Stacey, if he had not been prepared for him, as he and his party were prepared for Colonel Hamilton."

ASIA.

A LETTER from Nagasaki, of February 27th, brings us the important information that the Takasima Colliery is producing 300 tons of coal a day; the bulk of which goes to Shanghai, the local mail steamers using the rest. The discovery of coal, not only in the Pekin district, but in other parts of China, and also of iron ore, is likely to lead to important results. Mr. Henderson is now in this country obtaining all the necessary machinery for smelting iron in the Pekin district; and he has been treating with the Mandarins for the establishment of iron works and opening of coal-mines in other parts.

THE *Russian Invalid* publishes the latest report of Colonel Ivanoff on the results of the system adopted by the Russian authorities with regard to the Turcomans of Khiva, since the campaign of 1873. The Turcomans, he says, are now so quiet that the Khan of Khiva has for the first time ventured to show himself among them; he has visited all their tribes, including the most powerful, that of the Yomuds residing near the canal of Khasawat. Though he has not made any concessions to his Turcoman subjects, he has everywhere been well received by them, and has even induced them to pay taxes which no Khan had ever levied before. Colonel Ivanoff adds that he has received a letter from the Khan describing his visit to the Yomuds of Khasawat. On learning that they were called upon to pay the same tax for the use of the water of the canal as the Usbeks, the Yomuds humbly begged the Khan to take into consideration their necessitous circumstances, which would make it difficult for them to pay any large contribution. The Khan then fixed the sum they would have to pay. The Yomuds ate bread and salt with him, and their elders went to Khasawat to meet him and accompany him on his journey. Two of the latter, who had been very active in their hostility towards the Russians and the Khan, went on foot in

front of the Khan's horse as a sign of submission. Five of the Yomuds who were chiefly implicated were imprisoned by order of the Khan, and one shot.

A JAPANESE writer has commenced a crusade against the use of torture in judicial proceedings, and speaks very sensibly on the subject. "The ancient and wicked Emperors of China, (he says) such as Ketz or Chu, committed great crimes, but these were not so bad as torture, because they were committed only in person by the Emperors themselves. But torture may be inflicted by a large number of officials and cause continuous suffering to numbers of people." Further on he quotes the opinion of an assistant judge who says: "It would not be a task of great difficulty to make officials of the highest rank, or officers of the army and navy, to confess to any crimes by means of torture. This shows that the injury done by torture is terrible. Though a person may be innocent, he will finally say he is guilty, because he thinks it better to die than to undergo torture." The writer then goes into a geographical paroxysm which is so good as to be worth quotation:—

"The Himalayas are the highest mountains in the world, and are situated in the centre of Asia. South and west of them is India and the Germanic race; and over the ocean westwards to America, the same Germanic race. But north and east of these mountains are the Mongols and Chinese, and over the ocean again eastward, there is the same race in America. Now, the Germanic race admits no torture, but the Mongolian cannot escape it. O, Himalayas! What manner of mountains are ye! Why do ye make of yourselves symbols of the distinctions of races? Why do ye make the Germanic race happy and pass by the unhappy Mongol race? Hath not God made all mankind of one flesh and blood? In my middle age I passed through the Indian Ocean, and saw many islands inhabited by Malays, but I think they are only modified Mongolians. But they were under the power of England or Holland, and therefore not subject to torture. The Africans are a black race, but those of them under European rule escape torture. Is the question of torture, then, one of difference of race or difference of knowledge? Neither in ancient nor in modern times is there anything worse than torture. Why cannot it be abolished? It must cease or we never can claim an equal civilization with Europe and America. Nations will not form treaties on a basis of equality with us so long as the custom exists, *nor will it be possible for us to acquire jurisdiction over foreigners.*"

Now in this last sentence lies the key to any power we have over China to induce her to reform her criminal code in this respect. She will never acquire jurisdiction over foreigners until torture is abolished. There are perhaps no articles in the Chinese treaties with foreigners which cause them a greater feeling of humiliation, than those referring to exterritoriality, and it is well known that large concessions would be made to get them abrogated.

LITERARY.

THE *Pall Mall* takes a very proper and serious view of the seditious tone of the native Press of India; and whilst it admits the necessity of checking the unlimited license it deplores, it regrets that the particular case of Baroda is not of a nature to afford Government a decent opportunity for interference. In other words, it thinks the blunders perpetrated have been so great as almost to excuse the use of the strongest language on the part of native writers. It concludes a forcible article on the subject in the following terms: "In the meantime we have to recover in India our reputation for firmness and justice, and a first step to this will be the final abandonment of that ill-advised attempt to combine the liberal and autocratic methods of Government, whereby our policy has seemed mere weakness while we played the liberal ruler, and has resembled downright injustice when we resumed the autocrat. Next, we have to free our hands for dealing strongly and sharply, if the occasion should arise, with what threatens to be a serious danger to our rule—the seditious writing of the native journals, and a first step to this will be to supply them with no more blunders to attack." A word of warning to our native friends. The Government of India would only be too glad to establish a censorship of the Press if it were assured of the support of public opinion in England. For public opinion in India, the Government cares little or nothing. Consequently, as the eyes of Englishmen are being opened to the dangers of seditious writing in India, the future liberty of the Indian Press depends entirely on the discretion of native editors. If these editors go on making use of the language they have recently adopted in reference to British rule, the whole of the English Press will speedily follow the lead of the *Pall Mall*, and the Indian Government will promptly respond to the demand for "strong and sharp" measures of repression.

OXFORD has set to discussing what arrangements she can make to give instruction in Oriental languages to candidates for the Indian Civil Service; so we may mention that Sanscrit has been for some time taught in two English schools—the City of London School and the Manchester Grammar School. Indeed, a pupil of the former school gained an Exhibition for Sanscrit last autumn at Trinity College, Cambridge.

DR. GUNDERT'S *Malayalam dictionary, which has just been published at Mangalore, on the Malabar coast of India, is a superbly-printed work*; the Malayalam character being rendered more clearly and uniformly than they have, perhaps ever before, except in Dr. Burnell's subsequent pamphlets. It would be superfluous to praise the work, which is simply the result of the life long labours of one of the ablest Orientalists who have made India their home. Dr. Gundert has done as much for Malayalam as Mr. C. P. Brown has for Telugu, Mr. Molesworth for Mahratti, Dr. Caldwell for the Dravidian languages, Mr. Hodgson for the Himalayan dialects, and Mr. Beames for the Prakrits.

PROFESSORS GREGORIEFF, Palkanoff, and Chevolson, of the St. Petersburg University, and Herr Von Kuhn, of the Turkestan Government, have been appointed Special Commissioners for the third International Congress of Orientalists, to be held at St. Petersburg. Besides scholars, numerous military and civil officers, merchants, travellers, &c., acquainted with the Russian portion of the east, will, it is hoped, take part in the Congress.

ECCLESIASTICAL.

THE ceremony of laying the foundation-stone of the Pratt Memorial School took place on Tuesday evening, in the compound of St. James's Church. There was a large number of ladies and gentlemen present, and the litany having been first offered in St. James's Church, the laity headed by the bishop and clergy proceeded to the spot where the stone was to be laid, the choir chanting the 119th psalm. A hymn and the 127th psalm were first sung, and his Lordship the Bishop delivered an address, in the course of which he said:—"Beloved brethren, if we look through the annals of this diocese, in its religious and even in its social aspect, we shall see that more than thirty years have made their impress of the devotion and high character of him in commemoration of whom we to-day lay this stone. When I turn to my predecessors' work, I ever more and more see how they sought the assistance and found the ready and wise co-operation of the trained intelligence, the powerful mind, and the sober and wise judgment of a tender and loving heart in Archdeacon Pratt. During the incumbency of Bishop Wilson, he came out from England, and during Bishop Cotton's tenure he was to be seen ever at his side, giving the wisest counsel and the most useful co-operation, yet never thinking of himself, never putting himself forward. While he was with me in this diocese, nothing could exceed the value which I set on him. There was no one to whom I could more truly turn when I needed counsel and information, and there was no greater intelligence from which I could derive wiser counsel. Every one who knew him will allow, and will bear testimony, that there was in him a singular union of those qualities which I have mentioned, of zeal and discretion, fo wisdom and sound learning, of sympathy and purity of heart, and of great simplicity of character."

MILITARY ORDERS.

BRIGGS, Lieut. D. R. M., *to England, to appear before a medical board.*
BROWN, Surgn.-General J. C., C.B., *leave for six months.*
BLAIR, Lieut.-Col. J., V.C., to be Col. by Brevet.

MACAULIFFE, *Mr. M.*, Assistant Commissioner, from the Montgomery to the *Mooltan* District.
WARBURTON, Captain R., Assistant Commissioner, Peshawur, leave for ninety-two days.

COMMERCE AND FINANCE.

FRIDAY NIGHT.

THERE has been considerable advance towards greater ease in the Money Market since our last issue, but although the accouuts of the Bank of Bengal published on Thursday morning evidenced a much stronger position, no reduction was made in the rates for accommodation. The cash balances have increased Rs. 26,35,430, and Government Funds in the Bank are rather lower and it may cause some surprise that the present high rates should still be maintained in spite of what appears to be an important improvement in the Bank's resources.

The figures show the following differences as compared with the *last statement* :—

Treasury Balances	decreased	... Rs.	6,75,260
Other deposits	increased	... ,,	9,42,090
Loans and credits	decreased	... ,,	13,97,580
Bank Balances	,, ...	... ,,	1,63,570
Bills discounted	increased	... ,,	10,89,275
Investment	decreased	... ,,	5,51,475

It is generally felt that low rates cannot be longer delayed, and that a easier tone in the Bombay market would immediately lead to a reduction on this side. It may be expected that Government Funds will be accumulated in the Bank of Bengal with a view to assist the market until the payments for the loan just issued shall have been completed. A long continuation of the existing tightness would perhaps result in some of the weaker tenders being forfeited, and it would therefore appear expedient that the Treasury should lend all possible aid in leading to an easier market, in order to secure the full payment of the tenders in cash.

Business during the week has been almost stagnant in every department, and the feeling still continues to be one of anticipation more than of actual enterprise.

The result of the tenders for the 2½ crores 4 per cent. loan was declared yesterday morning to be as follows :—

Mininum	... Rs.	100
Tendered at and above minimum, European	... ,,	3,56,15,800
,, ,, ,, Native	... ,,	1,85,45,100
	Total Rs.	5,41,60,900

Amount Alloted.

European	... Rs.	1,07,33,500
Native	... ,,	1,42,66,500
	Total Rs.	2,50,00,000

Tenders at Rs. 102 received 91·64 per cent., and the average rate of allotment was Rs. 102-3-8 per cent. This is a lower rate than was generally looked for, although the time chosen for the issue of the loan was thought an unfavorable one. The effect upon the Government paper market was momentarily depressing, and 4 per cents. receded to Rs. 102-4. There are now buyers for large amounts at Rs. 102-6, but no sellers below Rs. 102-8, which quotation may be said to be the present rate. A parcel of the new loan has been bought at that figure. The list of accepted tenders is not altogether a strong one, and it is believed to contain many weak hands who are likely to throw their allotments into the market at once. The Bank of Bengal has been entirely shut out, and the Exchange Banks have received only a small amount among them ; there are other reasons which will probably maintain present rates, and paper is not likely to fall much below its present figure at the moment. Transactions in 4½ and 5½ per cents. have been few, and quotations close at Rs. 103-6 for the former, and Rs. 109-6 for the latter. Exchange shows some weakness and has fallen considerably since our last. The following are closing quotations on London.

Bank Bills at 6 months' sight	... ...	1-9 15/16	to 1-10
Do. do. at 3 months' sight	... ...	1-9 11/16	to 1-9¾
Do. do. on demand	... ...	1-9 7/16	to 1-9½

Reports from Bombay do not evidence much improvement, and the Directors of the Bank of Bombay seem to show a disposition to maintain existing high rates as long as possible. There is little doubt, however, that the position warrants this line of policy, but at the same time further ease may be shortly looked for in that market.

Telegrams have been received announcing the failures of Messrs. A. Collie and Co. of London and Manchester, and Messrs. Shand and Co. of London, both for large sums. There are rumours of other similar disasters to follow, which cause considerable anxiety.

The local share market has not yet shown any signs of vital improvement, there have been a few speculations made but enterprise is for the time suppressed by the weight of heavy charges for accommodation.

A slight spurt has taken place in Jute Stocks, more business having been reported than last week, but prices have not advanced. Tea stocks maintain a firm position, and a considerable business has been done in Bank shares, particularly in Nationals, which have advanced to Rs. 119.

Freights have been active, particularly for seeds ; rates are for the most part unchanged.

In Produce the reports from the Indigo districts are generally favorable, and the rains having now set in a good season is anticipated. A very limited business has been done in Bengal Cotton, and what transactions have been recorded were chiefly for China or for local consumption. Jute is also very dull ; the reports of the weather are favourable from most of the growing districts, and arrivals of the new crop may be expected to commence about the beginning of July. There has been a full demand for seeds at advanced prices for Great Britain and America in almost all descriptions. Castor-Oil has also met with some enquiry, both for immediate shipment and forward delivery.

Manufacturing is steadily progressing in all Tea districts and the out-turn is expected to be a large one. The backwardness in some of the Assam and Cachar gardens has been now more than made up for. In Darjeeling a very extensive out-turn has already been yielded and reports continue favourable. Public auctions are advertised for Monday the 21st instant, at which it is expected that about 7,000 packages will be offered.

Persons presenting receipts for payment are requested at the same time to produce the registry certificates which have been granted to them from this office.

HIGH COURT:
Calcutta, 12th June, 1875.

F. S. COLLIS,
Offg. Administrator-General.

between France and Germany are much exaggerated. After the impression produced by the French cadre law at Berlin seemed fixed by the language of the press and in other ways, Russia informed the Governments confidentially that she would, if necessary, take some steps in the interest of peace. The Government agreed to this, counselling at the same time caution at Paris. England went one step farther, and eventually offered her good offices. This has been designated by the English journals as an attempt at intervention. As, however, no warlike intentions were ever entertained by Germany, there was no need of intervention.

THE Government monopoly of tobacco has lately been fiercely assailed by some of the French newspapers, the quality of the tobacco and the whole system pursued in regard to its sale being alike faulty in the estimation of these critics. A writer in the *Temps*, however, takes up the cudgels in defence of the tobacco *régie*, maintains that the smoking tobacco supplied by the State is far better than that tendered to the public by private enterprise, and that in the matter of snuff, the Government must, from the magnitude of its resources and appliances, always distance private manufacturers, since snuff takes three years and four months to mature, and no small establishment could afford the time to secure its perfection. The cigarettes, indeed, are devoted by this authority to the infernal gods and the critics. Meantime he makes some soothing remarks on the subject of the much-dreaded nicotine. This subtle essence, he *maintains*, never killed a smoker yet, and he estimates the value of the warnings that have been published respecting it very low, from the fact that the tobacco which produces most nausea and vertigo happens to be precisely that which contains the smallest proportion of nicotine. Thus a beginner may, so he declares, smoke the Haute-Saône tobacco, which contains from 6 to 8 per cent. of nicotine, with impunity, while a *Londrés* containing scarcely 1 per cent will reduce him to his lowest denomination.

SPAIN.

THE Carlists commenced bombarding Guetaria on May 14th, causing great damage. They vainly attempted to demolish the gates by means of dynamite powder. Fort San Anton vigorously resisted the attack, and was supported by five war steamers stationed in the Bay of Zaraus. It was soon reported that the place had greatly suffered, but Fort San Anton was still intact. The garrison has been reinforced. Don Carlos was present at the bombardment together with the Princes of Naples and Caserta. A later telegram states that the attack has been suspended and will be abandoned. The artillery is to be transported to the front of Orio.

AN important victory (according to a Barcelona telegram) has been gained over the Carlists at Bruch, on Mount Monserrat. The royal troops carried some formidable positions. On the side of the Royalists there were ninety-three killed and wounded, including three officers. The Carlist *losses are unknown*. From San Sebastian it is stated that the negotiations for the submission of the Carlist battalions in Guipuzcoa have been broken off in consequence of the exorbitant demands put forward by them. Hostilities will consequently be resumed along the line of the Oria.

BELGIUM.

A BRUSSELS paper gives a painful account of the ex-Empress Charlotte of Mexico. Her physical health is good, but her mental condition is hopeless. She lives in constant communication with imaginary beings, and dislikes the presence of any living person. She speaks only when obliged to do so, and gives orders to her attendants in writing. She dresses herself without assistance, takes a fixed walk in the park every morning when fine, frequently plays on the pianoforte, and sometimes draws and paints with decided taste. She recognises no visitors, not even her brother King Leopold, or the Queen. The latter always accompanies the physician on his monthly visit, when, in reply to his inquiries as to her health, the Empress coldly says she is well and immediately retires. She has become stouter, and shows a tendency to corpulency, but at present it is stated that this has only increased her beauty, which is now truly striking.

ITALY.

IN the Italian Senate the bill granting 50,000 francs a year in perpetuity to Garibaldi, and an annual pension of the same amount for life, has been passed without discussion. Both grants are to date from January 1 of this year. Every five years they will, if not claimed, revert to the treasury instead of being allowed to accumulate longer. The same provision was made with the annual grant voted for the Pope, of which he has hitherto refused to avail himself.

THE Roman correspondent of the *Daily News* quotes from the *Osservatore Romano* an article in which that journal reads the Prince of Wales a severe lesson for accepting the Grand Mastership of the English Freemasons. It ascribes the downfall of Charles X., Louis Philippe, and Louis Napoleon to their connection with the craft, and implores the Prince to take warning before it is too late.

GARIBALDI arrived at Velletri on May 19th, on a visit to that city with a view to participating in the festivities to celebrate the anniversary of the battle fought in 1849. Great preparations had been made for his reception. He was met by the Prefect, the Mayor, and the officers of the garrison, and the railway station was specially decorated for the occasion. Garibaldi afterwards made a speech in acknowledgment of the welcome accorded to him.

THE *Fanfulla* of Rome states authoritatively that the Pope has resolved to convoke a second meeting of the Vatican Council at an early date to discuss ecclesiastical reforms in general, and particularly matters relating to the regular orders.

ONE of the Papal organs at Rome, the *Voce della Verita*, has been seized for publishing an address issued by the Primary Society of Catholic Interests to the German pilgrims.

TURKEY.

Al-Gawâib of Constantinople, of April 29, reports the arrival there, from Alexandria, by one of the Khedive's steamers, of Yakoob Beg, the Envoy of the Ruler of Kashgar. He was received on landing with all honour, and made an official visit to the Prime Minister, on Thursday last. The same journal mentions the arrival, at Constantinople, of Sir Arnold Kemball, "appointed English Commissioner on the Commission about to be formed to settle the question of the Turco-Persian frontier." Sir Arnold is admirably suited for the post, for besides his extensive knowledge and eminent tact and judgment, he is well acquainted with Turkish, Arabic, and Persian.

GENERAL.

SEVERAL doctors of Paris have been duped by ingenious rogues who advertise that they would lend from 500 to 1,000 francs to doctors upon the production of their diplomas. Several requests for loans were made under those easy conditions, and when the claimants presented themselves they were asked to leave their diplomas for examination. After collecting a number, the rogues bolted with them across the French frontier, and sold the documents to men whose names were cleverly substituted for those of the real owners, and who thus found the means of starting a doctor's practice.

ARCHDUKE CHARLES LOUIS, brother of the Emperor, has just inaugurated the "Oriental Museum" in Vienna, before a numerous audience, chiefly composed of the Ministers, members of the Diplomatic body, and of some of the leading members of commerce. The Museum possesses various and interesting collections of industry and art exclusively belonging to Oriental countries, for which it is indebted to the generosity of the Asiatic Governments represented at the Vienna Exhibition of 1873.

AN interesting but melancholy discovery was made the other day at the foot of Mont Blanc. A block of ice, separated from the mass of the mountain by the thaw, rolled down into the valley. Upon closer inspection it was found to contain enclosed the remains of the American, John Blackford, who about three years since attempted an ascent, and has never since been heard of. He evidently met his death on that occasion, and has since lain in his cold crystalline coffin, which has preserved his body and clothing admirably. When found his features were unchanged, and he might have breathed his last only half an hour before.

IT is officially announced in Maine that any woman who has been ordained to preach for any recognised religious denomination, on proof of such fact and proper recommendation by any persons personally known to the Governor, will be appointed to solemnise marriages in any part of the State. Any woman who has duties to discharge in a public or private office, or in any other position where the discharge of the duties imposed upon her makes it necessary or convenient that she should receive the authority, will be appointed to take acknowledgment of deeds and affidavits, as well as to solemnise marriages, for the county in which she resides, on furnishing the Governor with appropriate recommendations of citizens generally known to him.

HOME NEWS.

ALEXANDER II. has not any affection for France. He can indeed have none with any consistency. Without France there would have been no Crimean War; without France England would have had no short cut, *viâ* Suez, to India. France has taken every opportunity of flaunting the cause of Poland in the Russian autocrat's face. In the teeth of a rumoured difficulty between France and Germany, Paris has elected Citizen Floquet, a man who publicly insulted the Czar, to be President of its Municipal Council, and yet Frenchmen fondly believe Alexander to be willing to use his influence at Berlin in their favour. "Credat Judæus!" Gortschakoff and Bismarck have pulled too long in the same boat not to know how to keep time with the Prussian stroke. A writer in a London journal hears that immediately after this meeting at Berlin, a proposition for a *general disarmament* will be sent from St. Petersburg to all the great Powers. Is there a single politician in Europe who will be deceived into slumbering by the peaceful lullaby written and composed by those eminent manufacturers of *opera-bouffé*, Princes Bismarck and Gortschakoff?

AN observer of the ways of journals has drawn a distinction between the one "with the largest circulation," and that written "for gentlemen," in that the *Daily Telegraph* often brushes away a tear as it plunges into the thick of this rough world, while the *Pall Mall Gazette* never has any tears to brush away. There are exceptions to every rule. There is a time when even our evening contemporary's feelings appear to give way, and that is when the editorials of the *Spectator* are under consideration. It must be conceded as an extenuating circumstance that the *Spectator's* fears concerning, for instance, "the conspiracies," of the present Government against the army and the Indian Civil Service are calculated to disturb the most stoical.

THE *Times* has made an independent attempt to bring India nearer to London by transmitting its Calcutta correspondent's letter by telegraph through its Paris wire.

A HOME journal in a very interesting paper on cock-fighting, informs us that the first accounts we have of cocking in Britain, strange to say, are in connection with the *schools*; and afterwards the "cock-penny" was customarily paid by each scholar to the

master at Shrovetide, not as a school-fee, but to provide cocks for the children and their parent's diversion. Only six or seven years since, Mr. J. Fitch, one of the Assistant Schools Inquiry Commissioners, called attention to the fact that the now obsolete usage of cocking was the pretext for charging a guinea and-a-half to each scholar at Sedgbury, where the "cock-penny" had been transformed into a guinea to the head-master, and half-a-guinea to the usher, for which the scholars received no equivalent. He adds that "at other free schools similar fees are collected." To such height, in fact, has this sport been carried in former years, that in old deeds tenants were bound to walk so many fighting cocks for the use of the lords; and in corporation accounts of expenses I have seen large sums charged for entertaining this or that great dignity with cock-fighting. Men have taken cocks to fight to distant India, and in the Easter week of 1822, in one pit, 188 cocks, weighing together 7 cwt. 4lbs. 6 oz., were fought for sums amounting to upwards of 6,000*l.*; and still more recently over 1,000 cocks have fallen in a single season in one of our northern towns."

As the prisoners at Dartmoor are permitted to see three of their friends for about twenty minutes every six months, Mr. Guildford Onslow, Mr. Anthony Biddulph, and Mr. East visited the claimant a few weeks ago. Mr. Biddulph thus describes the interview: "On our arrival at the prison we were received most courteously by the governor, to whom we had sent in our cards, and who informed us that though he could give no liberties beyond those allowed by the prison regulations, he would give every facility for our interview. We were then led off to our interview, and needless to add, were somewhat shocked at the diminished size and careworn expression of Sir Roger Tichborne; but the inspection had its consolations, in so far that it strengthened in our minds the identity of the man we had come to see. Though fallen away in size, the jaws being denuded of their superfluous mass of flesh, we were enabled thereby to see more clearly the features of the Roger of the Chilian photograph, the Roger that I knew years ago in Bath; while the figure was the well-proportioned one of a man of middle age. The flesh looked healthy, and the step was light and elastic, and altogether we were confirmed in the truth of the report that the claimant was in good bodily health. He brightened upon seeing us, and asked after his family and friends, and if anything had been done or was likely to be done to enable him to free himself from prison and from the suspicions against him. He, of course, was not allowed to touch on the discipline of the prison, but expressed his horror at the society of the felons with whom he was obliged to come in contact. Twenty minutes were soon spent in answering the questions which three individuals had prepared for him, and he was again marched off to the monotony of the sewing machine which he works as a tailor."

THE experiment of the action of a torpedo on the double bottomed iron-clad ship *Oberon* at Portsmouth resulted in the total destruction of the vessel. The torpedo, which was fired by electricity from the shore, and was submerged forty-eight feet, by the force of the explosion, lifted the vessel almost bodily out of the water, and left her a shattered wreck. The experiment was witnessed by Admiral Elliot, Rear-Admiral Sir Leopold M'Clintock, and other eminent officers.

DR. HARRINGTON TUKE publishes, in the *British Medical Journal*, an account of the condition and history of the lad Arthur O'Connor, now committed to Hanwell Asyium, and recently arrested at Buckingham Palace at the spot where he had three years since committed an assault upon the Queen. In 1872, when O'Connor was arraigned for treason-felony, Dr. Tuke testified that O'Connor was "clearly of unsound mind, and entertained insane opinions that rendered him dangerous to others." On that occasion, it was given in evidence that he had had a sudden idea to shoot the Queen, but had abandoned that course for one of intimidation. He had intended to attack her Majesty in St. Paul's Cathedral on the Day of Thanksgiving for the recovery of the Prince of Wales. Being turned out of the Cathedral at two in the morning, he had returned at eight; the crowd prevented his reaching it again, or getting near the Royal carriage. Persistently tracking the Queen, he at last got near her Majesty's person, climbing the iron railings of Buckingham Palace; he had time to present a pistol at the Queen's head before her attendants could arrest him. Upon him was found a coherent but insane document, purporting to be a pardon for the Fenian prisoners, and an order for O'Connor's own execution. Other insane documents were produced. These the counsel for the prosecution objected to receive. That counsel for the Crown (the present Lord Justice Coleridge) showered ridicule upon the plea of unsoundness of mind, and considered it a "sacred duty" to reject it: the jury adopted the advocate's view, and he was treated as an ordinary criminal, and sentenced to twelve months' imprisonment and a whipping. The latter part of the punishment was remitted by the Queen's clemency. The subsequent history of O'Connor, his letters to the Queen from Australia asking, among other things, for the post of Poet Laureate, and his present condition, show, however, that Drs. Tuke, Maudsley, and Sabben were on this occasion right, and that the lawyers were wrong. One of the Queen's physicians and Dr. Tweedie saw O'Connor recently with Dr. Tuke before his arrest. The *British Medical Journal* publishes O'Connor's own written account of his present condition. It runs as follows: "Physical symptoms. Back like ice; want of ability to swallow food. Sinking in stomach. In cold weather one moment deadly cold, the next burning hot—pains in the head—completely stupefied by cold weather. Mental—want of rest—thought continually revolving upon religion. Visions at night of angels hurling men down precipices to die for ever because they had not given up all they loved and go and sell Bibles to the unconverted. Sense that unless I gave up the drama, witty and convivial society, novel writing, and the world completely I should be everlastingly damned. In a word, one unceasing mania concerning Jesus Christ —the intellect warring with extreme views yet unable to crush the ever-revolving mania. Sense of utter want of constitution and energy in comparison to what I ought to be. Naturally I am a poet loving the dramatic writers and poet of nature, and at one time of my life, ere I become physically debilitated, quite unsusceptible to the present mania, which leaves me no rest day nor night. Of late my brain agony has terribly increased. I awoke the other night raging to commit suicide; the idea occurred as a very delightful one, and just as I was about to spring from my bed to act upon it, it passed off and left me trembling all over and utterly horrified. Since then my feelings have risen to absolute madness continually, and I know very well it is all physical disease, a dead liver, or something of the kind. My home is very wretched, it is in fact a hell to me. Naturally I am devoured by energy, running in my walk, and in everything else, but when stupefied by dyspepsia scarcely able to drag a foot." Dr. Tuke adds to his report of the case: "I freely forgive Lord Coleridge for his personal attack upon myself; it was possibly his professional duty to break down, by every possible means, a witness hostile to his own views, but he must surely now deeply deplore his share in a proceeding which consigned a sick and insane boy to degrading punishment, and to a prison instead of a hospital, thus, perhaps, rendering him a hopeless lunatic; he may also regret that he treated a medical witness with much discourtesy, and ridiculed scientific evidence that has ultimately proved correct: and he must feel deeply that his unfortunate advocacy very nearly resulted in injury or alarm to the Royal Mistress it was his special duty to protect and defend. I trust the case of Arthur O'Connor may lead the English bar either to more extended study, or induce them to receive with greater attention and respect the evidence of those who make medical and other scientific investigation the pleasure and business of their lives."

THE case of O'Connor calls attention to some of the features of criminal lunacy. The medical evidence at his trial was strongly on the side of his insanity, but the jury, convinced that he was only foolishly wicked, and not mad, found him guilty, and he was sentenced to twelve months' imprisonment, and to a whipping. The whipping which was made part of the punishment of such freaks, after one of the early attacks on her Majesty, is said to have been remitted, and O'Connor went to Australia, from which he wrote letters that pretty clearly proved his lunacy. These letters show the unhappy lad as conscious of his own fits of mad depression and mad exaltation, and they justify his consignment to Hanwell, where he can do no harm, and may possibly be cured by judicious care. It is not quite so obvious that they confute the very prevalent distrust of medical evidence in cases of alleged lunacy. Lord Coleridge, who, as Attorney-General, prosecuted O'Connor, "showered ridicule," we are told, on the plea of unsoundness of mind. O'Connor may be mad now, and at the time of his trial he may only have been in that condition of exaltation and conceit which, if not checked, leads to madness. The whipping and the term of imprisonment might have brought him to his senses, and at worst they cannot have "encouraged the others," the hot-brained boys like him, inflamed with desire to make a noise and get their names into print, at whatever expense. The line in these matters of nerve and brain is very delicate. The *Daily News* believes that thousands of people pass their lives on a razor's edge; as it were, haunted by the insane impulses, as Christian was by the whispers of Apollyon, and yet just managing to restrain themselves from overt action. If once they yielded, if once the whisper that seems actually to come from the outside, from an extraneous force, were yielded to, it might be impossible to reach the safe side of sanity again. But among the motives which work for sanity no doubt one of the strongest is the dread of the punishment which, in spite of medical evidence, may be inflicted on the person who yields to the spur of incipient lunacy. There is thus less danger to society in the occasional punishment of a lunatic as if he were sane, than in the occasional imprisonment of a same man as if he were a lunatic.

CAPTAIN BOYTON'S life-saving apparatus, though fully deserving its title, labours at present under the disadvantage of being nearly as costly as a costume by Worth. This objection may perhaps be removed in time, but meanwhile a simple and easily available life-preserver has, according to the *Scotsman*, been introduced to the notice of the shipping and emigration agencies in Glasgow. The preserver consists of two pillows, of prepared corkwood, with an upper padding of hair, covered with mattress-tick. The pillows are attached to each other in such a manner that when about to be used they can be placed one on the back and the other on the chest, and tied, the head and shoulders being thus kept above water. They have been tested and the two have been found capable of supporting a man of twenty stone, breast high. The pillows can be made useful as articles of bedding during the passage, and every passenger can in a few minutes' notice of danger put them to use as life-preservers.

Amongst the deaths recorded this week are:—Earl of Ranfurly; Lord Mackenzie; Sir E. G. Culling-Eardley, Bart.; and Capt. T. Shepherd, late H.E.I.C.S.

SHIPPING.

THE following passages have been engaged by the P. & O. Company's Steamers:—

June 10th.

FOR BOMBAY—Capt. and Mrs. G. Coussmaker. *From Brindisi*—Mr. W. Lawrence.

FOR BOMBAY—Mr. F. C. Franck. *From Brindisi*—Capt. Ollivant.

June 17th.

FOR BOMBAY—Mr. Keelan. *From Brindisi*—Gen. and Mrs. Blake, and Col. A. C. Phillips.

FOR BOMBAY—*From Brindisi*—Mr. J. H. S. Cotton.

NORTH BRITISH AND MERCANTILE INSURANCE COMPANY.

ESTABLISHED 1809.

BY ORDER OF THE BOARD OF DIRECTORS,

1, HASTINGS' STREET, CALCUTTA. *CHAUNTRELL, KNOWLES, & ROBERTS,*
Agents for India in the Life Department.

CAMPBELL'S PLANTATION
HAVANA CIGARS.

"No. 7," a large Havanah pattern Cigar, about 60 to the pound.

"No. 6," a smaller Havanah pattern Cigar, about 85 to the pound.

Can be purchased only at Messrs. Campbell & Co's Depots at

CALCUTTA, ALLAHABAD, LAHORE, POONAH, BOMBAY.

"No. 7," Rs. 30 per 1,000, inclusive of all charges. | "No. 6," Rs. 23 per 1,000, inclusive of all charges.

Application should be made to the Clerk in charge of any of the above Depôts.

If 2,000 Cigars are taken, a Discount of 10 per cent. is allowed.

If 1,000 are taken, Discount of 20 per cent. | If 30,000 are taken, Discount of 25 per cent.

Terms—Cash prepaid.

MESSRS. CAMPBELL & Co. have sent a stock of their Havanah patterns Home, and are prepared to deliver them free of all charges to any Railway Station of the United Kingdom at the following rates, duty paid:—

"No. 7" Rs. 80 per 1,000. | "No. 6" Rs. 60 per 1,000.

Prices in Bond in London.

"No. 7" Rs. 35 per 1,000. | "No. 6" Rs. 25 per 1,000.

"No. 7" costs therefore about 7 Cigars to the shilling anywhere in the United Kingdom.

"No. 6" nine to the shilling.

Orders for large quantities, or orders for supplies to England, should be addressed direct to

MESSRS. CAMPBELL & CO.,
PLANTATION WORKS,
Dindigul, Madras Presidency.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example.

A, aged 30, wishes to Assure Rs. 1,000.		With Profits.		
Annual Premium at Indian Rate ...	Rs.	36	0	0
Annual Premium at English Rates ...	„	23	10	8
Difference ...	Rs.	12	5	4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

D. McLAUCHLAN SLATER,
Fellow of the Institute of Actuaries,
Manager and Actuary.

9, ELPHINSTONE CIRCLE, BOMBAY.

H. M. MEHTA,
AGENT,
CALCUTTA.

THE numerous testimonials received by C. Lazarus and Co. tend to prove that their

BILLIARD TABLES

are now the only ones appreciated in India, being constructed on an entirely new principle introduced by C. Lazarus and Co.

DENTISTRY.

MESSRS. CORFIELD & CO.,

May be consulted daily upon all cases of Surgical and Mechanical Dentistry.

THEIR IMPROVEMENTS IN

Artificial Teeth and Painless Dentistry

Afford the following advantages :—

First.—Extreme lightness, being completely self-supporting.
Secondly.—Moderate charges, extreme simplicity of construction, the highest class of mechanism, and the best materials.
Thirdly.—Absolute immunity from pain.
Fourthly.—Nature so closely imitated, that detection becomes an impossibility.
Parties residing in Calcutta and the Suburbs attended at their own residences if desired.
Teeth supplied by other Dentists not having proved satisfactory, or old cases that have become out of order through absorption of the gums and other causes, can be remodelled on Messrs. Corfield's system on moderate cost.
Artificial Teeth repaired and returned by following post.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified, with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼ lb. and 1 lb. tins, labelled thus :—

CABINET MAKERS, UPHOLSTERERS,

BILLIARD TABLE MANUFACTURERS,

BY APPOINTMENT

To His Excellency the Viceroy and the Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh,

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible, and annoyances and inconveniences are done away with, and the interest in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. *C. L. & Co. have at present only* a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade Advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persa, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

Infantile Fever Powder.

Of the greatest value for CHILDREN suffering from *Fever* in consequence either of *Cold, Derangement of the Bowels* or *Teething*, as also in various *Eruptions of the Skin, Thrust, Diarrhœa, Opthalmia*, &c. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Tonic Antiperiodic Pills.

Invaluable in *Ague, Intermittent Fevers of all kinds, Ague and Spleen;* and all those diseases that partake of a *Periodic character.* Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Spleen Pills.

Has cured thousands of cases of Enlarged Spleen—See full directions in Pamphlet. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Family Aperient Pills.

Mild, prompt, safe and uniform in their action. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Family Antibilious Pills.

More especially suited for acute diseases, such as *Continued Fever, Headaches from exposure, Bilious attacks*, &c. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Restringent Mixture.

A pleasant, safe, certain and effectual remedy for *Diarrhœa or Looseness of the Bowels*, certain form of *Dysentery, Incipient Cholera, Cholic, Griping Pains, Flatulency, Cramps in the Stomach* &c. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Cholera Drops.

Full directions given in the Pamphlet. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Laxative.

A safe, certain and useful purgative; *may be taken alike by young or old.* Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Carminative.

Of the utmost value in attacks of *Cholic, Griping Pains, Wind in the Stomach, Diarrhœa*, and other disorders to which young children are subject. Rs. 2 per bottle.

☞ *Does not contain opium in any shape.* ☜

Balsamic Expectorant Drops.

Of the greatest benefit in *Coughs, Colds, Hooping Cough, Chronic Pleurisy, Hoarseness, Asthma, Pain in the Chest, Difficulty of Breathing, Bronchitis, &c.* Rs. 1-8 per bottle.

DR. E. J. LAZARUS'S

Family Hair Tonic.

Stands unrivalled for the production of ELEGANT (LUXURIANT) GLOSSY and BEAUTIFUL HAIR. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Embrocation.

For *Sprains, Sore Throat, Stiffneck, Quinsey, Pain* or *Stiffness of the Joints, Chronic Rheumatism*, &c. &c. &c. Rs. 1-8 a bottle.

A Printed Pamphlet giving full instructions will be found wrapped round each bottle.

Prepared only by MESSRS. E. J. LAZARUS & Co. at the MEDICAL HALL, BENARES, from the original receipt of EDWARD JOHN LAZARUS, M.D., and sold by all Medicine Vendor

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered.

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

INTEGRITATEM
EMTORIBVS TVENTI
REX. D
MDCCCXLVIII.

PRESENTED BY THE KING OF THE NETHERLANDS

DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM

LIGHT-BROWN COD LIVER OIL

GOLD MEDAL OF MERIT

PRESENTED BY THE KING OF THE BELGIANS

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescsibed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, *and regulated; the muscular power and activity* are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion or DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL *is sold* ONLY *in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath* the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. *A* sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

PRINTED AT THE "INDIAN STATESMAN" OFFICE CALCUTTA—BY W. H. TARGETT, PUBLISHER.

„ KURRACHEE, GUADER, MUSCAT, BUNDER ABBAS, LINGA, BUSHIRE, FAO, and BUSSORAH, receiving Cargo for BAGHDAD, 30th June, 7th, 14th, 21st and 28th July.
„ CALCUTTA, calling at same ports as the Steamers from CALCUTTA, 1st, 8th, 15th, 22nd and 29th July.
„ ADEN for ZANZIBAR, 16th July.
„ ZANZIBAR for ADEN, 3rd and 31st July.
„ Ditto, „ MAYOTTE and NOSSI BI and MOZAMBIQUE, 2nd and 30th July.

Arriving at ZANZIBAR on the return trip 24 hours before the departure of the Steamer for Aden.

From LONDON for LISBON, ALGIERS, PORT SAID, SUEZ, JEDDAH, ADEN, MAKULLA, KURRACHEE, BUNDER ABBAS, BUSHIRE, and BUSSORAH. BAGHDAD Cargo transferred at BUSSORAH, to Steamers of the Euphrates and Tigris Steam Navigation Company, or other Steamers, 10th July.
„ BUSSORAH „ LONDON calling at same ports as on outward voyage, 13th July, touching at KURRACHEE on 25th July.

Note.—This line connects at Aden with the Steamer for Zanzibar, carrying Passengers, Mails and Cargo for the Steamer from Zanzibar for Mayotte, Nossi Bi, and Mozambique. It likewise connects at Kurrachee with the Steamer for Bombay, carrying Passengers, Mails and Cargo for Goa.

AGENTS AT BOMBAY.
MESSRS. W. NICOL & Co.

AGENTS AT MADRAS
MESSRS. BINNY & Co.

Managing Agents, MACKINNON, MACKENZIE & Co., CALCUTTA.

Steam Communication with the Malabar Coast, Ceylon, Madras and Calcutta.

THE British India Steam Navigation Company (Limited), UNDER CONTRACT WITH GOVERNMENT, despatch steamers as above with Mails, Passengers and Cargo, every fourteen days.

This route is the most expeditious and economical for passengers for the Neilgherry district, Bangalore and Madras, who can land at Calicut for Beypore, and proceed from thence by rail.

Passengers for Calcutta can take the same route, picking up the steamer at Madras.

W. NICOL & Co.,
Agents.

Bombay, 1875.

Steam Communication with Kurrachee.

THE British India Steam Navigation Company (Limited), UNDER MAIL CONTRACT WITH GOVERNMENT, and in connection with the weekly service from England, despatch a steamer to Kurrachee every Monday at noon.

W. NICOL & Co.,
Agents.

Bombay, 1875.

Steam Communication with the Persian Gulf, via Kurrachee.

Interchanging Cargo and Passengers at Bussorah, to and from Baghdad, with the Euphrates and Tigris Steam Navigation Company.

THE British India Steam Navigation Company (Limited), UNDER MAIL CONTRACT WITH GOVERNMENT, will despatch a steamer every 14 days to the PERSIAN GULF, touching at KURRACHEE, GUADUR, MUSCAT, BUNDER ABBAS, LING, BUSHIRE, FAO, MAHOMERAH, and BUSSORAH.

W. NICOL & Co.,
Agents.

Bombay, 1875.

Peninsular and Oriental Company.

THE following or other first-class vessels will be despatched for Europe on the undermentioned dates :—

FROM BOMBAY.

Vessels.	*Captains.*	*Tons.*	*H. P.*			
"Australia,"	J. Murray	.. 3,648	600	2nd	July	Southampton.
"Kashgar,"	G. J. Babot	.. 2,609	450	9th	„	Suez, &c.
"Indus,"	N. Stewart	.. 3,478	500	16th	„	Southampton.
"Delhi,"	G. Lee	.. 2,178	400	23rd	„	Suez, &c.
"Deccan,"	J. D. Gaby	.. 3,128	600	30th	„	Southampton.

Passengers are booked to Malta, Gibraltar, and Southampton by every mail. The Southampton Steamers proceed to that port direct, but by the alternate steamers passengers change vessels at Suez.

Passengers to Brindisi, Ancona, and Venice, are carried by every Steamer, but proceed by Rail from Suez to Alexandria.

The China Mail Steamers will leave Bombay on 28th June, 12th and 26th July.

The Australian Mail Steamers will leave Bombay on the 26th June, and 24th July.

[illegible] BINNY,
Superintendent.

Bombay, 15th June, 1875.

Overland Route via Trieste.

THE Austrian Lloyd's Steam-Packets leave Alexandria direct for Trieste, in communication with the P. & O. Steamers from Calcutta and Bombay, immediately after the arrival of the Mails and Passengers from Suez :—

The following is the about cost of Passage, first class, for a Lady or a Gentleman from Calcutta to London *viâ* Trieste :—

Passage to Suez per P. and O. Steamer	£55	0	0
Transit to Alexandria	3	0	0
Passage to Trieste	12	0	0
Trieste to London	12	0	0
	£82	0	0

The Rates of Passage between Alexandria and Trieste are now reduced as follows :—

1st Class	£13	0	0
2nd Class	9	0	0
3rd Class	6	0	0

The undersigned are also authorized to grant to Families of at least three adult travellers, a reduction of 20 per cent. on the amount of the nett passage money.

NOTICE.—Passengers by the above Route are no longer required to have passports in passing through the Austrian dominions.

For further particulars, apply to

BORRADAILE, SCHILLER & CO.,
3, Fairlie Place, Calcutta.

Eastern Bengal Railway Company.
Through service to Chuttuck, Sylhet, & Cachar.

The Steamer "*Queen of Seelpore*" and Flats, plying in conjunction with this Railway, will, until further notice, perform the service to Chuttuck, Sylhet, and Cachar every third week, instead of fortnightly as heretofore, commencing as from Sealdah on Saturday the 22nd current.

Goods for despatch should be delivered at the Sealdah Terminus by 1 P.M. of the Thursday previous.

Full particulars as to the dates of departure, rates and fares, &c., may be obtained of the Enquiry Officer, Sealdah Terminus, or of the District Agent at Dacca and Naraingunge.

AGENT'S OFFICE, Sealdah Terminus, 10th May 1875. (Sd.) GEO. LOW CALDER, *Acting Agent.*

Eastern Bengal Railway.
NOTICE.

WEEKLY Communication by Railway and Steamer between Calcutta, Dacca and Naraingunge for Sylhet, Cachar, Tipperah and Eastern Districts.

This Company's Steamers leave Goalundo for Dacca and Naraingunge every Sunday morning, returning from Dacca and Naraingunge every Wednesday, reaching Goalundo on the Friday.

Passengers should leave Sealdah by the 7-30 A.M. or 8 P.M. Train on the Saturday preceding the departure of the Steamer, and goods for despatch should be delivered at the Sealdah Terminus before 3 P. M. on the Thursday previous.

Further particulars can be obtained on application to the Company's Enquiry Officer, Sealdah, or the Company's Local Agent at Dacca and Naraingunge.

E. B. RAILWAY, AGENT'S OFFICE, 17th November, 1873. FRANKLIN PRESTAGE, *Agent.*

ASSURANCE COMPANIES.

STANDARD LIFE OFFICE.

THE DEATH CLAIMS paid by the STANDARD COMPANY, during the past nine years, have been upwards of £1,200 per business day.

THE FUNDS during the same period, after payment of Claims and Expenses of every kind, have increased from £2,600,000 in 1865 to £4,800,000 in 1874.

NEW ASSURANCES, to the amount of £1,000,000 Sterling, have been placed upon the Company's Books in each of the years since 1865—some of them years of doubt and anxiety in the Assurance World. This result, it is believed, has been maintained by no other Office in the United Kingdom, during the same period.

BONUS YEAR 1875.

The next division of Profits will take place at 15th November, 1875.

ANNUAL REPORT 1875.

Copies of the Annual Report, containing the Balance Sheet, &c., may be obtained on application.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

MANCHESTER FIRE ASSURANCE CO.,

ESTABLISHED 1824.

Alfred Lowe, Esq.
John Napier, Esq.
Henry Michael Steinthal, Esq.

Insurances are granted by this Company on nearly every description of property in Great Britain, in Foreign Countries and in some of the Colonies at moderate rates.

Mills, Factories and other hazardous risks will be specially [illegible] request of the owner.

The duty on fire insurance has now entirely ceased.

KETTLEWELL, BULLEN & CO.,
Agents in Calcutta.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit."—Extract from the Speech of the Chairman of the Annual Meeting, 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY,
CALCUTTA.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY,

FIRE AND LIFE.

ESTABLISHED IN 1836.

And specially empowered by Parliament.

OFFICES: DALE STREET, LIVERPOOL,

Cornhill, and Charing-Cross, London.

At the Annual General Meeting of the proprietors, held 24th February 1875, in the Company's Office, Liverpool, the Report of the Directors for the year 1874 was read, and it showed that:—

The Fire Premiums were	.. ..	£ 1,082,521
The Life do.	.. ..	244,607
The Annuities payable	.. ..	59,511
The Invested Funds	.. ..	4,089,747

For Tables of Rates and full particulars both for Fire and Life Insurances apply to

GILLANDERS, ARBUTHNOT & CO.,
Agents, Calcutta.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, *King William Street, London.*

Insurances effected with or without participation in Profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed,* whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premium,* the sum allotted for Bonuses this year being £37,030.

COLVIN, COWIE & CO.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example.

A, aged 30, wishes to Assure Rs. 1,000. With Profits.

Annual Premium at Indian Rate ...	Rs.	36	0	0
Annual Premium at English Rates ...	„	23	10	8
Difference ...	*Rs.*	*12*	*5*	*4*

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

D. McLAUCHLAN SLATER,
Fellow of the Institute of Actuaries,
Manager and Actuary.

INDIA AND AVA.

THE murder of the Inspector-General of Police of British Burmah, is a disaster which derives additional importance from the present critical state of affairs in that province. The death of an officer like Colonel Hamilton would be deplorable at any time no doubt; as for the last thirteen years he has been closely connected with the country, and for two years has filled with credit and efficiency one of the most onerous and responsible positions in the whole of our Indian dominions. In a province like Burmah, where the English rule is comparatively a recent event, and where former scenes of disorder, violence, and bloodshed are an abiding recollection in the minds of the older inhabitants, it is scarcely possible to exaggerate the importance of the *rôle* the Police have to play. It is only lately that any success has been achieved in breaking up the roving gangs of dacoits who have so long infested the province. Composed chiefly of the turbulent adherents of former Burmese officials, whom the change of Government has deprived of their pristine pay and plunder, they exercised much the same system of terrorism over the neighbouring villages as the more picturesque brigands of Italy and Greece. They were the scourge of Rangoon as well as the outlying districts, and a thousand miles of frontier offered them an easy refuge when their accustomed haunts became too hot to hold them. It is greatly owing to the energy and administrative ability of the late Inspector-General, that so marked a diminution has appeared in the statistics of dacoity and other serious PART I. His vast local experience, his extended knowledge of the people and their habits, and his indomitable vigour, though sorely tried of late by the inroads of sickness, will long be regretted by his executive superiors, while his personal and social qualities have rendered his death a loss to provincial society which it will be difficult ever wholly to replace.

Apart, however, from the intrinsic significance of the event, it is necessary clearly to recognise the effects it may produce upon the country at large. The complications which already exist between India and Ava, the extensive reinforcements which have recently been sent, and the terrors of impending war have produced a disturbed state of feeling which is by no means confined to the lower and more ignorant among our native subjects. The murder of a high official will intensify this excitement, and largely influence the interpretation which may be placed on the result of our negotiations with the Burmese Government. As in the murder of Mr. Man in 1872, and of Mr. Hallett in 1865, it is the highest degree improbable that the death of Colonel Hamilton resulted from anything but the reckless despair of ruffians sorely beset for life. Yet all who were in Burmah at the time will remember the profound impression that existed amongst the Burmese that both the former tragedies were due to some mysterious agencies at Mandalay. The present gang seem to have selected their victims according to a graduated scale, shooting first a constable, next a Police superintendent, and lastly the Inspector-General. We have no doubt they will all meet with exemplary punishment, and that the subdivision of Pegu will be finally cleared from this band of marauders. At the same time we cannot refrain from expressing a hope that the policy the Indian Government will henceforward adopt towards the potentate at Mandalay will be of a character to remove any suspicions of our being intimidated by his mysterious machinations, however hypothetical they may be in reality.

Though the fact seems hitherto to have been entirely ignored, there can be little doubt that the Karennee question and the anomalous position of our Agent at Mandalay are by no means the chief objects of the mission to Upper Burmah. It has become absolutely necessary to arrive at some definite understanding as to the ultimate fate of the Avan monarchy. The present King, from the date of his succession, has always been more or less of a *protégé* of the Supreme Government, as in fact the first of the Alounggpyah dynasty, who in the least degree recognised our real position in the country, and affected anything of a friendly disposition towards his barbarian neighbours. As compared with his predecessors, Tharawadi and Paganmeng—the former a truculent maniac, the latter a malignant debauchee—the present ruler Mounghon, is assuredly a model of beneficence and virtue. Moreover, he has managed to keep his country tolerably quiet; has been sufficiently complaisant to the British merchant; and his occasional outbreaks into barbarity are the inevitable reaction from the constantly strained efforts he is making after a sham civilization, which he would probably define as more money and more machinery. His private life will bear a certain amount of scrutiny, and is at least more sober-hued and inoffensive than that of his late Highness at Baroda, whose deposition has been so bewailed by the London periodicals. It must be allowed that on the whole, our political relations with the King of Burmah have been satisfactory. He is at heart thoroughly afraid of us, and generally proves amenable to reason, and may be described as a very decent type of the petty Oriental despot. On the other hand, the action of our own rulers, though somewhat undignified, is perfectly intelligible. In the present monarch, we found a useful agent who, without any expense on our part, could just succeed in controlling an exceedingly troublesome country. It was manifestly inexpedient to detract from his utility by insisting on any petty rights of precedents or punctilio. We have deprived him of all we wanted of his dominions, and in consideration of his keeping what is left in decent order and subjection, we have never obtruded our superior might; have yielded perhaps a little weakly to his petulant pretensions; and, in plain English, have consented to assume in his palace, a position wholly out of consonance with our Indian suzerainty. This self-interested humility, as being entirely at unison with our policy both at home and abroad, might be continued to an indefinite period, were the King only complaisant enough to give the Foreign Office some idea of what will happen after his decease. The fate of his three immediate predecessors seems to have determined his Majesty against appointing an heir out of his numerous progeny, and the rebellious conduct of his relatives have no doubt confirmed him in this resolve; the result being that his death would infallibly plunge the whole kingdom into an internecine strife. As the first step of an aspirant to popular favour would be the massacre of the British Resident and the other white "kulars" at Mandalay, it is probable that our Government would finally interfere. Even supposing we had no tangible pretext for intervention, a state of anarchy in Ava would prove an awkward obstacle in the path of various Government projects, and frontier raids and trade-disturbances would speedily call for vigorous measures of mediation. The real heir to the throne is at present in British custody; on what pretence and under what charge it would puzzle the compilers of the Criminal Procedure Code to decide. The whole of the dynasty, from Alounggpyah downwards, have shown themselves a race of as vile and bloodthirsty tyrants as ever disgraced an eastern throne. The comparative moderation of Mounghon is due to his accession when late in life, and to his former occupation of "phongyee" or priest, an order as a rule of high excellence and blameless character. It is by no means improbable that the Home Government may place the Mengoon prince on the vacant throne, as its nominee, with armed protection. The young man like all his

kinsfolk, when he finds a British army at his back, will ape no doubt the worst excesses of Bhodan Pyah, or the vilest of his villainous forefathers. A Mulhar Rao at Mandalay is far from a pleasant prospect, and sooner or later annexation may simply be inevitable. We do not intend to indulge in any further vaticination, but we think we have succeeded in showing that Sir Douglas Forsyth's task is by no means a light one, and that some definite policy must be determined on with reference to the future relations of India and Ava. At present, the death of a decrepit Oriental, long past middle age, might result in a most lamentable catastrophe, sufficient to inflict a serious blow on English prestige and power in the East, and to retard for years the progress of the most promising of our Indian possessions.

INDIAN TRADE STATISTICS.

GOVERNMENT has been much occupied of late by questions relating to trade routes and trade statistics. The information in this respect at its command, has long been acknowledged to be in a backward state. The late Lieutenant-Governor, Sir George Campbell, struck the key-note of the discussion, and his endeavours towards improvement in this province are at length beginning to bear fruit. In one of his early reports he regretted the want of a local department of trade. Taking food grains alone, it is useful not only for the administrator of a country, but also for merchants and traders generally, to know what districts produce more food than they consume, what districts hoard food, and what districts export food. In times of scarcity, such knowledge is invaluable. In a similar manner, the importance to the commercial world of accurate statistics regarding jute, cotton, silk, oil seeds, and other main staples of trade cannot be over-estimated. With regard to internal traffic, a system was adopted under Sir George Campbell for the collection and tabulation of the traffic passing Sahibgunge on the Ganges, in addition to the registry at Jungypore and Nuddea, on the Bhagiruttee and Jellinghi respectively, and at Kissengunge on the Matabhanga. Statements are also prepared, with more or less completeness, of the traffic on the Calcutta canals, and the reports of some of the Railway Companies specify the quantities conveyed by them of the chief articles of merchandize. The information thus obtained, is published in the Bengal Administration Report in the chapter on trade. The subject has recently engaged the attention of the Secretary of State, and a Special Committee has considered and reported upon the question of the collection of statistics of the inland and maritime trade of the country. We purpose now, however, to concern ourselves only with the suggestions of the Committee as regards inland trade. For the purposes of their report, they divide the trade of India, conducted by land, into two portions, foreign and internal, the former comprising the traffic conveyed through the various passes over the mountains forming the northern boundary of British India, or which crosses the frontier line at any point between the river Hubb, on the extreme west of Sindh, and Pakchon, the southernmost point of the province of British Burmah—and the latter including all other descriptions of inland traffic. This appears a more rational division than the classification adopted by the several local Governments in their Administration Reports. Taking their own province as the unit of reference, instead of the whole of British India, as the Committee propose, they each class as external all trade which crosses the boundary, even though it be only into a neighbouring British district.

The small amount of attention bestowed by the different Governments on the subject of trade, is commented upon by the Committee. Bombay gives no description of its land traffic with countries beyond the frontier. The North-West Provinces make no attempt whatever to deal with the question. The *Sind Gazetteer*, a recent publication, mentions the existence of a considerable trade in wool, woollen apparel, carpets, and horses, from Central Asia into Sind *viâ* the frontier, but no regular statistics of the traffic appear to have been kept. The Oude report is also very imperfect, while the Bengal report contains no statistics of trade with the neighbouring States on the north and east; the special chapter on trade making no allusion to the subject. The endeavours made by the Bengal Government to register the river and railway traffic are, however, recognised by the Committee, but they consider the information thus obtained, though important for local and commercial purposes, to be hardly of any use for general purposes, as throwing light upon the internal trade of the province.

They are of opinion that the statement relating to the trade entering or quitting each province, should be subdivided into, (1) trade with countries external to British India, (2) trade with internal countries not under British rule, and (3) trade with British provinces proper; and they accordingly recommend for adoption in each province, a form in which this threefold classification is observed, showing the quantity and value of articles crossing the boundary, either for import or export. They further consider that particulars should be obtained of not merely the amount and nature of the traffic passing into or out of a province, but also of the route which the trade takes, the duties imposed on the goods (as far as they can be ascertained), both during the route and at the time of entering or leaving British territory, and any other hindrance which may exist to the progress of commerce. They propose that these particulars should be given for the trade through Beloochistan, by the various passes from Sind across the Hala mountains; with Affghanistan, by the several passes across the Suleiman range; with the independent territories on the north and north-west of the Peshawur and Hazara districts; with and through Cashmere, by the various passes from the Punjab; with Thibet, by the roads from the Punjab and North-West Provinces; with Nepal, from Oude and the Lower Provinces; with Sikkim, with Bhootan, with the Chino-Thibetan territory at Towang and also at Ruima with the hill tribes on the north-east, with the Nagas, with Munnipoor, with the hill tribes on the eastern frontier, with Burmah, and with Siam.

The Secretary of State has approved of the Committee's report, with the modification, however, that as regards trade between British and native or foreign States, the collection of information should be confined to cases where there is a well-defined boundary, and where some facilities for obtaining the statistics already exist. The following classification is suggested:—

(1) Trade external to British India, under each particular route.

(2) Trade with

- (*a*) A group of internal native States, such as Rajpootana and other States surrounded by the customs line;
- (*b*) A large territory like that of the Nazim; or
- (*c*) Mysore; or
- (*d*) A foreign state, as Pondicherry; or
- (*e*) Goa.

(3) Trade along the chief routes in the provinces of British territory.

Prompt action has been taken in India on the Secretary of State's despatch. A conference was held in March at Allahabad, consisting of delegates from Bengal, the North-West Provinces, the Punjab, Oudh, and the Central Provinces, for the purpose of devising a scheme for carrying out the proposals of the Committee, as modified by the Secretary of State. The result of their deliberation has now been made known. The questions for discussion were the classifications of articles, the location of registering stations, and the amount of information to be recorded. On the first point, the Committee wisely determined to take as their model the lists used in the returns of sea-borne traffic, so as to admit of a ready comparison, to some extent, of the inland trade with the returns in the trade and navigation volume, *published annually and devoted exclusively to imports and exports by sea. Three classes of articles are, therefore,* to be adopted. The first comprehends those whose weight must be ascertained on the spot, and which can be valued according to the market rate of the time, such as cereals, ghee, sugar, and the like; the second, those which can be numbered on the spot, but not weighed or valued, with any probability of approximation to the truth, such as animals, timber, bricks, &c.; while those articles which can not be valued except on the spot, such as piece-goods and goods of a miscellaneous character, are placed in the third class, both their weight and value being registered. The opinion of the Conference regarding the

THE ENGLISH MAIL.

WE gave an account last week of the European "scare." There can be no doubt that we were on the verge of another war, and there has been much speculation as to how the calamity was averted. The official press of Berlin have been declaring with emphasis that this happy result was due to a timely interference on the part of Great Britain. The Earl of Derby wrote a remonstrance or an explanation which stayed the German arm just as it was raised to strike. This, of course, is too absurd to obtain credence anywhere. Every one knows the Earl of Derby sufficiently to know that he would never place his name to a State paper that was couched in language sufficiently vigorous and definite to produce such an effect as this, even were the *English army in a condition to justify us in assuming such a tone.* Of the weakness of our army Prince Bismarck is, of course, perfectly aware, and any remonstrances coming from us he would certainly treat with indifference. He could count with confidence upon our never proceeding beyond the stage of written remonstrance. There can be little doubt that it is from Russia that his plans have received this sudden and unexpected check. He obtained her neutrality in the last war by supporting her demand to break through the conditions of the Treaty of Paris. And it is conjectured that he hoped to obtain from her a similar guarantee by the promise of support in the extension and consolidation of her Central Asian conquests. But the result has shown that Russia feels she has more to fear from the further aggrandisement of Germany than to gain by a nominal and unprofitable sovereignty over hordes of wandering Turcomans.

***

THE bills for the suppression of monastic establishments in Prussia will very soon become law, but the Roman ecclesiastics are taking prompt and energetic measures to elude the blow aimed at them. It does not seem improbable that when, six months hence, the law comes into operation, there will be neither Institutions to suppress nor property to seize. The monasteries with their lands or other endowments will be found to have been made over, and become the legal property of some Roman Catholic noble or gentleman living in the neighbourhood, while the monks will be, by a decree of the Pope, what is called "secularised." That is to say, they will, *pro tem.*, be released from their vows, converted into simple priests no longer members of a brotherhood, but living as private chaplains or guests on the estates of the person to whom the property of the Order has been made over. Such at least is the account of the policy to be pursued, which is given by a correspondent of the *Guardian.* The end of all this foolish wrangling becomes every month more and more difficult to predict.

***

THE French seem to be getting into hot water at Senegal, where the Government exercises as despotic a power as any Turkish Pasha. The stations on the Senegal and the Gambia which give the colony its compound name were established as far back as 1637, but being unfitted for European colonization their progress has been very slow. It is estimated that a territory of some 250,000 square miles, with a population of 600,000 and upwards, is under French "protection." The real subjects of France are aggregated in St. Louis, at the mouth of the Senegal, and the district surrounding it, in the island of Goree, and in the station of Backel, 200 leagues up the river from St. Louis on the left bank. One of the native villages inhabited by friendly people has been wantonly destroyed by the French garrison, the following being the official account of the affair: In November last a Captain of Marines was sent to Bakel as commandant, and he at once began to ill-treat the inhabitants, many of whom he put in prison on frivolous charges. They sent a deputation to complain to the Governor, and while he was investigating their grievances an event occurred which had disastrous consequences. On January 1st, the Feast of the Circumcision, which is a great day with the Mussulmans, a servant belonging to the Native Rifle battalion, underwent the rites. It is usual on such an occasion to grant many privileges to the neophyte; but this one was unreasonably exacting. He laid hands upon a large number of fowls belonging to a trader named Jupiter Whalley, and then said he must have a sheep. The owner was willing to give him one, but he wanted to choose the best. Thereupon an altercation ensued, daggers were drawn, and some of the villagers arrested the Captain's servant, to prevent murder. The Captain put them in irons, and released his servant, who returned to the village to levy blackmail. Out of all patience, the inhabitants of Sarracolets gave him a beating, and then the Captain gave orders to bombard Sarracolets from the fort. The cannonade lasted three days, and to finish the destruction which shells had left incomplete, tirailleurs were sent with orders to burn everything. Four inhabitants were killed and fifteen wounded. It is remarkable that the villagers did not fire a shot in retaliation. They abandoned Bakel and fled to Tuabo to a tunka or king of the province of Goye. Since this event trade with Bakel has been completely stopped. The Moorish caravans come there no more. It is stated, as the result of an inquiry set on foot by some native chiefs, that property to the value of 100,000 francs belonging to French merchants of St. Louis was burned.

***

IF the Wandering Jew is still going about, he must be rather amused at the suit between Messrs. Chatterton and Cave. It seems that Mr. Chatterton owns the copyright of one play about the Wandering Jew, and that Mr. Cave is the proprietor of another drama on the same interesting wayfarer. Both works are apparently after the French of M. Eugène Sue, whom the authors have used as Shakespere used the Italian novelists, as the Italian novelists did the Greek romance writers, as the Greek romance writers did Oriental storytellers, where the game of adaptation is lost in the mists of mythology. "Bill was an adapter," as some one says in "Nicholas Nickleby," speaking of Shakespere, and Molière adapted a few whole scenes from Cyrano Bergerac. That is all quite fair, and in accordance with the laws of the game; but Mr. Chatterton accuses Mr. Cave's author of having "cribbed" points and situations from his dramatic rendering of Eugène Sue's story, which, if proved, would be a grave offence. M. Sue appears to have described a vision of the Jew in supernatural felicity, which happy lot the first English adapter seems to have adequately represented by displaying the Jew "located in an icy region," where he sees a vision of a person named Dagobert, and others. Now this idea may have been, and indeed seems to have been, M. Sue's, and, if we rightly understand the matter, M. Sue must have confused the legends of the "Wandering Jew," and of "St. Brandan" who met Judas Iscariot cruising about on an iceberg. But the point is that the second English author adapted the first English author's notions of how this Polar paradise should be put on the stage, and so infringed copyright. The law of these matters seems to strain at home-bred gnats and swallow camels of international injustice, and authors who suffer from piracy must hope that their rights may soon be as carefully looked after as those which are vested in the arrangement of lime-lights and theatrical icebergs. Perhaps the Wandering Jew may survive to witness this happy consummation.

***

THERE is a report that the Government of Germany has requested that of Brussels to prohibit Catholic processions within its territory. The statement is widely believed, but it is obviously invented by enemies of Prince Bismarck. If such a request could be addressed to the Government of an independent State, no country would be free, and Great Britain might be "requested" to restore the Establishment in Ireland, or re-enact the Penal laws. The theory seems to be that the Liberals in Belgium will support the demand, and overthrow the Ultramontane Cabinet; but the Liberals showed in the recent debate on the Bishops' Charges that they were Belgians first and partisans afterwards, and they will scarcely recede from that position.

***

CABRERA is proving his new loyalty to King Alphonso by striving to repair the failure of his first efforts at intervention between the revolted provinces and their so-called Constitutional King. He occupied a great part of the month succeeding his arrival at Bayonne in raising an independent corps six hundred strong, which he has placed under the charge of Aguirre, formerly a well-known Carlist chief, who has joined his standard. Among those enlisted are the [illegible] priest whose command was dissolved on the frontier of France and deserted into that country when their chief was suddenly disowned by Don Carlos. Aguirre began his command by addressing a lengthy proclamation to the Basques and Navarrese as "from an old comrade," in which he assures them that the Fueros of the four provinces will be absolutely guaranteed by the King. He reminds them that they were promised long since by their present chiefs that the war should be brought to a speedy end, and that all the blood and money spent in the cause they have adopted has brought them no nearer this consummation. Their leaders, he says, purposely prolong the struggle, "not for the sake of country or religion or King, but to enjoy themselves, and make money out of the business. Had you even the guns and other means necessary for victory, you would never reach it under such chiefs as these, who have done nothing the two years past but exhaust the resources of the country." He concludes with declaring his cry to be "Viva for Peace and the Fueros, Alphonso XII., and General Cabrera!" Since this proclamation was issued, he has taken the field, and moved in two columns from Irun, threatening nominally the Carlist depôts on the border of Guipuzcoa and Navarre; but the real object being no doubt to circulate the document in the rear of the army at Estella.

***

MR. KENEALY recently told an audience in the town hall at Burslem that the great National Debt was incurred by a Septennial Parliament, which is quite true,—as it is also true that it was incurred by a Parliament which usually meets at four o'clock; and probably the one arrangement has about as much to do with its sins as the other. Beyond this terrible septennial charge, Dr. Kenealy does not seem to have had much to say, except to give the history of a stick he had received in Glasgow: "'This,' they said, 'is made of the true black birch of Scotland, and we give it you to birch your enemies, if ever they come near you.' Here is an eagle (pointing to the top of the stick), perched proudly upon a rock, and from the terrific look of his beak and talons, he is a very ugly bird, I can assure you—he is what, in sporting phrase, is called 'an ugly customer.' Here (pointing lower down) is the serpent of corruption, climbing gradually and stealthily towards this mighty eagle; but the shining serpent, false as he has been from the beginning of the world, dares not to face that mighty eagle from the front, but is crawling up from behind. He is expecting, as many enemies of the people have done, to find that eagle napping. But he is mistaken, and he is sure to find the eagle wide awake. Little doubt may be entertained that the very moment the glittering eye of that serpent falls upon that eagle, the eagle will be down upon him, and crush the serpent's head." This, the *Spectator* thinks, is sadly like the style of the young Columbian, in Martin Chuzzlewit, only waterier: "I tell that lion that Freedom's hand once twisted in his mane, he lies a corse before me, and the eagles of the Great Republic laugh ha! ha!" The colliers of Burslem might have imitated the eagles of the Great Republic with advantage, but it is stated that instead of laughing, they cheered this wretched stuff.

WRITING with reference to the recent outcry against the "seditious" utterances of native editors in India, the same journal observes: "Speeches are made in mosques which are, no doubt, incitements to treason. Songs are sung in bazaars which make the Government seem ridiculous or hateful. Dramas are acted in which the white man is represented as a Croat would have been in 1859 in a Venetian patriotic play. 'Leaders' are published in which the Administration is denounced, misrepresented, traduced, with great acerbity, considerable eloquence, and in Bengal at all events, a good deal of wit. The biting humour of races who have much of Rabelais in them, and can ridicule sometimes the very gods, exhausts itself upon the foreign conquerors, whose ways, officers, and social habits are held up to the broadest and sometimes the most obscene derision. But all this hostility is the expression rather than the cause of a chronic disaffection, which has its origin in the nature of the situation, the rule of one civilisation by another, which is not entirely discreditable—after all, we do not denounce Poles for not liking German government, far more efficient though it is than Polish government would be—and which is, we fear, irremovable except by time." It is doubtful if orator, dramatist, or editor really deepens it in any appreciable degree, certain that they do not deepen it as orator, dramatist, and editor would do if driven by repressive legislation into secrecy, and tempted to preach, and perform, and write amid an audience whose sympathy would shroud them from observation like a fog. No Mahomedan will denounce us from the pulpit as he would do in secret meeting. No dramatist can satirise us on the stage as he does in the great room of a Hindoo house. No journalist will print the things which were formerly, and we believe still are, circulated in the lithographed news-letters over which we have and can have no control. It is very doubtful whether the effect of all these modes of attack is not to alleviate rather than intensify disaffection.

FOREIGN NEWS.

GERMANY.

THE *Cologne Gazette* confirms the statement which has been made respecting Prince Bismarck's intention, at the recommendation of his medical advisers, to spend henceforth part of every year at a warm place in South Germany; but it denies the other statement made, that Prince Bismarck intends to dispose of his estate at Varzin.

THE Continental papers are still discussing and endeavouring to explain what is now known as the late "war scare." The Berlin correspondent of the *Echo du Parlement* confirms the statement that Bismarck, at the end of April or the beginning of May, Prince Reuss, Vienna, and St. Petersburg a despatch, pointing out the dangerous precipitation of the French armaments, and the impossibility that the heavy sacrifices imposed by the cadres law could be supported long. This ardour led to the presumption that France intended to go to war next year. Prince Hohenlohe, at Paris, received a copy of this despatch for his personal information. The three Ambassadors communicated the Note to the respective Foreign Secretaries, who all declared, verbally, that they would act in favour of the maintenance of peace. The Ambassadors of Russia and Austria at Paris received orders to recommend prudence and moderation. The English *chargé d'affaires* (Lord Lyons being absent) offered the mediation of the English Government. The Duc Decazes declared that France wished only for peace, and that her measures of armament and the cadres law had not the proportions and importance attached to them at Berlin. Some days afterwards, the Emperor Alexander arrived at Berlin, and Prince Bismarck succeeded in convincing him of the peaceful intentions of the German Empire. The Paris correspondent of the *Cologne Gazette* says that the disquieting rumours arose simply from the fact that France, who now possesses an army of 800,000 men, which she can mobilize in six days, ordered four or five weeks ago certain military precautionary measures, which suggested that she believed in an approaching war. The circular Note was a confidential communication to the German representatives abroad, stating that, in spite of the menacing attitude of France, notwithstanding all the efforts of the German Government to establish an at least outwardly friendly intercourse between the two countries, Germany will keep on the watch, and under no circumstances attack, but wait for the attack. At St. Petersburg these intentions of Germany were well known and approved. When this became known opinions changed at Paris, and when the Russian Emperor arrived at Berlin all difficulties were already removed. A Berlin telegram says that on the occasion of the "peaceful intervention of the British Foreign Office" the German Government "while thanking the British Government, is understood to have pointed out that there was no ground for mediation, as no differences existed between Germany and France." It is stated in a Paris telegram that an assertion published in a German newspaper that the French Minister of Foreign Affairs had again assured the Berlin Government of the pacific intentions of France, is contradicted in semi-official circles. "It is stated that no doubt has ever been entertained as to the intentions of France. The assertion also that the French Government has suspended the execution of the measures decided upon by the National Assembly for the re-establishment of the military status of the country and for the security of its territory is denied in equally positive terms. There never has been the slightest intention of suspending these measures."

THE Upper House of the Prussian Diet has voted the second reading of the Bill respecting the administration of the property of Catholic parishes. The measure was amended in two paragraphs, but in other respects it was passed in the form adopted at the first reading. The House next agreed to the Bill in its entirety. The Bill for the suppression of convents was afterwards discussed. It passed the second reading, and was subsequently finally carried by 66 votes against 24 votes, without amendment, in the form in which it had been voted by the Lower House.

THE Prussian Government, apprehending disturbances, has prohibited all Roman Catholic processions in public. This order prevented a number of processions which were to have been held at various places in honour of the Pope's jubilee.

FOUR members of the staff of the *Frankfurter Zeitung* have been fined thirty marks each for refusing to give information as to the authorship of certain articles, the Court intimating that if, after three days, they were still refractory, they would be committed to prison. They have, however, appealed against the decision. A prosecution has also been commenced against a Nuremberg paper for inadvertently inserting an advertisement, apparently in cipher, which, when read backwards, consisted of reflections on Prince Bismarck.

FRANCE.

THE Paris correspondent of the *Times* says, that the Committee of Thirty is composed of one member of the Republican Union—M. Cazot; six of the Republican Left—MM. Duclerc, Albert Grévy, Jules Ferry, Humbert, Le Royer, and Jules Simon; twelve of the Left—MM. Bethmont, Christophe, Delorme, Laboulaye, de Marcere, Krantz, Comte Rampon, Ricard, Ernest Picard, Scherer, Vacherot, and Waddington; seven of the Lavergne group—MM. Adrien Léon, Baze, Beau, Cezanne, De Lavergne, Luro, and Voisin; three of the Right group, De Clerc—MM. Adnet, Delsol, and Sacase; one of the Moderate Right—M. de Sugny. Thus the Left has twelve members, without reckoning the seven members of the Wallon or Lavergne group, which hovers between the Left and Right Centres. M. Duclerc, of the Left, received the largest number of votes—namely, 401; M. Laboulaye, of the Left Centre, and M. Lavergne standing next, with 371 each. The three members of the Right Centre, and one of the Moderate, together with one of the Lavergne group, were elected at the third ballot, the number of votes they received ranging from 311 to 256. The correspondent of the *Daily News* states that M. Gambetta only failed to be elected for want of a single vote. The same writer says that during a suspension of the sitting, the Radical leader exhorted the Left not to push their triumph too far, and recommended the selection of the five members who were elected at the third ballot.

THE Bureaux of the French National Assembly has met for the purpose of nominating the Committee on the Budget of 1876, to consist of seventeen members. Thirteen of the Left were elected. They nearly all recognised, we are told, the necessity of voting the Budget before August 1st. The financial proposals of M. Léon Say were generally approved. He declared that the yield of the taxes was very satisfactory. An excess of 30,000,000 *fs.* over the estimates for the first five months of 1875 had been obtained, and, in consequence of the total amount which the year's taxes might be expected to produce, it would not be necessary to have recourse to the advance of 40,000,000 *fs.* on the part of the Bank of France. He believed that the same state of things would exist in 1876.

THE French Government has accepted an offer made by an officer in the Belgian army and an inhabitant of Antwerp, to place at their disposal four hundred carrier-pigeons of the very best breed, most of which have won prizes at the principal pigeon races held in Belgium. Another Belgian gentleman has also sent a number of his best carriers to M. Geoffroy de Saint-Hilaire, president of the Jardin d'Acclimatation. The "military pigeon-house," which has been formed by the French War Office, is therefore in possession of nearly five hundred carriers, which will soon breed a sufficient supply of pigeons to people the dovecots which will be erected in the different fortified towns of France. The *Journal des Débats* states that one of the carrier-pigeons now in possession of the Jardin d'Acclimatation has undergone singular vicissitudes of fortune. This pigeon, which was in one of the balloons sent up from Paris during the siege, fell into the hands of the Germans, and Prince Frederic Charles, to whom it was brought by one of his orderlies, sent it as a present to his mother, the Princess Charles of Prussia, who had it placed in her dovecot, which contains the best breeds of pigeons in Europe. After remaining in captivity for four years, this bird made its escape, and found its way back to its original home in the Boulevard Clichy, and has now been presented by the owner to the "military pigeon-house" of France.

ACCORDING to a French newspaper there is in existence a profession in London which reflects great credit upon its original professor—the French journalist who, in describing London life and manners, attributes its existence to our constitutional hypocrisy and our irrepressible desire to seem to our fellows different from what we really are. In the suburbs of London, we are gravely assured, there exist what are known by the name of "splashing houses"—where for the modest sum of three shillings a would-be fox or stag hunter can be splashed from head to foot in the soil of any county in England, where he wishes to have it thought he has been hunting. The process is simple enough. On the arrival of a customer a stableman comes forward and inquires, "What hounds, sir; Kent, Surrey, Essex?" and on receiving the reply the noble sportsman is led to a wooden horse, which by turning a wheel, is made to splash and kick up as much dirt and mud of the proper character in five minutes as an ordinary hunter in the field would in five hours. Then, continues our historian, the proud splashed one returns to Bond Street, Piccadilly, Pall Mall, *une cravache à la main, étaler son costume moucheté*. Had the Comte de Jarnac still represented France at the Court of St. James, and had Lord

location of pass stations, is in favor of the frontier system in preference to what is called the trade-centre system of registration. The latter system proceeds upon the principle that the great bulk of the trade of a province, must be concentrated at some town, to which the goods are imported, or whence they are exported; and that if each town, of any importance as a place of trade, reports the value and quantity of articles it receives and sends, excluding mere local traffic, a fair idea will be obtained of the trade between district and district of a province, and between the whole province and external countries. The system of town registration, though well adapted for obtaining information regarding internal trade, is not sufficient to secure statistics of the [illegible] entering or leaving British territory, which is after all the chief aim of the registration scheme. Each Government will be required to select suitable posts on the principal thoroughfares on or near any frontier; existing local establishments such as the customs establishment on the inland customs line, and the toll stations on roads and river, being utilized as far as possible. The Conference's proposals regarding the amount of information which it is desirable to obtain of the traffic passing the frontier of each province, fall short of the Secretary of State's requirements. They consider that it will be impossible to ascertain such particulars as the destination of the goods, the place or country from which they have come, and the route by which they have travelled, or by which they are to proceed; and they state that for all practical purposes, it will be sufficient to know that the traffic enters or leaves the country or province concerned, at a certain point. But we cannot agree to this view. It appears to us that not only does the scheme stop short of the instructions issued to the Conference, but it stops just at the point where the statistics called for would be chiefly valuable, whether for commercial, political or geographical purposes. For instance, in the case of a caravan proceeding from the Kangra valley by the Kooloo route across the Bara Lacha pass, with tea, piece-goods, and other merchandize, although it would be useful to know what quantities of each article passed the border, it would be of more importance to learn whether the goods were destined for Ladakh or were to be carried to the more distant marts of Yarkund or Bokhara; also whether the tea was the produce of the Kangra valley, or the piece-goods were of Manchester manufacture or the outturn of Indian looms.

But however delicate the inquiries, traders will be sure at first to regard them as preliminary to the imposition of transit dues. The Conference deprecate anything in the nature of inquisitorial proceedings, but is there any such difference between the enquiry proposed by them, and that which would be necessary to ascertain particulars of the route and destination, to justify the one being pronounced inquisitorial, and the other not? Merchants are more likely to take alarm at an attempt to ascertain the weight and value of their goods, than at any questions with reference to their destination, their route, and the country they have come from. These are matters which travellers would expect to be questioned about. And it would give very little trouble to the registering clerk to record this additional information. The success of the scheme will depend upon the care which is bestowed on the selection of the stations and suitable men for the work. It may be found desirable to locate the former as near as possible to camping grounds, so as to avoid inconveniencing travellers by tedious stoppages. As regards the latter, we doubt if men of sufficient intelligence and discretion are to be obtained for the small salaries proposed by the Conference. It will be a mistake to be over-economical, at the outset. It will be better to have fewer stations, than to stint expenditure by the employment of inferior men. If the scheme is only allowed a fair start, there is every reason to believe that it will prove to be of great practical value.

THE INQUISITION AT OLD GOA.

THE precise point at issue in Germany between the Church and the Civil power, seems to be whether any person by reason of his or her renouncing, or having been excluded from the communion of the Roman Catholic Church shall suffer any forfeiture of civil rights, or of property, at the hands of the State. Rome excommunicates a professor in one of the Colleges, and forthwith commands the State to forfeit his appointment, and remove him from his chair. Shall the State obey her or not? The Professors pour contempt upon the Vatican decree of infallibility, because of its historic falsehood, and Rome replies by excommunicating them, and ordering the State to remove them from their appointments. Should the State obey the command, or treat it as an intrusion of the Church upon the domain of civil rights? It was a question of this precise order, we believe, that produced the present rupture. In India, we absolutely refuse to enforce by law any forfeiture of rights or property on the ground of a man's excommunication by his caste-fellows.

Every one should understand distinctly what is the great ground of opposition to the Roman Catholic Church in educated Europe. The day has all but gone by when the doctrinal decrees of the Council of Trent move Protestant resentment very much. Indeed multitudes of Protestants are willing to admit, and do so, that the purely doctrinal differences between the two Churches (as distinguished from the errors of popular Romanism, *e.g.*, what we call Mariolatry) have ceased to be of the importance they once were; and that it is doubtful whether the dogma of Transubstantiation, for instance, is of an order that should in these days prevent communion between the two Churches. In the 16th century, Transubstantiation meant an impious traffic in masses, and it was then right for men to go to the stake rather than go to mass. For ourselves, we confess that while we regard the doctrine as an untrue "development" of the primitive faith, we think a man may be an equally good Christian whether he believes in Transubstantiation with the Romanists, Consubstantiation with the Lutherans, the Real Presence with the Anglicans, or simple Commemoration with the Swiss. The world has outgrown the dispute. What has still, however, to be protested against in Rome is the secular, the political, claims which it asserts against the Civil power. This is the real quarrel in Germany at this moment. It is simply ridiculous to talk of poor old King William, or his great Chancellor "persecuting," or wanting to persecute, Roman Catholics for their religion. Let us try to illustrate exactly what we mean. This then is the year 1875. Just one hundred years ago, 1775, the Inquisition at Goa was suppressed by Royal Edict after its annual *auto da fe* in that year. But the Roman Church would not submit to the "sweet reasonableness" of the edict. It was an act against the faith in its eyes, and so the priests got it set up again in 1779. After a bloodless interval of four years, Rome put this terrible engine of cruelty again into working order. It did not give up or abate a jot of its pretensions, but simply held its bloody annual festival privately, within the walls of the Inquisition itself. And the horrible thing was in full working order when Buchanan visited Goa 30 years afterwards: and men and women, we may be reasonably sure, were burnt as heretics in Old Goa within the years of many now living. The institution claimed complete, and was allowed complete, independence of the Governor-General of Goa, and it exercised authority over all India. If it seized a British subject, say a Portuguese resident of Bombay, and hurried him off to one of its two hundred dungeons, there was no power in India that could release him.

Now we ask the gentlemen who conduct the *Indo-European Correspondence*, whether the Civil power did right to acknowledge an *Imperium in imperio* of this order? It is of no use to say that the age has outgrown it. It has: but *Rome* has not outgrown it. It is barely 70 years since this terrible institution was in full working order at Goa, while British regiments were garrisoning the Portuguese forts against the French. We take this extreme instance of Roman pretensions, that it may take hold of the popular mind. Barely 70 years ago, the company of priests at Goa forming this terrible tribunal, claimed authority over every person and over all authorities in the territory; and we are told it is persecution to stamp such pretensions and such institutions out of existence. No: Bismarck is in the main right. The Empire is simply driving the Church into her own proper sphere. And if measures of seeming severity are resorted to, it must not be forgotten that the Church absolutely refuses to

own defeat, refuses to withdraw any of her pretensions whatever. Under the development obtained by her at Rome, the Church has been the enemy of freedom, and the great obstacle to enlightened legislation for centuries past. If Rome will but abandon her pretensions to rule the Civil power and submit to be ruled thereby, as Presbyterians and Wesleyans, and Anglicans, and every other body of Christians do, there will be an end of the so-called persecution. Unfortunately for herself, she is Infallible, and she has to outgrow that delusion, before she can loyally acquiesce in the suppression of all priestly interference with the secular affairs of life. No one objects to her giving as much 'counsel' as she pleases, or preaching till she wears herself out. Only let her frankly disavow all claims to, and all attempts to, assert magisterial powers of any kind over society. Her theory of the Church makes its priests magistrates and rulers; and that is what must be given up totally.

THE PUNJAB COURTS.

THE new judicial scheme for the Punjab, from which such great things were expected, has broken down. It has been found that changes are necessary in the Chief Court Act, and several other Acts, before the new scheme could be brought into force. It has, therefore, been resolved to consolidate all the Acts relating to the Punjab Courts before anything further is done: in other words, the measure has been adjourned *sine die*. Perhaps the absence from the Council of the great local knowledge of Sir Douglas Forsyth has had much to do with the very sensible resolve now come to. No doubt the numerous petitions against the new scheme, and its disapproval by the entire body of the Punjab Commission, one individual perhaps excepted, have also had something to do with the matter. In the meantime there is wailing among the moonsiffs elect, and those who had expected to step into their shoes when vacated, and are now left out in the dark. We trust that when the scheme is again taken in hand it will be possible to remedy some of the evils of which the burden is grievous to the province. We have lately a series of letters purporting to be written by one Sirdar Satbachan Singh, explanatory of the evils generally of English rule. The Sirdar attributed much of the unpopularity of our Government to the evils fostered by our law Courts. While, however, what he stated has much, very much, truth in it, we apprehend he has missed the real blot in our system. It is not that legal processes in our dominions are spun out over lengthy periods, and years pass without a decision being come to. Patience is most certainly one of the virtues of this land: "hope springs eternal in the plaintiff's breast." But delay is not an invention of the English Courts. We could mention a Native State, not far from the capital of the Punjab, where some cases instituted about the Hindoo year 1908, and this is 1932, are still pending. It is not that parties to suits have to cool their heels for days together under the trees in cutcherry compounds. We have seen the same things in places not under our rule. Any one who has travelled through the Puttiala territory, for instance, must have seen the same crowds waiting at the gates of the Nazims' and Naib Nazims' Courts. It is not that injustice is often done. Our Courts in this matter are far better than the indigenous *punchayets* whose tendency to side with the richer man is notorious. It is not that they have a dislike to law—witness the popularity of the Small Cause Courts.

The real evil at the root of our administration is beyond doubt the facility of appeal. Not only does this cause suits to be carried from Court to Court, when there is no doubt of the justice of the first decision, but it leads to the institution every day of numerous false claims. When people see that the Tehsildar, Deputy Commissioner, and Commissioner, all of whom have passed examinations in law, are just as likely to differ on the merits of a case as not, the institution of suits becomes a mere matter of chance, in which the probability of winning is greater on the side that has the longer purse and the sharper vakil. A recent *Saturday Review* gives us the opinion of one who is an authority on this matter: "As to the general danger of encouraging criminal appeals, Sir George Campbell was able to contribute the fruits of his Indian experience. He had seen how easily frivolous appeals were got up by unscrupulous attornies, and he thought that the natural proneness of Scotchmen to appeal had better not be carried too far." *

The present *summum jus* of the Punjab Courts seems to be the *summum bonum* of lawyers only, but the *summa injuria* of the persons most interested, the people generally. But can substantial justice be done without a system of appeals? We think it can, provided the Courts are not compelled to bow so deferentially to legal technicalities. Take the instance of the Small Cause Courts. There is no appeal from the decision of the Judge; but where there has been a miscarriage of justice, a reference can be made to the Chief Court. Legal technicalities are not allowed to prevail at the expense of justice. Execution of decrees, and all the *subordinate processes* are directed by European or Eurasian clerks, in whom the greatest confidence is reposed by suitors: there is no string of grasping native amlahs to interrupt or divert the progress of a suit in any way. And when we hear of a Small Cause Court from which there have been only a dozen references in as many years to the Chief Court, and half of these made by the Judge, and that in not a single instance has the Judge's decision been set aside, surely we may claim to have found the remedy we have been seeking. It is true these Courts decide small causes only, but the greatness or smallness of causes is but relative. "These little things are great to little men." It would be easy to extend their procedure to greater suits. It is the procedure that we think so worthy of imitation.

THE ARTICLES.

THERE is a lull in the clerical world on this subject, but the storm will be raging up again before long. Dr. Pusey when speaking of the 21st Article of Religion, in the preface to his somewhat recent edition of Tract 90, says that the article in declaring "that General Councils may err, and sometimes have "erred, implied at least that some Councils never had erred, "such as those which had established the faith which the [illegible] particulars for the Articles ourselves, but this way of dealing with them is certainly open to the charge of disingenuousness. For the words of the Article do not "imply" what Dr. Pusey says, but assert as plainly as language can, a proposition destructive of such an inference. The Article runs thus:

> XXI. General Councils may not be gathered together without the commandment and will of Princes. And when they be gathered together (for as much as they be an assembly of men, whereof all be not governed with the spirit and word of God) they may err, and sometimes have erred, even in things pertaining unto God. Wherefore things ordained by them as necessary to salvation have neither strength nor authority, unless it may be declared that they be taken out of Holy Scripture.

The Article is levelled against the principle of *Tradition*, with the theological developments that principle has received, and it means that a whole string of propositions springing therefrom are untrue. In particular, the Article is directed against the infallibility of General Councils: and what it really says is that there never has been any Council, of which it could be affirmed that it was "infallible," and so of equal authority with Scripture. Now does this really imply what Dr. Pusey says it does, namely, that "some Councils have never erred"? It is asserted of English Parliaments that they cannot err, and as a matter of fact never have erred; and when you reply such Parliaments not only may err, but *sometimes* "have erred," you are assured that you imply by such language that *some* Parliaments never have erred, and could not err, because they were infallible. What you have really asserted is the *fallibility* of *all* Parliaments, and though it were even true that *some* Parliaments never had erred, the statement in no way "implies" that admission. It is a true instinct, we think, that declares such a mode of interpreting the Articles to be disingenuous. The Article says plainly that no General Council is infallible, and yet men who believe that all such Councils are so, subscribe nevertheless to the Article as true, and then justify their so doing by importing into it an admission which, if it were really there, would still make subscription to the Articles wrong. While the Articles are thus a snare to High

* *Saturday Review* of 1st May, 1875.

Churchmen on the one hand, they are equally so to Broad Church and the Low Church on the other. Three-fourths probably of the clergy of the Church of England regard Calvinistic doctrines with dislike, and yet masses of young men are persuaded to present themselves year after year for ordination, declaring their belief in Predestination and Election (Article XVII) by ingeniously fencing with the meaning of the words. The question of subscription is no doubt a very difficult one, but to torture the Articles to mean what they do not, and then say we believe them to be true, cannot be the right way of dealing with it. Carlyle declares the age sick with Jesuitism, which has so nestled itself in the life of the nation, that men are *but canting when saying their sincerest and best. Sincere—insincere speech: such has* become the most common current coin of the age, in the universities, the pulpit and the press. And the charge is but too true. Whether the Heads of houses acted prematurely in 1841 in their famous Resolution on Tract 90: "That modes of interpre- "tation such as are suggested in the said tract, evade rather "than explain the sense of the Articles," we must hold their judgment to have been true. And "evading" is the special object of hatred to the national character. Dr. Pusey contends justly, however, that the condemnation was altogether one-sided. If such a resolution were to be passed at all, it should have been levelled at *all* evasions of the Article. The evasions of the Arminian, Calvinistic, and Broad parties are just as obnoxious to condemnation as those of the Newman school. But then the former were in a majority of 19 to 2 at the hebdomedal Board, and so without any conscious wrong, they passed a most unjust and partial verdict on the Tract. John Keble had eagerly avowed to them his own hearty approval of it, and so had Pusey, but other counsels prevailed. The "car went on: it mattered not over whom its wheels should pass." Newman was lost to the English Church by this question of subscription to the Articles—a greater loss, as Mr. Gladstone thinks, than that of even Wesley in the last century. That Newman knew well that the doctrine of Transubstantiation was not primitive, is certain from his treatment of the subject only four years before his secession. Thus in Tract 90 itself, he calls it the "shocking doctrine" of Transubstantiation, and shows from antiquity that it was opposed to the primitive faith, quoting in particular S. Cyprian on the point. And yet when in 1845 the Church told him it was not a shocking doctrine at all, but that it had been held by the Apostles, he deliberately sacrificed what he knew to be true (that is, if he knew anything to be true in history) to the assertion of the Church that she was infallible. There is something touching in this abject deference to authority, but what would have been the state of the world to-day if its great men had all been Newmans? We do not think that Transubstantiation is a sufficient ground for dividing communions in the present day, but in the sixteenth century it was part of a system of profitable imposture that could be overthrown only by laying the axe at the root of the belief on which the system rested. With the disappearance of the sale of masses from the Church, the dogma became merely a metaphysical controversy, and remains so to this day, wherever the doctrine of the 'real presence' is held in any shape.

THE DISTRICT OFFICER.

Bengal.

AT a time when the condition of the agricultural classes has become so much a topic of general discussion as at present, and when the attention of Government is being directed to the subject, as evinced by Sir Richard Temple's proposed Bill, it will not be out of place to consider our position with regard to obtaining accurate information as to the real state of the agricultural classes and to see how far our present machinery might be utilized for the purpose to a greater extent than it is at present. The yearly life of the Bengal district officer consists of two periods, during one of which (the cold weather tour) he has whatever opportunities are afforded him of seeing for himself the actual condition of his district with regard to the subject in hand. In the other (which comprises the greater part of the year), his district, as far as his personal knowledge is concerned, is practically a closed book to him, during which any information he may receive is either derived from the reports of his subordinates, which are but second-hand, or from inferences drawn from returns furnished by the Registration or Stamp Department, which, useful though they be in showing the *general* state of the district, fail to afford any information with respect to particular cases. We shall first of all take the cold weather tour, and show how even then, in our opinion, a district or subdivisional officer cannot obtain full and accurate information as to the relations existing amongst the agricultural classes of the district or sub-district under his charge.

The district officer is now moving about; he sees for himself the state of the district as regards crops and cultivation, and all the other physical phenomena of the country. He looks after roads, ferries, and all means of communication, and his tour is undoubtedly one of unmixed good to the district. It is not, however, it may be feared, a sure means of finding out the actual condition of the people. It is true that in the course of conversation with the ryots as he moves along, he hears more than he would at head-quarters, but we question much whether he hears all. The ryot will either keep silence with regard to his grievances, if he has any, or grossly exaggerate them. We refer, of course, to instances of individual hardship, not to cases where ryots are banded together to resist some common enemy, backed up perhaps by the influence and countenance of some powerful rival zemindar. The Collector comes and goes: and beyond moral influence has but little power to help the oppressed ryot, so long as his zemindar keeps without the pale of the Penal Code, which he is sure to do. The zemindar remains, and we may be sure visits the temporary inconvenience he may have suffered, with tenfold interest on the unhappy man who has dared to dispute his will or complain of his oppression. The district officer also, has not sufficient time to appear to the peasantry in his real character. He comes amongst them for a few days only, known previously to them, but as a terror to evil doers, and as the authority who for nine months in the year is unknown save as the source whence summonses and warrants issue; as one before whom the very police tremble. To any one who knows native character, it is clear that it will take more than the few days he remains in camp entirely to eradicate this impression, and show the district officer in his true colours, as one coming amongst them to know them and benefit them as far as he can. Assuming, however, that this belief is absent, and that the ryot approaches the district officer without any feeling of uneasiness or fear, we have then the second of the two conditions we have mentioned as coming into play. He exaggerates the wretchedness of his condition *ad nauseam*. Thus it is well known that this year when the crops in the ground were springing up more luxuriantly than they have done for years, the cultivators in many instances did not hesitate to come up to men on tour with pitiful stories of the failure of their crops, hoping that as Government had supported them in a time of real distress it would continue to assist them for ever. Yet with all this, except in the cases we have mentioned, where they are united or supported by some powerful auxiliary they will not accuse the zemindar directly: they will ask aid from Government, but will not endanger themselves with their zemindars. They will make long stories of their wretched condition, but will not accuse any one of being directly the cause of it. The difficulty of obtaining really accurate information was never so clearly shown as in the early days of the famine. Our present system was then tried to its utter-most, and it was a matter of impossibility to obtain information about grain in the villages and information of the like nature. It was not until the people gradually got rid of the feeling of suspicion they originally entertained, and saw that Government were really anxious to help them, that they began freely to tell their tale of distress and want: this, too, when hunger was staring them in the face, when intelligent officers were constantly moving about impressing on them the fact that Government had come as their helpers; and when every circle of villages had its own officer seeking out infor-

mation—not as in the usual state of things, when one individual has to depend upon his personal knowledge of a large tract of country upon observations gathered during the interval snatched from criminal and other work through a brief Indian cold weather.

Thus even in the most favorable part of the District officer's year, information is hard to obtain, and not trustworthy when obtained; and what are we to say of his knowledge during the rest and greater part of the year, obtained as it is second-hand or deduced from returns and information of a like nature. It cannot surely be of much value in obtaining an accurate knowledge of the relations between the ryots and zemindars —great and valuable as is the knowledge of the actual condition of the country, of the wealth or poverty of the agriculturists as a class that the District officer now has. There are improvements which would give him further insight into the district, which would show him the people more as they individually are, and less as they seem to be from a general point of view. We are of course aware that the objection may be raised to our remarks, that in all investigations in India allowance must be made for exaggerated statements, but officials are fully qualified to make these allowances. We must not forget that where District officers have not the power to help materially in cases of oppression, the oppressed will not come forward readily and imperil their future by making complaints, while Government nevertheless have to look to District officers, and to them alone, for their information. And without accurate and clear information, it is unreasonable to expect that the subject can be grappled with and disposed of satisfactorily. We shall endeavour to show in our next, in what direction the present force at our command might be more advantageously directed with a view to putting before Government the actual state of the agricultural classes.

HIGH 'FALUTIN.'

THERE can be no doubt about it; the Britisher, like the typical [illegible] for want of a licking. And what's more, he lets off steam in far higher-flown language. His phraseology is stupendous, especially in official announcements of a warlike nature, recording how some small boy trod on the tail of his coat and then ran away, when threatened with the terrors of the Police:

> "Nor art nor nature has the force,
> To stop its steady course:
> Nor Alps nor Pyreneans keep it out
> Nor fortified redoubt."

Substitute *Naga Hills* for "Alps" and *stockade* "for Pyreneans" and "redoubt," and we here have a *résumé* of the published account of our latest martial triumph. But four lines of poetry however sublime can hardly do justice to it, and although an antiquated general of some merit, named Cæsar, once managed to summarise the events of a campaign in three words, the exigencies of modern warfare require greater refinement and prolixity of expression, just as an advanced civilization no longer recognizes apothecaries' and grocers' shops, but speaks of our medical halls and Italian warehouses. In fact, high 'falutin' is the order of the day, and the result of the Naga expedition is announced to the public much in the same style as our respectable contemporary the *Pioneer* proclaims the virtues of a potent Aphrodisiac in its advertisement columns. To save our readers the trouble of wading through the despatch, we will give them the cream of it.

Paragraphs 6 to 32 relate the hair-breadth escapes and heroic performances of the invading army. At the very commencement of the campaign, the men were subjected to a severe trial, for they actually had to march fifteen miles instead of the ten anticipated by the gallant commander. After that feat, let Xenophon and his 10,000 vanish from the pages of history! Towards the end of this harassing march, they had to rush violently down a steep hill, but it is satisfactory to learn that they succeeded in setting up a store on the road. It now became necessary to secure the line of communication between the hostile country and the base of operations. This was effected by putting four native officers inside as many stockades, each with from 8 to 30 sepoys under his command. The numbers one has to deal with, it will be noted, are overwhelming. A proclamation against mutilation followed. This caused no dissatisfaction among the troops, with the exception of one irate up-country sepoy who was overheard remarking with excited gestures to a well-looking female camp follower, "*kuchh purwa nahneen—main terá nák kát loonga!*" He was promptly put under arrest. Amid such stirring scenes, the narrafor nevertheless pauses to observe that "the principal crops "grown by the Nagas are rice and *kuchoos*: the latter, a species of "arum, is very extensively cultivated, and forms the staple food of "the Nagas of these hills." Where in the world was Mr.———? He might have picked up some useful wrinkles for the Gammon and Spinach Department. All the same, *kuchoos* don't seem to be a good staple food for fighting on, because it presently appeared that the consumers thereof, "though well stockaded and holding a very strong natural position...did not wish to fight." They continued doggedly masticating their rice and *kuchoos*, till our impetuous troops, no longer to be restrained, bounded across the intervening heights and "came in on their rear most unexpectedly, when they fled in every direction," leaving the remains of their vegetable diet behind them. Craven consumers of rice and *kuchoos!*

A few days later another engagement took place, which may also be briefly described. The Nagas took good aim, and firing well over the heads of their assailants, then ran away with remarkable celerity. The despatch writer remarks in a melancholy tone, "*had they stood their ground* for a very short time, *the flanking parties would have* got in their rear and *caused them very great loss.*" The fact is, your only chance with a Naga is to fetch him in the rear. Strange to say, though the enemy's balls went right over their heads, somewhow or another "several of our men and one European got wounded." This, however, is susceptible of explanation. "The whole ground around was pangied in every direction." So they must have been *pangied.* There's something that sets one's teeth on edge in the bare sound of being *pangied.*

Little or nothing remains to be recorded but the services of our officers. Colonel Nuttall, we learn, considers his thanks are specially due to Colonel Sheriff and Lieutenant-Colonel Corry, because they abstained from disobeying his orders:

> "And thou, Dalhousy, the great god of war,
> Lieutenant-Colonel to the Earl of Mar!"

To Lieutenant Abbott his thanks are due, because he made an excellent trestle bridge, constructed on the reverse principle to that which failed in the case of Brian O'Lyn's well-known causeway; to Lieutenant Ridgeway, because in spite of his anomalous position as staff officer, during this arduous campaign, he never once threw any [illegible] of the operations; to Lieutenant Macgregor, because he did not intercept the supplies and loot the baggage; and, last not least, to Major Tulloch, because that resolute and upright officer did not evacuate Borwasali (a reserve depôt), and carry off the stores, immediately after the disappearance of the troops into the interior. In short, "their services were constant and arduous, and of the greatest importance to the success of the campaign." Such negative services as those noted are, indeed, of the most vital importance, and we may next expect to hear of full private Tommy Atkins being raised from the ranks for abstaining, in the heat of battle, from accidentally driving a bullet *into* the back of some particularly obnoxious subaltern, who too confidingly gets in his way. Forbearance of the sort deserves the highest commendation, detection being under the circumstances almost impossible, and the temptation to succumb to the impulse of the moment must be at times stronger even than that which presented itself to Lieutenant Macgregor in the shape of Commissariat rum, or to Major Tulloch in the form of miscellaneous stores. We nearly forgot to mention that Lieutenant Woodthorpe, R.E., surveyed "300 square miles of country on the scale of two miles to the inch," besides building another bridge, and generally doing what he was told; one more feather in the cap of the Grand Trigonometrical Survey Department. In fact, everybody connected directly or indirectly with the expedition, down to the Political Officer's sherishtadar, is plastered over with praise, to an extent that must make the recipient of the flattering unction quite sticky, and it is probably through an oversight that Colonel Nuttall has not scratched the backs of the Deputy Commissioner's dog and the Assistant Commissioner's cat. The only official publication we ever recollect having seen so fulsome as his despatch, was the thanksgiving of the N.-W. P. Government on the occasion of the last Kumbh fair at Hurdwar, in 1867, and we are half inclined to believe that Colonel Nuttall must have prepared himself for his literary labours by carefully studying it.

It is pleasant to flatter our imagination with the fancy that a vein of quiet sarcasm runs through the Commander-in-Chief's comments upon the document: "The *severe trials* endured by the troops from the inclemency of the weather," (there were some showers of rain), "and in overcoming the physical difficulties presented by high precipitous hills and rapid torrents, and the *skilful and spirited*

manner in which the enemy were driven" (they ran away) "*from their formidable defences*, will doubtless meet *with the approval of His Excellency the Governor-General in Council.*" This is really ingenious. The Commander-in-Chief thus preserves a judicious reticence, and refers the worshippers at the temple of Fame to the Viceroy, who, being a plain matter-of-fact man of business, swallows the whole thing at a gulp in the ordinary course of affairs, and disposes of the case by bowing all round. We, however, regret that so excellent an opportunity of authoritatively checking a most pernicious practice has been allowed to pass unheeded. The British officer, it is true, does not yet consider it a work of supererogation to do his duty; but high falutin, and the constant repetition of indiscriminate praise cannot *fail to have a most baneful effect in the long run*; and unless *tall talking* and obsequious encomiums be put down with a high hand once for all, we may, before long, bid good-bye to manly feeling and discipline in our army. The policy of Government should be something loftier than that of the "*après moi, le deluge*" school. We are, notwithstanding, quite prepared to see military honours conferred in recognition of exploits, similar to those of civilians all over the country every cold weather, sometimes, too, in the hot. If not, we shall be agreeably surprised.

EDITORIAL NOTES.

Vanity Fair assures its readers that the difficulty with Burmah is chiefly due to the Viceroy's contempt for the counsels of his military advisers. "He was repeatedly warned by Lord Napier of Magdala not to sell arms to the Burmese, and persisted in disregarding these monitions, for no other reason, as far as can be made out, than to turn a few thousand rupees. The King of Burmah, finding his troops armed with Sniders, while the English force in his vicinity was still equipped with breach-loaders, waxed insolent, and may yet have to be dealt with at a cost of a few millions." We suppose these *canards* are furnished from India. *Vanity Fair* will not care, we fear, to be informed that Burmah has just ground of complaint against us for interfering with its right to import arms. Wisely or unwisely, we agreed by a modification of the treaty to allow the Burmese Court to import arms as freely as it pleased, while it remained on friendly relations with us; and it has a grievance against us for having withdrawn the permission.

***

THE same journal assures us, that if we were to permit the people of India to send representatives to Parliament, "the ex-King of Oudh would certainly own one member, Scindiah and Holkar would also each find one, and the native members would represent not the people of India, but simply the personal interests of a few factious, intriguing, and selfish Rajahs and Nawabs." These gentlemen very much underrate the intelligence of the people about whom they thus write. It would not be difficult to find native gentlemen well fitted to sit in Parliament, but they would have to be *nominated*. The people are not yet ripe for the introduction of *representative* institutions amongst them, and that is all, we think, that can be said against the proposal.

***

THE *Germania* publishes a rejoinder by the Prussian Bishops to Bismarck's answer to their memorial against the 'Disendowment Bill.' The document is signed, we are told, by the whole Episcopate, except the imprisoned prelates of Posen and Paderborn. The official press calls it a "collection of empty phrases," but the phraseology is said to be dignified. The first taunt of the Minister was that the Bishops had regarded a promise to obey laws in Prussia, which in other countries aroused no scruple, as a denial of the Christian faith. The Bishops answer that they never said anything of the kind, but that it was repulsive to the Christian conscience to be compelled to promise unconditional obedience to any laws the State might think fit to make, and that the rule of faith had provided for such cases by commanding that then "we ought to obey God rather than man." The assertion that Catholics in other countries yielded willing assent to laws refused by themselves, they declare to be utterly untrue. The well-informed Dusseldorf correspondent of the *Guardian* traverses their statement, however, in one particular, and points out that at the very beginning of the conflict the Bishops put their foot down on the provision of the May laws, which they declared to be a violation of the rights of the Church, by the nomination of priests being notified to the Civil authority. On that one provision they refused obedience, and were fined and imprisoned, and finally deposed; while it is notorious, according to this writer, that this demand on the part of the State is yielded by the Catholic Episcopate in Austria, Bavaria, and Baden. We believe it to be true that Rome seldom yields an inch to the Civil power on the mere ground that she has yielded the point in question to other Powers. She gives nothing gracefully; every concession has to be forced from her. The Bishops upon the whole, however, are said to have made an effective rejoinder, and to have answered the taunt of the ministerial rescript fairly enough.

***

IT was hoped that the statistics collected in connection with infanticide in the North-Western Provinces would furnish valuable information regarding the rural birth-rate and mortality. The hope has been to a great extent disappointed by a perusal of Mr. Hobart's report on infanticide, for the half-year ending September last. The birth and death rates have been ascertained not for the whole community, as might have been supposed, but for a section of it only, consisting chiefly of children and married couples. The number of children under 12 years of age is also a mere estimate, no great care having been taken to ascertain ages. Mr. Hobart, indeed, acknowledges all this. On one point of extreme importance, however, the statistics seem fairly reliable, and the figures for the two sexes corroborate each other by tolerably close agreement. The point to which we refer is the proportion of infants born who die in the first year of life. This reaches the astonishing figure of 27·2 per cent., such being the mortality of Rajpoot infants; other castes are probably worse off. The rules for suppressing infanticide might be made more subservient to the collection of vital statistics, or if this be impossible some special method of enquiry adopted, for we are absolutely in the dark as yet to the general value of Indian life.

***

IT seems to be forgotten that the Prince of Wales is something of an Oriental traveller already. In 1852 he made a visit to the Holy Land in company with Dean Stanley.

***

The Levant Herald makes the following statement concerning a projected Catholic procession that was to take place in Paris on the 29th of this month for the "civil interment," as it is called, of "the principles of 1789," on the occasion of laying the foundation-stone of the Church of the Sacré Cœur at Montmartre:

> It was the intention to invite delegates from all the Departments to be present. This ceremony was further declared to be intended to represent, in the language of one of the speakers at the General Assembly of the Catholic Societies, 'the civil interment of the principles of 1789.' It appears now, however, that the ceremony is not to take place. Such at least is the announcement made by the *Gazette de Nismes*; and the *Univers*, which reproduces the same intelligence, adds to its regrets on the subject a bitter criticism on the policy of a Government which 'dispossesses Catholics of the right of openly affirming their faith, while it tolerates the procession of revolutionists.'

The *Débats* thinks it a duty to congratulate the Government on its countermanding a demonstration that would have had a very serious character.

***

THE metrical system of weights and measures is now adopted by all Europe except ourselves, the Plenipotentiaries of France, Austria, Germany, Italy, Russia, Spain, Portugal, Turkey, Switzerland, Belgium, Sweden, Denmark, the United States, the Argentine Republic, Peru, and Brazil having just signed the International Convention for the adoption of this system. In spite of our vast overshadowing commerce we also shall have to adopt the system. Indeed, we have already adopted it in principle in India in the new seer which we have made our unit of weight.

***

IN Mr. D. M. Smeaton's report for the last year on Settlement operations in Moradabad, we are presented with a painful picture of the state of official affairs in the district. The village papers were found to be worthless. Dead men were represented as diligently cultivating and paying rent for lands, which even their sons or heirs did not hold. Fields which had twice or thrice changed hands were found entered in the names of tenants who had long since vacated them. Even the record of rents was sometimes bungled—"batai" being found on paper where money rents were paid, and *vice versâ*. The putwarees in many cases did not know what tenants tilled the lands in their villages, far less the precise fields. Regarding the length of occupancy in the holdings they were

generally in the dark, and just as often pretended ignorance, especially when their papers falsely showed short terms, and the zemindar wished the cultivator recorded as a tenant-at-will. "Along "with these difficulties on the very threshold, we had to work with "landlords and tenants who were often at bitter enmity with each "other. The bulk of the rents in this pergunnah had been paid in "grain for generations." The zemindars (principally Hindoos) had contrived to exasperate the cultivators by a persistent course of oppression. The proportion of the crop taken from the tenant had been gradually enhanced on almost numberless of pretexts. Where it was one-half a few years ago, it was now, by the imposition of a lot of petty cesses, two-thirds, although recorded as one-half still. Old grazing rights and customs had been trampled on; the tenant forbidden to touch the grass which grew on the borders of his field; was prosecuted for using the timber he had himself planted thereon; was forbidden to lay hands on any spontaneous products; was prosecuted if he took possession of a tree within his own homestead; was sued for house-rent; was taxed for grazing his plough cattle on the waste—if, indeed, he was permitted the privilege at all. On all sides, the tenantry were harrassed and oppressed. When settlement operations commenced, they determined to free themselves from the misery they had endured for years, and the consequence was a sort of petty agrarian insurrection. The landlords retaliated by putting every recusant cultivator into Court, on whatever pretext. "Our khatiaunis, being truthful, were, as was to be expected, often quite at variance with the current jummabandis. The zemindars leagued together to cancel the attested records of occupancy, and to regain their ascendancy over their tenants by the terror of eviction by decree of Court. Act XIX of 1873 had not been passed, so that the door of the Moonsiff's Court was still open. Suits to eject tenants poured in; and, in by far the majority of cases, the zemindars came off victorious." "It is not for me," writes Mr. Smeaton, "to dwell on the procedure of the subordinate Civil Courts in these suits; but I cannot help saying that it was marked by the most culpable neglect of reliable evidence; by extreme carelessness; by utter want of respect for the results of *bonâ fide* inquiry; and by what an impartial observer might with reason have called resolute landlordism." It was Mr. Crosthwaite's intention to bring the whole history of these proceedings to the notice of the Government. We trust he will be able to carry out the intention.

***

A CORRESPONDENT writes: "The fact is that the Indian Civil Service is an anachronism. It is a mere survival from the days of the Court of Directors. Nothing was more natural than that these gentlemen, while they ruled India, should wish to do so through the instrumentality of their kinsfolk. The natives understood this; and probably considered it quite natural that young men of good birth and breeding, and bearing known and honoured names, should exercise over them the authority wrested from Mahratta reivers and French adventurers. There was no one else to take the posts, and all went smoothly enough. But now, when there is a large supply of competent men, of all creeds, colours, and characteristics in the country, it is difficult to perceive any advantage in sending out from England men whom the Indian Government is bound to employ whether it likes them or not; and whose discontent is becoming a certain appreciable nuisance, and even danger, to the empire." We cannot agree with the writer.

***

ECCLESIASTICAL circles in Vienna are agitated, we are told, by the marriage of a couple of "Old-Catholics," having been officially blessed by the parish *curé*. The fact was cited before the Chamber of Deputies, and the married parties affirmed it in a formal declaration, published in all the journals, adding that the affair took place with the knowledge of the Consistory. The Consistory acknowledged the fact, but said that the *curé* was not sufficiently informed. It is affirmed, however, that the *curé* had demanded instructions of the Consistory, and that he received orders therefrom, not to raise any difficulties in the matter. It is this marriage difficulty that has been the occasion of all the heart-burnings of the last half-century in Germany, between the Civil power and Rome.

***

SIR GEORGE BALFOUR has obtained from the House of Commons a return of the cost of the new Transport service. The fleet consists, as most of our readers are aware, of five steamers, of 4,173 tons each, that were built seven or eight years ago at a cost to the Indian exchequer of about £1,000,000 sterling. They may be interested in the following facts about them:—

	Cost ready for service.	Horse Power.	Speed at full power.
Serapis	... £206,255	700	13·37 knots.
Crocodile	... £205,365	700	14·00 ,,
Euphrates	... £210,126	700	14·71 ,,
Jumna	... £211,253	700	14·65 ,,
Malabar	... £210,201	700	14·57 ,,

The ships have a mean speed of about nine knots an hour, with the exception of the *Euphrates*, which, for some reason not stated, made but an average of six throughout the season of 1872-73. The vessels vary immensely in their consumption of fuel, the figures for the same year standing as follows:—

Serapis ...	... 24,725 knots,	5,790 tons coal.
Crocodile ...	... *26,228* ,,	*4,893* ,,
Euphrates ...	... *24,636* ,,	*5,959* ,,
Jumna ...	... 25,643 ,,	*7,355* ,,
Malabar ...	... 15,736 ,,	4,561 ,,

Thus the *Crocodile* burnt but 4,893 tons of fuel in steaming 26,228 miles, while the *Jumna*, that did 60 miles less, burnt 2,500 tons more. Judging by the returns before us, the *Jumna* and the *Malabar* are the bad bargains of the fleet.

***

The total number of officers, troops, &c., carried to and fro during 1872-73 averaged 1,074 by each voyage, or a total strength out and home of 20,872. The total cost of the fleet to the Indian revenues after deducting the contribution received from the English Government, under the Royal passage warrant as it is called, amounted to £424,883, including insurance and percentage for renewal. At this rate, the cost of transport per head is as follows:—

Commanding Officer ...	£104	4	8	per head.
Non-Commissioned Officer ...	£20	16	5	,,
Troops	£16	0	9	,,

Children are accounted for in these figures, and the cost comes as nearly as possible to £22 per adult head all round. The injustice of casting this heavy charge year after year upon the Indian revenues has been so often commented upon, that we are sick of referring to it. The fleet ought to have been built at the cost of the home revenues, and one-half the annual cost of the service be borne thereby. There is equal meanness and injustice in a wealthy country like our own, treating a poor dependency like India (the dominion of which is of such importance to it) in this pettifogging way.

***

IT seems to be certain that unless further agitation arises in Bombay, the continuation of the Rajpootana State Railway, on which so much has been written and so little determined, will be consigned to the limbo of frustrate activities. From recent information, it would appear that Government is undecided with regard to the extension of the line past the Ajmere terminus; neither will it give the required guarantee to the Bombay and Baroda Company, who otherwise would, it is understood, gladly continue the line from Ahmedabad even to Ajmere. It is now many years that the Government of India have delayed coming to a determination on two vital points; first, whether there should be any extended line through Rajpootana, and secondly, what direction the extension should take; the former query having its answer only in the correct solution of the latter. For if a line through this part of the country, were opposed by very serious physical obstacles, or if there were no probabilities of remunerative traffic, the question of this long-talked of extension might be negatived. But the facts are exactly the reverse. From the terminus of the Rajpootana State line at Ajmere, to the Bombay and Baroda bridge over the Sabarmuttee at Ahmedabad, there is positively no serious engineering difficulty. The country to the west of the Aravelli range of mountains consists, especially throughout Marwar, of stretches of unbounded plain, only interrupted occasionally by the shallow tributaries of the Soonee river, as they pass from their source in the Aravelli hills on the west to the receiving stream on the east. For fifty miles through the petty state of Serohi, the country is more uneven and rocky, but would not require either embankments of magnitude or any tunnelling whatever. On reaching the Baroda territory, and the districts of Goozerat, the surface is flat, although extraordinarily sandy, and with perhaps a larger number of nullahs intersecting the line than at any other part of the course. Except in the near neighbourhood of Ahmedabad, the rains are so moderate that bridges across the nullahs on the route could scarcely be swept away. Every mile north from Ahmedabad in the direction of Marwar lessens the rainfall, until, in the more northerly part of the proposed line, the moderate fall of

fourteen or fifteen inches would probably not be exceeded. All things would seem to conspire to render this part of the country favorable for the construction of a line of rail. And if the districts are considered in regard to population, they also present a promising aspect.

***

WE are tempted to ask whether Father Lafont really believes that the Free Masonry with which we have to deal in this country or in any English community whatever, has for its purpose "to overturn civil and religious order." He does not, of course, believe it, but must be aware that there is as little in common between ordinary Free Masonry and the *Carbonari* and *Illuminati* societies of Italy and Germany, as between his own order and those societies. To charge upon Masonry the aspirations of the political conspirators against law and order begotten of the misrule of Church and State on the Continent—for it is misrule alone that has brought these secret societies into existence—is certainly unfair. The cruel and brutalising oppression of the people under the conjoint despotism of the Catholic Church and the Bourbon princes was the real parent of these secret societies, and not Masonry, as every student of modern history knows well enough. The misrule of the Bourbon princes, to the maintenance of which the Roman Church prostituted its whole influence and power, had resulted towards the close of last century in absolutely brutalizing the people everywhere. The Revolution of 1789 was not the work of Free Masonry, but of institutions that had blasted the people with mildew, and reduced them to immeasurable misery, in the sacred name "of civil and religious order." The very *Carbonari* themselves are powerless in the presence of honest rule. That which makes conspirators dangerous is misrule and oppression. And instead of denouncing these secret societies, guilty as they are, the part of true wisdom is to denounce the institutions that produce them. Why are *Carbonari* unknown to English Masons, but because the people are honestly governed? *Carbonari* will spring up, in the nature of things, wherever there is tyranny or wrong.

***

THE Irish Church is being torn to pieces over the revision of the Prayer-book. The *Guardian* charges Archdeacon Lee, Dr. Pusey, and Dr. Liddon with having "drawn their revolvers" in the struggle in two persons, says our usually quiet and dignified contemporary, are engaged in a struggle, we may encourage or sympathise with one or other of them, because we like him best, or because he is the weakest, or because he is in the right, or for other good or bad reasons. "But if one of them draws a revolver we are forced to "leave these considerations, and to ask immediately, and before "blood is shed, whether the quarrel is one which justifies the use "of deadly weapons. In the struggle now in progress in the Irish "Church, Archdeacon Lee, Dr. Pusey, and Dr. Liddon have drawn "their revolvers."

The Archdeacon, in other words, proposes an open and avowed schism, or the setting up of a new Church in which the old ritual shall be maintained, and of this he speaks as the "old historic Church." The *Guardian* says it would be nothing of the kind, but a new and different Church altogether, although Drs. Pusey and Liddon have given their adherence to the proposal, on the condition that the ministers of the new Church shall "for-"mally repudiate communion with any body which should adopt "this deformed Prayer-book," and specifically with the Archbishop of Dublin if he accepts it. And these proposals Archdeacon Lee characterises as "generous in every sense of the word."

"Those," says our contemporary, "who adopt a course which, if it answers their expectations, can scarcely fail to end in breaking in pieces the great edifice under which they have become what they are, and their predecessors what they have been, may be obeying an inevitable necessity and performing an heroic act—or they may be committing an error which will be held more than a mere error by posterity, and by Him Who is greater than posterity. 'These be the doctors of whom it came that there is no longer a Church of England.' To some persons, perhaps, this would appear a glorious epitaph. Not so to ourselves—nor, we believe, to Dr. Pusey, who, we are convinced, would be the last man to minimise the responsibility for what he is doing—to undervalue the historical claims of the Church of which he is a minister—or to represent himself as merely playing a game of brag, with such stakes on the board."

Where will it all end.

***

THE *Guardian* is full of the subject. One of its correspondents, and a very able one, complains that in the new Prayer-book, in flagrant contradiction to the Sixth Article, the accents of the venerable books called Apocryphal—even the musical and exquisite words of the First Lesson for All Saints' Day—are banished as profanations from Irish Churches. The modern theory of the separability of the Athanasian Creed into creed and setting is definitively accepted, upon authority which reverent minds, by no means enamoured of the language of that Creed must consider inadequate, and by a very haphazard and slap-dash process. The Spaniards, adds the writer, say of a soft but pestilential wind which visits Madrid and its neighbourhood, that it will not blow out a candle, but it will kill a man. It may be said of the whole tone of this Preface, and of the Revised Prayer-book to which it is to be prefixed—Whateleyan and rationalising in essence, though superficially Puritanising—that "it will not put out the spirit of any party roughly and at once, but that it will kill a Church." Certainly: if these changes are to result in schism, as Drs. Pusey and Liddon advise.

***

THERE has been a dropping fire of letters and leaders in most of the principal London papers on matters Indian. The self-satisfied and magniloquent speech delivered by Mr. Grant Duff, was taken in hand by the *Times*, the *Pall Mall*, and the *Daily News*, torn into tatters, and laughed out of existence. The key-note of the speech was an unquestioning belief in whatever emanated from official sources. So long as officialism painted in the political prospect with a liberal use of rose colour, rose coloured it was, and any one who presumed to deny it exhibited his ignorance and presumption. Eminent official men all over the world, had assured Mr. Grant Duff that affairs everywhere were in such and such a state, and, this being so, it was idle to listen to anonymous newspaper writers who presumed to think otherwise. Had not these official personages the very best sources of information? Was it not for their interest, that everything should be in the best and most efficient condition? Such doctrine is of course absurd in the mouth of an English Liberal and a member of the Opposition, whose political *rôle* is to insist that official persons never are in the right, never know what is going on under their own eyes, but live in a fool's paradise, where they mistake the wishes of indolence and interest for objective realities. If true, it would show that the best of all governments after all is a despotism, seeing, that according to Mr. Grant Duff, irresponsible criticism is invariably in error and destitute of value. Mr. Grant Duff's opinions concerning India acquire an importance from the fact that he has been and may again be Under-Secretary of State for India. The verdict of the home press on men and things connected with India becomes continually of more moment to us who have to pass the best part of our lives here. For there can be no doubt that English interest in India is now fully awakened, though unfortunately for us that interest rests at present upon an Egyptian blackness of ignorance, lightened by little else than a sensational flash occasionally from the *Spectator*, and some sledge hammer dogmatism on the part of the *Pall Mall Gazette*. It would have been a calamity had the English Press agreed to accept Mr. Grant Duff as an unquestionable authority on the strength of his having hastily surveyed the country.

***

MR. GRANT DUFF'S remarks on the Boroda business have had the effect of evoking fresh criticism on that event for and against the Government of India. Mr. Romaine, the late Judge Advocate-General of India, has appeared in the columns of the *Times* as the author of a letter, in which he complains that those who find fault with the conduct of the Baroda *imbroglio* are wise after the event. They knew months ago how the Commission was to be constituted and uttered no remonstrance. Even now, though loud and abundant in their condemnations, they had no alternative policy to suggest. To this the *Pall Mall Gazette* replies that the function of criticism is to criticise, and an author might as reasonably demand that his critics should write a better book before they attempted to criticise his, as a Government demand from the organs of public opinion, not merely the expression of a verdict, but the construction of a policy. Moreover, in this business of the Gaekwar, it was impossible to be wise except after the event.

***

A CORRESPONDENT writes to us: The object of the speech delivered lately by Mr. Monier Williams, Professor of Sanscrit at Oxford, is to obtain from the Government of India "the means to found Indian Institutes at Oxford and Cambridge for the training or education of selected candidates for the Civil Service of India." The Haileybury students paid for their education; why are the students

of the present day to be educated gratis at Oxford and Cambridge in Sanscrit, Arabic, and Hindustani, which languages are more easily acquired elsewhere? Professor Williams informs all whom it may concern that "Oxford and Cambridge have rich endowments at the service of the selected candidates." Then why ask the Government of India to contribute "Indian Institutions" to those Universities? We doubt whether Sanscrit and Arabic can be taught by a European Professor as efficiently as they can by a native of India in India. The student may gain a grammatical knowledge of those languages at Oxford or Cambridge, but Sanscrit cannot be learned in two years, nor yet in ten, either in England or in this country. We do not require a Civil Servant to speak a dead language in his kutcherry; we want that he shall be able to speak, read, and write the vernacular fluently, and this ability is more easily attained in India than at the Universities, even though natives filled the professional chairs of Arabic and Sanscrit there.

***

ANOTHER writes: "What would Indian society say were it dealt with as English society is dealt with by some writers in *Vanity Fair*? Yet *Vanity Fair* is eagerly read by the classes satirised, and is known to be written by men who 'know all about it.' We do not consider that the style of literature is commendable: it is a bad sign of the times; but it is a healthy reaction against a miserable spurious style of fashionable journalism which it has cast entirely in the shade. People not in society now distinguish between the real and the sham; and *Vanity Fair* tells boldly what society is. It does not pretend to point a moral; indeed if it shoots folly as it flies, the work is performed in true sportsmanlike spirit—with no enmity to the game. But it is at least genuine and may do good. Take the *World*, too, for strictures upon men and things. It's utterances are more importaut than those of *Vanity Fair*, for it assumes a purpose, and deals with many public facts. It is bold and to the point, but not scandalous nor given to the more objectionable kind of gossip. The *World* is a genuine production, and in so far as it deals with social matters, exercises a healthy influence in discrediting the spurious tribe of loungers and gossippers in the press, who pass—among people in the country—as a part of the great world. The great world is made of more robust material than these feeble fribbles are competent to represent, and the public are beginning to find out the fact. It is curious, by the way, to hear of privilege being discussed in the House of Commons as regards reporters, when somebody is allowed to write in the *World* such things as appear with the heading Under the Clock. They are more free than anything that as yet appeared in the way of Parliamentary commentary, and indicate knowledge of the interior of the House which contrasts forcibly with the effusions of the gossipper who never gets farther than the lobby. If the writer be a member, we may conclude that it is the privilege of a member to be as insulting as he pleases to his brother members; if not, it is wonderful that no notice should be taken of his peculiar style. The fact is, we suspect, that his wickedness is too amusing to be sacrificed—and a great deal of wickedness finds impunity for the same reason. To draw another comparison with India, let us suppose the writer of Under the Clock let loose upon the Council of the Governor-General, or those of the estimable Governors of Bengal, Bombay and Madras."

***

SEVERAL of the London papers still give Lord Northbrook credit for the proclamation as well as the Resolution on the Baroda case. Upon this point the *Times* has a glimmering of light. "It has been observed, it seems in India," says our contemporary, "that the latter document [the Proclamation] is drawn up in the name of the Queen's Government, whereas the former is in the name of the Indian Government; but it would be an additional element of confusion which we cannot anticipate if the Home Government should deliberately proclaim that it takes a different view of the result of the Commission from that taken by the Viceroy." And the writer goes on to say that if the language of the Government has been inconsistent, its acts have been more so. This is in reference to Lord Northbrook's friendly letter to the Gaekwar, quoted by Serjeant Ballantine, and Sir Lewis Pelly's assurance that the Gaekwar was desirous of reforming his administration. "If this were the case," says the *Times*, "and if the truth of the special charge made against the Gaekwar could not be assumed, it would seem he was in exactly the same position as when Lord Northbrook wrote the friendly letter of the 25th of November. If it cannot be assumed that the Gaekwar was proved before the Commission to have been guilty of poisoning, it certainly cannot be assumed that he was proved before them incapable of reforming his mode of Government." Our contemporary has little more to say except that "the proceeding wears a most perplexing aspect," and that if any explanations can be afforded they ought to be made public without delay. Some allowances are made for Lord Northbrook by the *Saturday Review*, which takes it for granted that the Viceroy decided rightly as to the guilt of the Gaekwar, and expresses its opinion that the case was not one for giving the Gaekwar the benefit of the doubt, as there was a delicate political duty to perform for which his Lordship was responsible. But the writer freely calls the Commission and the anomalous character of the proceedings a series of blunders—and here falls into a blunder of his own for which there seems no accounting. The concession of allowing the employment of Counsel, he says, led, no doubt, to what was temporarily a bad result. "It permitted a practiced advocate to weave the webs of a dangerous cross-examination without a judge being present to sweep them away." Again, he says, in enumerating the mistakes, "It was a blunder to allow cross-examination to affect the minds of the Native Commissioners without there being a presiding judge qualified to place to results of cross-examination in their true light." But this is exactly what there was, unless Sir Richard Couch is to count for nothing; he was the appointed President of the Court, and checked the cross-examination as it proceeded with the greatest care and caution. One must suppose that *Saturday Reviewers* write without reading, judging by so important a slip as this. Our contemporary notices, however, that "the Proclamation is to all appearance the work not of Lord Northbrook, but of the Home Government." And he adds, "In fact Lord Northbrook is over-ruled by it. The decision of the Viceroy is ignored." This is the first decided recognition of the fact that we have seen in the English Press; and there is now some hope of the situation being understood.

***

THE scandal arising out of the sale and purchase of "livings" in the English Church is daily attracting more attention, but we to not remember to have seen it before placed in the following light: The income of every living already belongs to the Church, and must, if not purchased, be available for the support of a non-purchasing clergyman. To the latter it would be worth its full value, whilst to the purchaser 400*l.* a year only represents at best 100*l.* a year over and above the interest of the purchase-money, and not that when the sinking of the capital is taken into account. Every one, therefore, who buys such a living secures for himself some 50*l.* or 100*l.* a year *at a cost to one of his clerical and probably poorer brethren of* 400*l. a year.* He, in fact, uses private property which would itself secure him a fair maintenance, to take the hard-earned bread out of the mouth of one of his brethren, who will very probably in consequence live and die in want, and leave his wife and children unprovided for.

***

THE firm of Macmillan appear to have published a remarkable volume under the title of the *Unseen Universe; or, Physical Speculations on a Future State.* The book is anonymous it seems, and is the work of more than one hand. Starting from a purely scientific basis and building everything on the facts of physical science, the authors are declared to have established the following conclusions thereon:—

The evolution of the visible universe out of the invisible by the operation of a triune God, and its dissolution and absorption into the unseen universe in process of time.

The immortality of the human soul and the framework of a spiritual body within the present material and perishable body.

The probability that some at least of the mighty operations of nature are the work of angels.

That miracles are not inconsistent with any of the established facts of physical science.

The authors say that abandoning ourselves without mistrust or hesitation to the guidance of legitimate principles, science, instead of appearing antagonistic to the claims of Christianity, is in reality its most efficient supporter; and that the burden of showing how the early Christians got hold of a constitution of the unseen universe, similar to that which science proclaims, is transferred to the shoulders of the opponents of Christianity.

The Libraries should bring the book out to Calcutta.

***

IN noticing in our last issue, some remarks in the *Indian Statesman* on the subject of a gold currency for India, we said that the fall which had taken place of late years in the value of silver had put the question out of the range of practical statesmanship altogether; and added, "Silver is falling steadily in value intrinsically as a metal, and it is better for industry that it should do so, while

it remains our currency than that it should rise. Our contemporary remarks on this as follows :—

> But if it be a good thing for industry that the intrinsic value of silver should fall so much as to enable a Government to issue at the nominal value of two shillings coins really worth sixpence only, it is a wonder that impecunious Governments do not adopt the plan more extensively. If a Government owed a million sterling, for instance, it could, by buying a large quantity of bar silver, and coining it into something representing four times the intrinsic value of the metal, get rid of the liability at a considerable reduction, *i.e.*—if "industry" (or its creditors) could see the force of the argument.

But when economists speak of "industry" in an association of this kind, they mean labour, not capital: the debtor class and not the creditor. Take the illustration of a cultivating lease, running say, like the State leases of India for 30 years. It is very much better then for the country, that if the value of money changes at all during the currency of these leases, it should decrease and not increase. For if the value of the rupee rises during the lease, the cultivator will find the rental increasingly burdensome; while the landlord or creditor will find his rental virtually increased. A rise in the value of money (silver in India) means a fall in the value of everything else. Under such a change, the cultivator would find that his produce commanded lower prices every year, while his rental remained the same. And so with *all* labour, except that which is remunerated by fixed income. A rise in prices occasioned by a fall in the value of money enriches *pro tanto* all classes except the creditor or capitalist class, and the class depending upon fixed incomes: while a fall in prices on the other hand, improves the position of the capitalist, and that of men with fixed incomes, at the cost of the great class of producers. Is it then better for a country that the money obligations therein should grow in weight, or diminish, as time flows on. Plainly it is better for the *industry* of the country that capital should insensibly lose its power over labour, rather than find its grip tightening and becoming yearly more and more burdensome. The perfect or ideal currency is one the value of which never changes; but as change is inevitable, it is more healthy for a community that its money should fall in value than that it should rise. Silver has fallen in value in the last few years from 62½*d.* per ounce to 55½*d.*, and the fall is of course felt very cruelly by *all* persons in the receipt of fixed incomes. But when we speak of industry, we do not mean this class, but the class of producers. The fall is so heavy that the question is becoming a most serious one, and the Statesmen are well to call attention to it.

THE WEEK.

We have been very near war with Burmah during the past week. The Madras authorities have been warned by the Viceroy of the probability of an appeal to arms, and one European and three native regiments received orders to be in readiness to proceed to Burmah. Later advices from Mandalay are more satisfactory. Sir Douglas Forsyth reports that the King has explained the circumstances under which he received Lee Seh Tahee, and His Majesty has executed an agreement guaranteeing perpetual and entire independence to the Western Karennee country. Sir Douglas remains at the capital till the Government of India receives his despatches, and sends orders thereon. Naturally, all this has given rise to some discussion about the possible annexation of Burmah. The Golden-Footed Monarch has no connection with the Princes and Chiefs of India whose rights we are bound to respect. The measure might, certainly, tend to confirm any impression which may be gaining ground in India as to our annexation tendencies, but this consideration would not be sufficiently important to obtain weight. There need be no scruples upon moral grounds. If the King of Burmah forces us to war and his subjugation ensues, he must be prepared for the usual consequences which follow defeat among Eastern nations. Some strong measures might indeed be necessary to cement the advantage we should have gained; and upon this account—to avoid the responsibility entailed—it is satisfactory to find that the apparently impending hostilities have been rendered unnecessary. But the real questions involved are, 1st, what the annexation of the country would cost us in consequences; and 2nd, whether it would be worth the price, or any price at all? If we annex Burmah—and there seems to be a growing expression of public sentiment in this direction—we shall have the French of Cochin-China pushing on to the southern frontier of Yunan, when both English and French will be face to face, with the Chinese on their south and west borders, without any such buffer between ultra-civilization and utter barbarism as has served our purposes hitherto in the person of the King of Burmah and his compeers. It is not to be doubted that the removal of Burmah as an independent power would before very long necessitate our advance, and probably gain for us a very inconvenient amount of honor and glory. For the question naturally arises—how are our honor and glory to be preserved, and at whose cost? The advantages to commerce might be considerable, but who is to protect that commerce, and the new establishments which it would be necessary to maintain? We have already quite enough to do with what troops we have. It is more than questionable whether our European Army is strong enough for occasions which may arise any day. It is already weakened by extension over an enormous area. For years we have been told that we have more territory in India than we are well able to guard with a due proportion of British troops—we certainly cannot spare any for permanent occupation of new territory in Burmah, and who shall say how far beyond? We cannot draw upon our Indian forces, even if they would suffice for the purpose, and would enter willingly into the service demanded; and if we increased our troops for the purpose, the main difficulties would remain. As for local levies they would be mere incumbrances, and a source of danger rather than aid, even though the people, as it is said they would, made common cause with the invaders. British troops, then, would be necessary, and how is our army to bear the strain? These considerations, however, are of less importance than they might be, as no Government at home, dependent upon popular suffrage, is likely to take the responsibility of such an act as the annexation of Burmah, however just and beneficial it might be. Whatever the Government, it would always have an Opposition sufficiently strong to show the worst side of the policy, to exaggerate the dangers, to underrate the benefits, and to ministerpret the motives of its authors. It is possible even that we should hear of the Golden-Footed Monarch before long in the character of a "Persecuted Prince." Right or wrong, the Government would be opposed, and the opponents would at least have the logical argument on their side, that being mindful of our uncertain military position, our rulers should not attempt to sing new songs until they were quite sure that they had mastered the old.

Sir Douglas Forsyth "had an interview with the King without boots" according to one telegram, while another states that the "Chinese merchants here (Rangoon) have received letters from Yunan which speak of an army of one hundred thousand men being collected there. Stores of grain are being made at Manwyne." All this may be mere rumour, and the Chinese may even have been induced to spread these stories in order to procure for the King of Ava more favourable terms than Sir Douglas Forsyth might otherwise have been inclined to accede to; nevertheless, when we string together the different facts in connection with our relations with China, we must allow that the contingency of hostilities is not a very remote one. China has for some time been very busy improving the defences of her forts and harbours, buying ironclads and torpedoes, and enlisting the services of experienced Danish and other officers—naval and military. The Manwyne outrage was perpetrated by Chinese troops under the orders of a high Chinese official, and when China was called upon for an explanation, she deputed a low class mandarin to investigate the matter, and almost simultaneously despatched, as Imperial Ambassador to the Court of Mandalay, the very man, Lee Seh Tahee, who was responsible for the attack on Colonel Browne's party. This alone would have constituted a *casus belli* with any nation less meekly submissive than Great Britain has recently proved herself to be. The firing into and seizure of a British steamer is another significant item; so that, all things considered, a large force *may* be really assembling at Manwyne to give the British inquirers into the murder case a warm local reception, as well as to afford moral, if not material support to the King of Ava in his trying negotiations with Sir Douglas Forsyth. At any rate, the situation is sufficiently unpleasant to put England on her guard.

A correspondent of a Rangoon paper says the Home Government issued orders that Sir Douglas Forsyth should conform to the old custom, and take off his shoes in the presence of the King of Ava. It is said that both Sir Douglas and Mr. Eden "tried all in their power to get this most degrading piece of etiquette abolished." The Mandalay correspondent of the same journal remarks, that the King appears to have been thoroughly cowed by the warlike demonstrations of the Indian Government, but he adds, that "great activity is displayed just now in all the King's workshops on the part of the Europeans who were lately brought out from France or Italy. Four of them are masters in all that relates to big guns or small arms, and though their help can be of no avail to the King at present, yet Sir Douglas will do well to remember the existence of such men at Mandalay, when

he arranges for peace now *and hereafter* with the Burmese Government." Two more embassies have been determined on. The Woondouk Oochain will go to Washington, and Thandauzin Moung Galay to Italy.

MUCH, of course, depends on the nature of the treaty which Sir Douglas Forsyth has concluded with the King of Ava. If that potentate has simply obtained a reprieve by affixing his sign manual to a document purporting to concede all that has been asked of him, and if Sir Douglas has been satisfied with a mere promise, has omitted to insist on the British Residency at Mandalay being adequately guarded by a detachment of our troops, neglected to provide for the full and free opening of trade routes through His Majesty's dominions, and forgotten to mention that British representatives would not in future be allowed to crouch shoeless in the King's presence—then the arrangement entered into is to be deplored, and we shall have merely given the King more time wherein to utilize the services of the Italian engineers and mechanics, who are rapidly supplying him with home-made arms and ammunition. The telegram from Sir Douglas Forsyth appears to refer to two points only, *i.e.*, the reception of Lee Seh Tahee and the Karennee territorial question. In our opinion, the obstructive trade policy of the King, his opposition to our opening up communications with Western China, and the degraded and unguarded position of our residents at Mandalay, are equally important questions, demanding immediate settlement; and if Sir Douglas's instructions have been confined to the settlement of the matters especially alluded to in the telegram, his errand has been a bootless one. All we hope is that the terms of the treaty and the attitude of our Envoy have not been affected by the reported demonstration on the Chinese frontier. It may be well to observe that the apparently satisfactory conclusion of a treaty at Mandalay does not dispose of the fact that Chinese merchants in Rangoon have received news of the assembly of a large Chinese force at Manwyne. It is true that the rumour may be false as regards the actual state of affairs at Manwyne, but we cannot very clearly see what object the friends of the Chinese merchants could have had in sending them unreliable intelligence, which put them in a fright and induced some to sell off at a loss and evacuate British Burmah. There is a remote possibility of the news [illegible] purpose of procuring a modification of our demands upon the monarch; but it is at least doubtful whether His Majesty has sufficient money at his command to compensate persons engaged in trade, for spoiling the market, and suffering heavy trade losses for his sole benefit. Under any circumstances, the recent behaviour of China in several notable instances has been distinctly hostile and insulting to us; and if Lee Seh Tahee and his friends are collecting a large army at Manwyne, the move is a threatening one as regards ourselves, and it matters little whether the supine Government at Pekin approves of the proceeding or otherwise. Whatever explanation the King of Ava may have given on the subject of Lee Seh Tahee's visit, that worthy Chinaman certainly could not have called upon him in the capacity of a mediator on our behalf. Lee Seh Tahee either was or was not the Imperial accredited Envoy to Mandalay. If he was duly accredited, the King might have felt bound to receive him honorably; but then the fact of the Imperial Government having selected such an Ambassador, would prove that the Chinese Government was preparing to defy us, and had no intention whatever of voluntarily giving us satisfaction for the outrage in which Lee Seh Tahee was directly concerned. If Lee Seh Tahee was not an accredited Envoy, then the King could not possibly give a satisfactory explanation as to the reception of our foe.

THE following is the latest reliable information from Mandalay, with reference to the result of Sir Douglas Forsyth's mission: All affairs have been settled amicably with the King, who has conceded the Karen boundary question and granted a passage, if necessary, for troops to Western China. His explanation that Lee Seh Tahee was the accredited agent of the Emperor of China has been accepted as satisfactory. Sir Douglas Forsyth leaves Mandalay on the 25th. Everything else is now as before.

THE installation of the Gaekwar was performed by the nobles of Baroda in accordance with ancient custom. The principal portion of the ceremony was of a religious nature, and presided over by a Brahmin in a closed temple. His Highness first paid his respects to the "family god," bathed in water brought from the Ganges, the Jumna and the sea, and was then attired in State robes. A *levée* followed, and a few hours afterwards a *khureeta* arrived from the Viceroy; although late in the day, a durbar was held, and the document read by Sir Richard Meade. It ran thus: "My honoured and valued friend,—I have received your Highness's welcome letter of the 27th May, 1875, acquainting me with your adoption by Her Highness Jumnabaee and your installation as Gaekwar of the Baroda State. I offer your Highness my cordial congratulations upon these auspicious events, which I regard with confidence as the inauguration of a time of happiness to yourself and prosperity among your subjects. I have read with pleasure the expression of your Highness's acknowledgment to the British Government, and of your reliance upon the friendly advice which may from time to time be tendered to you in the interests of yourself and the honour of the Indian Empire. Your Highness has requested me to offer to Her Most Gracious Majesty the Queen the most respectful acknowledgment of Her Highness Jumnabaee for the conspicuous favour conferred upon her on this occasion. I have had great pleasure in complying with your Highness's request." The Viceroy concludes the *khureeta* by expressing the high consideration he entertains for the Gaekwar, and subscribes himself his sincere friend. Sir Richard Meade then presented Sir Madava Rao with the Viceroy's presents, consisting of an aigrette, a necklace, a ruby ring, shawls, kincob, and turban cloths. After personally decorating Sir Madava Rao, Sir Richard led him to the Gaekwar, and said the British Government had selected him from the whole of India as the proper Minister for the Baroda State. Being now installed and presented with the Viceroy's *khillut*, Sir Richard Meade hoped all would support and look up to him. The city is peaceful, and the country is gradually settling down into quiet and order.

SHERE ALI is depriving Nowroz Khan and the Momunds of any real power for harm. The fort which is to command Lalpoora is already assuming shape, and there is every probability of Nowroz submitting to his sovereign. The son of this rebel has been offered as a hostage, and is now on his way to Cabul. The Khyber and Tartara trade routes will be opened immediately. The Koorum route will also soon be free from "men of the road," and thus the three principal highways of traffic in Affghanistan will once again be safe. Herat is quiet; all the chief men who befriended Yakoob Khan having been sent as prisoners to the capital. The representative of the Ameer has blown away a number of rebels from guns, and others charged with conspiracy in connection with Abdool Ruhman Khan have been placed in irons. As illustrating the state of affairs elsewhere, we give the following news from a native correspondent: "Two *kaflas*, one from Teheran on its way to Tajkund, and the other from Mushhed to Oorgunge, were plundered by the Ullamanee people of Merv. When the Persian authorities were informed of this, four thousand sowars from different thannas were sent after the freebooters, who were overtaken and some hard fighting took place. A number of men were killed and wounded on both sides, and some Ullamanees were taken prisoners by the Mushhuddee sowars. A portion of the goods belonging to the kaflas was also secured by the sowars, and sent to Mushhed. About thirty thousand Turcomans are said to have been assembled at Merv." It has been ascertained by the officials of the Ameer's durbar, that the Turcooman chiefs at Merv, have asked Shere Ali to assist them with troops from Turkistan and Herat, to enable "them to fight the Russians; but the Ameer has declined to give them any aid, saying that as they were nothing but dacoits, he did not believe in what they said." It is reported at Cabul "by all the merchants from different places, that the Turcomans and the Ullamanees who had fled from the territories conquered by the Russians, have assembled at Merv, and that they have resolved to fight the Russians. They have proclaimed that all Mussulmans are to join them in the religious war in the name of God and Mahomed." The Ameer has decided upon sending four thousand rifles and six thousand troops to Herat, as there are disturbances near the frontier. It is also stated that a number of Russian troops have marched from Tajkund and Oorgunge for Merv. "The Meer of Mamana is said to have sent his Vakeel to the Russian authorities, assuring them that he will not assist the Turcomans in any way."

IN consequence of the disturbances in Burmah, and the likelihood of offensive operations becoming necessary, it has been deemed expedient to guard the Munipore frontier. We understand that a strongly fortified stockade is in course of erection in the vicinity of the Jeeri Ghat tea estate, which is immediately on the boundary line between Cachar and Munipore.

UNDETERRED by the fate of Lieutenant Garnier, his former companion, Dr. Harmand is leading a fresh expedition into the interior of the Indo-Chinese peninsula from its south-eastern corner. It is well known that the Cambodia River, not far above

the French port of Saigon, becomes impassable. Hence such trade as there is from this side of the peninsula makes its way more to the westward, down the Melam to Bangkok in Siam, being much encouraged thereto by the liberal policy of the King, whose fear of the French possibly has made him a devoted ally of our rule and copyist of English traditions, and who is having his sons brought up in England. Dr. Harmand believes that the inquiries made in the former French expedition confirmed the truth of the report that there is a navigable stream flowing out of Chinese territory into the Lake of Cambodia, while again there is good water-way from Saigon. He hopes, therefore, to establish the fact by observation, and is now proceeding with his party, under Government direction, to explore the region about that vast sheet of water, and examine the chief rivers which empty themselves into it, from the northern side especially.

LONDON LETTER.

(From our own Correspondent.)

LONDON, May 28th, 1875.

THE intellectual weakness and, so to speak, the brute strength of the Conservative party have seldom been more strikingly illustrated than in last Monday's debate on Mr. Fawcett's amendment to the Public Works Loan Acts Amendment Bill. The argument was all on one side, the majority of votes on the other. It may be doubted if Mr. Fawcett has ever delivered a more masterly and thoroughly logical speech than on this occasion. The Chancellor of the Exchequer with comical solemnity professed to explain the attitude of Government with reference to local taxation. In their eyes the first consideration must be given to the improvement of the relations between local and imperial taxation. The Liberal Government, indeed, had given precedence to local finance, but it was premature to talk about the machinery until the policy of the question had been first settled. As yet the Government had done little more than adopt Sir Massey Lopes's resolution, but in due time they would be prepared to introduce further amendments in that direction, and in any case he cautioned his party against taking their cue from an adversary. Brushing aside Sir Stafford Northcote's measure and comments, Mr. Fawcett attacked the inconsistency of ministers in postponing legislation on the very matters which, when out of office, they had declared to be of primary urgency. The unjust incidence of local taxation, the confusion of areas, the defective system of local government, were all brought out into bold relief, and ministers were bitterly taunted with their dilatoriness in applying some sort of remedy to evils whose existence they had so often deplored. One after another, Conservative speakers arose to confirm the justice of Mr. Fawcett's charges, though they still looked to their own leaders for the ultimate if gradual removal of the grievances of which they complained. Ministers, said they, had not done as much as they ought to have done, but would the Liberals have done as much? And then they differed from Mr. Fawcett in that they demanded subventions from the imperial treasury to lessen their burdens and transfer a portion to the dwellers in towns. The discussion dragged on for hours, though while Sir George Balfour was addressing the House only two members were present, and of these one went out, and left Sir George with a solitary listener, if listener he were, in addition to the much-enduring Speaker. After a while the House filled again, and in the end a ministerial majority of 249 overwhelmed Mr. Fawcett's 175 adherents, but the announcement of the numbers was received with silence and indifference by both sides of the House. That same evening the Marquis of Hartington obtained from Mr. Disraeli the assurance of the satisfactory nature of the correspondence that had taken place between the Courts of St. James and Berlin. The English Government had made a representation to that of the Emperor of Germany "to correct misconceptions and to insure peace," and to that representation a satisfactory reply had been sent, but which could not conveniently be laid upon the table. This is the communication which fluttered the Continental politicians who had come to regard England as one of the last Pleiades. And the letter was despatched and answered previous to the visit of the Emperor Alexander to Berlin, who further confirmed the prospects of peace for at least another year. The notice taken in Parliament of Count Münster's injudicious speech at the National Club dinner has drawn down upon that diplomatist the displeasure of his sovereign. Mr. Disraeli's rebuke appears to have commended itself to the good sense of the German people, who approve of the quiet and gentlemanly censure conveyed in a few courteous and well selected phrases. The French generally are well pleased at our interference on their behalf, though they would be still more grateful were we to promise them material aid in the event of a third great conflict with Germany. The Belgian Government has extricated itself in a very creditable manner from the false position into which it was being so unjustly driven by Prince Bismarck. It is proposed to bring in a law to make penal, suggestions of assassination such as were ascribed to the tipsy Duchesne, and the late debate in the Belgian Senate exhibited a tone of friendliness which the German Chancellor is not churlish enough to set at nought.

On Tuesday evening Sir Wilfred Lawson went down to the House, primed with a speech better suited to the columns of *Fun* than to the graver meridian of the British Parliament. His object was to oppose the adjournment of the House over the Derby day, and at the same time to excite the hilarity of the members. The gods granted one-half his prayer—the other half became the toy of the wanton winds. The Commons adjourned for a whole day in honour of the Isthmian games, though two hours are enough to mark their veneration for Ascension-day; but in revenge they laughed consumedly at the facetious Baronet's carefully prepared pleasantries and pronounced his monologue as good as a play. Perhaps it was considering what rubbish is now-a-days placed upon the stage; but I cannot think such exhibitions of grinning through a horse collar will tend to raise the Lower House in the estimation of the world. Moral and intellectual deterioration has accompanied its social decadence, and a further debasement may be expected, as the democracy becomes more largely and more directly represented. The *Times*, indeed, glories in the recognition of the Derby day as a parliamentary holiday, because it shows the sympathy between our democratic institutions and the people for whom they are intended. Then, why not adjourn for a hanging? Why not meet in Hyde Park and ask Odger to attack Kenealy, that "almost bigot in support of our old Constitution"? Thus is the learned *ex* Q.C., described by himself in an insolent and impertinent letter against the claimant's "cousin," Mr. Anthony John Wright Biddulph, who is accused of having smoked away whatever little intellect he ever possessed, in his death's-head pipes. Dr. Kenealy himself has discovered how fleeting is the popular favour. At a meeting of his constituents at Stoke, last Friday, he was hooted and jeered at till he lost all self-control, and roared and shouted all sorts of nonsense. He called upon his audience not to deal with any trades-people who took in the newspapers that abused him. He would muzzle the lying dogs and destroy their papers. The people who laughed at him were monkeys and the ugliest he had ever seen. They were villains and blackguards. They were the long-eared donkeys of Stoke. He would bring in a bill to compel every journalist to affix his signature to his articles—*sic ad nauseam*.

Little as I admired Sir Wilfrid Lawson's speech against the adjournment of the House over the Derby day, I confess to entire sympathy with the 81 members who had the moral courage to vote with him. Mr. Hardy's plea that the House must not be overworked was quite out of place on the fourth night after the Whitsun recess. The present session has certainly not been marked by excessive application to legislative duties, for it has been only on rare occasions, and those usually of a semi-personal character, that the House has been really well attended. But the Derby day is fast becoming an intolerable nuisance for quiet, orderly Londoners. The betting has developed into a national disease of a most pernicious order, and for days before the race came off there was no way of escaping from the jargon of book-makers, subscribers to Derby sweeps, and the imitative vulgar who fancied they knew something about horses because they had just learnt the last odds on Galopin or Camballo. The invasion of town by our country cousins is always a bore. At the close of the year the bucolic element is rife in the theatres, restaurants, and music halls, but the West End is less infested than the West Central District. Again, in the early part of May, the Albert and Exeter Halls, the Christy Minstrels, Mr. and Mrs. German Reed's Exhibition, Mme. Tussaud's wax work, and other harmless amusements are much patronised by clerical-looking individuals seeking to disguise themselves in gray garments and black neckties, but redeemed by the fresh, healthy, complexions, and the half amazed, half happy air of their somewhat dowdily if gaily apparelled companions of the so-called gentler sex. There is no compensation, however, of any kind when clubs, opera houses, theatres, and the best streets swarm with horsey provincials with bowed legs. There is no pursuit so levelling as horse-racing. High-bred gentlemen and publicans are on a par, except that the latter affect to be better informed, better provided with "tips." The national character must inevitably suffer if this low-life holiday goes on increasing in

importance as it has done since Lord Palmerston thoughtlessly dignified it with the title of our Isthmian Games.

That Baroda business is the canker worm that will eat into Lord Northbrook's fame as an administrator, and neutralize whatever good he may already have done. It would be a cowardly thing, perhaps, for him to resign at this moment, and his resignation would naturally be construed to mean an acknowledgment of error, and it would be uncharitable to suppose that his Excellency has any misgivings as to the propriety of the course he has adopted. On the other hand, it will be a hard task to "live down" this deplorable blunder, the memory of which will never be more than partially effaced by an uninterrupted series of excellent and irreproachable measures. The Viceroy, too, is unfortunate in his advocates. The advocacy of Mr. Fitzjames Stephen brought out a crushing reply from the *Pall Mall Gazette*, and now Mr. Romaine, the late Judge Advocate-General of India, has provoked the *Times* to add another stinging article to its former condemnatory leaders. Mr. Romaine complains that Lord Northbrook's censors have never suggested a preferable course, and that they reserved their censure until after the evil, if evil there were, had been consummated. The proper time for criticism would have been after the Commission was appoin ted but before it assembled. In conclusion he assumes that a population of some millions will henceforth be "well governed instead of being oppressed by a debauched and degraded tyrant." Now, it is commonly admitted that the driver of fat cattle need not himself be fat, that a connoisseur in arts need not himself be an artist, and that a journalistic critic may detect an error in statesmanship or denounce a pernicious policy, without having held any public office and without being expected to point out an alternative and better course. Besides, until the Commission did meet, who could possibly guess that the Government had no other grounds for the perilous experiment it was about to make than the wretched evidence scraped together by Mr. Soutar's police. There was surely nothing unreasonable in crediting Lord Northbrook and his advisers with sufficient judgment and common sense to save them from such egregious bungling. The real fault committed by the critics was in not allowing a wider margin for the recklessness and incapacity of the Government. As for Mr. Romaine's peroration, nothing has occurred since the friendly letter from the Governor-General to the Gaekwar, dated November 25, 1874, to diminish the "high consideration then entertained for His Highness by his sincere friend." This letter was republished in last Monday's *Times* at the request of Serjeant Ballantine, together with the following extract from the evidence given by Sir Lewis Pelly at the enquiry: "As far as I am aware, his Highness was most desirous of reforming his administration." It is this glaring inconsistency which shakes our belief in the case set up by the Government itself. Then the Resolution and the Proclamation contradict one another, and so far as the outside public can judge, Lord Northbrook appears to move in one groove and Lord Salisbury in quite another, —and in one not even parallel to the Viceroy's. Personally, I have been one of Lord Northbrook's steadfast admirers up to this lamentable mistake, and in my small way have done what I could to give a favourable bias to public opinion at home; but it is impossible to gloss over the injustice that has been done to the Gaekwar, whatever may have been his deficiencies and even delinquencies.

The Civilians of the North-West Provinces will scarcely be better pleased than was Mr. Lowe with the answer he drew from Lord George Hamilton. The Under-Secretary of State for India began by denying that there had been any breach of contract with "certain Indian Civilians," and in the very next breath acknowledged that the complaints of the Civil Servants in the Non-regulation provinces were "borne out by facts, though," he added, "the results of which they complain have been brought about by causes which unavoidably led to them in former years, and which are no longer in operation." The "results" were clearly and irresistibly demonstrated in a long letter from "A Competition-Wallah" published in Monday's *Times*, and which attracted very general attention, the facts of the case being less known in this country than they ought to have been, considering that India is supposed to be governed by a Viceroy and a Secretary of State directly responsible to Parliament. The remedy sanctioned may, or may not, grapple with the wrong that has been done. Or, rather, it may check the continued perpetration of unfair dealing, though it offers no reparation for past unjustice. But a loop hole is still left for favouritism in the "special qualifications," which may justify the preference of an outsider to a Civilian. No doubt, if human nature were free from amiable weaknesses and partialities, this exception would be highly commendable; but a very slight experience of the ways of the world will suffice to show that there is no qualification so special as relationship or other forms of personal interest. It is not, therefore, very surprising that Mr. Lowe should have given notice of his intention to revert to the subject by moving a resolution on going into Committee of Supply.

The *Times* devotes three columns of small print to the reproduction, *in extenso*, of a lecture upon "The Effects of Observation of India upon Modern European Thought," delivered by Sir Henry S. Maine in the senate-house, Cambridge. The compliment was well merited. Sir Henry began by claiming for the Germans a greater interest in Indian questions of a literary and philosophical order than is generally displayed among the most highly educated classes in England. This apparent indifference may be largely due to our greater familiarity with the ordinary and superficial phenomena of Indian society, which necessarily tends to vulgarise details invested with an ideal charm by dreamy and generalising strangers. The new grouping of peoples as the outward and visible sign of recent philological researches, occupies a considerable portion of Sir Henry Maine's lecture, but is treated in a somewhat vague and perfunctory manner—scholiastic phrases being much used to conceal thinness of thought. Neither is there anything original or striking in his remarks on the modern introduction of caste' distinctions and prejudices. And yet there is some novelty in the idea that the British Government, had it so chosen, might, in its early days, have obtained "that deification and worship which have seemed to some so monstrous when they were given to the Roman Emperors." It might have saved some trouble had our predecessors been less squeamish, though, I fear, the natives of Hindoostan would long ago have adopted the usage of more barbarous idolators who flog their gods when deaf to their prayers and importunities. Among the more important lessons we may derive from India is one that regards the vexed question of property. Though in some points closely resembling the Western counterpart, there is no exact correspondence. "There was ownership, but joint ownership by bodies of men was the rule, several ownership by individuals was the exception. There was the rent of land, but it had to be reconciled with the nearly universal prevalence of fixity of tenure and the consequent absence of any marked standard. There was a rate of profit, but it was curiously under the influence of custom. There was competition, but trade was conducted by large bodies of [illegible] did not compete together: it was one large aggregate association which competed with another." Such are the observations made by Anglo-Indian functionaries, whose speculations thereon are not very highly appreciated by Sir Henry Maine. Indeed, he does not appear to have been favorably impressed by the generalizations of his predecessors. Nor is he to be blamed for the ridicule he assigned to Mr. Buckle's hasty assumption that the nations of India are exclusively a rice-eating population, whence "it follows by an inevitable law that caste prevails, that oppression is rife, that rents are high, and that custom and law are stereotyped." Mr. Buckle drew his inference as to the staple article of food from the coast population, and which was consequently as inapplicable to the natives of the interior as would be an estimate of their social, moral, and intellectual character drawn from observation of the anglicized Indians who form the "fringe of British civilization," round the great interior block of native barbarism—using that word in its earlier sense. Among the conclusions at which Sir Henry Maine has arrived is that "property in land, as we understand it—*i.e.*, 'several ownership'— ownership by individuals, or groups not larger than families, is a more modern institution than joint property or co-ownership." Again, competition is also a modern growth, being "the regulated private war of ancient society gradually broken up into indistinguishable atoms." To the principle of progress, whose Greek origin is eloquently attested, Sir Henry looks for the development of as marvellous effects in India as it has produced in other societies of mankind.

OUR LIBRARY TABLE.

Indian Evangelical Review.—The high character of this journal is well maintained. One of the most important essays in the present number relates to the Bhagavad Gita—"the Divine Poem, the poem in honor of the Supreme Being, the glorious, the adorable One." No one has conversed with Hindoos of any intelligence without perceiving the profound reverence in which it is held. It is frequently called the Gita, the Poem, as we designate in Scriptures the Bible, the Book. Quotations from it are often made, and even a sentence or a clause is regarded as so authoritative that it ought to decide the point under discussion. In remote villages and out-of-the-way hamlets there may be seen manuscript copies, strongly though not finely bound, wrapt up in cloth which has been carefully taken

off, as if it covered a most delicate and precious thing. The book thus produced and opened has had almost always the dingy look which indicates its having been much used, and which also, no doubt, tells of the smoky humble dwelling in which it has been kept. Passages from it are chanted, and their meaning interpreted, to the admiration of the surrounding villagers. The book is a special favorite with bankers and traders who are bent on gain and are at the same time desirous to secure religious merit. It is not infrequent for these persons to engage visits from pundits, who explain and enforce its lessons. Some time ago the author of the article asked a merchant, who had been in a mission school and knew English fairly, what his Bible was; and he at once answered, "The Gita." A pundit visited him in his times of leisure, and so explained the Divine book to him that his heart was full of joy, and he knew this to be the true religion. It has been translated from the Sanscrit into the Hindee and Bengalee, and we believe into other vernacular languages. Not only has the Gita been successful *in obtaining a lodgment for itself in the Hindoo mind, but it has received an unusual measure of attention from those* who are outside the Hindoo pale. Several Sanscrit scholars have deemed it worthy of translation and annotation. One translation into English was made in the last century, and another in this. Two translations have appeared in French, one from the English translation, and another from the original Sanscrit. It has also been translated into German, Latin, and Greek. The translation by Mr. J. Cockburn Thomson, published in 1855, is peculiarly valuable to the student of the book, on account of its introduction, its numerous notes, its use of previous translations, and the constant effort shown throughout to grasp the exact idea of the poet.

The time of the composition of the poem is unknown, as well as the name of the author. From various considerations it is evident it belongs to a comparatively recent period. Sanscrit scholars are, we believe, agreed that its style is that of the golden age of Sanscrit literature, the age of its great poets and dramatists, the era of Kalidas and Vikramaditya. It is founded on philosophic views which arose long after the Vedic age, and asserts these views in a way which shows they had taken firm root in the minds of the people. It was written at a period when the worship of Krishna as the Supreme Being had reached its height. Krishna is represented throughout as the One to whom devotion is due. This all-pervading characteristic of the Gita proves beyond doubt its recent origin, as it is certain this worship was utterly foreign to Hindooism in its most ancient forms. No nearer approximation to the date has been made than from 100 B.C. to 300 A.D. The object of the poem is very apparent. It earnestly teaches that persons may keep their place in society, perform the duties of their respective castes, and demean themselves as good members of the community, while striving to obtain the only end worthy of a wise man's striving—liberation from the misery of birth and absorption into the Supreme. The Gita does not indeed condemn *a retirement into the wilderness to give one-self over to a life of contemplation, but it* declares such a course to be unnecessary, and affirms it to be in many cases inexpedient. It would seem that when the Gita was written, the Yoga Philosophy, the Philosophy of devotion, with a view to union with the Supreme, had obtained a power over the community which thoughtful men saw to be hurtful and indeed perilous. It would appear that many had for the purpose of devotion forsaken their families, friends, and business. Thus society was impoverished and weakened by the withdrawal of useful members. The bonds of caste were released, because the religious, to whatever caste they belonged, were supposed to be invested with peculiar sanctity, and all who remained in secular life, even Brahmans of the highest birth, and of the greatest reputation, were cast into the shade.

Freemasonry Exposed.—This is the title of a small quarto publication issued from the *Oriental Figaro* press, and as a specimen of broad fun it is very good indeed; it contains a description of the ceremonies observed at the taking of the degrees necessary for becoming a Master Mason, and, if accurate, is a very startling revelation. We recommend those concerned in the matter to study the work itself.

Asiatic Researches.—Rajendralal Mittra and Mohendronath Bose. These gentlemen have undertaken the praiseworthy work of republishing the celebrated and most valuable transactions of the Asiatic Society of Bengal. The opening number contains the introductory discourse of Sir William Jones on the establishment of the Society and a dissertation on the orthography of Asiatic words. Sir William began his address thus: "When I was at sea last August, on my voyage to this country, which I had long and ardently desired to visit, I found one evening, on inspecting the observations of the day, that India lay before us, and Persia on our left, whilst a breeze from Arabia blew nearly on our stern. A situation so pleasing in itself, and to me so new, could not fail to awaken a train of reflections in a mind which had early been accustomed to contemplate with delight the eventful histories and agreeable fictions of this eastern world. It gave me inexpressible pleasure to find myself in the midst of so noble an amphitheatre, almost encircled by the vast regions of Asia, which has ever been esteemed the nurse of sciences, the inventress of delightful and useful arts, the scene of glorious actions, fertile in the productions of human genius, abounding in natural wonders, and infinitely diversified in the forms of religion and government, in the laws, manners, customs, and languages, as well as in the features and complexions of men. I could not help remarking how important and extensive a field was yet unexplored, and how many solid advantages unimproved."

The Death of Akbar, and other Poems.—H. S. Keene. This is a very readable little book, and contains in addition to the dramatic fragment, which gives a title to the collection, many pieces, several of them considerably above the average of merit usually observable in poetry, which has been produced, as we presume this has been, in the intervals of leisure snatched from sterner pursuits. It would be manifestly unfair to expect in a volume so unpretentious, and put forth with so modest an apology as that contained in "Weeds of the Woodland," anything more than the effusions of a cultivated leisure. And starting from this position, we must say that the meed of praise due to Mr. Keene's production is very high. In "Weeds of the Woodland" there are some verses of exceeding sweetness—verses that have a Tennysonian ring—and as we read them we recall the "Dream of Fair Women" and the "Recollections of the Arabian Nights." Take, for instance, the following:—

"I following as I could,

Saw glades and alleys, and across them drawn
Soft gossamers that wavered in the dawn,
And dewy slopes with wildings prankt, below
The lines of water-courses, to a lawn

Where had been set a garden; none so fair
In Gulistan, or that august repair
In which our Milton saw, with inward eye,
The cedars shining in the golden air

Of the first morning; and the light was pour'd
On wealth of bloom and fruit, and all the sward
Glittered and glowed with hues of flowers that men
Had planted to the glory of their Lord."

Of the "Death of Akbar" we cannot justly speak very favorably. It is too fragmentary, in the first place, for criticism from a dramatic point of view: and for the rest it is principally a compilation of moral and ambitious reflections in blank verse, cut into unequal lengths and put into the mouths of Budaoni, Aquaviva, and a courtier. This, mixed with a little lyrical flippancy and a trifle of bluster from Khushru, seems to make the sum total. It is with pleasure we turn from these to better things, and amongst them we may instance "Lutetia Infelix" and "Le Coq Francais"—pieces which draw their inspiration from the prostration and overthrow of France in the late war. "Menken's Epitaph" is one of the best things in the book. It is a fine attempt to give expression to the bitter meaning lurking beneath the terse—"Thou knowest" which the unhappy Adah Isaacs Menken (herself a poetess) requested might be placed, sole epitaph, above her grave. We regret that our space does not permit us many extracts, and yet, perhaps, it is better that our readers, when they get the book, should read, in their places, such sparkling verses as "Behind the Veil," "The Last Love Song," and others of a like kind. The "Pervert's Apology" is certainly very clever, but we are sorry to see the measure which the genius of Tennyson has glorified, wedded to an impiety worthy only of Swinburne in his coarsest mood. From "The Other Side," [illegible] we extract the following:—

And who said "of a truth our desert and reward
Are at terrible odds;
And far in the hills sleeps our temporal lord
With our negligent gods:
While we starve here, begrimed in the dust of our waterless clods.

"What avails it to pray, with a suppliant hand,
To this comfortless sky,
Or to waste plough and seed on this traitorous sand?
Let us lie down and die;
There is never a god or a man to give ear to our cry!"

So they; but the sound of their sorrow went forth
On the wings of the breeze
Being borne by the lightning to hills of the north,
And, under the seas,
To the Queen at the Isles sitting throned in her splendour and ease.

There is a touch of the "Lotus Eaters" about these lines, but they are still not without a charm which is all their own. In concluding these remarks, we think it would be unfair to Mr. Keene if we neglected to express the pleasure which, taken as a whole, his book has given us. We could have wished, perhaps, to have seen a few more of those short pieces in the lyrical measure which he handles so happily; and should a second edition be called for, we shall look with interest for some additions to that class of versification.

POETRY.

THE PAGODA TREE.

"Shake, George!" and Georgie shook: then early dubbed
A Knight, he ruled, and hated left the scene,
His fame preceding him, while he unsnubbed,
But ever snubbing, hastened to his Queen.

Next to St. Stephens, by the votes of those
Whom George had courted, ere he sailed from Ind,
Carried was he, and made his friends suppose
He could detect where legislators sinned.

His speech was long and talented no doubt;
He knew the story of the Famine well:
Much dreading lest the *Times* should leave aught out—
Next day his speech into *one* sentence fell.

In George's place stands Richard, whose renown
From "Multan avenues" and "Income tax"
Was much increased when Richard scampered down
Hinself to see the famine-stricken blacks.

The banking brothers of a well-known firm
Had less of filthy lucre in their eye,
When sent they N - rthbr - - k here to serve a term,
And earn a Marquisate—at least to try.

But these are minor shakers of the tree:
To the Benighted cometh bigger game,
A noble Duke will shortly land to see,
If, like the others, he can shake the same.

UMBRA.

LETTERS TO THE EDITOR.

WIFE OR CONCUBINE?

To the Editor of the Friend of India.

SIR,—*Apropos* of a very able article in your issue of the 8th of May, which has only just reached me, allow me to say a few words illustrative of the fact that sacerdotal despotism is not confined exclusively to Germany and Ireland.

I, a Protestant, desired very recently to contract a marriage with a young lady of the Roman Catholic religion. It was agreed, in deference to the young lady's wishes, that we should first be married in a Roman Catholic church, and subsequently in a Protestant one. At her request, I took her to a convent in Calcutta to receive the "sacrament of marriage," but after about an hour and-a-half's delay, during which time I had been requested to call again, I saw the "Mother" who asked me if I was prepared to give the necessary promise to the effect that the offspring, if offspring there were, should be brought up in the Roman Catholic faith. To this I emphatically replied that I had a very decided objection, and should make no such promise, as I intended that the children, if children there were, should be brought up in the Protestant faith. I was then asked to see the "Father"; this I at first refused to do, but at the solicitations of the young lady and the "Mother," I at last consented. I must observe, however, that the "Mother" had distinctly said, that although under the circumstances we could not be married in the Roman Catholic church, they would acknowledge the legality of the marriage. I saw the "Father" who informed me that, unless I made the necessary promise, and married the young lady in a Protestant church, I made her commit "a deadly sin." Now, Mr. Editor, to what "deadly sin" did he allude but con- [illegible] the "Mother" in effect had assured me that they acknowledged the legality of such a union *under compression.* Could there be any worse form of intolerent despotism than this?

It is by such acts that the Roman Catholic religion is rendered unprogressive; none but the most bigoted of men will submit to doctrines which have for their object the cure of souls to the sacrifice of all domestic happiness. I need hardly say that I married the young lady notwithstanding these denunciations.

AN ENGLISHMAN.

RAILWAYS *versus* CANALS.

To the Editor of the Friend of India.

SIR,—In your issue of the 5th instant, in a note, you give an account of the traffic by the railways during the famine from a railway *point* of view: suppose you were to take some new objects into consideration, would it not be possible to get into a *line* of view?

"The smallest fleas have little fleas to bite em."
"And so on we progress ad infinitum!"

Very great stress is laid by you on the circumstance that the railways received nearly three-quarters of a million during these ten months, but they were paid for carriage, and *subsidized* to boot, *at the public expense*, and have wholly failed to secure the land and its products from famine hereafter.

In the United States, 122 railway companies have failed to pay any interest on their mortgage debts since January 1874, according to the London *Economist*, and the same authority gives a deplorable description of premature railway enterprize in Peru. In India there is an annual deficit of 1½ millions sterling in the Budget on account of railways; and in no one instance have they secured any enhanced production from the land; yet we are told irrigation is a failure, and the extension of the railway system is the thing we must look to for securing the finances of the country. The circumstance of the Midnapore Canal paying an income of 100 per cent in one year, is nothing to the point; but the deficits by railways will make all right by-and-bye. Is it possible to conceive anything more preposterous? Long ago the late Mr. J. S. Mill in his Political Economy, pointed out that capital could not be reproductively employed in railway enterprize in countries where industry was chiefly agricultural, or in a very backward condition, more particularly with reference to the United States. Their utter failure in *all* countries where they have been attempted under the conditions mentioned by him, clearly demonstrate the correctness of his *point* of view, and in India they have had the further disastrous effect of depriving the land of water, which, as Mr. Mill further truly said, is the only great reproductive agent the land requires in all tropical climates. Will you explain, please, what good is to be got by conveying food to people at railway cost of traffic and depriving them of the means of growing it for themselves in the most secure and reproductive manner possible?

A.B.

NOTICE TO CORRESPONDENT.

BHAGOBATTY BOSE, M.A.—We agree with you in the opinion that the Laureate's verse—

'A land of *settled* Government'

refers to the *band o bast*. We are not sure, however, whether the allusion is to the perpetual settlement, or to what is known as the Oudh settlement.

In the last two lines of the stanza you quote,

'Where freedom slowly broadens down from precedent to precedent.'

The precedents laid down by the High Courts to the Chief Court of the Punjab (not to say the Judicial Commissioner of Oudh), are without doubt referred to. The matter is very plain—there is the reference to *broadness* of views, which, of course, means that each Judge of each Court has his own views, and of the *freedom* with which they agree to differ from one another—and themselves—there can be no question. Law, too, another wise serpent, "drags its *slow* length along."

REVELATIONS OF THE BARODA BLUE BOOK.

THE report of the Commission appointed to inquire into the administration of Baroda reads like a romance, with its stories of seductions, and prison-murders. The Gaekwars have since 1802 held their throne under pledges of protection from our Government on the one hand, and equally distinct pledges to govern justly, and to be guided and controlled by the British Government on the other. It was particularly incumbent on the late Gaekwar to be so guided, while he seems to have adopted throughout the traditional policy of the Durbar, namely to lie, oppress, and corrupt, and then to be abjectly submissive to ward off evil for the moment, and gain time for the resumption of old practices. On a Sunday afternoon, it was announced to Colonel Phayre that His Highness was on his way to the Residency, and preparations were at once made for his reception. "As soon as we were alone in the drawing-room, he drew out of his pocket a copy of a native newspaper, and asked me if I had seen it. I replied that I had not, but asked him what was the matter. He said that there was an article in it, which said that the Government had come to the determination to dethrone him, on account of oppression and tyranny; that on account of [illegible] he had not slept for three days, and was worn out. On saying this, he fell at my feet, put off his cap, and bowing his head to the ground burst into tears, and began to declare that he had no wish to oppose the Government in anything; that he was really its dependent (tabedar), and that he was a lost man if he lost their favour. I raised him, and told him to calm himself; that although it was true the Government was displeased, as I had often told him, at his general obstructiveness and failure to accept its advice, so often tendered through the Resident, yet that no such intention as that of dethroning him existed, and that if he would alter his line of conduct, and listen to reasonable demands, his relations with the British Government would remain on a friendly footing; but that the patience of Government had been sorely tried in many ways. He replied that henceforth his sole desire would be to meet the wishes of Government in every possible way, and entreated that the treaties and engagement with his ancestors might be adhered to." Colonel Phayre said that such was our intention and desire also, but that he must not put his own construction upon the treaties.

On the same evening, the Gaekwar summoned his Durbar and made an excellent and impressive address, calling upon its members to "turn over a new leaf," and avoid the risk of being "turned out of office" by serving their own interests instead of those of the State. Reform followed for a few days, when the open abduction of married women, and the extortion of illegal taxes were once more resumed, reducing the people to a state of complete misery. His Highness was buoyed up with the delusion that his power as an independent prince allowed him to deal with the lives, liberty, honour, and prosperity of his subjects as he pleased. The private Secretary, Damodhur Punt, "managed all matters about women." One of the cases reported to the Resident, related to the daughter of Vishnoo Punt, who was sentenced to ten years' imprisonment in 1865 and banishment on its expiration, for the conspiracy against the life of Maharaja Khunderao, in which Mulharao was implicated. Vishnoo Punt was released soon after the late Gaekwar's accession to the throne, and obtained a post in the Prince's household. This man's daughter was seized and taken to the palace, whence after a few days she was sent back to her husband, and on the latter refusing to have anything to do with her, she poisoned herself through shame and grief. Here is Colonel Phayre's account of another such case: "Hurjeevun Kevul is a large cloth trader in Baroda, and has dealings with His Highness the Gaekwar. His house is close to the palace; and his daughter is said to have been taken by the Gaekwar's servants when walking in the street on her way to the temple. The father, who is a man of influence, went after her directly he heard of it, and by bribing the Maharaja's people got her off before the Maharaja returned from his drive. On his inquiring for her, his people declared that they could not find her. In consequence of this case, none of the higher Bunyahs allow their wives and daughters to walk out in the city,

Here is another: "Luxmun Punt Kothiwalla was a Karkoon of the Government granary, and lives near Bulwuntrao Yeshwunt's house. where he resided with his daughter. She was a widow of 14 or 15 years of age. Her husband was the son of Raojee Dandekur, the Karbharee of the Kiledar Baba Saheb Daheba. One day a Government shigram was sent to her father's house with a message, as from one of the Maharaja's mistresses, inviting the girl to come and visit her. On that occasion, she was not procured, as her father said that she had gone to her father-in-law's house. Her father then sent her to her father-in-law's house, thinking that she would be safer there than with himself, but she is said to have been carried away forcibly by His Highness's servants to his own residence, where she was detained for a day or two and then sent back. The girl's family are described as in great grief owing to their dishonour. This case occurred about two years ago. The father has since died."

Many similar cases are stated in the blue-book. In connection with these matters, we may refer to a proclamation issued by the Gaekwar on the occasion of the last *Hoolee* festival. The document ran that if during the *Hoolee* any woman came out of her house in the city, *rung* would be thrown upon her, and that no complaints would be received by the Government for anything that might happen; that the Maharaja himself would go out, and that the people might throw *rung* on him, as he would on the people. Accordingly, His Highness and his Durbar took *rung* in small pumps on their elephants, with guns loaded with gunpowder and goolal, which were fired upon the people. The revenue Sir Sooba, Hurriba Gaekwar, had the management of these so-called festivities, and the amount expended on the Saturnalia in question, is said to have been two lakhs, the red powder alone costing Rs. 65,000. Previously to the *Hoolee* of March 1872, Mulharao appears to have made great preparations for its celebration by having a large cistern constructed at the rear of the palace, where he placed all the prostitutes of the city to the number of 100 to 150 under surveillance, so that none could leave the place. For several days during the *Hoolee*, these wretched creatures were collected in the courtyard of the palace between 11 A.M. and 5 P.M., when His Highness himself and his Minister and Hurriba Gaekwar amused themselves by setting pumps to work on them, His Highness and his two friends directing the hose themselves. Having been for several days in succession exposed to this treatment, several of the women became very ill, and two of them died.

Although the Commission did not enquire into the "death" of Bhow Sindiah, ex-Dewan of Khunderao, the popular belief is that Bhow Sindiah was poisoned, together with three other dependents of the late Khunderao. On the death of their master, they were *at once* disgraced and thrown into prison and died under very suspicious circumstances, and Mr. Tucker's *minute* shields Colonel Phayre from the charge of exaggerating the evils that came under his investigation. "I deem it only fair, to the Resident to notice this point, as I believe with him that a fuller and less superficial investigation would have brought to light facts which would have irrefragably proved that Colonel Phayre had in no way exaggerated the character of the evils which had come under his observation, and had not been premature in his vigorous denunciation of them. In fact, I am of opinion that considering the opposition which this distinguished soldier and conscientious public servant must have known he would have to encounter, in attempting to put an end to the chronic state of mal-administration which had grown up under the inert and *laissez faire* policy of his predecessors, he deserves the highest praise for the courage, energy, and unswerving determination with which he pursued the important objects which he kept in view; and I trust that he may receive this well-merited commendation from those who can best appreciate the difficulties of the position in which he has been placed."

The bankers and firms who were not in favour with the Prince had no substantial security for their persons or their property. Floggings were administered so cruelly as to have ended in one case in the death of the person flogged; respectable women were seized in the streets by court servants, and converted into household slaves in the palace, where, if sufficiently attractive, they were subjected to dishonourable treatment; cruel reductions were made among the servants of the State, military and civil, arbitrary and unjust, and were carried out in a spirit of hate and vengeance; hereditary offices and rent-freelands were attached and retained in sequestration for long periods without inquiry. The practice of extorting confession obtained to some extent, and the corporal punishment of women; the jails were without proper regulation, and justice was dispensed in a fashion on which no reliance could be placed; fictitious records were fabricated, and true ones falsified; and finally, the whole system of administration was bad and called urgently for reform. Mr. Tucker thinks it was a mistake not to have investigated the case of Bhow Sindiah. "In the interests of the citizens of Baroda and of the inhabitants of the large territory ruled over by the Gaekwar, it was of the most vital importance that it should be determined whether the entrance to a Baroda prison was a portal to the grave. No complete estimate of the extent or character of the misrule which prevailed, nor of the judgment or discretion of the Resident in recommending the adoption of strong measures to terminate such misgovernment, can be formed while this most important and significant allegation remains unverified or unrefuted. The Commission have thought it right to pronounce only a mild condemnation of the established misdeeds of the Maharaja and of his officials; it remains, therefore, to those on whom it devolves to review the Commission's report to direct more particular attention to the wretched condition of the large number of persons who have suffered by such misdeeds, or who are liable to suffer, if the abominations brought to light are not effectually grappled with and put an end to." From his close acquaintance with the real state of affairs, Mr. Tucker expresses his conviction that not only was the position at Baroda much "worse than was represented by the Commission, but that any refusal to recognise and terminate the misgovernment which had endured too long, would bring great discredit on the British Government."

INDIAN INTELLIGENCE.

BENGAL.

We are glad to observe, from the recently published abstract statement of receipts and disbursements of the Uncovenanted Service Family Pension Fund for the third quarter, ending 31st January 1875, that the net balance in favour of the Fund, exclusive of interest upon capital, at the end of the period under review, was Rs. 46,21,081-13-9; which, as compared with the corresponding quarter of the year 1873-74, showed an increase of no less than Rs. 3,26,682-10-3.

The *Indian Mirror* says: Those of our townsmen who lament the untimely death of Miss Seelie, will derive some satisfaction from the arrival in our midst of Miss P. R. Brink, another lady doctor from America, who has been in this country for the last two years. Miss Brink first came to Bombay, lived there for a short time, and then came over to Benares, where she was placed in charge of the dispensary belonging to His Highness the Maharajah of Vizianagram. Miss Brink remained in the sacred city for, we think, about a year-and-half, and had hundreds of female patients, some of them belonging to the higher and richer orders of society. We hope Calcutta will give Miss Brink a warm welcome, and that the Hindoo families of the town will appreciate her services.

There seems to be a difference of opinion among the Judges of the Calcutta Small Cause Court as to whether a servant, who was only paid for the days he attended, could be treated as a monthly servant. The majority hold that he could not be so treated. So that a servant may be absent from his work for a week, and, if his wages are deducted for that period, he can abruptly leave the service. At the same time, it may not be generally known that a master is at liberty to dismiss his servant for continual absence from work, and the servant is not entitled to his wages for the month in which such dismissal takes place. A master is subjected in a great many ways to annoyance by the servant, and has no redress of any kind. If his property is destroyed, he cannot deduct the value of the same from wages, nor can be fine the menial for doing his work badly. A cook may starve his master by spoiling his dinner; there is no remedy for it. Where the dismissal of the servant is legally justifiable, he forfeits his wages; but if the insolence or overbearing conduct which formed the ground of dismissal arose from the fact of his wages being deducted, then such dismissal is not considered by the court to be justifiable. When a master is sued and he informs the Judge that the servant has destroyed property, he is told that this is no defence to an action for wages, and he has his remedy in a separate suit. A master may in vain tell the Judge that he did not dismiss his servant, and that he left of his own accord: the servant has only to say that his mistress dismissed him. Unless the master undertakes to bring a lady into Court, he must submit to a decree. All this no doubt might be obviated by the master getting the servant to enter into a special agreement, which has its advantages as well as its disadvantages.

The Lieutenant-Governor will leave Darjeeling on the 1st proximo *en route* for Cooch Behar, Dhoobree, Gowhatty, Dacca, and Calcutta, at which latter place he will arrive probably about July the 22nd.

Let us add another to the many suggestions that have been made at home and in India as to the pomp and circumstance which should surround our coming Royal visitor. People in both countries have puzzled their brains as to the relative positions of the Prince of Wales and Lord Northbrook during the stay of the former. Which will have the *pas?* The Prince as heir to the throne, or the Viceroy as representative of the Sovereign? If, as is doubtless right, the latter, how shall the superior inherent rank of our future Sovereign be denoted in an unmistakable manner? What is required is some mark of supreme personal distinction patent to all eyes—those alike of the Rajah in the durbar, and the cooly in the street. This could not be better done than by Her Majesty lending her heir a troop of her own body-guard as his personal escort. The Viceroy, and even the Governors of Bombay and Madras have theirs. Let the Prince have his too, instead of borrowing a detachment of the nearest cavalry regiment. The sight of a couple of score of the magnificent warriors of the 1st Life Guards, riding in gorgeous and unfamiliar array on their great black chargers behind the royal carriage would impress the native mind as no distinction manufactured out of native material in the way of *chowries* and umbrellas could do. There would be no difficulty and no great expense in bringing them out—horses and all—in the *Serapis;* and their presence in England would be missed by nobody but the nursery maids of Regent's Park and Belgravia.

NORTHERN INDIA.

Sir William Muir's hobby was centralization, and Sir John Strachey's mission appears to be decentralization. His wish to make subordinate officials something more than mere transmitting machines is certainly a laudable one. We recently deplored the want of continuity in the policy whereby the affairs of India are directed, but really, when we come to think of it seriously, what *could* successive rulers find to do, if they were deprived of the amusement of playing ninepins with each other's measures? Games of the kind, and the kindred process of flying kites of your own and cutting down those of your neighbour, may not seem to spectators either dignified or edifying, and may even prove expensive in the end, but what would

you have? On the principle that "Satan finds mischief still for idle hands to do," it is better that our administrators should amuse themselves and others in these playful ways than that they should have leisure to plan mischief. A spirited horse might object to be ridden in circles and alternately spurred and caressed by a succession of hack-riders, but the quadruped we have to deal with has, by long use, become accustomed to the vagaries of administrative equestrians, and would probably be grievously disappointed if, for a change, it were made to run straight on the highway of true progress.

AFFGHANISTAN seems to have, just at present, peculiar attractions for foreign gentlemen—generally of Russian extraction. With the far-sighted policy for which it has long been celebrated, our Foreign Office has taken good care that no English traveller shall explore Affghanistan; rightly judging that any information it may require should come from St. Petersburg rather than from prejudiced Anglo-Saxons. But as Englishmen are sometimes—though not often—able to pass themselves off as foreigners, the prohibition has been made to include all persons whose colour and nationality might suggest the possibility of their being honest Christians, likely to paint things in their true colours, and not as Foreign Office Mahomedan agents are apt to represent them. The latest frontier arrest is that of a person who calls himself Dr. Potagos, who has been detained at Peshawur till, by convincing the Government of India that he has no intention of exploring for England's benefit, he can obtain leave to go on to Affghanistan. We believe that foreigners generally are perfectly safe in Affghan territory, provided they do not carry money or valuables about them; the Affghans reserving their deadly expressions of friendship for the particular Kaffirs who call them their allies and find them in money and arms. This is the natural outcome of many years of successful diplomacy on the part of our Foreign Office, which is to be congratulated on the "fruits" by which it is known.

A REMARKABLE *exposé* of conjugal amenities took place recently in the Court of the Assistant Commissioner, Lahore. The case is thus reported by the local paper: A European and his wife, the latter a lady of some personal attractions, were summoned at the instance of a neighbour to whose discomfort their domestic differences apparently contributed. These differences, it appeared from the evidence, occasionally resulted in such pleasantries as a playful tap inflicted on the lady's head by her husband with a love-inspired pickle-bottle, which was met with an equally striking requital from her side in the shape of a felling blow with an iron tea-cup. The Magistrate, a slave to conventionalism, took a somewhat more serious view of these conjugal attentions than the parties themselves, and the happy pair were consequently bound over to keep the peace in the sum of Rs. 700 each on their own recognizances, and to furnish one surety each in the sum of Rs. 100, or in default suffer six months' imprisonment.

THE following is the original rough draft of some recent correspondence between the India Office and Indian Government on the wrongs of the N.-W.P. Civilians:—

N- -t- - - - -k to A-g- -l.

1. Wallas wailing again—Dalhousie ignored—no promotion—discontented—hard up.

2. Say that "some grounds exist for believing complaint to be not altogether devoid of a slight substratum of something approaching truth." Talk about "memorial receiving careful consideration," and hint at vigorous steps being taken to remedy, &c., or any other customary fiction. Put into official language "the Government of India have preferred nepotism to obedience to orders, and now admit such to have been the case because it is too late to do anything."

3. Admit that memorialists were brought out under false pretences, and suggest one or two moderately just remedies.

Conclude by showing obvious necessity of rejecting all compensatory schemes as they would cost money.

4. Tell the Duke we are going to put round men into square holes all over the shop—as far as consistent with prior claims—or are willing to try any other equally impracticable suggestion, provided that it cause confusion and disgust without increasing expenditure.

A-g- -l to N- -t- - - - - k.

1. Begging letter to hand.

2. N.-W.P. civilians appear to be situated at the lowest extremity of a deepish hole—keep 'em there.

3. Your proposals are sufficiently futile and inadequate. Don't bother me any more on the subject. Why allude to my having *Dâkhil duftered* the first memorial?

N- -t- - - - -k to A-g- - l.

Native Judge Scheme enthusiastically applauded by all civilians. District work being rapidly increased with a view to early extermination of memorialists.

S-l- -b- -y to N- -t- - - - - k.

Don't be silly. Lowe has blown the plant. Parliamentary inquiry imminent. What do you advise? Couldn't you make some memorialists patwarees or something? For God's sake don't start any original idea. Your last one was rather costly. I will sanction increase of pay up to Rs. 3-8 per annum.

THE piers of all the large bridges on the Punjab Northern State Railway are shielded from the effects of scour and floods by protective works on a very large scale. Around the piers of the Ravee Bridge, 8,57,292 concrete blocks have been placed, and 12,89,200 are sanctioned. In the case of the Chenab, 12,83,744 out of 25,70,000, round the piers of the Jhelum Bridge 5,00,296 have been laid. This ought, even under extraordinary circumstances, to prevent the occurrence of any of these disastrous effects which result from scour. The cost of the section from Lahore to Jhelum has been up to date £1,396,224, or £13,500 per mile, and according to the Government estimates it will probably, by the time it has been completed, have absorbed £2,300,000, or about £23,000 per mile, which compares somewhat unfavorably with the mile cost of the Guaranteed Railways.

LIEUTENANT BERESFORD, of H.M's 83rd Regiment, shot himself on the morning of the 8th instant. He was only 22 years of age, and had been suffering from a long and severe illness.

MR. T. C. HOPE, Collector of Surat, has been appointed to the Legislative Council, and goes to Simla immediately.

MR. CURRIE, Judicial Commissioner of Oudh, goes home on three months' leave. Colonel Reid will officiate.

THE Maharajah of Kashmeer has contributed Rs. 700 to the Murree Fire Relief Fund, besides timber, worth Rs. 1,000.

JOWAHIR SING, a noted outlaw, on whose head a price of 1,000, rupees has lain for some years, was captured by Mr. Hennessy Superintendent of Police, Etawah, and Inspector Arratoon, on the night of the 19th instant. This outlaw had long been a scourge in the Gwalior territory.

THE last few months have introduced a new and novel feature into the landscape near the banks of the Jumna at Agra—a large railway viaduct stretching from bank to bank, a distance of some 2,500 feet, landing under the very walls of the fort, and very much influencing the surrounding scene. For two or three years past engineering operations have been in progress here, the greater part of the time directed to the tedious and unattractive works of sinking wells for foundations. At the commencement of the present working season, the river bed at the site of the bridge crossing presented to an ordinary observer much the same appearance as it had worn any time during the last two years, but appearances in this case were deceptive. The subterranean labours were fast drawing to a close; satisfactory foundations had been secured for most of the piers, and with the materials for the masonry piers ready to hand, and the iron work of the girders arrived from England, it was hoped the bridge might be completed by the rains of 1875, which has happily been brought about. The structure now receiving its finishing touches is destined to connect the Rajpootana and Scindia State Railway systems, with the East Indian terminus on the opposite side of the river, and consists of 17 spans of 142 feet girders, carried by masonry piers upon brick wells, with a cart-road on the top, at about 50 feet above low water level, and a double line of railway for both broad and narrow gauges below.

A DISASTROUS fire occurred at Simla on the 23rd, the block of shops near the Church being entirely destroyed. The damage is estimated at a lakh of rupees.

THE Maharajah of Kashmeer will spend a portion of next winter in Calcutta. He has ordered two state carriages to be built in anticipation of the Prince of Wales' visit.

THIS is certainly the season for fires. Another conflagration on a small scale is reported from Pesbawur, as well as from Ballah, a village in the Kurnal district. The former fire does not appear to have been of a very serious character; but at Ballah, where the conflagration arose from a stack of cow-dung cakes taking fire, no fewer than five deaths took place, and three more men were severely burnt, while about forty houses and thatched dwellings were destroyed, and some twenty head of cattle burnt to death and about half-a-dozen more injured.

BOMBAY.

A NATIVE Christian missionary was travelling lately in the Deccan with his family. He left Tullegaum on Saturday and halted for the Sunday at a village called Pent, under a tree. A female servant went to a well in the neighbourhood, and got a Maratha cartman to give her a pot of water. A report was made to the Patel that "a Mahar woman had polluted the well" by drawing from it, which was not true. The Patel at once ordered the woman to appear before him, and as soon as she came he seized a whip and beat her so unmercifully that she was not able to lie upon her back for days afterwards, and could scarcely sit up. The missionary brought the cartman to prove that the woman had not taken the water from the well, but the Patel would not believe either of them; and ended by fining the woman Rs. 2.

SIR MADHAVA RAO'S annual allowance will be Rs. 72,000, besides Rs. 63,000 as salary, and elephant, horse, and carriage allowance.

THE Baroda astrologers having fixed the day and hour at which the ceremony of installation should begin, Syajee Rao bathed in a mixture of "water from all the oceans" and "from all the sacred rivers," which was consecrated by the chaunting of hymns from the Atharvaveda, the Sama Veda, and other sacred works. Young Sayajee Rao then addressed a prayer to his tutelary god and made libations; after which verses in his praise were recited by the officiating priests. The following oath was then taken: "If I, the king, do ever harm thee, the priest, thou mayest deprive me of all pious acts which I have done from the time of my birth up to that of my death, of heaven and whatever else good has been accomplished by me, of long life and offspring." Four kinds of fruit and four kinds of grain were then brought in and placed in a ladle, when curds, honey, clarified butter, and water proceeding from rain during sunshine, and which has never touched the earth were added to the mixture, and the ladle was placed on the ground. These are all symbolical of increased enjoyment, righteous government, and independent rule. The relatives of the king then proclaimed his high qualities, and the priests again chaunted some Rig Veda verses. The Gaekwar's head was covered with an Udumbara branch, the leaves of which had been wetted, and also with a gold Pavitra; and he was clothed in the robes of State. The priest sprinkled him with the consecrated liquid, while reciting the following three Rig Veda verses: "These waters are most propitious, they have healing power to free from poverty and other diseases. They are the augmenters of kingly power and therefore its supporters. They are immortal. With which Prajapati sprinkled Indra, the king of Soma and Manu,

with these I sprinkle thee, that thou becomest king of kings in this world. The queen, thy mother, bore thee to be great amongst the great, and a righteous ruler over men; an auspicious mother bore thee." The following Tajur Veda verse was also recited: "The divine Savitri has given his consent, therefore I pour this liquid over thee with the arms of the Aswins, not with my own; with the hands of Prisban, with the beauty of Agni; with the radiance of Simya; with the sharpness of the eyes of Indra, for the sake of strength, prosperity, glory and increase of food." The officiating priest also uttered the three sacred words as follows: The priest wishing that the king might enjoy good health (literally may eat food) uttered the sacred word *Bhur* (earth!); wishing that the king might enjoy good health and live to see a son and a grandson, he uttered the sacred words *Bhur! Bhuvas* (earth! intermediate region between earth and sun!); and in wishing him to enjoy good health and live to see three generations, and to remain unrivalled, he uttered the sacred words, *Bhur! Bhuvas! Swar!* (earth! intermediate region! heaven!) *The ceremony having been completed, the king made a present to the inaugurating priest, who then handed to His Highness a goblet of spirituous liquor, reciting the verse, "Soma, with thy* most sweet exhilarating drops purify this, for thou wast poured out for Indra to drink." The king drank after he had said, "what is left in this goblet of the tasteful liquid, and what Indra drank when consecrated by various rites, that portion of it I consume now with a placid mind, as if it were the royal Soma. To thee, supreme Indra, I offer this liquid for drink, for it has been poured out on thy behalf, rejoice in it until thou art happy."

On the Sindh Railway fifteen out of eighteen miscellaneous railway accidents were caused last year, by the bursting of engine tubes, resulting, it is said, from "*fair wear and tear.*" The italics are ours. A boiler also burst on the same line, and apart from the "fair wear and tear," it is supposed that the bad water of Sindh has something to do with the matter. The Government naïvely remarks on this head, that "it is a question for consideration, whether some system of examination may not reduce the number of accidents from this cause." Meanwhile, pending the result of the *consideration*, we would recommend railway travellers in Sindh to keep at a distance from "fair wear and tear" boilers, as by neglecting the precaution, they might possibly have good reason to complain of the badness of Sindh water, especially when converted into steam and mingled with boiler fragments.

MADRAS.

Of late, unfortunately, the strength of the elephant department in Ceylon has dwindled down to the half of its full complement, and from every province where works of any importance are going on demands come in for the assistance of elephants, but in vain. *Formerly well-trained* elephants were not difficult to purchase; many were owned by private persons, but still more by the representatives of the Boodhist temples, who let them out for hire when not wanted for religious processions. *Now none of any value can be procured. The native headmen report that elephants are* disappearing, and the wanton massacres of them in those parts of the island where there is sufficient population to capture them by a kraal have rendered it unlikely that the public want can be supplied by this means. No doubt they can be supplied by the employment of elephant catchers, but the cruelties practised on the wretched animals by this process, in which hardly one in three servives the tying-up operations after the elephants are noosed, induce the Government to resort to it as seldom as possible. In former days the number and boldness of elephants rendered their destruction a matter of necessity; now they are fully alive to their danger, and instinctively keep away as a general rule from villages where they know they will be encountered with firearms. Complaints, no doubt, sometimes come in that an outlying crop has been ravaged, in which case the punishment of the invaders is permitted. Rewards are also given for the destruction of rogue elephants, who occupy for a time some particular road, put to flight the post runners, and tear open the bags, which are abandoned to them to divert their attention. The letters scattered about are shown by the runners in attestation of their story. It has, however, been remarked that, though ordinary letters in such cases are recovered, the registered letters have some particular attraction to the animal and are carried off by him into the jungle. In these circumstances it has been found necessary to put a stop to the issue of licences to shoot and capture, except for Government purposes, for some time to come; and it is desirable that sporting adventurers should be apprized that their only chance of being allowed a shot at an elephant in Ceylon is in the case of a notorious rogue, or of a herd indulging in too frequent visits to irrigation works, and consequent destruction of the dams.

Dr. Cornish records that "with regard to the habit and mode of living of the 127 Officers of the Staff Corps dying in the last twelve years, the following particulars have been ascertained: Temperate, 70; intemperate, 29; not known, 28; total, 127. The average age, at the time of death, of the 70 officers of temperate habits was 42·7 years; of the 29 intemperate, 37·4 years; and of the 28 whose habits were unrecorded, 39·7 years; from which we may observe the degree in which intemperate habits in India tend to shorten the average duration of life."

Havildar Jeganaikaloo, 36th Madras infantry, is the crack shot in the native armies of India. This distinction he attained in 1873-74; and he has carried off His Excellency's Gold Medal for this year also. The general results of the shooting, as stated by Lord Napier, were that 3,826 competitors from 42 Bengal regiments scored an average of 24·11; 1,885 from 25 Madras regiments, 23·71; and 980 competitors from 31 Bombay regiments, an average of 18·24. Nearly 7,000 men competed for His Excellency's medal.

It is rumoured in Madras that the new Governor will be assisted in dispensing the hospitalities of Government-house, by his Grace's sister, Lady Anne Gore-Langton, who became a widow last year. This lady, who was born in 1820, and is therefore fifty-five, or three years senior to the duke, is heir presumptive to the Earldom of Temple, under special limitation in the patent of creation of that title, which is one of the many that his Grace holds.

A strange attempt to destroy life has been exposed in Colombo. A basket containing a *cobra* was sent to a person residing at Grand Pass, and he, fancying it contained a present, opened the basket, when the snake glided out and nearly stung him to death.

The new works at the Colombo Breakwater have been put to a severe test lately by the heavy seas which have been washing over them, but the rubble mound has stood the test well. The Engineer is now engaged in filling up what is to form the head of the Breakwater. Considering the short time which has elapsed since work began on the Breakwater proper, the progress made has been remarkable.

It appears that the whole conformation of the Wynaad gold country, its table elevation between the lowlands and the hills, broken by peaked ridges and extending in long spurs into the lowlands, are all signs of that class of hill country, the backbone of whose ridges is usually quartz. This, taken in connection with the actual discovery of gold-bearing quartz in many places, the proximity of timber, and the certainty of a good water supply, in a country where the rainfall is so heavy, seems to afford promise that large and payable gold fields might soon be founded there, which, while they would afford profitable employment to thousands of natives and many Europeans, would also engage advantageously the capital of the wealthy. It would be worth the while of those who are seeking for profitable investments to obtain the assistance of practised quartz reefers in making selections of places favourable for mining operations. It would not, we opine, be difficult to get grants of such selections on easy terms from Government, and companies to work them would have no occasion to go begging for capital. It is of course permature to speak positively with no further details before us: but should such details, when to hand, bear out the promise contained in the information we have already received, we have no hesitation in saying that a gold field of great richness has been discovered, and lies waiting to yield up its wealth to those who shall come forward to work it in a proper manner.

ASIA.

We read of three large forts being built at the mouth of the Swatow river; to be armed with Krupp guns, of which a great number have already been imported into China. Great activity prevails in the arsenal at Canton, where about 300 workmen are employed in manufacturing fire-arms. These are chiefly huge rifles on the Enfield system, about 2½ metres long, each of which requires three men to attend to it. Gun-carriages are also being made for long 15-centimetre coil guns. A correspondent tells us he observed a great want of coal and other naval *matériel*; and on touching at [illegible] he was informed that several desperate encounters had taken place between the Chinese and the natives, and that the former had been so successful in their efforts to subdue the Formosans that a force of about 10,000 Chinese troops had been assembled in the southern part of the island to complete its subjugation. This, however, will probably turn out to be a difficult task, for the Chinese troops are badly organised and equipped. Large masses of troops were also assembled in a camp near the harbour of Amoy. Three thousand of these were regulars, and 7,000 more were scattered about in the vicinity. The camp is behind a granite wall, about two English miles long and twelve feet high, which was fortified during the complications with Japan by a few small forts. These are so badly armed and built that they are incapable of resisting not only rifled artillery, but even wind and weather. The arms consist of smooth-bore muskets, but the soldiers do not know how to use them, evincing a decided preference for the national halberds and spears.

A treaty recently concluded between Russia and Japan cedes to the former Power the southern portion of a large island called Saghalin, the exclusive possession of which may some day prove exceedingly important to the subjects of the Czar. The island occupies a note-worthy position on the map, situate as it is on the northern extremity of the line or belt of islands which form the Japanese group. It extends from north to south from the 55th to the 45th degree, with a breadth of from 20 to 100 miles, having on its northern and eastern side a vast gulf known as the Sea of Okhotsk; on the west the narrow Gulf of Tartary, which separates it by a small interval from the rocky Siberian coast; and to the south the Straits of La Perouse, dividing it from the island of Yesso. The Russians had long ago established themselves in the northern part of the island, where its breadth is greatest, but they were particularly anxious to extend their sway over the whole territory, chiefly for strategical reasons. The island, although possessing no good harbour on its own coast, commands, in a great measure, the mouth of the river Amoor, through which the most valuable products of Eastern Siberia find their way to the ocean highway. The forts erected at Saghalin are also destined to protect the formidable ports which Russia possesses in the Sea of Okhotsk, and which, in time of war, are destined to prove more accessible refuges than those in any other part of her dominions. The newly-acquired territory is also rich in mines and oil, and its only weak point appears to be its deficiency in agricultural products. One of its merits is its accessibility in winter, the narrow Gulf of Tartary being frozen over so firmly as to admit of the passage both of men and provisions, which are transported across it in carts drawn by Siberian dogs.

A letter from Yokohama in the *Börsenzeitung* says, that the Japanese Government is still bent on introducing greater uniformity in the administration of the country, and that it has decided, with this object, to abolish the use of the Chinese character in all official documents. In future, the simple Hira-Gana letters are to be used,

which every Japanese can read. There are no fewer than 705 foreigners in the Government service, and 281 others have obtained appointments from private employers, and the number of the latter continues to increase. This, observes the correspondent, is the best proof that the foreign element is necessary to the Japanese; and such will be the case for some time to come, notwithstanding the efforts which are made to educate the Japanese youth, both at home and abroad, and to train them as teachers. The Government gives particular attention to education; examinations take place at regular periods: prizes are distributed, and during the last two years nearly 1,000,000 dollars have been contributed for educational purposes from private funds. The Imperial Prince Fushimi passed his examination the other day, and is said to have distinguished himself in French and Chinese; he is to enter the army as a sub-lieutenant. The Government also proposes to establish from ten to twenty new harbours for foreign trade, and it is hoped that the whole of the interior of the country will soon be opened to foreigners. 200,000 dollars have been appropriated for the cost of the Japanese department in the exhibition at Philadelphia.

IT is reported that attempts are being again made in the southern parts of China to get up an excitement against foreigners by distributing "massacre fans," and the Consuls have resolved to take prompt action to suppress them.

LITERARY.

A GREAT want has hitherto been felt by literary men in the South of India. They possess a large Tamil-English Dictionary (Winslow's) but, save an imperfect vocabulary, no English-Tamil one. The Madras School-Book and Vernacular Literature Society have now come forward in a handsome manner to supply the want. An advertisement was widely circulated, calling upon candidates who would undertake the work for the Society, in consideration of being paid a good figure per page. There were many competitors, but the choice has fallen on an able Tamil scholar, Mr. Walter Joyes, Head Master of the "Madrissa," or Government school for Mahomedans in Madras. He is to have the assistance of some able Tamil *pundit* in his work. The dictionary is to be after the plan of Mr. C. P. Brown's well-known Telegu Dictionary.

A TRANSLATION of the Chinese life of Boodha has been made by Mr. Samuel Beal. Boodha, like Josephat, was born of royal parents, who employed every device to secure him against even a knowledge of the disease and misery with which he was surrounded in the world. Every form of voluptuous pleasure was provided for him within the walls of the palace. Only the young and beautiful of the two sexes were admitted to be his playfellows. All his whims were eagerly gratified, and no source of earthly joy was withheld from him. But in the midst of these fascinations the youth's good genius, the Devaputra T'so Ping, imparted to him a desire to visit the outer world. No sooner was his wish made known to the King his father, than orders were at once issued that everything which might suggest the existence of old age disease, or death, should be removed from the city. But again the Devaputra T'so Ping interfered, and caused an old man with shrivelled skin, a bald head, and a body bent down with age and infirmity, to appear before the Prince. "What human form is this, so miserable and so shocking to behold?" inquired the Prince of his coachman. "Great Prince! this man is what is called old," replied the servant, who, in answer to further questions, explained that old, age, which is but a prelude to death, is the lot of all who survive youth and middle age. On hearing this the Prince returned to the palace sick at heart, and, though he again entered into the enjoyments provided for him, it was not with the same thoughtlessness as formerly. It is interesting to notice, for example, that Boodha descended from Heaven to be born as a man, and that the avowed purpose of his mission was "to give peace and rest to all flesh; to remove all sorrow and grief from the world," and, again, to—

"deliver the world and men
From the deep sea of misery and grief,"

and to preach the incomparable truth. At the time of his birth a bright light shone through the universe, and the Devas who announced his entrance into the world saluted his mother with the words, "All joy be to you, Queen Maya! Rejoice and be glad! for this child you have borne is holy." The worship also of Simeon in the Temple finds its reflection in the adoration paid by the venerable Asita to the infant Boodha. These similarities are striking, and were we able definitely to fix the date of the original of Mr. Beal's translation as being before the Christian era, they would be of the utmost importance. But this we cannot do, and, in the words of Mr. Beal, "we must wait until dates are finally and certainly fixed" before we can attempt to draw any conclusions from these parallelisms. Christianity has borrowed so much from Boodhism in the matter of outward paraphernalia and legend, that Boodhism can well afford to be indebted to her for a few outlines for the history of Sâkya Muni. One thing, however, is certain, and that is, that if the life of Boodha be a plagiarism on the life of Christ, the Gospel history has suffered in the transfer.

PROFESSOR MONIER WILLIAMS has in the press a work which will shortly be published, and of which numerous copies have been bespoken by several societies interested in Indian topics. The book is intended to be, we understand, an exhaustive *résumé* of Hindoo literature and religious castes and practices, and to be especially useful to those who, on the eve of going out to India for the first time, desire to obtain a clear, though general, view of the wide, field of Hindooism.

THE report that has appeared in some papers, that Lady Hobart is preparing a biographical memoir of the late Lord Hobart is unfounded.

ECCLESIASTICAL.

As was to be foreseen, the Orthodox movement is steadily progressing in Poland, and will very shortly lead to the extinction of the United Greeks. If the intelligence we receive be correct, nearly 250,000 persons in the provinces of Siedlce, Lublin, Suvalki, and Lomsa have already embraced the established faith of the empire. The Uniad remnant left is estimated at only 30,000, and as the priests, who are adverse to the movement are running away to Galicia, the last trace of the sect will soon disappear. The political advantage accruing to the Russian Government from this wholesale conversion of a religious community, half Roman Catholic and half Greek, cannot well be over-rated. Not only are all their subjects of Russian blood brought within the pale of the national Church, but a number of Poles being likewise included in the sweeping change of creed, a way is paved to further an even more comprehensive conquest in the same field.

THE Bombay *Guardian* states that since the Bishop of Bombay reached England, he has taken medical advice, and no hope is held out of his being able to return to India. It is a question, we believe, whether the tumour in his mouth is cancerous, but in any case it is of a very serious nature.

MILITARY ORDERS.

BROWNE, Lieutenant W. H., to be Captain.
BROWNE, Brigadier-General H. R., brought permanently on the Establishment.

ROBINSON, Rev. A., Chaplain *of Mooltan*, leave for sixty-two days.
WARTH, Dr. H. F. S., Collector of Customs, Punjab Mines Division, leave for fifty-five days.

COMMERCE AND FINANCE.

FRIDAY NIGHT.

ANOTHER week has passed without any alteration having been made in the Bank of Bengal rates; the statement published on Thursday morning shows that the Bank is considerably stronger in funds, the cash balances having increased Rs. 35,24,575, but treasury funds have chiefly contributed to this result. This we anticipated last week, and it is probably the policy of Government to keep strong balances in the Bank until the payments on account of the new Loan shall have been completed. Telegrams on Wednesday morning reported a fall of 2 per cent. in the rates of the Bank of Bombay, which it was generally expected would have been followed by lower quotations on this side. On the same day, however, the Bank of Bengal raised the margin on Government paper loans one per cent.

The principal items of difference in the Bank's statement as compared with the last week are the following :—

Treasury balances,	increased	...	Rs.	44,86,540
Deposits	decreased	...	„	13,73,500
Post Bills	„	...	„	4,99,850
Investments	„	...	„	5,91,750
Loan and Credits,	increased	...	„	9,05,521
Bills discount,	decreased	...	„	13,37,054

The fact of rates being maintained at their present high figure is, in the bazar and other quarters, thought to be for purposes of the Bank's investment account. There appears at least to be no other reason evidenced, the public demand having been but very slightly increased. The accounts show that the investment account has been reduced to the extent of nearly six lacs of rupees, during the past week, and it will be interesting to notice whether this is replaced prior to a reduction of charges for accommodation. Money is obtainable in the bazar at 5 to 5½ per cent. The minimum rate at the Bank of Bengal is 7 per cent.

In Government paper the market has been very fluctuating. Four per cents. fell from Rs. 102-8, our last quotation, to Rs. 101-4 on the receipt of warlike news from Burmah, but have since recovered to Rs. 101-14, which is the closing quotation to-day.

Exchange on London closes as follows.

Bank Bills at 6 months' sight	...	1-10 1/16
Do. at 3 months' sight	...	1-9 13/16
Lo. on demand	...	1-9 9/16

Shares are still quiet, speculation is dull simply owing to the heavy charges for accommodation, notwithstanding that there is a good enquiry; and the share list may be said to be healthy all through in regard to quotations. Considerable anxiety exists with regard to the present policy of the Bank which is effectually stopping business. Cheaper money would no doubt immediately revive enterprise.

Several important failures have been reported from London since our last, which have not been without an influence upon this market, although the firms have not been directly connected with Calcutta.

Freights have been dull, but rates remain about the same.

Some important auction sales of Indian Teas were held on the 21st instant; 6,473 packages were sold, and prices show a marked improvement upon former sales. Reports from the Tea districts continue satisfactory.

From Tirhoot and the adjoining Indigo districts accounts are still very good, and from the North-West they are also favourable. Telegrams state that 11,200 chests have been declared for the London sales in July. The out-turn generally is expected to be a large one. Business in Bengal Cotton continues quiet, the demand for Europe having almost ceased. There has been more activity in Jute, chiefly for Continental demand, but the market closes inactive. In Seeds there has been considerable fluctuation, great activity being succeeded by extreme dullness and *vice versâ* for some time past. Unfavorable reports from the Home markets have caused a falling off, and prices have somewhat receded.

The following is a comparison of the trade statistics of India extracted from the report issued by the Department of Agriculture and Commerce for the year ending 31st March 1875 as against the previous year :—

Imports	increased	...	... Rs.	2,37,29,500
Exports	„	...	... „	1,38,36,114
Imports of treasure	„	...	... „	2,03,04,783
Exports „	decreased	...	... „	28,87,620
„ foreign	„	...	... „	2,75,219
Imports duty	increased	...	... „	21,46,548
Export „	decreased	...	... „	6,23,783
Tonnage inwards,	increased	...	... tons	1,49,057
„ outwards	„	...	... „	23,458
No. of vessels inwards, increased, with cargoes...				27
„ „ outwards, decreased			...	364

Derby been known to be addicted to hunting, a diplomatic incident might have arisen from such an assertion in a semi-official organ.

SPAIN.

IT must be a poor case for the King of Spain when only about two-thirds of the gathered Senators of former Parliaments pronounce in his favour. The opinion of the remainder is not recorded, and they may perhaps be supporters, though not demonstrative—if that in a Spaniard be possible. The fact that there is a stir to call the Cortes together implies that the necessity for some change is discovered. Spain, at present, has made no sign under Alphonso of getting relief from any of her burdens. Carlists, brigands, an impoverished army, and a worse exchequer, afflict Spain as much to-day as before young Alphonso was crowned.

A SEVERE combat is announced from Valmaseda, in which the Alphonsists seem to have suffered severely. Brigadier Fontecha reports that at daybreak on May 14th the forces of General Loma attempted to occupy a height lying on his extreme left, called Pena del Caballo, which was defended by four companies of the 2nd battalion of Castile, two of the 2nd battalion of Asturias, and two small steel guns. Being unable to capture the height, General Loma ordered three battalions with six guns to advance against the two hills on the Carlist right, called Campa del Caballo and Biergal, respectively defended by the 5th battalion of Castile and the 1st of Cantabria. Notwithstanding that Loma, reinforced his attacking columns, he was not able to force the Carlist trenches, and towards evening the fire ceased, and the Alphonsists retired to their former positions at Medianas and Menamayor. The fighting was renewed early on the morning of the 15th, when General Loma attempted to storm the Carlist centre, situated on Pena de la Complacera; but though his troops behaved most gallantly, returning to the attack ten or twelve times, his efforts were unavailing, and at four o'clock the Government forces were in full retreat, followed closely by the exultant Carlists. The Alphonsist losses in the two days cannot have been less than 400 in killed, wounded, and prisoners, besides a large amount of arms and munitions of war. In the retreat General Loma left his rations behind. The new Carlist commander-in-chief of Biscay, General Carrasa, was present on May 15th, and took command of the line of Valmaseda. The Carlists are very much elated with the results of the operations of the past few days, and these skirmishes are only considered as the prelude to sterner work within a short time.

A MADRID paper, the *Diario Espanol*, accuses the Carlists of having massacred the wounded Royal soldiers in their hands who were unable to proceed to Cartallotte, where an exchange of prisoners was to take place. The Carlists are also said to have fired upon the train going from Maranda to Haro. A report is circulated by a Spanish newspaper that the Carlists have not murdered helpless agricultural laborers, but have thrown petroleum over a man and allowed him to be burnt alive in his own cottage. This outrage is said to have excited a profound sensation in Madrid, but no official confirmation of the news had been published. The *Official Gazette* of Madrid publishes a letter from General Cabrera to King Alphonso, dated Paris, March 11th, and His Majesty's reply. General Cabrera expresses his warm adhesion to King Alphonso, whom he acknowledges to be desired by the Spanish people, and trusts that he may be able to restore the greatness of the Spanish nation. The King, in his reply, says: Constitutional Monarchy, of which I am the representative, embodies three principles—God, Country, and King. I consider your co-operation important in definitively establishing a Government accepted by the majority of the nation. A foreign Prince, who is ravaging Spain and staining the land with blood, has stripped you of your offices and titles. This was a futile vengeance. I restore them all to you, and am confident that your sword, if needed, would not be the last to respond to my call. You are welcome near a throne which will equally protect all faithful and loyal Spaniards.

THE Spanish Government are, it is said, making efforts to capture the robbers who recently seized and held to ransom Mr. Rouse, the superintendent of the Bella Raquel Works in Spain. The robbers first demanded 10,000*l.*, and then reduced the amount to 1,000*l.*, on sending which sum he was released. Several arrests have already been made. Mr. Rouse has long been in the service of the company. He is much respected, and great sympathy has been shown to him in the neighbourhood, he having suffered much at the hands of his captors.

BELGIUM.

A DEBATE has taken place in the Belgian Senate on the diplomatic documents recently exchanged between Belgium and Germany. A resolution was proposed declaring that the House completely approved of the explanations given by the Government, and passed to the order of the day. This resolution was unanimously adopted. In the course of the debate a Liberal member expressed the opinion that the charges put forth by Germany were not of a serious nature. He regretted, at the same time, the language used by the Belgian Bishops, and protested against the statement that Belgium felt more sympathy for France than Germany.

THERE was some disturbance in Brussels on May 23rd in consequence of a procession from one of the parish churches. The ranks of the procession were broken by the mob, and the police charged with drawn swords. About ten persons were arrested.

THE report that the Belgian Government intended to propose a Bill making it penal to propose to commit murder, whether the proposal be carried into effect or not, is confirmed by the documents laid on the table of the Chambers.

ITALY.

GARIBALDI brought his plans for the improvement of the Tiber before the Chamber on May 26th, when the House unanimously decided that it should be taken into consideration. A telegram from Rome states that the General is highly gratified with the reception that his Bill has met with in Parliament. He returned expressly to Rome in order to introduce the measure. The expenditure proposed is 60,000,000 lire, of which 30,000,000 will be charged to the State.

THE Recruiting Bill has been agreed to in the Senate by 60 votes against 25. Several members spoke for and others against the amendments proposed by the minority of the committee, granting some relief to ecclesiastical recruits. General Ricotti, Minister of War, repeated his declaration that he could not accept this amendment. He again showed that the proposal voted by the Chamber of Deputies, and slightly modified by the majority of the Senate Committee, would in no way interfere with the religious service. Ultimately the House approved all the clauses of the Bill, including clause II, in the form proposed by the majority of the committee. It next voted an order of the day to the effect that "the Senate, having heard the declarations of the Minister of War, and being convinced that Catholic priests, as well as those of other denominations, who are called to arms in time of war will be employed by preference as non-combatants, passes to the vote upon the Bill." The Bill was then agreed to by 60 votes against 25.

MEXICO.

THE state of affairs in Mexico is perhaps not what may be termed "reassuring," but not less so than the state of affairs generally is in that country. The revolution which commenced in Michoacan in consequence of the publication of church reforms and the expulsion of the sisters of charity is, according to a correspondent writing from the city of Mexico on the 30th April, extending and gaining ground in other States. Michoacan was suffering greatly. All business was paralyzed, and the inhabitants were leaving. The village of Jacuba had been pillaged and burned. The Legislature of Michoacan, alarmed at the progress of the revolution, had been convoked in extra session, which commenced on the 23rd April to discuss measures for the extermination of the rebels. The strength of the rebels under Morella was increasing, and was estimated at 2,500 men, divided into numerous factions. The rebels at Queretaro attacked a convoy on the 20th April, and took away a quantity of arms and merchandise. At Arroyo Seco they attacked the diligence, when the passengers fired and killed one bandit. The whole body then opened a terrible fire on the passengers, and made them descend from the diligence. They assassinated Luis A. Chavez, a deputy from Aguascalientes, Miguel Cano, a Spanish merchant, and Luis Fiores. Among the passengers were three ladies and a sister of charity. The news of the affair reached Mexico during the session of Congress, and, to the credit of that body, created "a great sensation." The Minister of War, with much good feeling, expressed the regrets of the President at the outrage, and assured the Chamber that "it was the first that had ever occurred on the road from San Juan del Rio to Queretaro." It is to be hoped that it may be the last.

RUSSIA.

WITH reference to the relations of England and Russia, the Berlin correspondent of the *Cologne Gazette* makes the following statement: "Conversations of Prince Gortschakoff with several persons here are said to have shown that a *rapprochement* between Russia and England had taken place some time ago on important points. This is especially the case with regard to Central Asia, where a conflict of interests is no longer to be apprehended for any appreciable period of time. In the East and the affairs of Turkey the present state of things was guaranteed besides by the understanding among the three Empires which since the last events appears to be more strengthened than ever. It has often been erroneously concluded from the position which Russia took in Khiva, and which seemed to be irreconcilable with the first assurances of Count Schouvaloff at London, that a lasting disagreement between the two Cabinets would be the consequence. The event has not confirmed this supposition. Russia has, it appears, succeeded in convincing England that her procedure in Khiva was unavoidable, owing to the force of circumstances, and contrary to her first intentions. Thus a *rapprochement* between the two Empires, which can only be profitable to the strengthening of peace in general, was established for the future also in this respect. This dates from some time back, but was learned positively on the occasion of the presence of the Russian Chancellor at Berlin. In consequence of the Khiva affair Russia had, so to speak, to pay a moral debt to England, and it is quite in accordance with the personal qualities of the Emperor Alexander, as they have been shown on other occasions, that this debt has been discharged on the general understanding come to since then with respect to the question relating to Central Asia."

AMERICA.

ON May 13th, the evidence was concluded in the Beecher trial, and the case was adjourned for a week. Mr. Beecher's counsel, in their addresses for the defendant, had promised not to occupy more than four or five sittings of the Court. It was supposed that not more than a week would be required by the plaintiff, and that thus the trial might perhaps be concluded at the commencement of June, or even earlier. The following is a summary of the latest proceedings as given by the *New York Tribune*. The Court had just been called to order, and the plaintiff's counsel were on the point of calling Mr. Moulton to the witness-chair, when Mr. Evarts interrupted them, saying that he was expecting some papers in regard to which he might wish to question Mr. Tilton, and that he preferred not to have another witness put upon the stand until they came. Half an hour passed, and the large audience began to grow very impatient, and to wonder what cause there could be for the delay. Suddenly, about twenty-five minutes before twelve o'clock, Mr. Shearman entered the Court-room by the door leading from chambers. Closely following him was a lady who was immediately recognised by many as Mrs. Victoria C.

Woodhull. Expectation had been excited by the understanding that she would be called on for the defendant, and her sudden appearance created one of the most marked sensations that has occurred in the Court-room since the trial began. There was much smothered laughter, and many rose to their feet and fixed their eyes on Mrs. Woodhull. The counsel on both sides turned in their chairs and looked at her. The jurymen smiled and whispered to one another, casting curious glances towards Mrs. Woodhull. Mr. Shearman pushed his way rapidly through the crowded aisles, and Mrs. Woodhull kept close at his heels, appearing to shrink from the universal notice which she had attracted. Mr. Shearman found a seat for her in the rear of the Plymouth delegation. She was plainly attired in a dark purple dress, and wore a thick blue veil thrown back over her bonnet. Mr. Shearman stated that Mrs. Woodhull possessed letters which she declined to produce without receiving instructions from the Court. Judge Neilson declined to give any instructions, and, after considerable discussion, principally between Mr. Fullerton and Mr. Evarts, Mr. Shearman said: 'Mrs. Woodhull, we call upon you for these letters of Mr. Tilton.' Mrs. Woodhull arose and came forward quietly, and stood in the midst of the group of lawyers' chairs. Her face flushed, and she seemed to be embarrassed by the steady staring of the audience. Mr. Evarts and Mr. Shearman conversed with her in low tones for several minutes. Mrs. Woodhull's gestures showed that she was speaking very earnestly, and the result of the conference was awaited amid dead silence in the Court-room. The counsel for the plaintiff appeared to regard these proceedings with suspicion, and Mr. Fullerton asked Judge Neilson to inform Mrs. Woodhull that she was not called upon by the Court to produce the papers. Presently Mr. Shearman said that Mrs. Woodhull desired to say something to the Court. Mrs. Woodhull then turned, and bowing to Judge Neilson, she spoke in a low voice, saying in substance that the letters which she held were entirely creditable both to herself and the gentleman who wrote them, and that she had no disposition to keep them from any court of justice. During her imprisonment for publishing the scandal, she said her office had been ransacked and her private letters taken away. In her opinion some of them were in the hands both of the counsel for the plaintiff and for the defendant. With this explanation she was perfectly willing to give the letters. This address was listened to with the strictest attention. Every eye was fixed on Mrs. Woodhull, and people in the back parts of the room rose up to get a look at her. Her voice trembled a little, and she flushed very red at first. Judge Neilson bowed, and, when she had finished, said, 'Well!' Mrs. Woodhull then took out her pocket-book, from which she produced several letters, which she handed to Mr. Shearman. That gentleman smiled in a gratified way as he took them. Mr. Evarts put on his spectacles, and taking the letters from his junior counsel carefully inspected them. Then they were handed all around among counsel for both sides. After a short conference with his colleagues, Mr. Evarts said that he would not require Mr. Tilton to take the stand at that moment. The plaintiff's counsel objected to having [illegible] deferred, and Judge Neilson finally said that if the defendant's counsel thereafter recalled Mr. Tilton, they must have Mrs. Woodhull in attendance. Mrs. Woodhull remained in Court only a few minutes after delivering the letters, seeming to be annoyed by the attention she attracted.

A SPECIAL despatch to the *St. Louis Globe* from Jefferson City says: A scheme has just come to light there to rob the State of several millions of dollars. A commission on war claims sat at Jefferson City last winter and allowed nearly 3,000,000 dollars of claims, and issued certificates to claimants for nearly that amount. These certificates are not to be paid, however, until the Federal Government agrees to reimburse the State, and of this there is little hope. These certificates are worth about two cents on the dollar, and it is asserted that they have been bought up by number of New York, Chicago, and St. Louis brokers, and by a ring consisting of leading politicians in the middle and north-western counties of the State, with a number of friends in St. Louis. This ring, it is alleged, is now forming lobby for the purpose of getting the Constitutional Convention to insert in the new constitution a clause providing that the State can be sued, and the Legislature shall name the Court by which the suits against the State shall be brought. If, therefore, the Federal Government refuses to recognise these war government claims, and this ring accomplishes its objects with the Convention it is thought it will be an easy matter to induce the Legislature to name a Court before which these claims shall be brought, and with 3,000,000 dollars of a stake a favourable decision is believed inevitable. The swindle in the case is asserted to be that these claims, with the exception of a few hundred thousand dollars, are bogus. The names of men who have been dead ten years appear on the books, and are only represented by the attorneys of parties who hold the certificates; in fact, nearly all the men of the regiments for whose benefit these claims are made are dead, and the money paid by the State thereon will go into the pockets of the parties of this ring.

HOME NEWS.

THE Derby has been the principal event of the week at home. Sir Wilfrid Lawson made an attempt on Tuesday to prevent the adjournment of the House of Commons over the day, but was defeated by 206 to 81. The crowd on Epsom downs on Wednesday was enormous, and the weather was as fine as we have had on a Derby day for many years. The absence of rain, a freshly blowing breeze from the north-west, and an occasional bank of cloud to temper the heat of the sun, combined to make the day one of the most agreeable that could be desired. The race was witnessed by numerous members of the Royal family, including the Prince and Princess of Wales, the Duke and Duchess of Edinburgh, Prince and Princess Louis of Hesse, Prince and Princess Christian, Princess Louise and the Marquis of Lorne, and the Duke of Cambridge. So large an assemblage of Royal personages has, it is stated, not been seen on an English race course since 1844, when the Queen and Prince Albert were accompanied to Ascot by the Emperor of Russia, and the Kings of Prussia and Saxony. The winner, Galopin, is the property of Prince Batthyany, who is very popular on the turf, and there was much cheering on the course when the result was announced.

THE Prince of Wales, accompanied by the Duke of Edinburgh and the Duke of Cambridge went down to Portsmouth on the 21st May to see the Arctic ships. Their Royal Highnesses, after inspecting the ships, lunched with Lieutenant-General Sir Hastings Doyle and returned to London. On Saturday the Empress Eugenie and Prince Louis Napoleon went to Portsmouth, and made an inspection of the Arctic ships and museum. In the evening of the same day a dinner to the crews of the ships composing the Expedition was given by the Corporation of Portsmouth. The entertainment, at which Captain Nares was one of the speakers, was of a gratifying and successful character. The ships were expected to sail from Portsmouth on the following Saturday.

WITH respect to the Prince of Wales's visit to India, the *Manchester Guardian's* London correspondent writes: Though the arrangements for the visit are far from being completed, I shall be perfectly correct in stating that his Royal Highness is expected to reach Bombay about the second week in November, and that he will remain in India—visiting nearly every important place of interest—till the following April. He will be accompanied by Sir Bartle Frere, Dr. Fayrer, General Probyn, Colonel Arthur Ellis, and Lord C. Beresford, M.P. The Duke of Sutherland, Lord Suffield, and Lord Carington have also accepted invitations to join the Prince upon this grand tour. Several proposals have been submitted to the advisers of his Royal Highness as to the route he will take when once he reaches India, but upon that point nothing definite has yet been decided. As to precedence there is no intention whatever to disturb the position of the Viceroy. His Royal Highness would be the last person to put forward claims that would have any such effect; he would rather regard the recognition of Lord Northbrook's precedence as being likely to strengthen Lord Northbrook's position in the eyes of the natives. On the subject of presents, I believe it will be found that the old custom will be again adopted, and that the effort to abolish the system of present-giving among the native princes will not be made. I hear, also, that it is possible the Prince may call at the Cape of Good Hope either in going or in returning from India, and that before Parliament rises a vote to defray the expenses out and home will be asked in a supplemental navy estimate.

THIS is the last week of Messrs. Moody and Sankey's tenancy of the Opera. *The house-to-house visitation which is being carried on in connection with the revival movement in London has called* forth a number of complaints, and several persons have written to the papers on the subject. One correspondent states that a lady in delicate health was "prayed at, preached at, and catachized," for two consecutive hours by two "titled ladies," and so terrified that her husband on returning home found her in a fainting state. In another case, a male visitor, when a lady declined to permit him to come into the house to pray "for his dear sister," as he called her, began to pray on the doorstep. The thieves also are beginning to avail themselves of the system. A woman who said she had come on behalf of "our brethren in the Lord, Moody and Sankey," obtained admission into a widow lady's house at Kilburn, and after some pious conversation said she was much fatigued and would like a little refreshment—adding that, "if it would not inconvenience," she would prefer "a little hot brandy and water." It was given to her, and she went away, taking with her, it was afterwards discovered, the silver spoon she had used for the brandy, some ornaments from the mantelshelf, and the lady's best umbrella from the stand in the hall. In exchange she left a life of Moody and Sankey, some religious periodicals, and a promise that the lady "should be the object of a special prayer at an early meeting of Messrs. Moody and Sankey, as especially requiring 'light.'" The Archbishop of Canterbury has written a letter on the subject of the Revivalist movement, in which he says: "That addresses urging, in whatever homely language, the great truths of the Gospel in our people's consciences should be delivered by laymen is no innovation amongst us; and I heartily rejoice that the present movement is conducted on so great a scale with such apparent success." It is chiefly from the "after meetings" for confession of sin and for guidance of the conscience, as they have been described to him, that he is apprehensive lest evil may arise.

AMONGST the deaths recorded this week are:—*Major-General C.* MacLeod, Madras Army; Colonel E. S. F. G. Dawson, late 93rd Highlanders; Colonel W. Beaumont, Madras Army; Lieutenant-Colonel C. P. Kennedy, Bengal, Retired; Lieutenant-Colonel C. F. Young, Royal Art.; Mr. E. J. Boldero, late Bengal C.S.; John Smith, M.D., late of Calcutta; Archdeacon Sinclair; and Lady Drummond.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We *may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼ lb. and 1 lb. tins, labelled thus :—

JAMES EPPS & CO.,

MOFUSSIL ORDERS will receive immediate attention. Sketches of articles will be sent, on application by letter, to any address, and in cases specially where despatch is of consequence, goods will be selected and sent at once on inspection; when the selection of goods is left entirely to Hamilton & Co., their Constituents may rely upon a choice being made from the newest and most tasteful portion of their stock.

HAMILTON AND Co., in ordinary.

Medow Street, Bombay.

REMEDY FOR INSURANCE PANIC.

THE NEW SYSTEM OF RESERVING & INVESTING FOR POLICY-HOLDERS IN GOVERNMENT SECURITIES THE ENTIRE NET PREMIUMS.

THE ONLY EQUITABLE SYSTEM OF LIFE ASSURANCE.

THE POSITIVE GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, "LIMITED."

CHIEF OFFICE: 53, BEDFORD SQUARE, LONDON.
CALCUTTA OFFICE: 6, OLD COURT HOUSE STREET.

This Company has passed the probationary period of development, and has now become a well-established office, doing a larger business than was ever before transacted in the same period of time by any Life Assurance Institution, and possesses a current annual premium income of £50,000.

THE GREAT QUESTION OF THE DAY IS—

How can I assure my life with a certainty of the policy being paid at death?

THE ANSWER IS SIMPLE—

Only let the net premiums be reserved and safely invested at compound interest, exclusively to meet claims under policies, and the fund will so rapidly and enormously accumulate as to make the provision for payment as certain as is death itself.

AN EMINENT ACTUARY SAYS:

"To make the system of Life Assurance complete, it has yet to be recognised that an Assurance Society is, in its very essence, less a "trading company for profit to shareholders, than an institution with purposes of trust for policy-holders, the trust being to receive and "husband the premiums till such time as, by the discharge of the member's claim, the trust is ended as far as such member is concerned. "To this end it should be enacted that *every* office shall each year put apart in a 'Trust Fund' *a proper proportion* of its annual premiums, to "meet assurance, risks, and claims only, and not to be touched in any way for expenses, which, if need be, should come out of the share-holders' capital, or the profits of the year, and that this is to be effectually secured so as to obtain the best rate of interest consistent with safety."

This is exactly the system adopted by the 'Positive,' THE ENTIRE NET PREMIUMS being invested at compound interest in trust for policy-holders, and hypothecated exclusively for the purpose of paying claims under policies. The investments are made, in England, in Consols, yielding interest at the rate of about 3¼ per cent. per annum; in India, in Indian Government securities, yielding about 4 per cent.; in Canada, in Dominion Stock, yielding fully 5 per cent.

POLICY-HOLDERS IN THE 'POSITIVE' HAVE THREE DISTINCT LINES OF SECURITY:

1. The Guarantee Fund of over £51,000 Consols (one-fifth part of the paid-up capital).
2. The Net Premiums invested at compound interest as above.
3. The Capital and other property of the Company.

THE POLICY-HOLDERS' FUNDS

AMOUNTED, ON THE 31st OCTOBER 1874, TO OVER £125,000.

(ACCUMULATED SINCE COMMENCEMENT OF LIFE BUSINESS IN 1872.)

FURTHER ADVANTAGES OF THE POSITIVE SYSTEM.

POSITIVE POLICIES ARE UNCONDITIONAL, INDISPUTABLE, AND NON-FORFEITTALE.

1. Unconditional, being free from all conditions of every kind restrictive of the assured, except the due payment of premiums.
2. Indisputable, as no objection whatever can be raised on any ground after the Policy has been issued.
3. Non-forfeitable, because every premium purchases a fully paid-up Policy, or Positive note, for the relative proportion that the premium bears to the sum assured, which Positive note never lapses, but remains in force till death, whether subsequent premiums are paid or not.

SURRENDER VALUE AND NEGOTIABILITY OF POSITIVE NOTES.

The Positive note is a negotiable document, payable 'to bearer,' and bears a cash value of 40 per cent of the premium paid, which may be obtained at any time on surrender of the note, without forfeiting the balance of the sum assured, or may be taken as a loan bearing interest. The cost of probate or legacy duty is avoided by the Positive system.

PROSPECTUSES, AND ALL INFORMATION REGARDING THE COMPANY, MAY BE HAD ON APPLICATION TO

THE MANAGER,

6, *OLD COURT HOUSE STREET, CALCUTTA.*

F. & C. OSLER,

Austro-Hungarian Lloyd's Steam Navigation Co.

REGULAR LINE OF STEAMERS BETWEEN BOMBAY AND TRIESTE VIA SUEZ CANAL.

THE COMPANY dispatch during the fair Season (*November to June*) regularly every fortnight, a steamer from Bombay to Trieste, which leave on the 5th and 20th of every month. From June to November one steamer every month will be despatched on the 20th.

These steamers have either only one class of Cabin accommodation, or first and second class, and the rates of passage-money vary accordingly.

During the passenger season large passenger steamers are usually employed with excellent accommodation for first and second class passengers.

RATES OF PASSAGE FOR STEAMERS WITH ONE CLASS ONLY.

	Cabin.	Deck with food.
To Trieste	£40	£19-0
To Port Said	£30	£14-6
To Suez	£28	£13-7

RATES OF PASSAGE FOR STEAMERS WITH 1ST AND 2ND CLASS.

	1st Class.	2nd Class.	Deck.
To Trieste	£45 0	£35 0	£19-0
„ Port Said	£33 6	£23 0	£14-6
„ Suez	£32 8	£22 0	£13-7

Children under 3 years of age, FREE ; above 3 and under 10 years, HALF FARE. The passage-money includes free conveyance of 3 cwts. luggage for 1st class, and 200 lbs. for 2nd class Passengers, and a liberal table (*exclusive* of wines and liquors, which can be purchased on board at moderate prices).

OVERLAND ROUTE TO AND FROM INDIA, CHINA, JAPAN, AND AUSTRALIA.

Information of the Company's Service on the direct weekly line between TRIESTE AND ALEXANDRIA,

In conjunction with the Peninsular and Oriental Company's Service between Suez and the East, and *vice versa*.

The Austrian Lloyd's Steamers leave Trieste for Alexandria every Friday at midnight, and will reach their destination in about 5 days, inclusive of a stoppage from 4 to 6 hours at Corfu. The return voyage from Alexandria takes place immediately after the arrival of the Indian Mails from Suez, falling due every Sunday. In case of delay the departure of the steamer will be postponed.

RATES OF PASSAGE-MONEY BETWEEN ALEXANDRIA, CORFU, AND TRIESTE.

FROM ALEXANDRIA TO	1st Class.	2nd Class.	3rd Class.
	£ s.	£ s.	£ s.
Corfu	8 0	5 18	3 0
Trieste	12 0	9 0	6 0

Reduced Fares from Alexandria to Trieste for Families of not less than three adult persons travelling together.

1st Class, Rs. 100 each ; 2nd Class, Rs. 75 each.

These rates include berth, a liberal table (exclusive of liquor) and fees.

Baggage allowed—*1st Class, 200 lbs.* ; *2nd Class, 130 lbs.*, English weight.

Overweight, *10s.* per cwt.

Bombay, 28, Bombay Green, opposite the Custom House.

Eastern Bengal Railway.
NOTICE.

WEEKLY Communication by Railway and Steamer between Calcutta, Dacca and Naraingunge for Sylhet, Cachar, Tipperah and Eastern Districts.

This Company's Steamers leave Goalundo for Dacca and Naraingunge every Sunday morning, returning from Dacca and Naraingunge every Wednesday, reaching Goalundo on the Friday.

Passengers should leave Sealdah by the 7-30 A.M. or 8 P.M. Train on the Saturday preceding the departure of the Steamer, and goods for despatch should be delivered at the Sealdah Terminus before 3 P. M. on the Thursday previous.

Further particulars can be obtained on application to the Company's Enquiry Officer, Sealdah, or the Company's Local Agent at Dacca and Naraingunge.

E. B. RAILWAY, AGENT'S OFFICE, 17th November, 1873. FRANKLIN PRESTAGE, *Agent.*

ASSURANCE COMPANIES.

STANDARD LIFE OFFICE.

THE DEATH CLAIMS paid by the STANDARD COMPANY, during the past nine years, have been upwards of £1,200 per business day.

THE FUNDS during the same period, after payment of Claims and Expenses of every kind, have increased from £2,600,000 in 1865 to £4,800,000 in 1874.

NEW ASSURANCES, to the amount of £1,000,000 Sterling, have been placed upon the Company's Books in each of the years since 1865—some of them years of doubt and anxiety in the Assurance World. This result, it is believed, has been maintained by no other Office in the United Kingdom, during the same period.

BONUS YEAR 1875.

The next division of Profits will take place at 15th November, 1875.

ANNUAL REPORT 1875.

Copies of the Annual Report, containing the Balance Sheet, &c., may be obtained on application.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman of the Annual Meeting, 7th August,* 1874.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on the participating scale.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, Quarterly, or Monthly,
at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

Available Funds	...	... **£ 1,012,185 16 8**

COLVIN, COWIE & CO.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example.

A, aged 30, wishes to Assure Rs. 1,000.

		With Profits.
Annual Premium at Indian Rate ...	Rs.	36 0 0
Annual Premium at English Rates ...	,,	23 10 8
Difference ...	Rs.	*12 5 4*

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

D. McLAUCHLAN SLATER,

No. 2103.] Calcutta: Saturday, July 3, 1875. [Vol. XLI.

ENGLAND ON INDIA.

MISDIRECTED energy and wasted sympathy are always sufficiently lamentable sights, and it would not perhaps be easy just at present to find a more striking instance of either than that which meets us in the attitude which of recent years, and more especially during the last eighteen months, has been adopted towards India by English politicians. The wishes of those public writers and speakers who have mourned so long over English indifference to Indian affairs have at last been realized. The House of Commons is no longer empty during an Indian debate; the English press teems with articles on Indian subjects; and it is becoming almost as much a matter of course with the British politician to have an opinion and a policy for the affairs of India, as for those of France. But these gentlemen whose object of "getting England to take an interest in India," has thus been happily attained, do not seem to have foreseen that of the two evils, simple apathy which neither cares nor interferes, and uninstructed interest which does both, the latter may be by far the more serious of the two. The blundering, because uninformed, interference of the British public with the internal administration of this country, is perhaps the greatest of the many dangers which now threaten the welfare of the Empire. Sanguine temperaments may perhaps console themselves with the reflection that as knowledge of India increases in England, the evil will gradually diminish. "Let not their discreet hearts think it." For what reasonable prospect is there that the active-minded persons at home, who now busy themselves with Indian affairs, will ever acquire such a knowledge of the country, as will guide them to correct and save them from disastrously incorrect judgments respecting it. To our thinking, hardly any. Take the case of an average competition-wallah who has spent two years in studying Indian history, geography, law, languages, and political economy. Is it to be expected that one man in a hundred of those who talk so glibly of Indian affairs at home, who plume themselves on the effective method in which they have dealt with a Bengal Famine, or who sympathise with the sorrows of oppressed princes, will ever devote as much time or attention to acquiring information on Indian subjects? And yet, notwithstanding his far greater means of knowledge, what practically useful acquaintance has a competition-wallah with the state of the country when he first sets foot in it? What disastrous errors would he not fall into if he were suddenly called to decide on questions of land, of trade, or of administration? What hope, then, is there that the average politician at home will ever acquire a competent knowledge of India? Nothing but a residence in the country and among its people, of a length varying with the receptivity of the individual, can ever teach a European to know his own ignorance of the real wants of both; and until he is once potently and powerfully persuaded of that cardinal fact, there is no chance of his ever acquiring any true knowledge of the subject. This conviction of ignorance, however, is one of the hardest possible lessons to master. Few can learn it save by actual experience, and as not one in a thousand of British citizens can so learn it, it is much to be feared that the vast majority of them will never learn it at all. The only rational hope of their doing so seems to us to be that the gentlemen who profess to instruct the British public on Indian topics, may some day cease to flatter their readers or hearers by ascribing to them an intuitive acquaintance with the subject—may cease, in short, to address them as Sir Bartle Frere the other day addressed his Manchester audience.

If, which is sufficiently unlikely, these self-accredited professors would but teach their disciples that of the internal affairs of India, and of the life and wants of its agricultural millions they know nothing, and without devoting their lives to the subject can know absolutely nothing; and if, which is, we fear, still more improbable, their disciples would but believe them; then, indeed, English interest in India might come to be a blessing to the latter country, and not a curse. For there is a department of Indian affairs for the reform of which, what is really needed is the spread of information among the British public; and that is the financial relations of India to England. We have sufficient faith in the justice of the English people to believe that if they once fairly understood the nature of these relations—and for the comprehension of them a knowledge of elementary arithmetic is the *only* essential—India would no longer be drained of a yearly tribute for imaginary trade privileges which she has never obtained, or be burthened with expenditure on objects with which she has no concern, and from which she derives no benefit whatever.

But of the inner life of the people of India, the only lesson which English philanthropists can advantageously learn, is the lesson of their own insurmountable ignorance. The real wrongs of India are and must be a sealed book to all but those who are actually brought into contact with them. Let us point our moral with a plain unvarnished tale. In a certain district of Oudh—not a hundred miles from Lucknow—is a village which had been inhabited for many generations by a brotherhood of Brahmans. In the first half of the last century a Mahomedan gentleman obtained a *sunnud* from the Emperor of Delhi, constituting him *muafidar* of the village. In virtue of this *sunnud*, he and his descendants exercised some not very well defined rights over the village until annexation. After annexation, the Brahmans claimed a "sub-settlement," which was decreed them by the Settlement Court of first instance, but which they lost on appeal. They were then decreed 134 *beeghas* of land, as *seer*, the rental of which was fixed by a Mahomedan Extra Assistant Commissioner at Rs. 610. After this rent had been in force for nearly four years, and all the Brahmans, except one, who was a money-lender on a small scale, had fallen hopelessly into arrears, the Settlement Officer happened to visit the village, and reduced the rent of their *seer* from Rs. 610 to Rs. 180. The latter sum being presumably that fairly payable, the enormity of the former is obvious. It may be thought that the troubles of the Brahmans were now at an end. Not at all. Hitherto their tenure had been simply worthless, owing to the excessive rent which it bore, and could neither be sold nor mortgaged. Now, that by the reduction of the rental it had acquired some appreciable value, and the Brahmans had some little chance of recovering themselves, the proprietor stepped in, and applied for sale of the tenure on the strength of the unsatisfied decrees for rent held by him. This man, it should be observed, had been benefiting all this time by the excessive rental of the *seer* land, which was imposed after the conclusion of the assessment of the village, and he will now, in all probability, succeed in ousting the Brahmans altogether, in consequence of arrears which accrued while they were liable for an impossible rental. A whole brotherhood will thus be turned out of their ancestral village and ruined by the "error of judgment," for such, of course, it was, of an Extra Assistant Commissioner. They are entirely at the mercy of their landlord, the "unstrained quality" of which may be conjectured from the fact, that he has already bought up and pulled down several of their houses with a view to ejecting them from the village.

This is no isolated instance. Such cases are common, and their

effect in alienating from our rule the agricultural population need not be dilated on. These and such as these are the real hardships of India; but what does, or what can, the ordinary English politician know of them? Such incidents tempt one in spite of all our hopes for the future, to ask the question, whether it may not, after all, be ultimately recognized that the only permanent gain derived from British rule in India has been the lesson, taught once for all to the world, that an Oriental race cannot be genuinely benefited by Western conquerors bent upon imposing their own institutions upon them, as "civilization."

THE SETTLEMENT OF LAND REVENUE IN OUDH.

THE fertile province of Oudh pays to the Imperial Government a land revenue which is, acre per acre, less than that paid in the North-West Provinces, except in a few outlying mountainous tracts. There are but few differences between the part of Hindoostan called Oudh and those other parts of Hindoostan which bound Oudh on three sides, and which are still known by the now most inappropriate name of the North-West Provinces. The soil and the climate of Oudh are almost identical with those of the surrounding districts; the same castes, some industrious, some lazy, cultivate the ground; the same customs govern the agricultural systems; the same religion and language prevail among the people. The settlement of the land revenue in Oudh has only been completed within the last year or two, and presumably the knowledge and experience acquired in the last half century in the North-West should have been utilized in Oudh. What, then, is the reason that while in the former province which pays the higher revenue, no complaints are heard of the assessment, and the revenue is easily realized, in the latter which pays the lesser revenue the declaration of the new assessments has been, in some six or seven districts out of twelve, followed by numerous and well-founded complaints, which are leading to a revision of the settlement in those districts, where heavy arrears of uncollected revenue are accumulating year by year?

The immediate reason of this difference is patent to the world, and is confessed by the Oudh authorities. It is that while the Oudh assessment is not too heavy in the aggregate, it has been discovered to be most uneven and unfair, not only in different districts, or different pergunnahs of the same district, but in adjoining villages of the same pergunnah. In theory, the Government is entitled to eight annas out of every rupee of rent taken by the landlord; but various officers, Deputy Commissioners, Superintendents of Estates and Settlement Officers, have in the last two or three years represented to the Oudh Administration that the assessment varies enormously, being in some places as low as four annas, in others as high as twelve in the rupee. Here then of course is an easy explanation of the difficulty found in collecting the revenue. If Khuda Buksh and Ramchunder own neighbouring villages, from which each has a rental of Rs. 1,600, it is not likely that the former will pay Government a revenue of Rs. 1,200, if only Rs. 400 be demanded from the latter. The collection of a tax assessed in such a way becomes, and is felt to be, a mere confiscation of property. But if this unevenness of assessment be the reason why the land revenue is collected with difficulty, the question remains why is the revenue so uneven? The answer is that the Settlement Department in Oudh has been guided by no fixed principles, has had no one single method, or system, of assessment. In the North-West Provinces, the valuation of land for purposes of taxation has been reduced to a scientific system, and its principles have attained the character of scientific laws. The application of these principles is an art which has been practised with considerable success during the last half century, by a body of men of which each official generation has been taught by the previous one, and who were spoken of by a recent Lieutenant-Governor as "the picked men of a picked service."

But the Oudh Settlement Department was suddenly created, from ten to twelve years ago, and was recruited from the most heterogeneous elements. The Customs, the Commissariat, the Artillery, the Telegraph, the Police, the Bombay Cavalry, the Punjab Commission, supplied a number of men from all parts of the empire, many of whom if they lacked a knowledge of the principles and traditions of the Settlement Department of the North-West, had the superior merit of being connexions or relations of those in power at the time. These gentlemen all did fairly good work, but not the slightest attempt was ever made by the Oudh Administration from the first to teach them the science of which they were thus made professors: a few months' training in the Oudh Commission as Magistrates was considered perfectly sufficient. By practice they picked up a smattering of the art, and got on somehow. Each one accomplished his task in some way and after some time, just as the Captain of a ship, knowing a little of the art of navigation but nothing of the science of astronomy, might bring her into port after a tedious zig-zag and expensive voyage of months, instead of a short direct one lasting a week or two. The utter want of all system, the complete absence of uniformity of principles, that have characterized the operations of the Oudh Settlement Department, have been recently brought prominently to the notice of the Supreme Government; and about seven months ago the *Pioneer* announced the appointment of Mr. Jenkinson, a North-West Collector of considerable Settlement experience, as Settlement Commissioner of Oudh. The announcement proved to be premature, for the appointment was not made, but we have good reason for saying that it was recommended to His Excellency by two Members of Council, but was strongly opposed by the Chief Commissioner of Oudh. The appointment would have been a reflection upon the former Settlement Commissioner, now Judicial Commissioner, and at that time expecting to succeed Sir G. Couper as Chief Commissioner. We know not whether it was on this account, or from sensitiveness to the fact that Mr. Jenkinson happens to be a cousin of His Excellency, but Lord Northbrook refused to sanction the recommendation. We doubt, however, whether much good could have been effected by such a pouring of new wine into old bottles. We fear it is too late to undertake any general revision of Oudh assessments. Our point at present is to prove that Oudh has been assessed by amateurs, when it might and should have been assessed by trained men. We shall hereafter endeavour to show, that the result must be in the end a heavy loss of revenue to the State. But we cannot do so in the limits of this article. For proof of the proposition we have just laid down, we appeal to a short pamphlet written by Mr. McMinn, C.S., in defence of his assessment of certain pergunnahs in zilla Kheree, and in reply to the criticisms of his successor. It appears that mutual complaints and recriminations have been common among the officers of the settlement, and this is evidently because of the want of any common principles or system among them. Mr. McMinn writes: "After all, I have nothing especi-
"ally to complain of. Colonel Thompson was succeeded as
"Settlement Officer of Seetapore by Mr. Wood, and the
"language then used towards the former fully equalled in
"decision and vehemence what has been applied to me.
"Mr. Boys left Seetapore, and his work was disapproved
"of by Captain Young. Mr. Boys succeeded Major Clark,
"and altered the latter's assessments wholesale—the latter
"has now had his turn upon me. I could quote other pend-
"ing cases. The only men in Oudh who meddled with, and
"did not mangle, their predecessors' assessment work, were
"those who stood in the relation of pupils to masters, as Colo-
"nel Ouseley to Colonel Macandrew, Mr. Maconochie to Mr.
"Clifford, Mr. Woodburn to Mr. Carnegy." This state of things may have been partly due to the introduction as assistants, after the well-paid posts had been filled, of a few Civilians who appear to have endeavoured to follow the principles laid down in the N.-W. P. But the pamphlet abounds with statements in proof of the proposition, and it would really seem as if every district in Oudh had been assessed on a different system. For instance, Mr. McMinn speaks of "my system," the "Fyzabad system," the "Roy Bareilly method." It is evident that the very A, B, C, of Settlement science is unknown. For instance, it is not settled whether the whole *irrigable* area of a village or only the area actually *irrigated* in the year of measurement is to be assessed at net rate. Mr. McMinn writes:

"I and Mr. Williams are, then, the only avowed supporters "in Oudh of asessment upon irrigable, not irrigated, areas." In another place we are told, that it is not settled whether waste land is or is not to be assessed. In another we read of "*broad errors*" in principle of other officers. This talk about different systems and methods and principles is most astonishing. The knowledge of the one right way of performing each process of his art is that which distinguishes the artist from the amateur. We shall only quote one more passage; and let our readers remember that it is written by an officer with seven years' experience in the Oudh Settlement Department: "I undertake to prove that my system "secures as uniform an assessment, under similar circum-"stances, in each village, as any other hitherto applied "in Oudh. What is the use of concealing facts? We all know "that not a district assessment in Oudh would stand, if each "*taluka* were to be treated *mauzawar*" (*i.e.*, if the total assessment on each estate of many villages, were to be tested village by village), "*pace* Colonel Macandrew. It entails "much extra labour and cost to make a mauzawar "assessment, just as it is more difficult to weave or embroider "a fine pattern than a coarse check. The North-West Settle-"ment Officer, whose modes of proceeding I know that "Colonel Macandrew ignores, first assesses the gross sum on "the whole pergunnah, and then redistributes it over the "villages; in other words, *mauzawar* assessment doubles his "work. It is not the less necessary, I admit. I have done my "best to get all in details a correct mauzawar. I have not used "wild pergunnah averages, such as that each well or jheel "will on the average water eighteen beegahs, or that each "plough produces twenty rupees, or that each assamee "(tenant) earns twelve rupees. No landlord has come to "me, and said, as one did to Major Clark in Baraitch (*vide* "correspondence), I accept your jumma, but in a number of "the villages it is too low, and in a number too high." Oudh we fear has been unfairly and unevenly assessed, and the reason seems to be that the officers who have assessed it were bound by no common principles, were trained in no common system, and had no common teacher.

A CENTURY AGO.

THE bare facts of what is usually called "history," like the unclothed bones of an extinct animal, may enable the expert to re-construct to some extent the semblance of the past. But how much more is required when we would closely compare the social state of any given country with what it was at the other end of some long period; especially when that country is our own, and when to the curiosity of the student is added the uneasy egotism of the would-be patriot! Taking the century as a lapse of time often contemplated in conversation ("It will be all the same a hundred years hence"), readers may like to join with us in taking a glance at the banished features of ordinary life as reproduced in literature; and in asking—if not answering—the question, are we stronger, better, or happier than our grandsires?

The year 1775 was a sadly memorable one in the annals of Britain. Ten years before the Stamp Act, passing almost as a matter of form and in a thin House, had unfortunately laid the egg of the cockatrice that was soon to become the full-grown fiend of civil war between the mother-country and her thirteen colonies in North America. Edmund Burke was nobly, though vainly, urging the merits of conciliation, and tracing the border-line that parted imperial duty from colonial right. In this matter, at least, the British ministers and public have grown wiser. The Colonies now are not only not taxed, but there is little bond or continuity between them and the metropolis. If the fabric of the Empire is not dissolved yet, the fact is due rather to the absence of centrifugal force than to anything by which it is counteracted. The modern lord of Beaconsfield, so far from playing Cassandra to empty benches, rules the House and the nation; or floats, drifting, upon the top of the tide. Instead of Oliver Goldsmith, for whom "the Club" was then mourning, have we not still amongst us the graphic, inexhaustible Sala? In 1775 there were but few great men of intellect: Johnson, Gibbon, Sheridan, Garrick, Sir Joshua Reynolds, Fox, were the principal names in their respective pursuits. Instead of the skating-rink at Prince's, they had nothing then but Almacks. Covent Garden and Drury Lane were made over to the tedium of five-act plays, which the wisest and wittiest men of the time were content to witness from the pit. Lillie Bridge and Hurlingham had not begun to offer their attractions. The gilded youth of those days made "the grand tour" of Europe, entertained artists at the Dilettanti Club, or went into Parliament at nineteen. Mrs. Montague was presiding in her gorgeously decorated rooms; Omiah the Otaheitan was the lion of the season; Cooke, Banks, and Solander were discovering a new world and laying the foundations of Mr. Darwin and Professor Huxley; Politics ran high, and so did literary controversy. Johnson had just published his *Taxation no Tyranny*, and his celebrated condemnation of the so-called *Ossian*. In consequence of the first, a coldness had arisen between himself and Burke. The result of the second was the famous letter to Macpherson. "Your rage I defy, your abilities are not so formidable, and what I hear of your morals inclines me to pay regard, not to what you shall say, but to what you may prove." Sheridan, just married to the universal favorite, Miss Linley, had at once (unlike the Marquis de Caux) withdrawn his wife from the stage and the concert platform.

The condition of India was not less backward. Clive had passed away in frenzy and suicide, leaving behind him the deep foundations of an Empire. Warren Hastings was fighting his Council in Calcutta. Headed by the ardent unprincipled Francis, the opposition was carrying all before it. The Governor-General's Agent in Oudh was recalled, and a creature of the Council's substituted. In spite of Hastings, the British Brigade was brought back from Rohilcund. Benares was wrested from the Nawab. A combination of malicious calumniations, forged papers, and reckless dupes threatened the honour of the nominal head of the British Government, and he was formally charged by a majority of his coadjutors with having amassed £400,000 by corruption in the space of two and a half years. The counter-blow, however, was coming and was no less vigorous than the attack. The villainous Bengali Brahman Nundkomar was brought before the Supreme Court on an indictment for forgery; and, on August 5th, 1775, hanged before a concourse of his countrymen, without his patrons being able to take one step to save him. But the reputation of the Governor-General suffered for the want of a judicious champion in the Press. There was no *Pioneer* in those days; Allahabad being a portion of the Oudh territory lately resigned by the wandering Emperor Shah Alum, after it had served him as a temporary refuge, preparatory to his resuming the throne of Akbar and of Aurungzeb. Indeed the N.-W. Provinces generally did not exist. The country about Dehli was the theatre of constant contentions between the Hindoos (led by the Mahrattas) and the Mussulmans, whose chief impulse was derived from Cabul. Hyder Ali in the South was terrorising Madras and conquering the Carnatic. The Bombay Government was implicating itself in Mahratta politics; and at Poona an envoy was being expected from the French King, then just about to declare war against England and espouse the cause of the revolted American colonists. In the midst, however, of this cloud and tempest, the foundations of domestic administration were being laid with a firm and skilful hand. Though there was no Department of Agriculture, Commerce and Etcetera, yet Commissioners had been deputed to examine the land and its resources, preliminary to a revised assessment of the land revenue, with special regard to the rights and interests of the actual cultivators. At the same time, however, the zemindars were also to have their burdens lightened, a measure without which the wisest and most benevolent exertions in behalf of the ryot were thought to be but a vain thing.

Among the few examples of 1775 by which we in this country are profiting fully to-day may be mentioned that well-known Indian institution—the "Sadly-Peroo" dinner, which seems to have been as popular in those days at home, as it has since become in the land of its adoption. Dr. Campbell, an Irish clergyman who visited London that year, notices a dinner which he partook of, and which he pronounces "excellent. *First* course, soups at head and foot, removed by fish and a saddle of mutton; *second* course, guinea-fowl at head, and a capon, larger than some of our Irish turkeys, at foot; *third* course, different kinds of ices; in each remove there were, I think, fourteen dishes." And elsewhere, "I cannot help remarking how similar all the great dinners I have met with are; the soup, fish, and saddle of mutton; turkey and pigeons, &c., second course, ices, fruits, dessert." It is impossible not to recognise here the origin of the *burra khana* of modern India. It is, however, a just source of pride to think that we present so complete a contrast in most respects to bye-gone times. The only monument of the past that still survives is in itself a trifle. The transplantation of an entertainment once fashionable in London, is all that is left to us in this country of "a century ago."

IN MEMORIAM.

III.

"A CERTAIN aftershine of Christianity" has won back the mourner to the love of life, and to the hope of immortality. He now turns his full gaze on the Christian revelation, on Him who is the Light of life and the Vanquisher of death; and what could be more natural than that the story of the raising of Lazarus should strongly fix his attention? It has, doubtless, been now and then recurring to his mind, ever since he heard, beside the grave, the solemn words—words so deeply mysterious, yet uttered with such a calm assurance of simple truth, that the conviction they carry with them is almost sober certainty: "I am the resurrection and the life; he that believeth on me, though he were dead, yet shall he live." Now, that the first bitterness of grief is past, he can calmly meditate on the strange story, and it is worthy of observation that his mind, already convinced of the reality of a future life, is less occupied by the truth the narrative reveals, than by the mystery it fails to disclose. "Behold a man raised up by Christ," but "the rest remaineth unrevealed." Philosophy has viewed the future life as a probability; Christianity has taught it as a certainty; but regarding the nature of that life, and the occupations of the departed, Philosophy can but guess, and Revelation is silent. Here, then, is a call for faith, but no satisfaction to curiosity. "Where wert thou, brother, those four days?" Where art thou, loved one of my heart? Hoverest thou over me in this field of time, joying in my delights, pitying my sorrows, and tenderly commiserating my sins? Soarest thou on godlike wing through the divine ether, a "keen seraphic flame," piercing "from orb to orb, from veil to veil"? Or, enchained by the glory of the Eternal Throne, dost thou join with a high angelic choir in a rapture of everlasting adoration? Hast thou found the "passionless bride, Divine Tranquillity," and dwellest with her "in sacred everlasting calm"? Or, are thy human faculties, developed and purified, engaged

> "In such high offices as suit
> The full-grown energies of heaven"?

"The oracles are dumb." "Behind the veil, behind the veil!"

The remainder of the poem abounds with exquisite fancies and lofty conceptions concerning the possible character and employments of the future life, and the possible relations that may subsist between "the spirits rendered free," and their mortal kindred on earth. Some of these may claim attention in due order; we shall only observe at present, that the poem contains no speculation so wild as to be in the least inconsistent, so far as we know, with the known laws of our nature, and of the searchable universe. So singularly rational is Tennyson's Muse, that, after a careful reading, we think it would be difficult to show, by an appeal to any ascertained law, or to any trustwôrthy revelation, that her most startling dream of the future life cannot be realised. And this is surely worthy of observation, when we remember, not only what temptation to poetic licence the theme affords, but how impossible and absurd are many of the conceptions of the unseen world, that multitudes of sober, orthodox Christians cherish as articles of faith.

But can "the vision and the faculty divine" see nothing, then in the dwelling of Lazarus, but the suggestion of an incommunicable mystery? Here is the "man raised up by Christ," and here is Christ, who is "the Life indeed," the Word of life, but also the secret silence of the grave; the Light of truth, but attended by the deep shadow of mystery. But here also is a form, which the poet's eye, quick to catch, and rejoicing to scan, every manifestation of simplicity and beauty, loveliness and loveableness of human, character, cannot but dwell upon; and from which the anxious half-doubting and half-believing heart draws wisdom and strength. For how often does the heart of man find strength and wisdom in the gentle love, the simple faith, and the boundless trust of a believing woman; in the cup of the fair, frail human lily, the richest nectar of the gods,

> "Her eyes are homes of silent prayer."

But let us not mangle, by quotation, the section on Mary of Bethany, so well-known to readers, and even to half readers, of Tennyson. It is "beautiful exceedingly." "Wheresoever this gospel shall be preached in the whole world, shall also this, that this woman hath done be told for a memorial of her." And we may add that while the English language continues to be read and understood in its present form, Tennyson's exquisite rendering of the tale will probably be valued next to the Apostolic statement of the fact.

What then has the poet learnt from Mary? To believe where he cannot understand. To trust where he cannot know. To receive with meekness and gladness of heart the Word of life, and let "subtle thought and curious fears" sink beyond sounding in an ocean of grateful love. Or, if not to *do* all this, at once, and completely, at least to love and tenderly revere the sweet soul that does. And, in reverent admiration for the faith and blessedness of such as Mary, he introduces the off-quoted section addressed to the high man, who after toil and storm has reached the purer, (and rarer) air where all earthly forms melt away, and Reason communes face to face with Truth. He more than hints that that lofty region is less safe as it certainly is less fruitful of good deeds, than the lower, but equally pure, ground occupied by the simple woman's soul, that has never sought to separate the revealed Word from the human flesh in which it dwelt.

> "See thou, that countest reason ripe
> In holding by the law within,
> Thou fail not in a world of sin,
> And even for want of such a type."

It is pleasant to detect spiritual resemblances between two poets so different in many respects as Tennyson and Browning. Browning writes:

> This low man seeks a little thing to do,
> Sees it and does it,
> That high man, with a great thing to pursue,
> Dies ere he knows it,
> This low man goes on adding one to one,
> His hundred soon hit;
> That high man aiming at a million,
> Misses a unit.

But neither of the poets blames the high man, though both warn him, for they themselves are of his kindred. And Tennyson proceeds to declare his own conviction of the necessary immortality of the soul, a conviction resting on grounds apart from the Christian revelation, though not inconsistent with it. There is no place in a poem like this for elaborate reasoning, and moreover the poet's genius is not combative. It is not his aim to attack with logical weapons the unbelief of hard-headed sceptics. Spiritual truth can only be spiritually discerned. "The eye sees what it brings with it the power of seeing." But though no argument will convince me that a certain object is within my range of vision, if I cannot see it, the declaration of another that he also sees some marvellous object which I seem to behold, is useful as an assurance that my eyes do not deceive me. In like manner, a simple statement of his own conviction from a man of mental culture, of subtle intellect, and of real genius, is of high value, and we should have felt grateful to Tennyson even for that. But he has given us far more than that. His argument is brief—amazingly so; but it is no less complete than brief. That which has a real existence cannot cease to exist. If what we call life be capable of annihilation, if, when the outward forms of life are changed into dust, the life that animates them ceases to be, then all that is possessed of real permanent existence is "dust and ashes." And all this beautiful world exists for no other purpose than that its essential dust and ashes should be clad and clad again in ever-varying forms of fantastic beauty, only to return again to the original dust. The poet's mind cannot accept this account of the purpose of creation. The beautiful form does, indeed, spring from the dust, and after a fast fleeting existence does as surely return to the dust. But is there no result then? Or is the only result the succession of a new phantom form a little more exquisite than the former one? It cannot be. The outward form perisheth, but the inner life—the being it clothed—passes otherwhere to live for evermore. This is the poet's faith. Believing this, he can believe in God, and thinks it worth while to live, and love, and suffer; but snatch from him this faith, and God is nothing to him; no mortal thing is worth the heart's affection the joy of which is so oft attended by the keenest pain—a pain that has often a longer duration than the joy. If love receive all its portion in this life it were better to die than to live. In this world the highest natures suffer far more, and feel their sufferings far more keenly, than the lowest. Why, then, "let us eat and drink, for to-morrow we die"?

> "Fill the cup, and fill the can,
> Have a rouse before the morn;
> Every moment dies a man,
> Every moment one is born!"

Away with this imaginary, ethereal Love. It is no mingling of soul with soul in deathless, godlike passion—not, as we vainly dreamed, the mingling of the earthly dew-drops on their way to the ocean of eternal love; it is but the mad froth that brims the cup of pleasure and under it lie the beastliest dregs. Perish and vanish ye vain ideals of the immortal and divine! We are of the Faun and Satyr brood, that

> "Bruised the herb, and crushed the grape,
> And basked and battened in the woods."

Plainly, then, it is the poet's belief, that every truly living soul

possesses within it a revelation of its divinity and immortality. But the handwriting is in mystic characters, and light and darkness chase each other along the lines. And therefore,

"Though truths in manhood darkly join,
Deep-seated in our mystic frame,
We yield all blessing to the name
Of Him that made them current coin."

They are but few who can read the Word of Life dimly characterised in their own souls; in most of us it is hidden, if not effaced, by the stains of earth and sin. But a perfect revelation has been given, and in one human life the Divine Word stands written for ever, in indubitable, ineffaceable characters, traced by the finger of God. Christ translated the mystic truths into a pure and perfect life. The divine truth stands forth revealed "in loveliness of perfect deeds;" *every act* and word of His is a declaration of man's divine origin and immortal destiny, and thus he is the very word of God. The most pure and perfect, the most beneficent life that has been lived on earth, which even John Stuart Mill admits is perhaps the best pattern we can choose for imitation, has no meaning at all for man if not as a revelation of God and immortality. Its every word and act had its secret spring in the Divine and Unseen. How shall we imitate Christ's outer life, and ignore the inner life at its base? How reproduce His acts, and smile with high disdain on his motives? How weave the glorious fabric without a fibre of the material from which it was professedly and evidently wrought?

The poet, then, accepts the divine revelation in Christ—accepts it, with the blessing of a grateful heart, for himself and his fellowmen. The simplest soul may read the Word of God in the life and deeds of Christ.

"And so the Word had breath, and wrought
With human hands the creed of creeds
In loveliness of perfect deeds,
More pure than all poetic thought;

Which he may read that binds the sheaf,
Or builds the house, or digs the grave,
And those wild eyes that watch the wave
In roarings round the coral reef."

One might dwell long on this subject, and attempt to show that Tennyson, in a few brief stanzas, gives us here one of the most perfect and profound readings of "the sweet story of old," full of spiritual insight, and yet so simple and rational, that the meanest and the loftiest intellect may meet here, and will meet here, on sure and common ground. But how modestly he speaks,

"I am not worthy even to speak
Of thy prevailing mysteries."

And yet have we not here perhaps the one human standpoint from which the true character of the life of Jesus of Nazareth can be clearly seen, and begins to be understood? To us it seems that though at the present time the voice of Tennyson is little regarded amid the loud confused wranglings of sceptical philosophers and orthodox and heterodox theologians, he has given us, in low, sweet music, a rendering of the truth in Christ, that will be understood and felt long after the noisy debatings about inspiration and miracles have become silent for ever. "Christianity is a life, rather than a creed." This is the teaching of Tennyson. This we believe, is, if rightly read, the teaching of Paul and John. And this is the explanation of the many humble and pious lives, full of good and beautiful deeds, of simple saints who sit with Mary at the Master's feet, and never try to fathom the meaning of the dogmas of their church, though they "believe that they believe" them.

ST. PAUL'S COLLEGE: STONY STRATFORD.

A Minor Public School.

By W. A. Lawson.

THE difficulty of finding a school in England suited to the requirements of parents with comparatively small means—such as the majority of Anglo-Indian officials may be taken to be—is so great, that I have directed my attention to a large and prosperous college in this town, which seems to me to offer the advantage of a good education, combined with unexceptionable associations and moderate charges. The Anglo-Indian parent is usually placed in a peculiarly disadvantageous position, when the anxious question of educating his children comes up for solution. He is regarded with effusive interest by a certain class of schoolmasters, whose talents are in an inverse ratio to their pretensions; and should he be induced to put his trust in the plausible prospectuses of such gentlemen, he will very likely find, on his return to England, a few years afterwards, that notwithstanding the roseate reports of the mental and moral progress of his boys, with which he was periodically favoured, they have been allowed to fritter away the best years of their youth, and to acquire habits of idleness that threaten to result in their being the servants of servants to the end of their lives. That the outraged parent, whose fond hopes are thus cruelly disappointed, does not take the change out of the money-grubbing and unscrupulous adventurer who calls himself a schoolmaster, by administering a sound personal chastisement to him with his own cane, is a proof rather of the law-abiding propensities of the Anglo-Indian, than of his disposition to compound a felony. The education of the lower classes is closely scrutinised by the Government; but the middle-class which chiefly recruits the Indian and Colonial services and commerce, is still left to a great extent at the mercy of reverend gentlemen who have no mercy, or no special qualifications for the duties that they undertake. The Squeers tribe have died out, or have transferred their talents to new branches of industry; but there are not a few Dotheboys Halls yet in the land, from which the anxious parent must fervently pray that his sons may be delivered.

It is not of such an institution that I have now to write, but of a College that is interesting as a type of the best class of the minor public schools of the country in this, as to education, transitional period. My attention was first directed to it by an advertisement in the *Times*, which informed me, among other things, that the Rev. John Pickford (late Sanscrit Professor in the Madras Presidency College) is one of the Classical Masters. This gentleman is so eminent a Sanscrit scholar, and his early retirement from India was so much regretted, that it was but natural to desire to know more of a school with which so accomplished a man had connected himself. Another inducement to make further enquiries, presented itself in the statement that the "inclusive charge for board and tuition, washing, medical attendance, stationery, use of scientific and other educational appliances, is 60 guineas per annum." As this sum is about as much as a parent can afford to pay for schooling, who has no more than Rs. 1,000 per annum to assign for each of his children in England (say, £63 school fees, £7 extras, £15 clothing, £15 holidays, &c.), and very few even second-rate schools are as modest in their demands, I was induced to come here to see for myself how the land lies.

Stony Stratford is two miles from the Wolverton station of the London and North-Western Railway, thirty from Oxford, and sixty from London. It can boast of an ancient origin, since it is believed to have been in existence at the time of the Romans, and to have formed a halting-place on the long midland road of theirs known as Watling Street. The soil on which it is built is composed of a rubbly oolitic gravel overlying the lower oolitic rocks, a formation that is favorable to the absorption of the rather too abundant water supply of the plain in which it is situated. This plain is partly surrounded by gentle hills as fertile-looking as itself, and it is diversified by meadows, umbrageous trees, and thick hedges. The locality has an open and pleasant look about it, without any very marked characteristics. The town consists of little else than a long straight street of single-storied, red brick, clean and prosaic-looking houses, with here and there a small shop, a rather large church, good pavements, and the other accessories of a country place, that, without any manufactures, aspires to be thought well-to-do.

The College is the development of an old school that proved a financial failure, owing to the intellectual torpidity of its conductors, rather than to the dulness of the pupils. What made the present Headmaster, or Warden as he is called, apply himself to the task of evolving order out of the chaos that existed here when he came, I have not discovered. Himself a Fellow of New College, Oxford, a ripe classic, an ardent Churchman, and withal somewhat of a capitalist, the Rev. Walter M. Hatch, to whom I refer, devoted himself to the work of supplying a first class, and tolerably inexpensive school, for the sons of gentlemen, on the model of Winchester, and in accordance with modern requirements. And having invested a considerable sum in the development of his idea, he transferred his proprietary rights to a Company. Unlike Cheltenham, Clifton, Marlborough, and some other proprietary schools, the possession of a certain number of shares is not at this college essential to the admittance of a boy; but this may possibly be required of parents eventually. Meanwhile, the possession of twenty-five £10 shares enables the holder to nominate one boy to be educated at half the ordinary fee of 60 guineas, during such time as he may remain at the school; and the possession of five £10 shares entitles the possessor to a reduction of 10 per cent, say 6 guineas per annum, on the ordinary charges for one boy. These concessions necessarily offer more inducement to the parent of a small boy, than to one whose son is in his "teens." A boy of eight years may be expected to remain at least eight years at school, so the parent by investing £250 would obtain a discount of £252, and at the end of the lad's schooling, would still possess the 25 shares whatever might be their value. That value, a few years

hence, will of course depend upon the success of the school meanwhile; and probably small capitalists will hesitate to become proprietors until that success is assured.

The progress up to date has been rapid, and the present term shows an increase to the list, which now numbers nearly a hundred and fifty boys, of whom nearly a half are sons of beneficed clergymen. The Warden is assisted by the Reverend J. W. Knight, formerly Headmaster of Lichfield Grammar School, as Sub-Warden; by Mr. Moore, Fellow of Magdalen College, Oxford; Mr. Pickford, before mentioned; and three or four other masters of ability in their several departments; and the domestic arrangements are supervised by Mrs. Knight assisted by a Matron of experience. The school buildings comprise a beautiful chapel, a large dining-hall, a lecture room, school and class rooms, large dormitories, and a gymnasium, the whole adapted for the accommodation of two hundred boys; and there are about fourteen acres of playing ground and fields attached to the college. About thirty of the senior boys are provided with separate partitioned bed-rooms, or cubicles, excellently furnished, and suitable for occasional use as private studies—snuggerries in short that render the sleeping arrangements at most of the great schools poor by comparison. The chapel is the boast of the place, for it has been built and decorated with great taste, and almost regardless of expense. The boys attend, surpliced, daily service both morning and evening, and take a prominent part in the choral portion of it, many of them being excellent solo singers.

The following is the school time-table :—6 A.M. first bell for rising, 6-30 silence bell for private devotions, 6-45 roll-call, 7 breakfast, 8 chapel, 8-30 to 10-30 school, 10-30 luncheon, 11-15 to 12-50 school, 1 dinner, 3-50 roll call, 4 to 5 school, 5 tea, 5-30 chapel, 6 to 7 school, 7 to 8-30 prepare lessons, 8-30 supper, 8-40 dormitory. This gives 52 hours of actual tuition a week, and the greater part of a half holiday every day. All Saints' days and church festivals are holidays, and a whole holiday is also given once a month to boys who have passed a satisfactory examination, and behaved creditably during the previous month. The school is divided into two divisions at foot-ball, in one of which every boy is compelled to play three days a week during the season. At cricket, junior boys are required to field for the seniors for one hour twice a week. Every boy is expected to learn to swim, there being two bathing places in the River Ouse close to the playing fields, one with shallow water for novices, and the other with water fourteen feet deep for practised swimmers, the bathing being invariably superintended by a Master. The school is divided into Classical and Modern departments, the former being adapted for the preparation of boys for scholarships at the Universities, or for appointments in the Civil Service, and the latter being for those who are intended for the medical profession or for scientific pursuits. Greek, but not Latin, is optional in the latter department, though parents are urged to allow their sons the opportunity of making at least an elementary acquaintance with that language. Religious instruction, which is imparted by lectures on Sundays, and on Saints' days from 10 to 11, is confined to the Greek Testament, Bible history, and the liturgy and doctrine of the Church of England. The domestic arrangements are based upon a just conception both of the economy in the long run of providing boys with the best of comestibles, and of the duty of inculcating habits of order, neatness and cleanliness during youth. The meals are taken in the Hall with the whole staff of masters, who sit at a cross table overlooking the whole assemblage. In fact, St. Paul's College, Stony Stratford, may be regarded as a Winchester on a rather small scale, with the important difference that its fees are at the least a half of those charged by the great public school that it most resembles.

Since the above was written, the Rev. Walter Hatch, preparatory to entering upon a larger field of duty elsewhere, has resigned the Wardenship of St. Paul's College, Stony Stratford, and been succeeded by Rev. Walter F. Short, M.A. This gentleman was educated at Winchester, and was elected Scholar, and afterwards Fellow of New College, Oxford. He was subsequently appointed to the Headmastership of Oswestry School, which was in a short time raised to a prominent position by his exertions. Being compelled to resign this post by temporary ill health, he became one of the tutors of New College, and filled various University offices. He was Master of the schools, and one of the Proctors in 1870. He was then nominated by the Government to be Chaplain and Classical Instructor at the Royal Military Academy, Woolwich, an office which he has now resigned in order to go to Stony Stratford, where not his least recommendation in the estimation of his boys will be that he is an excellent cricketer, that he rowed in the "University Eight," and that he is as vigorous in body as he has proved himself to be in mind.

THE IRISH CHURCH.

(By Major R. D. Osborne.)

LONDON, 5th June, 1875.

THE affairs of the disestablished Irish Church have attracted some little attention during the past fortnight, though, busied as I was with the more awful tragedy that seemed to be about to come off in Europe, I had not space to chronicle the fact. I do so now; and in truth the matter, though in itself small, cannot be regarded as unimportant. At this moment nothing connected with religion can be regarded as otherwise than of the deepest moment. "What think ye of Christ; whose son is he?" is a question that in one form or another is passionately debated, not merely in reviews and quartos but wherever and almost whenever two or three thinking men are brought together. And I think no one coming to England can fail to see that the number of cultivated men is very few, who are not pronounced sceptics. There are some, like Mr. FitzJames Stephen for example, who are loth to part with dogmatic Christianity, and more especially with the doctrine of everlasting punishment, not on their own account, but because the schools of scepticism have not as yet devised any machinery that is calculated to be nearly so effective for the preservation of property and the repression of scoundrelism generally. Scepticism of this sort is slightly contemptible and exceedingly absurd. The unbelief of men like Mr. Morley, Mr. Clifford, and other writers in the *Fortnightly*, is of a much more sincere character. With Mr. Clifford, for instance, the genesis of the Christian religion is due not to any moral sublimity or spiritual insight in Christ and the Apostles, but to the action of hysterics and hunger. It is an unmitigated evil, which has destroyed two civilisations already—I wonder what two?—and is, unless promptly eradicated, about to destroy a third. The tone these men take up is that to remain a Christian, to do anything for the propagation of Christianity, or to have any association with religious bodies except for the purpose of attacking and destroying them, are profoundly immoral acts which no high-minded man ought to descend to. Of course this kind of rabid nonsense must very soon defeat its own object, and promote a reaction in favour of that which is so unjustly denounced. But the very fact that such things can be said without provoking an outcry shows that the faith of many is waxing very cold indeed. It seems to me as though Materialism had seated itself in the very heart of the English people. By Materialism I do not mean a philosophical doctrine as to the origin of man and the world, but the loss of that spiritual eye, which makes people incapable of enjoying anything but what is addressed to the senses. Luxurious living, rich dresses, a constant whirl of excitement, these appear to me to have become the exclusive objects in life of all classes, from the highest to the lowest. Prices certainly have risen in England, but when people complain of the impossibility of a poor man living here, they mean that he can't ride and drive in the Park, attend Hurlingham, and give grand dinner parties; and living without these diversions does not strike them as a thing which endures contemplation, far less as practicable. The assertions so abundantly made now-a-days by scientific professors, and others who profess to have a scientific turn of mind, that there is no world beyond this, or that if there be we can know nothing about it, tend of course to increase the number of these votaries of pleasure. Life is short, and if there be nothing beyond, let every one seize as much of the pleasures this world affords as he can, and the Devil take the hindmost. One naturally looks round under these circumstances to see what the clergy are doing. Everywhere they are fiddling. It is only necessary to observe the clerical faces one sees in the streets to understand the disregard and contempt into which the doctrines are fallen which the possessors of these faces are supposed to teach. These faces, with a few exceptions, are of one type—sleek, smug, comfortable, perfectly self-satisfied, and bearing no traces of spiritual conflicts or intellectual endeavours. I cannot conceive a more startling contrast than exists between these worldly and unlovely faces and the ideal type of Christianity—the man of sorrows and acquainted with grief, who bears the griefs of men and is bruised for their iniquities.

We laugh at Mr. Trollope's portraits of Archdeacon Grantley or Bishop Proudie. "How true to life," people say, and seldom think what an utter degradation and perversion Christianity in England must have endured before such delineations of Christian ministers could be accepted as correct.

This is a long preface to what I have to say respecting the Irish Church, but it was, I think, necessary in order to expound the full significance of what I have to tell. Ever since the disestablishment of the Irish Church, a Synod, composed of the clergy and laity, have been sitting to determine the creeds, formularies, and modes of worship for the Irish Church of the future. These labors are at last drawing to a termination. The Synod have made certain changes which are a sore grief to High Churchmen, and a great satisfaction to all sensible people. They have, for example, declared that both views respecting Baptism, Low Church and High Church, are equally tenable by ministers of its communion. "How," complains a plaintive Anglican in the *Guardian*, "is a Churchman to remain in a church where he can no longer assert authoritatively that only one view respecting baptismal regeneration is tenable or possible?" How, indeed, most sapient goose? The notorious fact that both views *are* held and allowed to be held had not troubled this noodle; but a declaration that the fact is so drives him to the verge of schism. But this is not the great offence of the Synod. They have actually had the audacity to decree that the damnatory clauses of the Athanasian Creed shall not be read in their Churches. This has proved too much for Dr. Pusey and Canon Liddon. They have written letters calling upon all good Churchmen to come out of the accursed body which has done this thing—"a deformed Church" as Canon Liddon calls it, and possessed by "the evil spirit of Puritanism." They, the Doctor and Canon, are ready to canvass their friends, to raise subscriptions and send out clergy to Ireland to form the nucleus of a "true" Church, where the damnatory clauses shall be recited without the omission of a single syllable. But they exact certain conditions—this "true" Church must repudiate *in toto* the authority of the present Archbishop of Dublin, and renounce all communion with the body calling itself the Episcopal Church in Ireland, which has been guilty of this heresy. Is there any one after this who wonders why scepticism is on the increase; why able and earnest men believe quite fanatically that all regenerative power has departed out of Christianity? A Christian Church, it appears, stands or falls according as it does or does not *recite* certain absurd statements in a forged creed. The unsearchable riches of the Gospel are shrunk to this little measure. Of course the step advocated by these two Divines is dictated by an ulterior purpose. They wish to provide a home for themselves when the Church in England imitates the action of her Irish sister, and refuses any more to declare that everyone is condemned to everlasting torments who does not accept the doctrinal statements of the author of the (so-called) creed of Athanasius. I see that this purpose is acknowledged by another clergyman, who writes in to-day's *Guardian*. He says that the letters of Drs. Pusey and Liddon are to be regarded rather as a warning to the English Church of what would happen did she presume to mutilate this creed; for, adds the reverend gentleman, there are numbers of clergymen in the Church to whom that creed is "dearer than life." In other words, rather than give up the damnatory clause, the High Church party are prepared to secede from the Establishment. For my part, were such a step on their part even tolerably certain, I can imagine no more cogent reason for casting out the Athanasian Creed root and branch. There could be nothing more conducive to the internal peace of the Church, or her resumption of a truly national character, than the secession of the entire sacerdotal party. The Wesleyan Methodists and others of the Dissenting sects might then find their way once more within her pale; and it is only by re-absorbing dissent that she can ever recover her lost ground. Every approach she makes to Rome only weakens the hold she has on the affections of the people.

I have given the above as an example of clerical folly and bigotry; but I have culled a single specimen only from a multitude of similar ones. No one can know the abysmal deeps of foolishness into which seemingly rational creatures can sink, who does not study the religious newspapers. They are on this account really instructive reading. A clergyman, I see, writes to announce that the teaching of Mr. Moody is different in certain important particulars from that of the Church. He does it by way of warning to those who might in their innocence attend these services, and be inoculated with poisonous doctrine. Mr. Moody is not sound, it appears, on the subject of baptismal regeneration. In a recent sermon he cited the penitent thief as one who had been admitted to paradise without being baptised or having partaken of the Lord's Supper, and deduced therefrom that neither of these rites were necessary to salvation. There is a perverted ingenuity in Mr. Moody's argument which makes one laugh; it seems so pertinent, it is so utterly irrelevant, but it is too much for our clerical friend. He puts a query—if Mr. Moody is right about the penitent thief, how does he reconcile his teaching with the words of St. Peter to those who asked what they should do to be saved. "Repent and be baptized," &c. Could the force of human folly go further than this? There is no more convincing argument of the divine imperishable life in Christianity than the fact that the clergy have not succeeded in killing it. Fancy any other system of thought subjected to the same trial; fancy the doctrines of Herbert Spencer or Mill or Comte "preached to death by mad curates" all over England. At the end of six months I am convinced that an outraged nation would demand that every copy of their works be bought up and destroyed, and nobody under pain of instant death be suffered so much as to allude to them.

FRENCH LITERATURE.

PARIS, JUNE, 1875.

THE history of the French Revolution has been often written, but apparently much yet remains to be accomplished to satisfy the demands of criticism and science. That which seemed to be the last word of posterity upon the men and the events of the Revolution, is found not to completely content us to-day. The more we advance on the subject, the more curiosity is awakened. We know the principal personages in the drama, the grand lines of the picture, but there are still figures almost forgotten, whose *rôle* has neither been without interest nor importance. History is right to deal with the summits before descending into the plain; but it is necessary to interrogate the lieutenants, after having heard the captains; to regard the army, after having contemplated the chiefs. Now Paris ever inspired, directed, and even oppressed the provinces during the Revolution, and it is to the history of the movement in the provinces, in that of Auvergne especially, that M. Boudet dedicates an interesting volume. Faithful to the historical method now in fashion, he studies not only the political or public aspect of the men he deals with, but gives us much of their inner life. He has gathered the information on the spot where they lived; he presents the souvenirs of their youth and also of their old age. Strange to state, the fellow townsmen of some of the notorious individuals that history has placed in the pillory, judge them with tenderness and even indulgence. Take for example Couthon and Carrier, whose acts were a combination of infamy and cold atrocity. Couthon in his native town was remarked for his amiability and distinguished manners, and before he played his odious part in the National Convention, was proverbially polite, obliging, religious, and charitable. He was a kind of glass of fashion, composed and recited poetry, and was a pronounced monarchist. It is requisite to be just therefore even towards Couthon. He was ambitious, hypocritical, and false, but he was not a coward, and he died with courage, although such does not redeem his crimes. In Auvergne people still speak of the pacific character of Carrier! And Maignet, the savage proscriber, who murdered and burned in the name of the law, was respected as a model parent, and died at an old age, regretted by his locality. When Couthon was delegated to represent the Terrorists, he permitted no mistake to exist as to his duties; he arrived from Paris at Clermont, with four executioners and five hundred coffins, and notwithstanding, that he loathed the cruelties of Robespierre. Delaure was the best of men in his neighbourhood, was an aristocrat, and belonged to a good family, yet all this did not save him from being the most rabid of Jacobins. He turned artist in Paris and early became famous by painting for an inn, a sign board, representing a king,

a priest, a nobleman, a soldier, and a workman. The king was made to say, "I eat all," the noble, "I pillage all;" the priest, "I absolve all;" the soldier, "I defend all," and the workman, "I pay all." It was a pamphlet of Sieyès illustrated for the mob. Delaure held that royalty was a crime, and no king could perform an innocent act. He was the avowed enemy of the aristocracy, yet his danger in his locality was the opinion that he was an aristocrat. He was the declared foe of priests, yet his appearance was so ecclesiastical, that he was frequently mistaken for a clergyman. On one occasion in Switzerland, when a refugee, the wife of an innkeeper took pity upon his position, and accepted some *pater nosters* and a family sermon, in settlement of his bill; he took for his text, "love one another." M. Boudet thus shows us that an intimate knowledge of men, is the key to history.

M. Jacquinet in his "Fragmentary Studies on Man and Society," has produced the kind of book his countrymen require, full of sense, and toleration. He believes in the progress of humanity, and asserts it is necessary to hold that belief, if not from conviction, at least from duty. He agrees with de Tocqueville, that progress means the procuring for individuals as much well-being as possible and enabling them to avoid the most misery, by equalizing the conditions for the attainment of both. He draws attention to the present condition of France as a proof that good sense, as well as violence, can effect revolutions, and that the most lasting are the pacific revolutions. He asks his countrymen, how is it that they flock in thousands to admire the most beautiful flowers and trees in the public gardens, and never injure either, though unprotected by any guardian, and why they do not similarly respect the constitutional laws of the country. His chapter on true and false judgments is very instructive, and recalls a remark by Paul Janet that to judge well, appears to certain people a quality too common place and mediocre: they prefer to deceive themselves in a brilliant manner, rather than be vulgarly right.

The works of M. Jacolliot now appear in a collected form upon the origin of humanity, religion, travels in India, and the same apparently in spirit land. No author's writings since 1868, have given rise to more controversies between philosophers and linguists, and if M. Jacolliot has received, he has also returned severe blows. It is not intended here to discuss his assertions, but to mention a few of the most prominent. Besides, he does not consider any person worthy of his steel, who has not resided in the countries he describes, so as to know the manners and customs of the country; he has only contempt for men who make the tour of the world in eighty days, and claim to know India because they have touched at Bombay, and slept a night in Calcutta. Critics maintain, that one can know Sanscrit as proficiently as the author, without leaving their study. In any case M. Jacolliot labours to prove, that India is the cradle of humanity, that Greece knew nothing but through Hindoo philosophers, and all that has been made, said and written, since the world existed, was first made, said, and written in India; that there is but one language in the world, of which all others are daughters—the Sanscrit; and only one race of men, to be found in Africa, Europe, and Oceanica—the Hindoo. This certainly simplifies history and humanity. However the idea of an unique centre of creation is not new either for ancient traditions or modern science, but the proofs ought to rest on the connection between languages, beliefs, and human types, and chronology which can alone represent the value of these affinities. M. Jacolliot requires often twelve and thirty thousand years for his facts, and Oriental scholars are not agreed, as to whether the introduction of Boodhism preceded the Christian era by six or ten centuries. On this subject the author does not appear to be happy, and perhaps is not more so on the filiation of the human race. There are laws, ceremonies, and arts, common to all peoples; to find such with two of them, does not suffice to establish the priority of one people over the other. The Greeks and Hindoos are artists, but what a difference: to derive the Parthenian from pagodas is not complimentary. Then no monuments of transition are to be found on the road betweed India and Greece; the links are wanting. The temples of Assyria, respectable in point of age, are of a special character. The Greeks, like the Hindoos, believed in metempsychosis, but so did the Gauls and ancient Germans; so do the Negroes generally in Africa. Such a belief is part of the common stock of human aspirations: a form of the desire for immortality, grosser and more primitive than the simple belief of the immortality of the soul. Apart from his theories, the style of M. Jacolliot is very seductive, full of marvellous and amusing facts. He is a spiritist, so that it is not surprising to learn by his last volume, the extent to which his imagination has carried him away. He asserts that he has witnessed actual miracles by fakirs; one, who moved the leaves of a tree by his will, and another, who executed, by hard, pithy taps on a brass vase beyond his reach, the grand march from the *Prophète*. He defends "psychic force," because the discovery of steam and electricity was received with incredulity. But Fulton and Galvani merely applied natural forces, the *existence* of which no one doubted: it was the possibility of their *application* that was alone treated as sceptical.

M. Ravaisson has brought out two more volumes of his researches among the archives of the Bastille, devoted as the previous four volumes, to the famous poisonings during the reign of Louis XIV., meditated or executed by the Marchioness de Montespan, the King's mistress, against her rivals the Duchesses de la Vallière and de Fontanges, and even against his Majesty himself. The other suspected poisoners were, the Marshal de Luxembourg, the two nieces of Mazarin, the Duchesse de Bouillon, &c. The evidence is enveloped in obscurity. It is certain, that from the moment the revelations became direct, the affair was withdrawn from the legal chamber and the matter hushed up. Saint-Simon states, that the husband of de Montespan pushed his wife in the way of Louis XIV., and then withdrew, to pass the remainder of his days in sorrow for his conduct, dying without ever being able to see the wife he adored. The royal mistress being a profound actress, probably made this story up herself. She superseded la Vallière in the "affections" of the King, and instigated him to take up a hound, and throw it at her, "There Madame, is henceforth your companion, and it is enough." Yet Montespan knew Louis was too egotistical to love any one but himself. To be able to say, he had "the most beautiful woman in his kingdom for mistress," was all the care he had for her. Bossuet and Bourdaloue did not spare the adulterous monarch for his relations with a woman whom he possessed only by keeping her husband in exile. He announced to Bourdaloue: "You are satisfied, *mon père*; Mme. de Montespan is at Clagny," a small village close by the palace. "Yes, Sire," replied the celebrated preacher, "but God would be much more pleased if Clagny were sixty leagues from Versailles." Mme. de Maintenon was the governess of the illegitimate children of de Montespan, whom she at last superseded in the affections of the monarch. It was her sage counsel to the royal lover, to hush up the accusations against Montespan, that won his esteem; for he was not accustomed to encounter such moderation and disinterestedness. *Louis never knew the full truth about* the poisonings, and even had he, it is certain he would have recoiled from a judicial investigation. How could he be severe on crimes arising from the passion he himself inspired, and how could he try her who had borne him eight children, of whom five were legitimatized: the honour of his bastards and the "reputation" of their mother forbad it. To silence slanderous tongues, he continued to visit Montespan, after he had attended mass, and for ten years she was a sovereign without power, effective authority having passed into the hands of de Maintenon. But Louis has not silenced history.

The Germans boast that, after Italy, no nation is superior to them in knowledge of that country, hence Leipzing publishes a special review—*Italia*. The past of Italy is full of human vitality, but it is no secret that her intellectual life has not followed the soaring of her political and economical *renaissance*. Berlin and Carlsrhue have each their reviews—the *Deutsche Rundschau*, and the *Deutsche Warte* respectively. They illustrate the feverish and the cool way of viewing subjects. In the first, politics form the *pièce de resistance;* in the second, history and literature are approached with serenity. In the *Deutsche Warte* M. Wittstock has a very interesting article, showing that it is an exaggeration in Germany, as indeed in France, to maintain that Locke exercised a powerful influence on Rousseau: that influence is to be traced to Rabelais and Montaigne, the latter above all. Its impartiality makes the Carlsrhue Review very excellent reading. M. Duboc quotes a phrase from Schopenhauer: "the French *idée*, and the English *idea*, have a sense, ordinary "and well defined, but a German when spoken to about an idea, is "taken with vertigo, loses his presence of mind, and appears as if "in a balloon." Very excellent articles are devoted to Mill and Michelet, that on the Russian fabulist, Krylof, the Lafontaine of the North, is excellent. He died in 1844, and at 50 years of age commenced the study of Greek and succeeded. A singular book, full of erudition, poetry, and imagination, and which can be read with pleasure and without fatigue, is *Anthropologic Memoirs* by Von George Gerland. He scouts the idea of man being a mere mechanical development; that there is no abyss between the organic and inorganic world; and that the first is but the consequence of the second. Man, was at first an agriculturist, before being a hunter.

The sixth volume of Lamartine's Correspondence extends over the years 1812 to 1852, almost all the political life of the author, and therein comprising his rise and fall. The letters are few which refer to 1848, but it is difficult to write in the tempest when one hand is occupied with the helm. There is nothing new in the book, and historians will find neither revelations, indiscretions, nor treasons of the pen. Lamartine has been described as a poet, who, one day, to amuse himself, disturbed his country. He prided himself upon being the soldier of an idea, of ideas which were God's. Lamartine's passion was pride, which produced his *ennui*; he hated no one, but he disdained all the world. Yet it was not the pride of his talent as an orator or a poet he hugged, but the pride of his ideas. The glory of the poet disgusted him against poetry, so he ended, by applying poetry to politics. France, he said, wants idols, not statesmen, and the only statesman to be found, was—himself. The secret of Lamartine's *ennui* was this; he returned after his voyage to the East loaded with debt, a million of francs at least, and the object of his life was to pay off his creditors by work. And he worked bravely to the last. Scott could not surpass him in his efforts to balance his schedule. He was elected in 1849 to the Legislative Assembly that he might enjoy the remuneration of a Deputy, 25 francs per day. When he visited England in 1850, to find money to work his estate that the Sultan gave him in Syria, he failed. England would not give him money—nor did they take it from him at hotels or railways.

EDITORIAL NOTES.

THE news from Burmah is very contradictory. First we heard that the King had without the least demur acceded to all our requests. The Karennee country was to remain independent, and we were to be allowed to send troops through His Majesty's dominions when and how we pleased. A day or two after this announcement, a telegram came to the effect that a rebellion had occurred at Mandalay. We waited anxiously for some days, and heard that the "information originally telegraphed from Rangoon is incorrect;" and that the news from Burmah is altogether unsatisfactory, the King having given another *casus belli*, in having directly refused to allow our troops to pass through his territory. This would of course prevent our sending a mission to Yunan with a sufficient escort, and stop a retributive expedition against the people who attacked Colonel Horace Browne's party. A special meeting of the Imperial Council has been held at Simla, and rigorous measures may be looked for. A telegram from Rangoon states that the "result of the mission gives great dissatisfaction to the mercantile community of this province. Trade is still dull."

***

LORD G. HAMILTON in reply to Mr. Lowe in the House admitted that the N. W. Civilians had been badly treated, but would by no means allow that the Government had broken faith. His logic, we suppose, is of some such nature as follows: Circumstances have been allowed to interfere with the fulfilment of the promise of Government, and Government has not given careful heed to control these circumstances—has, perhaps it may be admitted, created them, though of course with the best intentions. Though Government would have been glad to see the service getting their rights, they have not got them; and we cannot even yet see our way to give compensation for past losses, nor to entirely prevent any such in the future. But we have had good intentions all along, and have so still. Therefore Government has not broken faith with the service, and Civilians shall have their rights in future, whenever it does not appear to Government more desirable to allot them to others.

Mr. Lowe will not be put off in this manner, and we shall hear more of his proceedings by-and-by. It is not that Lord G. Hamilton loves the Civilian less, but that Mr. Lowe hates the Government more. But if the service get justice done them, it would be a pity to grudge Mr. Lowe the use of their claims as political capital.

***

THE *Indian Mirror* gives one answer to the question, why Missions in India are not more successful. We notice an attempt to answer the same question in the *Indian Evangelical Review*. We have ourselves been trying to find an answer to it. It is one of the questions of the day in India, We are so far from thinking that Christian Missions have failed in India, that we believe the good they have done to be incalculable. Yet we believe that their results are far from being commensurate with the mighty power inherent in the Gospel of Christ; and if that be so, it is of utmost importance to know, if they can be known, the real obstructions that are to be removed. The *Mirror*, which certainly deserves a hearing on the subject, declares in substance that Evangelicals are stupidly blind to the real nature of Hindooism. Hindoos, however enlightened, are classed by them with Esquimaux and cannibals. Enlightened natives believe that Hindooism, however deeply buried in a parasitical growth of error and confusion, till it has been almost lost in the blackness of ignorance, still contains within it much that is noble, beautiful, and true, and that cannot and will not perish. And the *Mirror* seems to think that Christians must recognise the truth that is in Hindooism, before we are fully qualified to recommend to Hindoos the truth that is in Christianity. There may be some ground for this opinion. Perhaps the spirit displayed in Paul's address to the Athenians is not sufficiently discernible in the tone of missionary sermons. There is altogether, we are afraid, too much self-satisfaction among us Christians. Until our Christianity can a little better stand the test of the precepts of our Master—say in his Sermon on the Mount—we very much fear we shall not soon overcome the world.

***

WERE we inclined to preach, or felt that we had a vocation, the same journal suggests a fertile subject. By a man's unrestrained conversation, you may discover the spirit he is of. We recommend the whole article on "Conversation" to the study of our readers. To those who are indifferent to spiritual experiences, the following may not have much meaning: "If a number of devotees meet, who are all passionately fond of the Lord, they cannot "but discourse on their most favourite theme, the sweetness of the "Divine Name. They will speak with rapture of their own experiences of the Lord's loving-kindness, the joys of communion, and "the salutary effects of prayer, and the sweet hopes of a sure immortality. Nay, they will go on for hours exchanging with each "other their pleasantest thoughts of God and eternity, and will be "intoxicated with the sweets of spiritual conversation. All this is "natural and inevitable. Where such conversation is wanting among "fellow-believers, we should feel inclined to question their mutual "attachment, as well as their professed joy in the Lord." Now, admitting that the Brahmos have learned much from Christianity, they have certainly not learned *that* from their intercourse with Christians. Is it not a fact that in almost any company of professed Christians, even of professing *converted* Christians—for, unhappily, we must make the distinction—such conversation as that described above is almost unknown. There is much talk about our churches, and church-schemes, about men and books, about religious meetings and religious machinery in general, much that deserves no higher name than religious gossip; but if a frank individual here and there makes an effort at real spiritual fellowship, how the fountains of speech become sealed and the most loquacious fall silent. The Brahmo Somaj claim to do better.

***

PRINCE BISMARCK has dissolved the Prussian Press Bureau, on account of its indiscretions during the late war panic. An official journal may be useful or even necessary, but a semi-official press is sure to be mischievous. We have yet to learn this in India, where we would gladly see a paper avowedly official established.

***

THE *Spectator* is not quite satisfied with the Archbishop of Canterbury's letter on Mr. Moody's Revivalist movement, but thinks the primate should have spoken out more emphatically against the preacher's "favourite superstitions." His great moral blunders, it seems, are "the mischievous doctrine, that an instantaneous and "dateable conversion is an almost universal condition of the Christian life, and the still more dangerous practice of encouraging small "social meetings for the mutual confession of private sins, and for the "guidance of consciences." But for these blemishes, the *Spectator* could give its hearty approval to the movement. But can it not see that the doctrine of sudden conversion, and the instrumentality of the enquiry meeting, are the most powerful forces in the movement? With these, the electric influence of the speaker is all powerful over a large class of hearers. Without them it would, we believe, effect little. In fact the life of the movement is its power of effecting those swift conversions, the necessity of

which, the *Spectator* thinks, an ignorant superstition, and its value is to be estimated by the character of such conversions. If it can be shown that the doctrine of "instantaneous and dateable" conversion is mischievous, it must follow that the movement itself is, in the main, mischievous. If we remember aright every conversion described in the New Testament is a sudden one.

***

No law can take cognizance of the mere intention to commit a crime, but when one man makes to another a proposal to kill a third, for a stated price, it seems clear that an overt act has been committed which may be, and ought to be, punishable by law. There was, however, no such law, in the Belgian statute-laws, but one is now introduced on the suggestion, not to say at the bidding, of Prince Bismarck. The frank and ready manner in which Belgium has admitted the defect in its statute-law. and has proceeded to supply it, takes away from the proceeding somewhat of the appearance it has of obedience to bullying. But as nearly all the Criminal Codes of Europe have the same defect—not that of England, however—Bismarck ought to make a similar suggestion all round.

***

THE European war panic is over for a time, thanks, partially at least, to the friendly representation of our own Government. The exact nature of that representation is still a secret, and the question of importance is, was it such as would have committed England as an ally on either side in the event of its having proved unsuccessful? We can scarcely believe that it was. Had war ensued, England would have washed the blood from her hands and looked on sorrowful but inactive. We have no doubt that the moral weight of Britain is still considerable on the Continent, and yet, we fear, that though it might turn a doubtful balance to the side of peace, it would not effect much if the angry parties had really resolved on war. Germany and France are each of them able, or will soon be able, to put a million men into the field, and two such clouds as these are pretty sure to meet in thunder before long. What England will do in such an event is for us the question of questions. The feeling at home seems to be growing stronger against the peace at any price party. Professor Beesly even writes in favour of putting on the shelf his doctrines against expenditure on armaments. The fact is not without significance. And we have no doubt that the more Parliament comes under the influence of the working classes, the stronger will be the tendency to war. We shall yet wade through blood before we reach the millenium.

***

DR. ROBSON has written a remarkable report on the condition of primary schools in Bengal. It appears that the rules laid down by Government in certain instances, actually compel the teachers to do as little work as possible. Take the district of Backergunge. Here the "system of primary education" contains no provision for offering inducements to a *guru* to exert himself to increase the number of his pupils, or to push them on in their education. Indeed, it might be plausibly argued that the fixed allowances which have been hitherto assigned to *pathsalas* without any regard to numbers or efficiency, have made it the interest of a *guru* to have the smallest number of pupils compatible with the existence of his school; for the Government allowance continues the same whether he has fifty or fifteen, and it gives him much less trouble to teach the smaller number. It is satisfactory, however, to find that girls as well as boys, are being taught in some of the primary schools, such as they are. Hindoo parents do not object to their daughters being taught generally, in the village school. In the Backergunge district about 250 girls are reading in *pathsalas*; and Dr. Robson recommends that teachers should receive a pecuniary stimulus, with the view of enlarging the sphere of primary female education. As regards aided schools, Dr. Robson tells an amusing story, and the kind of thing thus illustrated is no doubt going on all over the country: "As a contrast to the progress which girls make in the *pathsalas*, I shall conclude this section of my report by describing the state of things in an aided girls' schools that I fell in with in my tour. This aided girls' schools was at Boakati, where there is also a *pathsala*. The latter I found to be in a very unsatisfactory state, teaching a very low standard. While examining the *pathsala*, I thought it a very extraordinary circumstance that a village, where the education of the boys was at so low an ebb, should be so advanced as to have an aided female school of its own. That Bengalee villagers should care more for the education of their girls than their boys appeared something like a reversal of the fixed course of nature. As I expected, the girls' school turned out to be a mere sham. There were nine girls present, seven of them mere infants, who where amusing themselves with smearing ink on palm leaves: the other two had learned the alphabet. And this is the result to attain which Government gives a grant-in-aid of Rs. 60 a year, and the managers profess to give another Rs. 60."

***

A "FLY-SHEET" is being liberally circulated at Oxford, setting forth five reasons why it is desirable that the selected candidates for the Indian Civil Service should be sent to the University. One of these is "because they wish it themselves;" which, if it were a fact, would go far to settle the matter, without any correspondence between the Vice-Chancellor and the Government. Another is, "because they would have opportunities of society and of becoming known to one another which they cannot have in London," a proposition which would have been amusing if it had been intended as a joke. It is also benignantly explained, that the residence of these selected candidates in Oxford "would tend to cultivation of Oriental studies among us," and that "the training of the Indian civil servants, upon which the welfare of India so greatly depends, is a work worthy of the University." On analogous grounds, the *Examiner* suggests that every member of the Legislature should spend a couple of years at Oxford before taking his seat. Indeed the one reason of the whole five that is in the slightest degree practical, is that if the selected candidates were compelled to pass their time at Oxford, they would be "under superintendence and some degree of discipline:" or, to use the measured phrases of the Hebdomadal Council, "that the inconveniences and dangers attendant upon residence in London away from parental control, have long been seen by thoughtful observers." Of this beautiful sentiment, Mr. Thorold Rogers profanely remarked that it was "all nonsense," and he might very well have said the same of the five "reasons" in Mr. Ward's fly-sheet. The simple fact is, that there is no provision at Oxford—nor can any possibly be made—for giving the selected candidates what they want.

***

THE "upper ten hundred" and the "great unwashed" of London have done all in their power to impress the puny potentate of Zanzibar with an exaggerated idea of his importance. Syed Burghash who, it would appear from the telegrams, is regarded with fatherly interest by Reuter, is thirty-eight years of age, of middle height, and "of courtly manners, which latter qualification he "possesses in common with all the Sayids of the Al-bu-Sa'id fa-"mily." The African territories over which he is the nominal ruler embrace a littoral of 1,100 miles, including the islands of Zanzibar, Pemba, and Monfiyyah. Those on the mainland have no defined limit towards the interior, being chiefly inhabited by heathen tribes, who pay no taxes, and at a distance from the coast only acknowledge the authority of the Sultan when it suits their own interest to do so. The Island of Zanzibar itself, the only semblance of a Government in those parts, with a population estimated at 300,000 souls, contains an area of about 400,000 acres, and the soil is generally extremely fertile. Like most Eastern towns, it consists of a congeries of narrow streets, with a few good houses, including the Sultan's palace, facing the harbour. The harbour itself is commodious, and the supplies are abundant. Many intertropical fruits grow luxuriantly on the island, but its principal sources of revenue are the clove, the sugar-cane, and the cocoanut, the two latter recent cultivations. The Arab masters of the plantations are comparatively civilized, but have greatly degenerated, owing mainly to their relations with the slaves, who are the principal tillers of the soil. Formerly the Sultan had a respectable navy, but most of his vessels were destroyed by the hurricane of 1872. His military force consists of a few hundred Persian, Beloochee, and Hadhramauty irregulars, who, with the exception of the Beloochees, are not trustworthy. Still, Zanzibar is gradually improving, and, with a little timely help, might do much good in the way of civilisation and commerce. Its trade is increasing, and Sayed Burghash seems to be animated by a sincere desire to encourage it in every way. The recent establishment of the postal line between Natal and Aden, through the British Steam Navigation Company, touching at Zanzibar and intermediate ports, will greatly add to the importance of the place.

***

Now that the Oudh Land Revenue Bill is coming before Government, our readers may like to know something of the relations between the landlord and tenant in that province. We produce then an ordinary lease, from a lithographed form before us, translated of course. This is given by men considered to be superior landlords, and

its issue is not disapproved of by Government officers. It is considered indeed a distinct step in the right direction :—

"This land is let to you for cultivation during 1283 Fuslee, *i.e.*, for one year you should cultivate the land in question well, and be punctual in paying the rent according to the instalments fixed, further you will have to pay the usual zemindaree dues (*Behree*) on *Bhoosa*, *Rab*, *Ras*, *Pooal*, Sugar-cane, as well as other expenses, &c., (*oghaira*). You will be precluded from cultivating the land after harvest unless the rental is settled afresh and a fresh *putta* given. The lumberdar shall be competent to make any increase or decrease in the jumma and also to eject."

It will be noted that on sugar-cane, the only crop ordinarily raised which requires much labor and yields great returns, there are three different taxes in kind, one on the stalk, one on the fresh juice, one on the treacle. And none of these taxes are defined in amount: consequently the tenant can never calculate beforehand how far these inroads upon his sweet stuff will go. The landlord says in fact: "You pay the rent, also let my canker worms and palmer worms take whatever portion of your produce which seems to them right and proper, and then you go out at the end of the year, or pay a higher rent." We may note that the lease in question did enhance the rent, and that lest the tenant should be discouraged by its rasping terms they were entered in Urdu, a language which he could not understand. This consideration for his feelings would not avail him at the end of the year. There are about two million of cultivators in Oudh; nine-tenths and a half of whom occupy on conditions whose insecurity of tenure and stringency of terms are indicated above. What parallel can any other province in India shew? Whence is to come the Elphinstone or Munro who is to reconcile property and labor in Oudh, and rebuild on the one essential basis of protected industry the fabric of national prosperity? The Portias of Lucknow are, it is complained, on the side of the Jew.

***

THE *Indian Evangelical Review* deserves perusal by all who take an interest in the progress of Christianity and civilisation in India. It is honest, and in its zeal for the success of missionary labour, by no means conceals facts that are unpleasant. Intemperance, which seems to threaten to conquer India, "is making sad havoc in our native Christian communities." This is true alike of Hindoo, Mussulman, and aboriginal converts. The writer advocates total-abstinence as the only remedy; and not only among the natives themselves, but among missionaries and other European Christians. The native Christian will not give up his *ganja* and his peculiar liquors unless "the missionaries give up their brandy." It seems to be admitted on all hands that moderate drinking is impossible to a native, and as the disciple is, as a rule, not greater than his master, it seems too much to expect abstaining disciples while the teachers take a little wine or brandy for their stomach's sake. The subject is certainly a difficult one. We fear it is too much to expect that Europeans, as a class, will ever give up the moderate use of stimulants. Missionaries and a few others may, but if the salvation of native Christians from drunkenness depends on the abstinence of European Christians generally, we fear they cannot be saved. Is the sweet self-sacrificing doctrine of Christ, unable to save them without a new ceremonial law?

***

THE Rev. Lal Behari Dey makes a vigorous onslaught on a writer in a former issue of the same *Review* who brought several serious charges against Bengalee Christians. This writer was "one of themselves." So, of course, is Mr. Dey. The former has many faults to charge his brethren with: the latter proves to his own satisfaction that there is not an *iota* of truth in any one of the charges. Mr. Dey's blows fall thick and fast. His logic comes down like a steam hammer. It will crush anything that is not too strong to resist it. Whatever is too strong to be crushed, it comes down upon all the same, and, its momentum being unchanged, it seems quite unconscious of the possibility of its blows recoiling. Now we have a great respect for Mr. Dey. He is an able and intelligent man. And whatever his own opinions are worth, so much is the value of his article. And when he declares himself unconscious of the existence of the least foundation for charges brought against his brethren, we are bound to believe that he is unconscious of it. But we can testify from our own personal knowledge that if Mr. Dey is right, many of our most earnest missionaries and friends of the cause are wrong, and are vexing their souls from day to day over evils that have no existence. We fear Mr. Dey is on the mountain top and cannot see what is going on among the crowds below.

***

ANOTHER paper in the same magazine puts the question, why Missions in India are not more successful; and the answer is one which merits earnest study. The subject is too purely theological to be discussed by us, but the writer seems to be on the right tack. We hear a great deal of the external obstacles, and have always thought that if Christianity is what it professes to be, and is rightly taught, these obstacles ought to give way. It is attempted to be shown in this article, that the power of the Gospel is weakened by technicalities familiar to Europeans, but meaningless, or worse, to the Hindoo mind. It would need to be stript of much of the theological language that has gathered over it, till it has too often concealed the real truth of the future.

***

THE nation has heard so much on all hands of late years of desertion in the army, and the deteriorated physique of the soldier, that it is a relief to find these complaints reduced to their proper dimensions. The same trick of memory by which men contrive to divest the past periods of their life of almost everything but what was pleasant therein, is apparent in the general comparisons, which each age is accustomed to make with preceding ones, to its own disadvantage. Thus the men of the present day are neither as strong, nor the women as fair, nor the rich as gentle, nor the poor as virtuous, as they all were a hundred years ago. We are familiar with this tendency, but few perhaps suspect that it is a radical delusion. When the Eglinton Tournament was held nearly 40 years ago, the men who went there expected to find that the armour of those who went before them, would be so large that they would not be able to fill it. But the fact was, there was not a coat into which any of them could get. And so it has been since the world began.

The late debate in the Lords seems to establish beyond doubt that the men are neither younger, nor of less powerful physique, nor of a lower *morale* than they were 20, 30, or 50 years ago. On the contrary, there is a marked and very great improvement in every respect. Writing of the recruits of 1829, the Duke of Wellington said :

> The man who enlists into the British army is, in general, the most drunken and probably the worst man of the trade or profession to which he belongs, or of the village or town in which he lives. There is not one in 100 of them who when enlisted ought not to be put in the second or degraded class of any society or body into which they may be introduced.

Lord Cardwell fairly enough challenged the House to contrast this picture with the real character of the present army. Replying to Lord Hardinge he said :

> Now let my noble friend look at a return laid on the table by the present War Department, and let him bear in mind what sort of men were recruited in 1829. Let him also look at the table which speaks of the Courts-Martial, and he will there find that the number brought to trial has gone on diminishing. Let him look at the good-conduct pay, and he will find an ample increase. Of the age and chest measurement I need not speak, because the illustrious Duke has, I trust, for ever set at rest the questions raised on these points. Let him look at the return on Education, and he will see the extraordinary improvement which appears to be going on. And if he wants to know what the behaviour of these men is, let him ask the noble Duke how the 30,000 men behaved who went into the district of Salisbury, where the people had not seen a soldier since the days when William III. marched from the West. These men conducted themselves in such a manner that they left behind them a reputation which, I can tell him, produced a marked effect on some of the most distinguished foreign officers who were present. Well, then, I ask you, is it patriotic, I would almost say, decent, to be perpetually speaking of these men, engaged to defend us against a foreign enemy and to fight for the honour and interest of their country, as if they belonged to the most contemptible portion of the community. I want to know from what other portion of the community you could select 30,000 men and move them into a strange country like Salisbury, from whom there should be no case to go before a magistrate and no instance of abuse.

There was neither reply nor attempt at a reply to this challenge, and it is reassuring in the present electrical state of Europe to know that England could place within *a very few weeks* of the outbreak of a war 100,000 of such men under arms for foreign service : no mean contingent even in these days.

***

IN the course of the late debate in the Commons on the exclusion of strangers from the House, Sir William Harcourt is reported to have told its members that it would not have half the influence it possessed, if it were not for the publication of the debates, and he proceeded to assure them with delightful frankness that the moment the reporters went away, the mission of the House of Commons was at an end, and the only point was to get back the reporters as soon as possible. "The House recognized the fact that, practically, it could not go on without the reporters."

It is really so. The House would be powerless in the presence of a free press, were its debates not published. The Fourth Estate would have swallowed up the other three, and the country would be governed by an irresponsible power. Mr. Butt seems to have told a good story of O'Connell's quarrel with the reporters in 1833. At a public meeting of which he was chairman he denounced in very strong language the reporters of the daily papers, whom he accused of willfully falsifying the reports of the debates. The result was that they came to a resolution not to report him, and his name appeared several times in the debates followed only by a line or two, in which he was simply represented as either having supported or opposed a motion. He moved soon after that the printers be summoned to the bar of the House for publishing the debates, when Sir R. Peel and others spoke strongly in condemnation of the course which had been taken in reference to Mr. O'Connell. Sir R. Peel, among other things, said that he did not believe the course of not reporting him would be persevered in, but that if it were, means would be found of doing him justice. Mr. O'Connell then withdrew his motion, in deference, he said, to the general expression of feeling in the House. The next morning, however, in the *Times* newspaper, a letter appeared, signed by all the reporters of that journal, declaring their determination not to report any speeches which Mr. O'Connell might make, until he retracted as publicly as it was made the calumnious charge which he had brought against them. The *Times*, commenting on the letter, regretted that it was prevented by the resolution of its reporters, who had the entire sympathy of their colleagues on the other London papers, from publishing Mr. O'Connell's speech of the night before. This was on Saturday, and on Monday Mr. O'Connell, moved that the printers who published the debates should be summoned to the bar of the House, but the motion was lost by a majority of 105, the members being 153 to 48. Mr. O'Connell was equal to the situation, however, and again rose and insisted that strangers should be ordered to withdraw. The next day another letter appeared from the reporters, in which after using some very strong language, in reference to Mr. O'Connell, they said that they would not give any further trouble to the high-minded gentlemen who had voted on their side, and begged to announce their intention to return to the discharge of their duties, and out of respect to the House of Commons and for the convenience of the public, to deal in future with the speeches of Mr. O'Connell as with those of other members. So Dan triumphed after all.

***

A SERIES of essays—sermons on certain devotional work—has been commenced at St. James's, Piccadilly. The Rev. Dr. Farrar of Marlborough College, while delivering the first of the series on "De Imitatione Christe," remarked that "it is the worst error "of Romanism, and the source of all her other errors of ambition "and arrogance,—and it needs to be watched against in the English "Church also—that it intrudes into the sacredness of the soul's "individuality, and thrusts all kinds of intermediates between the "creature and the Creator." We believe he is right, and yet we see with admiration, how a strong soul, of powerful original instincts, can rise superior to the most pernicious system. Dr. Newman says on the subject: "Only this I know full well, ... that the Catholic Church allows no image of any sort, material or immaterial, no dogmatic symbol, no rite, no sacramant, no saint, not even the Blessed Virgin herself, to come between the soul and its Creator. It is face to face, *solus cum solo*, in all matters between man and his God. He alone creates; He alone has redeemed; before His awful eyes we go in death; in the vision of Him is our eternal beatitude." No language could be more emphatic than this: but how is it with the unlettered poor?

***

FAMINE threatens Roumania, the people round Erzeroum being chiefly apprehensive of its results. A correspondent writes: "The fall sowing is reported in good condition, and the spring sowing though late, may yet do well. We will, therefore, hope for the best, though the possibility of famine, even in these favoured regions, forces itself upon our thoughts. And this the more as we see that causes similar to those which have brought on famine in other parts are operating here. One of these causes is the lack of adequate means of communication. In the summer season the Trebizond carriage road helps a little, but in the winter that is closed to carriages, while many other roads leading to this city are utterly impassable, except by foot-passengers. So, if a remote district should enter the winter months with a short supply of provisions, it would afterwards be impossible to supply the deficiency at any cost. The present heavy tithe of 12½ per cent, in addition to the numerous other taxes that must be paid in cash, and in good money, obliges the mass of the peasantry to sell themselves short every year. And if perchance anything remains over from one year to another, their poverty forbids the building of suitable granaries, and as a last resort holes in the ground are dug and the grain buried. In time of need these granaries are opened, when it is too often found their contents are spoilt."

***

A CORRESPONDENT of the *Times* gives some striking facts in proof of the sudden attachment which the King of Burmah has shown for his Chinese neighbours. He has permitted the establishment by the Celestials of fortified posts within thirty miles of Bhamo, thus virtually giving them a large portion of his kingdom, while he has publicly declared that Manwyne in no way belongs to Upper Burmah. Some say that he is only carrying out on a larger scale the policy he has so successfully initiated in his own palace—that is, to pit one of his relations against another and benefit himself by the misunderstanding. In this case, China may be the catspaw. He has now his elder brother confined as a prisoner in his palace, and is so fearful of conspiracy that he dare not move out of the fortifications for fear of his relations and dependents seizing his throne and not letting him come back. Being much too holy to place his foot to the ground, he is carried by a powerful retainer whenever he wishes to go into his garden. One morning this most trusted attendant dropped a sharp poignard from his dress, as he was assisting the King on to his shoulders. The King seized the man, who confessed that he had been bribed to assassinate His Majesty. Another time his guards were but just able to shut the gates to save him from an attack by the heir apparent. Unfortunately, a member of his Privy Council happened to be on the wrong side of the door and was cut down, but this rising was eventually quelled. Notwithstanding his being shut up within his palace, and unable to mix with the outer world, he has picked up a large amount of knowledge, and may be fairly termed the astutest Prince of the East.

NEVER has any enterprise called forth so much enthusiasm at home as the departure of the Arctic Expedition from Portsmouth, a few days before the last mail left. As the hour of sailing approached, the stillness in the crowded harbour became oppressive. Four o'clock sounded from the dockyard clock, and with the first stroke the two ships moved from the jetties. The transfiguration which thereupon ensued was startling and overpowering. So intently had the eyes of the spectators been directed to the ships that no one seemed aware of the pictorial accessories of the scene, but with the actual starting of the expedition everything appeared to spring into life. The decks of the fine ships that lined the jetties, the yards and ratlines of the men-of-war in the stream, and the shores on both sides were clad with people. "Good-bye and best wishes for your success" was signalled from the flag-ship. "Thanks and farewell" was signalled back, and as the *Alert* and the *Discovery*, piloted by the *Fire Queen*, with Admirals Elliot and M'Clintock and Captain Sullivan on board, and accompanied by the *Heather Bell* and other steamers, sailed down the harbour channel, such cheers upon cheers rent the air as were never before heard in Portsmouth. The rigging of the *St. Vincent* training ship, presented a sight that will not be easily forgotten. It was a dense, unbroken, living mass that extended from the bulwarks and covered the topmost sky gear, and the roar which the lads gave forth as the vessels passed was heard far above the general diapason. Of course the excitement communicated itself to the crews of the expedition, for soon some adventurous seamen clambered to the mastheads and skylarked upon the verge of the yardarms, while Captains Nares and Stephenson, Commander Markham and the other officers acknowledged the plaudits of the multitude from the bridge. Turning up the eastward channel to the Spit buoy, the scene that met the eyes of the crews was unique, and rendered the scenes that were presented at the same spot on the visits of the Sultan and the Shah colourless by comparison. The ships are not expected back for three years.

THE blood of the martyrs is the seed of the Church it would seem, in a sense less metaphorical than is usually given to the proverb. Early Christians, it is said, were accustomed to treasure among other relics the blood of martyrs, sometimes in sponges and articles of clothing that had been dipped therein, sometimes in phials. In the Church of St. Chiara in Naples, the miraculous liquefaction of

the blood of St. Januarius was witnessed on the 1st of May by a correspondent of the *Indo-European Correspondence*. The blood of this famous martyr is preserved in two phials. The head also is enshrined in a silver bust. On the first Sunday in May is celebrated the feast of the translation of the body of the Saint from Pozznoli to Naples. There are two processions from the Cathedral to the Church of St. Chiara, one in the morning with the head, and another in the evening carrying the blood. The head and blood are placed on the altar, the presence of the head being necessary to the liquefaction of the blood. Certain conditions it seems, are in most cases necessary to the performance of such miracles. Faith and prayer, without these conditions, do not suffice. Would it not be possible by careful investigation to arrive at a Law of Miracles? The correspondent saw the blood at the beginning of the procession, and kissed it. It was perfectly hard. Through the kindness of a reverend friend, he was then placed in a favourable position for seeing the miracle. He stood within twelve feet of the officiating prelate, "no less a person than "his Eminence Cardinal Riario Sporza, a member of one of the no- "blest houses of Naples and of Italy, and Archbishop of Naples." The prelate held the phial between himself and the light, and then between the spectators and the light, to show that there was not the slightest change in the condition of the blood. Prayers were now commenced and continued for forty minutes, during which time the phial "never for a second left the hand of his Eminence," until at last the liquefaction began. In about a quarter of an hour more, the mass became liquid and was handed round to gratify devotion and pious curiosity.

"Is this a miracle or is it not?" asks the correspondent. We, of course, answer yes: and all who say no, are Scribes and Pharisees. But if it can be proved that the Church has sometimes lent its high sanction to imposture, we suppose most men, not Catholics, will consider it easier to believe that it may do so again, than that this occurrence is miraculous. But the nature of the miraculous agency is worthy of study. We have noticed that it demands certain natural conditions. It seems, morever, that the political, or ecclesiastical atmosphere affects it. "Neither does this liquefaction "take place always; for when any evil or disturbance is impending "over those regions, it does not become liquid, foretelling the "troubles by its state of quiet." Intelligent Neapolitans say, "that "ever since the commencement of the present revolutionary era in "Italy, that is, since 1848, the liquefaction is always tardy and "imperfect."

The correspondent is right in one point at least. Religious human nature has a strong craving for the miraculous.

> "For Faith's first born, and best-loved child is still,
> And still will be, a miracle."

And while the demand exists, the Church will doubtless be able to procure—we shall not say create—a certain supply. But it is becoming difficult now-a-days.

THE *Correspondence* supplies us with a sketch of Italian Freemasonry from the *Month*. It throws light on the present crusade against that confederacy. Up to 1871 the Italian lodges were entirely under French influence. Gambetta and his Government, which it is aserted was neither more or less than the "Red Lodge," had of course the support of the Italian brethren. Hence, the visit to France of Grand Master Louis Frappoli. Hence the assistance of Garibaldi's troopers. But Gambetta failed, and the Commune—the last card of the brethren—fell. Fortunately at this juncture, Freemasons discovered that Germany and not France was the land of hope. "Prussia was hated because she was supposed to represent religious faith and divine right." Now it was found out that "the success of the German arms and the prosperity of Germany" were due "to Protestantism and the spirit of absolute individual independence, in other words, to the masonic beau ideal." Henceforth the Lodges of Italy were governed from Berlin and not from Paris. The Italian "Grand Orient" made due profession of penitence to the Berlin "Royal York." "Garibaldi and his troopers became of a sudden useless, and very soon left the fleshpots of France for their native polenta." Frappoli was sacrificed, and Joseph Mazzini became head of the Italian Freemasons, and since then the Italian Lodges have been at one with the Berlin brethren. The great bond between them is hostility to the Catholic Church. The following is the *Month's* translation "from the jargon of the Lodges" of what is declared "in a pamphlet by D. W. Smith entitled "Ourselves and the Ultramontanes": "That Freemasonry is at war with positive Christianity, that it aims at propagating an atheistical humanitarianism, and making all mankind into one free family, an international object demanding an international organization. Its immediate purpose is the overthrow of the Catholic Church, and its ulterior end, the destruction of all political and social order. We are in the presence of a great league of European Freemasonry, the centre of which is Berlin, and which aims at the empire of the world."

And Bismarck and old King William are, we suppose, the tools of the Freemasons. No wonder that the Church has determined to take to her weapons, and that Father Lafont as a valiant son of the Church has blown the trumpet in Calcutta. While we seek the life-blood of the world-monster, let us lose no opportunity of pinching even its toes.

***

THE Freemasons must have got into the Universities of Belgium, for the students of Liège and Ghent have been making a series of "cowardly and savage" attacks on pilgrim processions. "Loaded canes and *knuckle-dusters*" have been freely used, and where these could not be applied, the unlucky pilgrims were hissed and spit upon. Many thousands of pilgrims arrived by train at Ghent on their way to the shrine of Our Lady at Oostacker. By the intervention of the troops they were protected while departing from everything more deadly than hisses and saliva, but on their return to the city, the students, now better organized, did some execution with "loaded canes and *knuckle-dusters*," and the priests, in particular, were mauled unmercifully. "One poor farm labourer was struck down with a knuckle-duster and killed;" and an impious jury brought in a verdict of "Died by sunstroke." On the whole, however, the pilgrims seem to have been not altogether destitute of muscular Christianity. At one time they forced the students to beat a retreat, and at Oostacker one rash youth who attempted to seize a banner found himself instantaneously in a wayside ditch, and was so thoroughly frightened that he took to his heels, and, the Flemish paper adds, "he is running yet."

***

THE *Freeman's Journal* urges the country to make earnest preparation to celebrate O'Connell's centenary on the 6th of August. Writing on the 15th of May, the anniversary of the date of the Liberator's death at Geneva, the journal becomes almost poetical as it tells how "in the calm, bright beauty of an Italian evening, and whilst the Church and convent bells were ringing the hour of *Ave*, the greatest Irishman of our century was passing tranquilly away from earth, and before the midnight had come O'Connell had yielded his soul to God." He bequeathed his heart "to the Rome of his faith," and his body to the "Ireland of his national love." It was this devotion to the Church that enabled him to achieve so many political triumphs. During the past thirty years "prejudices have been cleared away that hid from many eyes the full splendour of Ireland's illustrious chief," and it is now evident that if there be any hope for Ireland it must be "realized by the adoption of the principles of O'Connell." It remains for the Irish people to show by the manner in which they celebrate the approaching centenary of his birth, whether they are, or are not, worthy of O'Connell. "These be thy gods, O Israel!"

***

"GREAT minds run in parallel channels," and if the *Revue des Deux Mondes* has not found a mare's nest, a wonderful similarity is to be observed between the attitude of the Berlin Government towards the public press, and that of the Government of India. The "Press Bureau," endowed out of the confiscated property of Hanover and Hesse, is the home of a remarkable industry at Berlin. There are manufactured, and thence are distributed with magnanimous generosity, what does the reader suppose?—Opinions! Editorial sanctums are often blest by celestial visitants bearing letter-press from the "Central Press Bureau," which, if it be otherwise objectionable, is recommended by one attribute, it comes gratis. "'All I want' M. de Bismarck observed on one occasion, 'is that the papers should give me space for my communications from Berlin; they may fill up the rest of their columns as they please.'" Not quite so fast, M. de Bismarck: who caused the woes of the *Frankfurter Zeitung?* What about "the stoker and five folders who were examined on oath by a criminal magistrate with the view of finding out the author of 'Where are the five milliards?'" Why was the editor of the *Frankfurter Zeitung* kept in durance vile and not allowed even to buy his own provisions, or get his meals from his family? And when this gentleman was forbidden to edit the paper or engage at all in literary work, the business manager was judicially examined concerning the authorship of certain articles, and on his refusal to give information, a fine was inflicted! But probably the *Frankfurter Zeitung* did not hospitably entertain the

angels from the "Press Bureau." We do things better, or at least more quietly, in India. Hypocrisy is sometimes said to be a kind of homage paid to religion, and perhaps the method of dealing with the Fourth Estate in India is after all a kind of lame homage to the liberty of the Press.

***

In consequence of Mr. Knight's absence from Calcutta, the Editorship of the *Friend of India* will be provisional for a few weeks.

THE WEEK.

We have now more reason than ever to suppose that a secret understanding exists between the King of Ava and the Chinese; for it is only on this supposition that we can account for His Majesty's obstinacy. When we consider that it was at Manwyne that Mr. Margary was murdered, and in its neighbourhood that Colonel Browne's party was attacked, the absurdity of our troops being debarred by the Avan autocrat from exacting vengeance, in the event of the Chinese refusing to make ample atonement for the double outrage, becomes self-evident. If the King was obstinate when our Ambassador was present at Mandalay, there is little probability of his yielding now that he is relieved of Sir Douglas's presence. If His Majesty did not lie in stating that Leh See Tahee was the accredited Imperial Ambassador to his Court, the Imperial Government is directly concerned in the question; but this matters little, for, if Leh See Tahee has been acting on his own responsibility and is inclined to rebel against the Central Government, it is equally our duty to proceed against him in satisfaction for an outrage which the Chinese Imperial Government would only be too apt to pretend it could not itself avenge, owing to the rebellious attitude of the Momein provincial authorities. The position of affairs in Momein is such, that if the British officers who have been deputed to investigate the case locally, are allowed to proceed to Manwyne, they will probably be added to the roll of victims diplomatically offered up at the shrine of treacherous barbarism. Sir Douglas Forsyth was, it appears, merely instructed to obtain an explanation—more or less satisfactory—as to the circumstances of Leh See Tahee's reception at Mandalay, to insist on the Karennee question being settled from our point of view, and to demand a right of way for our troops in the event of its becoming necessary to punish the provincial Chinese authorities of Momein. By far the most important demand was the last, which the King is said to have met by a flat refusal. The right of way for British troops constituted the only substantial guarantee for the observance by the King of his treaty obligations. But in order to place our relations with Mandalay on a sound footing, Sir Douglas should have been also instructed to make demands in the interests of Burmese trade, to put a stop to illegal monoplies and ruinous trade-imports, and, above all, to prevent the future humiliation of British representatives, and secure for them and the British Residency at Mandalay an adequate guard of our own troops.

Apropos of Burmah, the *Pioneer* announces that "the instructions given to Sir Douglas Forsyth were explicit and decided. He was to proceed to Mandalay, demand a personal interview with the King, and, waving all unimportant questions of etiquette, in language firm but conciliatory, inform the King that no room for future misunderstandings could be permitted; that as a preliminary to any discussion whatever, he must give the required assurance that he would scrupulously maintain the *status quo*, himself verifying the record. The King's refusal to grant this indispensable condition was to have been accepted as the rupture of all present relations, and he was to have been warned that any aggression upon the disputed boundary would not only be repulsed, but regarded as an act of war, and be followed by active operations on our part such as might cost him his kingdom. This stage reached, Sir Douglas was to have retired to Rangoon and telegraphed for further instructions." This is satisfactory, so far as it goes, but what we complain of is that the *status quo* is in many respects, outside of the Karennee question, far from satisfactory. There is something mysterious about recent telegrams from Rangoon. Unconfirmed rumours are the order of the day.

Why does the Government persist in keeping a score of policemen at Bhamo without a commander, but with rifles and several thousand rounds of ammunition? The Burmese would pay them well for the use of their arms in case of war, and as they would be crucified if they attempted to remain neutral, it is not unlikely that the whole of them would go over to the enemy. Besides Bhamo, Maoobeng, Henzadah, Myanoung, Prome, and other stations where British officers and treasure remain, are in danger of attack and destruction at the hands of a gang of desperate daceits. The *Rangoon Mail* contains the following information with reference to affairs generally :—

Reports from Mandalay lead to the belief that the King is going to try to put Sir Douglas Forsyth off the objects of his mission. It is said that in accordance with his instructions, the King was asked, how he received our enemy Lee Seh Tahee. The King is said to have at first denied the right of our Envoy to make any such questions, and then to have refused to enter upon any business on account of the Boodhist Lent, which will not be over for more than a month. Every care seems to be taken that the public shall know as little as possible of what is going on, and in consequence the apprehensions of the Burmese on our side are increasing considerably. The greater portion of those in Pegu thoroughly believe in the strength of the King, and our behaviour in our relations with him forms a strong ground for such belief. They forget the past entirely, and that in our *two previous wars* we obtained large portions of the royal territory. They believe thoroughly tha the King has formed strong European alliances antagonistic to us, and think that the Chinese who have without doubt 100,000 men and large stores of grain collected at the scene of Margary's murder, have promised His Majesty their powerful aid.

Sir Douglas Forsyth left Rangoon for Calcutta yesterday.

Syed Noor Mahomed Khan, cousin of the rebel Nowroz Khan, has been appointed to the charge of Lallpoorah. The Ameer addressing the Khan in durbar, said: "You will get twenty-five thousand rupees a year for the post, out of which you will have to pay three thousand rupees to the son of Nowroz Khan, thirteen thousand rupees to the other members of your family, and nine thousand for yourself, Two confidental Mullicks with two hundred Jazailchees will be posted at the thanna of Shulman and a cantonment of troops at Lallpoorah. I congratulate you, Zurdad Khan, on your appointment to so responsible a post." A number of the Khyber chiefs have visited Cabul and asked the Ameer's forgiveness for the stoppage of the trade routes. Kokan is disquieted on account of the sickness of its Khan, who is being attended by two Russian doctors from Tajkund.

Notwithstanding the animadversions that have appeared in the Rangoon and other papers on the manner in which the Karen famine has been dealt with, we think time will show that the Deputy Commissioner of Tounghoo has done all in his power to mitigate the evil, and that he has met the difficulty with success. A correspondent informs us that the clans are not at all under missionary influence. On returning from his tour through the Karen country, in April last, Major Lloyd visited all the villages of these wild tribes and induced the people to come down for assistance. A complete history of the famine will no doubt be one day laid before the public, and it will then be seen that while Government was occupied in grappling with a far more overwhelming disaster in Bengal, the welfare of these savage tribes, nominally our subjects, in the most distant corner of our dominions, was not lost sight of of by either the Government of India, the local Government, or its servants on the spot. We say nominally our subjects, because most of them pay no taxes, and scarcely acknowledge our authority; and many at first refused to accept Government aid, lest the fact of their doing so should be taken as a token of allegiance. At the last meeting of the Relief Committee, held in Tounghoo, the Rev. Father Biffi read a report which showed that between May 4th and June 8th, he had been instrumental in relieving 1,244 persons with the funds of the Committee. Of the Rs. 400 he had received there still remained Rs. 113 in his hands. Father Biffi explained that his assistance generally took the form of small donations either of money or rice to such afflicted people as he might encounter in his visitation. He was of opinion that owing to the beneficial measures of Government, the necessity for private relief was disappearing. Should the Indian corn the people had planted result in a favourable harvest and the rats not return to commit their depredations, there would soon be a sufficiency of food on the hills. The Rev. Mr. Bunker's report showed he had expended all the money the Committee had allowed him in purchasing paddy, which he had distributed among the Gyaikoo and Konoung villages, and in aid of a colony of Karens lately formed on the plains. The state of affairs among his villages was very different from what Father Biffi described as existing among his own parts, and there was still a considerable amount of distress. A Burman had conveyed to the hills for sale 400 baskets of paddy. He proposed purchasing this as the rate (Rs. 90 per hundred baskets) was not excessive considering the difficulties of transport, and he was confident it would prove of immense assistance. His account showed a balance of Rs. 23 in favor of the Committee. The Rev. Dr. Cross reported that he expended Rs. 200 in assisting the Shwaylai and Lutoh and Kyouk colonies, which had lately been established on the plains. The remaining Rs. 200 was far less than he required, but he had heard reports of great destitution

among the Pakus which he was anxious to relieve. It was agreed to place the balance of the funds of the Committee at the disposal of the missionaries.

THE Howlongs are reported to be on the war path against the Shyloos, a tribe now living near our eastern boundary line. The Howlongs have for some time kept themselves aloof from British officials in their neighbourhood.

SIR JOHN STRACHEY'S resolution on the policemen of the North-West has certainly had good effect in one way. Rundheer Sing—a robber who had infested the country for many years—and several other distinguished dacoits, having been either shot or arrested. Information of the whereabouts of the men was given to Mr. Finn, who, accompanied by a few followers, went in pursuit, and soon discovered Rundheer Sing and his friends apparently safely esconced on a boulder-covered hill, a hundred and fifty feet high, very precipitous, and altogether a natural fortress of considerable strength. The chief of the robbers was the first to fall, and as night was coming on, Mr. Finn scaled the hill and gallantly concluded the work of extirpation before twenty minutes had passed.

ONCE again has our railway system failed in an emergency. Heavy floods in the Central Provinces have led to a stoppage on the Great Indian Peninsular line, and other railways. Through booking beyond Jubbulpore is stopped. A telegram from Nursingpore states that the line is damaged, in places, for twenty miles. Every assistance, however, is rendered to passengers, but the train does not arrive at Bombay till four hours after the appointed time. Mails for this side of India are delayed twenty-four hours, as it is not safe to cross the breaks after dark. It is expected that the damages will be entirely repaired within a week.

OUR LIBRARY TABLE.

The Death Tribute of England to India.—Dr. J. Mouat. There are few questions of greater political importance connected with India than that of the cost, in the lives of her children, which Great Britain must pay for the maintenance of her magnificent Eastern Empire. The general and scientific interest of the question is scarcely of less concern than its State relation; for now that increased facilities of communication have caused, and are causing, a large and constantly increasing current of European life to flow to the eastward, for purposes of business or pleasure it becomes a matter of national importance to ascertain the real and unavoidable risks of such migration, and to draw from them practical lessons for present use and future guidance. Dr. Mouat holds that the mortality tables of the various Indian funds, civil and military, are not correct estimates of the *present* value of European life in India, or exact indications of Indian risks now; that much of the sickness and mortality among Europeans in this country, commonly and generally debited to climate, is due to other causes; that the epidemic diseases do not exercise such an exceptional influence on the death-rates of Europeans as to need exceptional consideration in the construction of Tables of Life Assurance; that in the tropics there is a balance of proclivities to loss of health which reduces many irregularities in the apparent incidence of disease—the abdominal organs, in India, for example, taking the place of the organs of the chest, in England, in their importance as sources of disease and cause of death; that a temperate person in easy circumstances, with a first-class insurable life, has, in the ordinary course of an Indian career, as fair a chance of survivorship as he would have had in more favoured countries; and lastly, that the rates of assurance levied in England are sufficient to cover Indian risks in *carefully* selected lives.

A glimpse of the old order of things is afforded in the writings of Sir James Annesley, who mentions incidentally that of 1,366 European gentlemen in the Madras Presidency, 115 died in the years 1813, '14, and '15—not quite 40 per 1,000, but considerably more than double the number of officers who died in India in the decade above referred to. According to the same writer, the mortality among 1,260 European officers of the Madras army, in the year 1820, amounted to nearly 60 per 1,000, of which the highest proportions were furnished by the Infantry, Cavalry, and Medical Departments, the Artillery losing about half the proportions of those branches of the army, and the Engineers none at all. Coming to more recent times and more exact figures, the mean mortality of Mr. Samuel Brown's Tables gives a rate, for all ages combined, of 26 per 1,000 for military, and 19 per 1,000 for civil lives; while Woolhouse's Tables, which begin at a later period of life, give a mean death-rate of 34 per 1,000 for the lives of military officers. Dr. Twining, one of the best of the early writers on tropical diseases, in speaking of Europeans who have been a few years in India, says that: "Most of the evils arising from high temperature are borne with less suffering; but debility, and a sense of lassitude from slight exertion, is easily felt. However, it must be acknowledged that the power of accomplishing undertakings, which require extreme mental or bodily exertion, is much modified by the habits in which individuals may have usually indulged. Nothing is so destructive of energy of body and mind as habitual indolence and inactivity in a tropical climate. Those persons are undoubtedly the most happy who have sufficient inducements and opportunities to keep themselves always employed in useful occupations, and they alone preserve their vigor of body and mind unimpaired during a long residence in India." Admitting all this to be true, continues the same eminent observer, "it is certain that no care as respects our habits of living and occupations of mind can completely counteract the effects of climate; and a tendency to chronic disease of some vital organ is found to take place much before the ordinary period of senescence in Europe."

This, which nearly contains the whole question, as stated by one of the most trustworthy writers on tropical diseases, was written in 1835, and was perfectly true of that time, when Hill Stations were unknown; when the chief health resorts of Anglo-Indians of the higher classes were the Cape of Good Hope and Australia; when officers were tied to unhealthy localities and unable to leave them; when the European population of India was almost exclusively confined to the official classes; when the habits of society in general, and of military society in particular, were very different from the habits of our time, and when the laws of health were imperfectly understood at home, and altogether ignored abroad. In those days it took weeks by river, and days by road, to reach stations to which a traveller can now be carried in a few hours by rail. At some seasons, and those the most unhealthy, in some districts, and those the least healthy, all movement was practically prohibited by want of carriage, and supplies of all kinds were scanty and precarious. All this is reversed now, and the old medical aphorism has become a literal truth as respects India: "Plurimi morbi, multis remediis domandi, tempestate vel cœlo mutato, sponte evanescunt aut levantur."

Tamil Hymn Book.—Rev. W. E. De Riemer. There have been doubts expressed often as to the possibility or the wisdom of attempting to write out native metres with European notation, and the Rev. M. De Riemer confesses that the task is a difficult one, and that the music so written is liable to be constrained or cramped. "But to say that the task is an impossible one, betrays an ignorance of the perfection to which musical science has arrived. Probably there is no sound or succession of sounds capable of utterance by the human voice—be it high or low, long or short, heavy or light, single or compound—which cannot be represented in musical notation, and again reproduced by a real musical artist. Consequently the difficulties of such a task must diminish with the increase of scientific knowledge. I do not claim to have an artist's ability, but if I have succeeded entirely or in part in my endeavour to catch and reproduce these lyric tunes, I shall be repaid for the effort. As to the desirability of making the effort I have not the least doubt. I shall feel assured of the gratitude of every European missionary who desires to see good native music in use among the churches over whom he has charge, and who has hitherto searched in vain for a standard of song by which these congregations could be trained."

The Childhood of Religion.—E. Clodd. One-half of this work is what the *Athenæum* calls "twaddle," while the rest, answering to the title, contains chapters on the ancient religions of the Hebrews and the Hindoos, on Zoroastrianism, Boodhism, Confucianism, and Mahomedanism. For an illustration of the author's manner of work we will look at the twenty pages—"a greater length than I had intended"—which he allows to "the ancient and modern Hindoo religions." "A lifetime," he says at starting, "would not compass the study of its sacred books, and it is a religion hard to explain." Confessing by implication that he has not compassed the subject, he wisely makes no attempt to explain it. He tells us that "veda means 'knowledge,' 'science,' and is a word kindred to our English 'wisdom,' 'to wit,' and the many like words," and that Reg-Veda means "Veda of praise," that this sacred book contains more than 1,000 hymns, some of them 4,200 years old, and that "some 600 years before Christ every word, every verse, and every syllable was counted, and the number agrees with existing copies as nearly as one could expect." He quotes from eight of the hymns addressed to the principal gods, and mentions a few of the myths concerning these gods, assigning the first place to Agni, the god of fire. "He it is," he says, "who lives among men, who is the messenger between earth and heaven, the sole guarding and guiding power left to shelter men and dispel the gloom when the sun has set. His wonderful birth, from two pieces of wood rubbed together, is sung in glowing language; the ten singers are ten virgins who bring him into being; the two pieces of wood are his father and mother." He tell us that "one by one Indra, and Agni, and the rest fell from their high places to lower ones, and became symbols of the supreme soul, Brahma or Brahm"; but he adds, "Of the subtle system which had birth in those times nothing can be said here." He does say a little about Brahma, Vishnoo, and Siva, a little about Brahmanism and a little about the later degradations of the reformed creed, and, finally, he informs us that "Brahmanism is slowly giving way before the higher teaching of Christians and Mahomedans, and of a few earnest men in its midst who are striving to purify it, and to win the Hindoos to the simple creed which underlies the world's great religions, and which shows itself in doing and not in dreaming." But the chapter fails altogether to give any account of the "childhood" of Brahmanism, or of the early idolatries out of which it grew, or of the later idolatries that have grown out of it.

Administration Report of the Ajmere and Mhairwara Districts.—One of the chapters of this publication contains useful information about the gems and minerals found in Ajmere. Prismatic corundum or chrysoberyl is found among the Toda Hills near Rajmahal on the Banas in irregular rolled pieces, small and generally of a light green color: these stones are considered by the natives as emeralds, and pass under the name of "panna"; but they are much softer than the real emerald of India, which

is generally green-colored sapphire. Schorl occurs abundantly in the vicinity of Ajmere and elsewhere in the districts: very beautiful crystals of it are found imbedded in milk-white quartz: minute crystals also occur very abundantly in some of the granite: it is also found in massive broken and rolled pieces near the abandoned copper mine adjacent to Ajmere; and has been mistaken for lucullite (or black marble): the crystals become electric by heating. Chrysolite is found in the form of small pebbles of a pale green color and semi-transparent in the bed of the nullah near the same mine: it is not, however, sufficiently colored or transparent to be of any great beauty: it melts with borax into a greenish mass. Garnets are to be found in abundance in beds of various nullahs that flow from the schistose hills: they are generally small, but are sometimes of considerable size; their form is usually a rhomboidal dodecahedron: they are of a claret-red color, and more or less transparent. Quartz is very abundant, and chiefly common quartz; rock crystal, milk quartz, and calcedony are also met with frequently: onyx of a coarse kind is not uncommon in detached pieces; and hornstone is found in the same way. Cornelian—rolled, or broken—pebbles are found in the beds of some nullahs, both of white and reddish veined varieties, but very impure. Heliotrope or bloodstone is found in small detached irregular pieces in the beds of some nullahs, but it is generally of a green color, and seldom has red spots. Jasper is rarely found in rolled pieces among the sand of the nullahs; it is of a dull liver color. Carbuncles are found near Sarwar (in the Kishenghur territory), a town on the road from Ajmere to Kekree and Deolee. Shafts are sunk about twelve feet, and the rough carbuncles are dug out.

The Karens as a Race.—Rev. E. B. Cross. A valuable contribution to our knowledge of the Karen people appears in the last number of the *Evangelical Review*. The writer believes the Karens to be a very primitive race, although in some of their tribal varieties they show evidences of mixture with other races. In this respect we seem able to detect traces, in some instances plainly marked, of mixture with Shans, Taliens, Burmans, and even Madrasees or Hindoos. These last, however, are not so plain or well defined; but in a few cases they are so distinct as to give the observer a strong impression of the fact. This supposed mixture with some of the dark-skinned tribes of the Asiatic Aryans, has been frequently stated by the more intelligent and learned of the Karens.

The Karens when found in a savage state, differ slightly in their habits of life, from other savages. They are degraded and cruel. They seem to place little more value upon human life than upon the life of brutes, where the question of killing is concerned. They are extremely indolent so far as regular work is concerned; yet their mode of living compels them to very hard labour for some months of the year. "The women are far more industrious than the men, who seem to have to be forced to work by the simple necessity of food. They were never cannibals so far as known, but there is nothing so loathsome or disgusting as not to be food for them. Caterpillars, snakes and lizards are eaten by them without hesitation. In a savage state they preyed upon one another without pity or consideration. In this way they became segregated and broken up into nearly as many warring parties, as there were villages or chiefs. They attacked each other as if in an endless state of warfare, and yet no chief became powerful enough to add the country of his neighbours to his own. Feuds among them were rarely settled except by the extermination of one party by the other." As they were first found by the missionaries in Toungoo, clans and warring parties often consisted of single villages. Sometimes two or more villages were in league, but chiefly because they were of family kindred. Alliances were rarely extended beyond such family relationship. The paths leading to every village were beset with traps; spears or sharpened bamboos, were fixed in the ground in concealed places, to wound the feet of an aggressor and prevent his approach. The houses of the people were all built as if constituting one house. In this way, when attacked, they were ready for united defence, or prepared to make their escape together. Their suspicion and fear of one another took countless forms, and extended to every feature and manner of intercourse. If a village was visited by an individual of another village or by a stranger, the proper signal of approach had to be given before entering the village, or the visitor was taken for a spy or an enemy, and subject to death as such. The same precaution had also to be taken in leaving the village, after having been received and entertained. The retiring visitor left with the consent and the fair understanding of the chief, or forfeited his life as a consequence. The rule was that he would be followed and assassinated, and it was generally put in practice. This custom subjected the first missionaries, who were Karens, to the most serious difficulties and dangers.

Excise in the North-West.—An interesting statement has been prepared by Mr. Macnaghten showing the quantity of spirits sold per shop and the prices obtaining in different districts. The statement is avowedly tentative, and the results are not to be implicitly relied on. It would appear, however, that there is no very extraordinary difference in the average ratail price per gallon throughout the provinces, but the average profit per shop varies from Rs. 21 in the Cawnpore district to Rs. 555-8-0 in the Meerut cantonments; and the variation in incidence of license fees per gallon is still more striking, the Meerut district returns showing an average of Rs. 1-15-6, while those of Ghazeepore show five annas only. The low incidence in the latter district is rightly attributed by the Commissioner to the faulty system of assessing the shops in classes instead of according to their several capabilities. It seems improbable that competition and the varying strength of the liquor are responsible for all, or nearly all, the difficulties presented by the statement. It is, for instance, *primâ facie* unlikely that a Meerut publican would be content to pay Rs. 92 for his license and secure a profit of only Rs. 40, when by crossing the Ganges and bidding Rs. 82 at the Moradabad sales he could reap a profit of Rs. 146. It would be more satisfactory if the Commissioner were in future reports to explain some of the most striking differences in the statement, the nature of which seems to meet the requirements of Government.

The highest average number of gallons issued per shop is in the Bareilly cantonment, where it is 1,300; and here, too, calculating the average retail price at 10 annas a bottle, or Rs. 3-12-0 a gallon, the average profit per shop are the highest, *viz.*, Rs. 925; but we expect that in this instance the retail price has been calculated too high, and should be reduced to 8 annas a bottle, or Rs. 3 a gallon. We put it at the higher price, which appeared to be that of the Bareilly district, but competition would doubtless make the price less in the city and cantonments than in the district.

Speaking generally, profits per shop are, as was to be expected, largest in cantonments (which in the case of Meerut, Bareilly, Agra, and Futtegurh, include the neighbouring city), and in those districts, *e.g.*, Moradabad, Shahjehanpore, Benares, and Mirzapore, the returns of which include the head-quarters city. From Dehra Doon the revenue from country spirit has always been high, but we cannot account for the high average profit per shop in Bulundshuhur and Futtehpore. In the former district the average incidence of the license fee per gallon is much less than in the neighbouring districts, and it is low in Futtehpore, but as compared with 1872-73 the revenue from license fees has in 1873-74 been doubled in the Futtehpore district, and for 1874-75 the Collector has licensed 115 shops for Rs. 6,878, or Rs. 2,000 more than was realized in 1873-74. In Bulundshuhur, too, the license fees have been considerably raised for the current year, 57 shops having been licensed for Rs. 5,304.

LETTERS TO THE EDITOR.

THE VISIT OF THE PRINCE OF WALES.

To the Editor of the Friend of India.

SIR,—As might be expected, some of the native papers have already begun to cry out against charging the Indian tax-payer with the expense of entertaining the Prince, should he come among us. I only allude to the subject in order to express an earnest hope that there is sufficient good feeling in the country to discredit such talk at once. These writers are in the habit of recalling with admiration the days of the Mogul, when there were never less than 5,000 elephants and 12,000 horses in the royal stables; and have just been wailing over the fall of a prince who spent two-thirds of his revenue upon Brahmins and prostitutes; and it is difficult to restrain some indignation when they almost in the same breath, grumble at having to pay the railway expenses of their Sovereign. For be it remembered that, if the Prince comes to this country at all, he will come, *not as future King of England, but as future Emperor of India—not as the modern successor of Elizabeth* as she journeyed to Kenilworth, but as the son of Akbar as he visited his father's conquests in the Deccan. Let us hope that the complaint arises, not from disloyalty to the throne, but from a feeling that England, being a millionaire among the nations, ought to pay for all, just as some politico economists think it no injustice to throw the whole weight of taxation in any given society upon the rich. Certainly I would never blame a native politician for trying to get as much out of England for his country as he can. But there should be a limit to the demands of India; and considering that we contribute nothing to the annual income of the Prince, it would be disgraceful to throw upon another country the cost of the few months during which he will be with us in the twofold relation of monarch and guest. It is natural that on such an occasion there should be a difference of opinion as to the mode in which, if he comes at all, the Prince of Wales should appear before his future subjects. If we take Mr. Mackenzie of Kintail's ground that he should discard civilized notions of taste and dignity, and accommodate himself to those of the East, it is clear that his best course would be to borrow the Lord Mayor's coach, hire a team of half-a-dozen piebald horses from Sangster's circus, and descend from this equipage at every halting-place into a pair of golden scales to be weighed against rupees and pice for distribution among the loyal spectators! I have no doubt that at such a sight Ramsing, Khudabux, and Bapoolal would acknowledge with one consent that Aurungzebe himself was out-done, and that no regal virtue was wanting to their future monarch except a stone or two more weight for the purposes of the last-named ceremony. It is obvious, however, that, willing as John Bull may be to dazzle the eyes and win the hearts of his subjects, there are limits below which he cannot descend without loss of dignity, for which no amount of evanescent popularity could make amends. *The ass in the lion's hide is absurd enough, but the reverse spectacle of the British lion arrayed in red silk tights, spangled coats,* and such like womanish frippery, would be *something more than* ridiculous. The humblest native has sharp enough wits to know that spangles do not necessarily imply power, nor the absence of them weakness, and it is well that their future Sovereign should proclaim, even by the emblems with which he is surrounded, that his rule is something very different from all that has gone before.

O.

DISESTABLISHMENT OF THE INDIAN CHURCH.

To the Editor of the Friend of India.

SIR,—The chief argument that runs through your recent article on Disestablishment, and expressed in various ways, is that "religion is a natural part of government," "part and parcel of their con-

stitution as a government," &c. You endeavour to give force to this argument or statement by recalling the past history of India, from which you make it appear Government in former days was always associated with, and regulated by religion, Hindoo or Mahomedan, and that the Christian religion by the present conquerors only replaces that of their predecessors. You do not give prominence to this as an historical accident, but adduce it to prove a principle—*viz.*, that "religion is a natural part of Government." It is not necessary to your argument, you say, that you "should attempt to prove that the Christian religion of this country or any other form of it, or indeed any particular religion, is true. True or false, it seems to us that some religion, if it be believed to be the true religion, or to be better than any other religions prevailing in the country, must necessarily form an essential and recognized part in the system of a Government which believes, or professes to believe, in that religion." It is refreshing to meet with a statement of so broad and comprehensive a character as this, instead of the miserable side-issues that are raised by many on this question. Allow me to make the following remarks :—

1. I submit that religion, *as such*, is no natural or necessary part of good government. You agree with me, I suppose, when I say that the end of all good government is the general well-being of the people. We agree, further, in saying that the well-being of the people is best promoted when government is administered on the principle of equal justice and benevolence to all. Now these principles have a religious and non-religious aspect; a Divine (or, if you choose, a superhuman) and a human character. In regard to the former, that is, to our relations to our Maker, the principles of justice and benevolence are religious; they are elucidated and applied by Divine teaching and command. In regard to the latter, they are purely moral, that is, they affect and regulate our relations to each other as human beings. So long as the principles of political justice and benevolence are recognised simply in their mundane or human character, as ultimate principles of morality in every human breast, they form a workable basis of political government. But when you introduce the Divine or superhuman element, those sanctions or motives in connection with moral principles which each man derives from his peculiar beliefs concerning God as superhuman things, you unsettle the whole working of political government, owing to the variety and even contrariety of those religious beliefs. When a Government says, "We will endeavour to govern according to the principles of true justice and benevolence," a whole nation, all mankind, can understand and agree to such a declaration; and if they have respect for, and confidence in, the moral integrity of their rulers, they will not ask very carefully what religion they profess, but will allow to each ruler private liberty to apply such religious sanctions or motives in the discharge of his public duties as he may conscientiously think right and true. It is enough for them that he is a man of strict justice and benevolence. Should rulers or legislators say, "We will endeavour to govern according to *Christian*, or *Mahomedan*, or *Hindoo* principles of religion," the instinctive sense of justice of intelligent people would at once resent and protest against such a policy. People wont have a right to say, "We don't want to know about your private religious views: these are for a man in relation to his Maker; and about which all men have their peculiar and various beliefs. We want a government based on principles on which all men agree, be they religious sanctions to these principles or what they may." Just as, when a man is punished for some unjust action, he is punished not because he breaks a precept of the Koran, or the Institutes of Menu, or of the Bible, but because he has broken a *just law*; so we expect that our rulers in making laws and enforcing them, will do so, not because they find these laws in certain religious books, but because the laws are founded upon the eternal principles of justice and benevolence which find a place in each enlightened man's breast.

2. If religion, *as such*, is to be regarded as a necessary point of government, all good government becomes impossible. For religion is as various as the races, nationalities, and minds of men; but the broad principles of morality, on which alone just government is possible, are as universal as the enlightened portion of the human race. If Government legislate or rule on Christian, Mussulman, or Hindoo religious principles, *as such*, they tacitly protest against the religions they exclude from their principles of government; and that negative protest is an injustice to the professors of these religions, and as such it is bad government. The injustice is all the greater, when not only is government declared to be conducted on the basis of a religion which many, perhaps the majority, of the people deny, but when Government also compels the people to support by their money the institutions of what is to them a false religion—when a Mussulman legislator declares that he enacts or enforces a certain law because it is according to the Koran; when a Hindoo acts similarly, because he is guided by his caste rules; when a Roman Catholic legislates or rules according to a Papal dictate, or from fear of purgatory; or a Protestant frames his laws and enforces them according to his interpretation of certain texts in the Bible—laws would be promulgated and enforced which would exclude and oppose each other, according to the age or religion of the dominant sect; and in such variety and discord of politico-religious principles, good government would be impossible. But when a man, keeping the purely religious aspect of the principles on which he legislates or rules within his own heart, and between him and his Maker, professes to rule on the principles of equal justice and benevolence to all, then, if he is an *honest* man, his government must best commend itself, and be ultimately most beneficial to the mass of the people.

3. As a matter of fact, religion is not an integral part of the Government of India; and never was intended to be. The Queen herself is a Christian, but the Government, as such, is neither Christian nor anti-Christian; it is neutral with regard to religion. This is the policy of the Proclamation issued after the Mutiny. The introduction of the Anglican Church by the British Government into India, and its original endowment were intended not to declare the religious or Christian character or policy of the East India Company or the British Government, but, as is stated in the Preamble to the Letters Patent of George III in 1814, the Church of England was established because "the doctrine and discipline of the United Church of England and Ireland are professed and observed by a considerable part of His Majesty's subjects," and because "no sufficient provision hath been made for the supply of persons duly ordained, to officiate as ministers, and that His Majesty's subjects are deprived of some offices prescribed in the liturgy, and the usage of the Church aforesaid for want of a Bishop." The design of the Government was then simply to supply religious privileges to His Majesty's subjects; and there is not, so far as I am aware, any statement in the various enactments regarding the Episcopal Church in India which sets forth the principle that the Christian religion is "a natural part" of the Government of India. I am quite aware that the idea of the Indian Government being a "Christian Government" is common enough among defenders of the Episcopal Church Establishment, but it is an idea of later growth than the Establishment itself,—a kind of after-thought, by which the Ecclesiastical Establishment is supposed to represent the "Christianity" of the Government, very different from the simple intention of the originators of the Church Establishment, which was only to supply religious privileges to a "considerable part of His Majesty's subjects." In truth, your argument regarding religion as a natural part of Government is such as is used in England with regard to its Established Church but, it seems to me, has no force here. Religion has, rightly or wrongly, a close connection with Government in England, at least so far as ecclesiastical institutions are concerned; but that is simply because in former days the Church ruled or controlled the Crown, and was allowed to do so because the rulers and people superstitiously believed that Government had to be carried on under special Divine authority of which the clergy were supposed to be the sole representatives. What has been done in India in supporting such a Church Establishment could never be done in England to-day, if no such Establishment already existed. Our legislators, and the people generally, have ideas of the true ends and functions of good government which would make them scout the notion of Government becoming a Missionary Society to supply religious privileges to a "considerable part of His Majesty's subjects."

JAMES ROSS.

INDIAN INTELLIGENCE.

BENGAL.

THE officiating Meteorological Reporter to the Government of Bengal has written a valuable paper detailing the history and effect of the cyclone which did so much damage in Burdwan and Midnapore in October last. He is of opinion that these storms in the Bay of Bengal are generated, like the hurricanes on the Indian Ocean, in the belt lying between two parrallel atmospheric currents flowing in opposite directions, implying the existence of comparatively high atmospheric pressures to the south and north of the belt. It is shown that these disturbances existed in the present case; the pressure to the southward in the neighbourhood of Port Blair, and to the northward over Bengal, being above the mean immediately before the storm, and to the southward very abnormally so. Very little information, unfortunately, was to be obtained by Mr. Willson concerning the progress of the cyclone up the Bay, four or five ships only having been in its neighbourhood until it arrived near the Sandheads; and of these few, three were Arab craft, whose logs are principally taken up with the story of their prayers, the phantom ships they saw, and the "devils on their main-masts." Information, more or less valuable, however, was obtained from the logs of the *Ireshope*, the *Patrie*, the *Udston*, the S.S. *Scotia* and *Sirius*. The storm raged from noon to midnight of the 15th. From Baliapal to Bhograi the country presented a scene of desolation, almost every house being destroyed, and hardly a tree standing erect. Half the cattle are estimated to have been destroyed, and 200 lives lost. The chief violence of the storm however, was spent upon Midnapore, where its intensity is reported to have far exceeded that of the cyclone of 1864. The loss of life in the town itself was very lamentable, amounting in the whole district to 3,049. The labours of years in the way of arboriculture were destroyed in a single night, and 17,500 cattle are reported to have perished. The Hooghly district escaped with the exception of a small part only, but five deaths are unfortunately recorded. Twenty-nine deaths are reported from Burdwan, twenty-seven in the Moorshedabad district, nine in Hooghly, seven in Nuddea, and four in Rajshahye. In Midnapore, the hurricane was attended by the extraordinary rainfall of 10·27 inches. At Moorshedabad the almost incredible fall of 16·3 inches was measured on the 16th; at Burdwan, 7·43 inches during the storm; at Berhampore, 5·93; and as far north as Rungpore, 6·97. The Burdwan district suffered severely, and upwards of 21,000 houses were destroyed. Near the Kanoo station the down passenger-train was brought to a stand by the violence of the wind, and finally blown over upon the up-line. In the Moorshedabad district the storm was at its highest

between 8 A.M. and 4 P.M. of the 16th. It seems to have traversed the whole length of the district and, crossing the Ganges, passed into Rajshahye, where it finally spent itself. A very melancholy loss of life thus attended the cyclone: 3,392 persons are reported to have been killed thereby on land, while all the district officers express their fear that this number falls far short of the actual deaths.

There appears to be an important distinction between the storms which visit the Bay at the end of the south-west monsoon and those which sometimes attend its commencement. The former are usually generated a little north of the Andamans, while the latter appear to take their rise in the northern part of the Bay, the barometer falling steadily and considerably for days before their occurrence. On the other hand, the barometer gives little indication of the approach of a cyclone in October until it is close at hand.

CERTAIN acting Deputy Magistrates and Collectors have been warned that "their retention in the public service depends entirely on their passing the examinations to which they are respectively liable," and a like warning has been conveyed to officers in the inferior grades similarly situated. The justice of this measure depends very much on circumstances. We presume the officials in question were appointed *before* the examination test was imposed on candidates for the Subordinate Civil Service, and if so it would be hard to deprive them of their appointments, unless the nature of their official duties gave them plenty of leisure for study or unless they were allowed special leave for the purpose. Fearing that even the prohibitive examination test may leave too many passed candidates unprovided for, the Lieutenant-Governor has decided that the annual examinations are to cease for the present, and that no general examination is to be held till further notice. It is a pity this simple expedient was not thought of last year, as it is certainly a fairer proceeding than that of making a sudden alteration in the examination test, and thus shutting out men in 1875 who would have passed with flying colours in 1874.

THE new Chief Justice attended the High Court on Monday, when Mr. Justice Louis S. Jackson introduced to him the pleaders of the Court.

THERE has been some excitement in Bhaugulpore lately, owing to a case of forgery, in which a wealthy Indigo-planter and others are supposed to have been implicated. The case is at present under consideration, so nothing more can be said. The rainy season has set in throughout the district, a correspondent informs us. The heat this year from the 15th of May up to the present time, has been unusually great: the cool damp wind—pleasant, if not wholesome—which generally blows from the Terai during this period, having been entirely absent. The mango season has been a complete failure. "A bad mango season, is always a good Indigo season," is a saying which has passed almost into a proverb. And indigo prospects are certainly very satisfactory, except in a few of the factories in the Seopole divisions, where some damage has been done by grasshoppers. Manufacturing has commenced and the factories are full of life and activity. Unlike Tirhoot and Chumparun, where machinery is used—the work is here all done by hand. The vats filled with the water in which the indigo plant has been steeped, are beaten by men who, standing nearly up to their waists in water, strike the surface with wooden implements, not unlike canoe paddles, until the contents turn from deep blue to a dark shade of green. The men who do this work had need be strong, since they stand for hours at this toilsome labour, with the broiling sun overhead, and the fumes of the seething indigo rising up round them. These labourers are called Musahirs (*i.e.*, rat-eaters), and are probably descendants of some aboriginal tribe. They are shorter, stouter and darker, than the natives generally, and far stronger, probably because they supplement their wretched diet with animal food, in the shape of rats, pigs, mungooses, and anything they can obtain of the same kind. The transplanting of the paddy has been a little delayed, as the showers, though general, have not been heavy enough to soak the fields sufficiently for the process, but the clouds are heavy, and there will doubtless soon be a heavy downpour, which will enable the cultivators to complete the planting out of the grain. Murrooah, and kharee, and other grains are already well above ground, and thriving. It is only now that the cattle are recovering in numbers and condition, in which they had been reduced from the effects of the late famine. The loss of the paddy, from which the people derived their staple food, resulting also in the loss of the straw on which the cattle in a great measure depended.

CHOLERA is prevalent in Julpigoree, and some parts of Patna and Gya. The following remark refers to Noakally: "*The epidemic of worms has broken out both among river and tank fish.*" We believe there is no longer any doubt about the existence of the epidemic among fish in Lower Bengal, and the worms have, it is said, been found in fish brought for sale to the Calcutta municipal market.

IT has recently been judicially decided by the High Court that "persons accepting an invitation at their neighbour's house, and afterwards failing to attend, cannot be held liable to recoup the entertainer for the price of the food unconsumed on account of their absence." The Moonsiff of Moonsheegunge near Dacca in whose Court the entertainer originally brought his suit, had thought otherwise, and delivered his judgment in favor of the plaintiff. The case came up in appeal to the High Court (a report of which will be found in another column;) and the learned Judges who reversed this absurd decision, playfully remark, that if the Moonsiff's law were correct, "the risk of accepting invitations would be very serious indeed." It is, however, a grave matter to think that such a decision should even be possible at the present day when the Subordinate Judicial Service is recruited from among the most accomplished of the graduates of the Calcutta University. Our inferior Courts in former times, presided over by Judges who did not know a word of English, used to furnish some very curious instances of grotesque litigation; but it would probably be difficult to find, in the whole of the old law-reports, so brilliant an example of legal acumen as the Moonsiff of Moonsheegunge has displayed in this case.

THE East India Railway Company is said to have decided on dispensing with the services of twenty European guards and substituting natives in their places.

WE hear on good authority that the Prince of Wales is not likely to remain more than a week in Calcutta, and our fair readers will, we fear, be *désolé* to hear that there is no probability of a drawing-room; but, on the other hand, the public will be treated to illuminations on a scale that will eclipse everything hitherto seen in India.

SIR RICHARD TEMPLE left Darjeeling on Thursday for Cooch Behar, Dhoobree, Gowhatty, Dacca, and Calcutta, where he will arrive about the 22nd of this month.

THE expenditure of an additional lakh and thirty-three thousand rupees has been sanctioned for the Hooghly Bridge.

NORTHERN INDIA.

THE Annual General Meeting of the United Service Institution of India took place at Simla on July 1st, Lord Napier presiding. Lieutenant Hart, Royal Engineers, delivered a lecture on the siege of Paris.

IT is stated that all intention of fortifying Peshawur having now been abandoned, a large portion of its European garrison will be located during the hot months at Cherat, where the existing barrack-accommodation will be considerably enlarged.

THE wife of a retired Bengal Cavalry officer, residing at Mussoorie, is reported to have killed a leopard which had entered the compound in the absence of her husband.

THE Prince of Wales will spend a week or ten days in shooting in the Terai and Kumaon with General Ramsay, and he will afterwards proceed to Nepal, where Sir Jung Bahadoor will meet him.

"CAWNPORE is said to be a hot place in summer" says a writer in a New York paper, in describing a tour through India. The sweet simplicity of this observation characterizes all he says, for "We had rooms at the United Service Hotel, and found there quite a number of officers of the army. We found the English everywhere in India cordial and obliging, and everywhere polite, and always ready to give valuable information and to show us everything of interest in the town." The English, we are glad to hear, "are treating the natives with more consideration than they did before the Mutiny, but they are *not likely to spoil them with kindness now.* It is quite apparent that it is the established policy of the Government to yield to them their rights and also to protect them in their rights. Before the mutiny many of the English, especially the soldiers, were in the habit of taking almost everything they wanted of the natives, and there was no redress for such grievances, but now there are Courts established, where natives may implead Englishmen as well as Englishmen natives."

THE men concerned in the late case of *suttee* in Oudh have been tried, and Mir Niku, the chief abettor, has been sentenced to ten, two others to seven, and three more to five years' imprisonment. The rest of the defendants, about thirty in number, were released.

SOME time ago the Lahore Police warned the public against the promoters of the Lahore Great English Derby Sweep, but a portion of the public insisted on being taken in, and our Lahore contemporary has now favored us with further particulars. It is needless to remark that "the result of the drawing" has never been published. "The originator of the sweep was a Mr. Taylor, a gentleman having no occupation, and for some time a lodger in Mela Ram's barracks. About a month before the Sweep should have been drawn, circumstances took him away from Lahore, and he gave instructions to the Post Master to hand over all letters addressed to him as Honorary Secretary of the Lahore Great Derby Sweep to a Mr. Roach, who, we believe, for some time received them. Mr. Roach, however, was unfortunate in his monetary transactions with a gentleman he met casually at Lahore, inasmuch as he borrowed without the lender's consent or knowledge a currency note for Rs. 100, which he converted to his (Roach's) own use. This *contretemps* led to an introduction to a Justice of the Peace, and a prolonged stay at the Lahore Central Jail, and since then nothing has been heard of the Lahore Great English Derby Sweep, which has come to grief, a martyr to circumstances."

THE places on the Great Indian Peninsula Railway beyond Jubbulpore, impassable by trains owing to recent damage by floods, have been reduced to two, which are five miles apart. First and second class passengers are now conveyed through on lorries as far as practicable.

MAHARAJA SINDHIA has sentenced the man Jumna Doss, who was supposed to be the Nana of Bithoor, to four years' imprisonment, under the provisions of the Gwalior Durbar Code.

BOMBAY.

NOWANUGGUR, in Kattywar, is in a bad way, and seems to need the services of a British nurse. It is the old story. His Highness the Jam is so deeply involved that he can no longer walk alone, and Mr. Peile, according to the *Times of India*, has called upon him "to report what measures His Highness has taken to extricate himself and the State from the heavy encumbrances in which they are involved; what reforms he proposes in the revenue and

judicial branches of his administration; and what measures he is prepared to adopt for the introduction of a better class of native officials than those at present employed." But he knows not what to say in reply. Personally the Jam is a good Prince, as Kattywar princes go; but is cursed with a bad Karbharee, a "*Modhi* Banian named Bhugwanjee." This gentleman seems to have been as successful in feathering his own nest, as he has been unfortunate in the management of the Jam's affairs. He "is reported to be possessed of considerable wealth, and is perhaps the largest State creditor, though he does not hold State securities in his own name. He has banking firms in Kattywar and elsewhere, and is said to carry on extensive mercantile operations with Bombay and other large cities." The Jam is deeply indebted to him—in what way is not stated—and cannot conveniently dispense with him. We suppose the upshot will be that we shall have to take over sick Nowanuggur till it gets well again, and then discharge it from hospital with a full purse.

THE *Bombay Gazette*, alluding to the dangers to which honest politicals are exposed at native courts, gives the following account of the fate that befell Mr. Sutherland at Baroda: Let us see what sorcery, enchantment, or witchcraft meant in the case of Mr. Sutherland. His death occurred very suddenly in 1840. Syajeerao Maharajah had in his employment a sorcerer named Ladba Bhagat, who originally came from the Deccan, and was a bricklayer, and professed to be on good terms with a goddess, who reciprocated his friendship by helping him to accomplish his desires by supernatural means. This man was employed by Syajeerao in a domestic matter, and when His Highness's concubine, Bheemabaee, gave birth to a son, the cause was attributed to Ladba's sorcery. Syajeerao had important matters to discuss with the British Government, and as he took an opposite view of affairs from Mr. Sutherland, he thought he could settle the matter through the agency of his sorcerer. Ladba took the affair in hand, and commenced to perform disgusting rites, among which was the performance of incantations over clothing which Mr. Sutherland's washerwoman had been bribed to supply to him, and which incantations were to have the effect of making Mr. Sutherland die when he put on the clothing. He also called for the sacrifice of an unmarried girl, who should no sooner be touched by the fire than Mr. Sutherland should die, and this fearful rite was actually performed. Mr. Sutherland did die, not by the incantations of the sorcerer, but by poison which the miserable quack had caused to be given to him simultaneously with the sacrifice of the girl. After this event Ladba's fame became greater than ever. He became the confidential adviser of Syajeerao, who had a picture painted in which he and his sorcerer appeared side by side. Like many sinners in the civilised world, Ladba thought to compound for his misdeeds by building temples dedicated to the deity, which in his case was the patronising goddess. To this day the murderer's family, it is said, holds two *inam* villages, and gets a large allowance from the State.

TWO hundred prisoners were set free from the Baroda jails on the occasion of the installation of Syajee Rao.

THE Bombay papers are appealing to the public for donations of left-off clothing for the use of European vagrants. The *Bombay Gazette* thus describes the condition of the people on whose behalf the appeal is being made. "Many of these poor fellows enter this asylum (the workhouse) without shoes to their feet and with only rags for clothes. When taken into the institution they are supplied with dungaree clothing; but this sort of dress has the appearance of prison clothing, and cannot be worn out of doors. The consequence is that many men have no apparel to wear when they obtain leave from the governor of the workhouse to go out and seek employment. There are many respectable and good men whom poverty has so reduced that, against their will, they are forced into this abode. We understand that the governor of the workhouse is very anxious that it should be known that any gifts of left-off clothing or boots will be thankfully received by the vagrants. Such might be sent to the workhouse at Byculla for distribution. It frequently occurs that the authorities of the workhouse are able to arrange for employment or for a free passage to England for a vagrant, if he is willing to work on board, either as a seaman, fireman, or cabin steward. When such opportunity offers, the vagrant cannot be shipped without a small supply of clothes for the voyage, or be sent to employment in rags, and the institution has no Government fund on which to draw for money to provide such. There is a poor-box, it is true, but we regret to learn that its funds are very low at present. We hope we have stated enough to awaken the sympathy of the public in behalf of their destitute countrymen. No sight is so sad as a stranded Englishman in the streets of a great foreign city, homeless and nearly naked; his case is one for the exercise of Christian charity. It would not give such trouble to the gentlemen of Bombay if they would order their servants to send any cast off clothing to the workhouse for the use of the vagrants."

MADRAS.

THE South Indian Railway, which is being pushed on so fast toward completion, is, with the exception of the Oudh and Rohilkund Railway, the only guaranteed line which is not completely open for traffic. The Railway is to be of 619¾ miles in length, on the metre gauge.

THE erection of the machinery for the Alpha Gold Mining Company is nearly completed, and the Company announce that work will be commenced immediately.

RUNGACHARLOO, the Palace Comptroller, Mysore, has been assaulted in the public streets of Mysore by some of the palace peons, whose wages are said not to have been paid for the last six months. The men have been summoned for the assault and great excitement is said to prevail in the town in consequence. Whilst the case was being heard at the Town Magistrate's Court, a large crowd assembled, and when the Comptroller left there were cries of *Deen, deen*. Rungacharloo is said to possess great influence, but is detested by the people.

IT has been remarked that almost every one among the various officials of rank in Madras, is acting for some one else. Perhaps this is unavoidable, under present circumstances; but it is hardly self-evident why such should be the case among the officials in Travancore and Cochin. Beginning with the Resident, Mr. G. A. Ballard, we find him absent, acting for some one in the Revenue Board at Madras, Mr. Athole McGregor having been gazetted to act for Mr. Ballard; but, Mr. McGregor not having joined, owing to his having been appointed to act for some one else as a Secretary to Government in some Department, Major W. Hay, the Commandant of the Resident's escort and Assistant Resident, a Major of the Staff Corps is acting for him. Turning to the Nair Brigade, Captain McNeil, a young Captain of the General List, is acting Commandant for Major Bloomfield, who is acting for Major Ellis, but who seems to prefer to revert to his own appointment in the Salem Jail to rejoining his acting appointment during the absence of Major Ellis at Madras, who has not yet rejoined from leave to Europe. Then, again, at the Travancore Residency we find Dr. White acting as Residency Surgeon for Dr. Fry, who is acting somewhere for some one else. And the Nair Brigade has long been left provided with only one European commissioned officer, Capt. McNeil, who besides officiating as Commandant, is also acting for Major Sherman, who was acting for Captain Gostling, but who is now acting somewhere else for some one else!

ORDERS have been issued that the speed of the mail-trains on the narrow-gauge Southern India Railway is not to exceed fifteen miles an hour.

WHEN the Madras High Court opened on June 28th, the Chief Justice and Mr. Justice Kernan refused to recognise Mr. Louis Forbes, whom the Government appointed a Judge on the 15th instant. The ground of objection is that Government cannot appoint an officer to act for a Judge who is himself acting. Justices Holloway, Innes, and Kindersley being absent in Europe, the High Court now consists of two Judges.

DR. SHORTT has successfully treated two cases of cobra-bites with liquor potassæ and brandy.

MONSIEUR DELRIEN, Acting Governor of Pondicherry, died of apoplexy on the 30th June, aged 54. The Procureur-Général officiates.

THE Duke of Buckingham is expected to arrive at Madras per *Sultan* in November, accompanied by his two daughters and sisters.

THE ringleader in a murder that took place near Kegalle, 15 years ago, has been lately captured at Vebadde, 13 miles from Colombo. Proceedings were taken at the time against eight or nine of the persons implicated, some of whom were hanged, others transported, but Lewis Appu, who has now been found, has hitherto kept out of harm's way.

A FRESH outbreak of cholera has occurred in Colombo, and nearly fifty cases have been reported, one-half of which have proved fatal.

THE failure of Messrs. Collie and Co., and the consequent giving way of many London houses, have caused a large number of disasters in Colombo.

BURMAH.

REGARDING the great shoe question which has cropped up in Burmah, and for the present is unsettled, a contemporary supplies the following tale: "Till the appointment of Lord Stratford de Redcliffe as Ambassador at Constantinople in 1825, it was the rule for all Envoys and Ministers of Foreign States to appear before the Sultan barefoot. On the day appointed for Lord Stratford's reception, the Sultan, surrounded by his courtiers and officials, took his seat in the great hall of audience, as the new Ambassador with his Staff road up to the palace, and, having dismounted, was going to pass in, but he was stopped by his chamberlains and told to remove his shoes. Lord Stratford turned round, mounted his horse, and, followed by his Secretaries, rode back to the embassy, leaving the Sultan sitting in his hall by himself. The obnoxious rule was from that day rescinded." The precedent is not perhaps known in India, but it is worth recording in the note-book of the Foreign Office.

UPON a European who was at Bhamo some time after Margary's death remarking to a Burmese official that trade across the frontier seemed to be going on as usual between the Burmese and Chinese, notwithstanding the murder of Margary and apparent commotion in the country, the answer he obtained was, "Oh, what is the murder of a *Kulla*, after all. Why should that stop the trade?" The word *Kulla* generally means "foreigner," but the speaker only understood it to mean "Englishman" when he used it. We have been told by a gentleman who lately arrived from Mandalay that the King sent for him before his departure, and at an audience said, "I hear you are going to Rangoon. Tell the English there that they need not be afraid, as I don't intend to come down to Rangoon and hurt them." His Majesty also remarked, "If two neighbours want to fight, the cock of one of them roosting on the other's wall is sufficient to cause a disturbance. I desire peace." Words such as these uttered by the absolute monarch of a country would be reassuring to all who had no experience of Eastern manners and modes of thought.

THE following is the text of the agreement which has been signed with regard to Western Karennee: "It is hereby agreed between the British and Burmese Governments that the State of Western Karennee shall remain separate and independent, and that no sovereignty or governing authority of any description shall be claimed or exercised over that State."

ASIA.

THE Tashkend Government has sent an Expedition to Hissar, an unknown principality east of Shahrisiabsk, and north of the Affghan frontier. Herr Von Weinberg, the Diplomatic Agent attached to the Tashkend Government, accompanies the Expedition the members of which are mostly scientific.

THE earthquakes experienced in various parts of Asia Minor on the 3rd, 4th, and 5th of May have caused not only considerable destruction of property, but also of life. It appears from details given by the Broussa official journal, that in the village of Sheïkli, in the district of Kara-Hissa, 200 out of 300 houses were levelled to the ground, and 100 so much shattered as to have become uninhabitable. At Tchoril 285 dwellings were destroyed out of 300; 130 people were killed, and 170 wounded. Other villages suffered in proportion. The town of Kutahia was severely shaken, but happily the earthquake was there not accompanied by any loss of life. The total loss of life in the different localities where the shocks proved destructive is not yet officially known, but there is too much reason to fear that it has been larger than was at first anticipated. The "merrie month of May" has on more than one former occasion illustrated its rollicking tendencies by earthquakes. In 1830 more than 6,000 persons perished in Canton and its neighbourhood by earthquakes on the 26th and 27th of May.

THE Russian traveller, Miklukho-Maclay, succeeded in the beginning of this year in crossing the Malay Peninsula from the mouth of the Muar (which is a short distance to the south of British Malaka) to that of the Indau, on the east coast. This journey was undertaken before the close of the rainy season, and although the direct distance between the two places named does not exceed 120 miles, the difficulties encountered were such that it occupied thirty days. Mr. Maclay has satisfied himself that the tribes known along the coast as Orang-utang (men of the woods), Orang-bukai (hillmen), or Orang-miar (savages), are not of Malay race.

LITERARY.

OORDOO Christian literature has, says the Lucknow *Witness*, been enriched by a large Dictionary of the Bible published in the Roman character at the Mirzapore Mission Press. The preparation of this work employed all the available spare time of the last five of forty active years of missionary service rendered by Mrs. Mather to India. The experience gained by her during the previous thirty-five years, in which writing occupied a prominent place amidst her manifold labors for the spread of Christianity, has been most admirably utilised in this crowning effort of her Indian career. The form of the work seems on a par with its matter as regards adaptation to the needs of the country. The book contains 1,676 articles, and 578 superroyal octavo pages. It is also illustrated with 157 woodcuts, some of which are of the full size of the page; and the trees and flowers in many of them make up to some extent for the want of botanical articles in the book. The language is clear and terse Oordoo. In addition to the care bestowed upon it by Mrs. Mather, it has the advantage of being carefully revised by her son-in-law, the Rev. M. A. Sherring, as the work passed through the press.

PROFESSOR DOWSON contributes to the *Journal of the Royal Asiatic Society* a paper on a Bactrian-Pali inscription. The document records the name and title of the king, Maharayasa Gunupharasa, whom both General Cunningham and Prof. Dowson, independently of each other, have identified with Gondophares. General Cunningham's and Prof. Dowson's accounts on the point agree in a great deal, yet differ in a few points; and Orientalists will watch with interest the further developments of the controversy, which will probably turn on the correct rendering of the word *samvatsara*. With reference to Mr. Dowson's "revised reading," the Report of the Society contains the following ambiguous sentence, which may be sense and grammar, but which, we confess, is too learned for us to comprehend: "If this is really the correct rendering of the word *samvatsara*, the document would be of considerable value, showing as it would that era to have been in actual use at a much earlier period than scholars have hitherto been inclined to admit." How an "era" can "be in actual use" in any "period," "earlier" or otherwise, we must leave more learned gentlemen than ourselves to determine. Mr. T. W. Rhys Davids "has," we are told, "successfully continued his study and interpretation of the Elu inscriptions in Ceylon." The same number of the *Journal* contains the text, with translations and notes, of two such documents, one of which is dated 1191 A.D., and the other 1200 A.D. The Report of the Society terms both inscriptions as of "some importance." Mr. T. H. Blakesley will, it is announced, contribute to a future number of the *Journal* a communication of considerable interest regarding the ruins in Ceylon. The paper will be founded upon one read by the Dean of Lincoln, Mr. Blakesley's father, before the Asiatic Society on April 19th. We may now briefly mention a fact or two concerning the communication. The famous rock of Sigiri, which rises some 500 feet above the surrounding plain, appears, it is said, to have constituted in early times the citadel of a fortified position, surrounded by earthworks and moats, the sides of which are in parts rivetted with stone. Mr. Blakesley ascribes these earthworks to King Kasyapa, the parricide, who lived in the fifth century A.D. Of earlier date still than these earthworks are, he states, the walls of cyclopic masonry still to be seen at Mapagala, a pair of rocks to be seen about half a mile south of the rock of Sigiri.

THE Royal Asiatic Society have determined upon recommending to Government that the specimens of Boodhistical sculptures found west of the Indus, especially in the neighbourhood of Peshawur, and now in the Lahore Museum, should be as soon as possible sent to England. It will be more easy to judge of their value, artistic peculiarities, and alleged Grecian characteristics, there than in India. At Lahore they are naturally despised as "idols" by Mahomedans, whilst Sikhs and Hindoo take no interest of any kind—religious or archæological—in them.

ECCLESIASTICAL.

LIEUTENANT CONDER has made an interesting discovery on the mediæval site of Ashkelon. About a year ago, Professor Pusey called attention, in a letter published by the Committee of the Palestine Exploration Fund, to the fact that, just as there were a Gaza and a Maiuimas Gazæ, or "Gaza by the Sea," so there were, in the sixth century, at least, an Ascalon and a Maiumas Ascalon, each place having then a bishop of its own. He also pointed out that Benjamin of Tudela speaks of the present Ascalon as the new town "built by Ezra the priest on the sea-shore," four parasangs from the former place of the same name. Lieut. Conder has discovered that both places exist still. The ruined Ascalon by the sea-shore has been long known and frequently described. The site just discovered, called Khirbet Ascalon, is in the hills north of Beit Jibrin, near Tell Zakeriyeh. It shows remains of an early Christian church or convent, and a great lintel of stone, with a deeply cut cross in the centre, resembling somewhat the cross of Malta, lies on the ground. Such lintels are to be found in all that class of ruins which date from the fifth to the seventh century. It is twenty-three miles from the shore, which would seem to agree with the four parasangs measured to Ashdod. Lieut. Conder discusses fully the question of the site, and concludes that the Ashkelon of the Bible, of Herod, and of the Crusaders, are one and the same place, distinguished from an early Christian site of the same name by the title of Ascalon Maiumas. The numerous Crusading fortresses in the great plain, which was the scene of so many conflicts between the English and Saladin, have been pretty nearly all identified in the course of the survey. Some of them, of course, were known before. They are as follows: Galatia, now Keritya; Blanchegarde, now Tell es Safyeh; Plans, now Kalensawieh; St. George, now Lydd; Ramala, now Ramleh; Toron, now Tebnin; Ernuald or Arnald, now Latrun; Belvoir, now Kaakab el Hawa; Mirabel, now Ras el Ain.

SOME little excitement has been caused in Bombay by the secession of a Cowley Sister to the Roman Catholics.

MILITARY ORDERS.

BENNET, Lieut. the Honourable G. M., to England, for transfer to another battalion.
CRAWFORD, Deputy Surgeon-General T., to officiate with temporary rank as Surgeon-General.
FRASER, Major the Honourable J. H., to Simla, to the 20th October.
FERRIS, Capt. W. B., to remain in England, to the 31st March 1876.
GOFF, Lieut. J. G. S., to England for six months.
GRAHAM, Lieut.-Col. F. W., to Murree, to the 15th October.
GIBBONS, Surgeon-Major J., to officiate with temporary rank as Surgeon-General, Sirhind Circle.
LOCKHART, Captain W. S. A., to be an Assistant-Quartermaster General to complete the establishment.
PATCH, Lieut. R., to be Captain.
ROSS, Brigadier-General J., to Simla, from the 16th to the 21st June.
ROWLEY, Lieut.-Col. R. H. R., to remain at Landour, from the 9th July to the 15th September.
STORY, Lieut.-Col. P., to Bhagsoo and Nynee-Tal, to the 15th October.
WILLIAMS, Captain F. H., to Shillong, Cossyah and Jynteeah Hills, to the 15th October.

CIVIL GAZETTE.

IMPERIAL.

JARRETT, Major H. C. T., to officiate as a Deputy Conservator of Forests of the 1st grade.
JOHN, Major O. B. C. St., to be Principal of the Mayo College at Ajmere.
YATE, Lieut. C. E., to officiate as Political Assistant of the 2nd class, and Assistant Political Agent at Banswara.

PUBLIC WORKS DEPARTMENT.

BOSE, Baboo K. M., Executive Engineer, to the Chittagong Division.
NEUVILLE, Mr. P. J., to officiate as Executive Engineer of the Presidency Division.
ROY, Baboo M. C., to be Executive Engineer of the Tirhoot District.
SMART, Mr. J., Assistant Engineer, from the Chumparun Special Division to the Darjeeling Division.
WINDLE, Mr. J. A., to be Executive Engineer of the Circular and Eastern Canals Division.

BENGAL.

BADCOCK, Mr. E. W., Bhaugulpore, leave for three months.
BIGNELL, Mr. R. A. D., to 2nd grade Assistant Superintendents of Police.
BLAIR, Mr. W. A., to 4th grade District Superintendents of Police.
BUCKLAND, Mr. C. T., Commissioner of the Burdwan Division, leave for three months.
CHARLES, Mr. T. G., to have charge of the District Police of Rungpore.
COCKBURN, Mr. M. J., to 2nd grade District Superintendents of Police.
DAUNT, Major J. C. C., to first grade District Superintendents of Police.
DE DOMBAL, Mr. E. D., to be temporarily a Head Assistant in the Bengal Secretariat.
EASTON, Mr. G., to act as an Assistant Secretary to the Government of Bengal.
FISHER, Mr. C. A., Assistant Superintendent of Police, to have charge of the District Police of Jessore.
GHOSE, Baboo A. K., to act as Second Moonsiff of Comillah, in Tipperah.
HARDING, Mr. F. H., to have charge of the Rampore Haut Division.
HERSCHEL, Sir W. J., to act as Commissioner of the Burdwan Division.
KILBY, Mr. S. J., to act as District Superintendent of Police, Midnapore.
KILBY, Mr. W. J., to 5th grade District Superintendents of Police.
KNYVETT, Major W. L. N., to act as Personal Assistant to the Inspector-General of Police.
MEARES, Mr. G. R. K., to act as District Superintendent of Police, Purneah.
MEARES, Mr. J. R. K., to 1st grade Assistant Superintendents of Police.
PORCELLI, Mr. E. F. J., Assistant Sub-Deputy Opium Agent, Mynpoorie, leave for six months.
QUINN, Mr. C. C., to be Joint Magistrate of Bhaugulpore.

RAMSAY, Captain H. M., to 3rd grade District Superintendents of Police.
REILY, Mr. H. M., Officiating District Superintendent of Police, transferred to Mymensing.
STEWART, Mr. E., Deputy Magistrate, leave for two months.
SEN, Baboo B., to be Registrar of the Revenue side of the Bengal Secretariat.
SCOTT, Mr. J. M., Presidency College, leave for three months.
SIRCAR, Baboo M. L., to be Moonsiff of Nassirnuggur.

MADRAS.

ARUNDEL, Mr. A. T., to be Private Secretary to the Governor.
AUSTIN, Mr. W. P., to act as Sub-Collector of North Arcot.
BEACH, Surgeon-Major H. J., to proceed to the Neilgherry Hills, on leave to November.
BOYD, Mr. J. E. E. A., to act as Superintendent of Police, Coimbatore.
CAULFEILD, Major St. G., to be Commandant of the Nair Brigade, *vice* Major J. A. Ellis.
HUNTER-BLAIR, Mr. J., Collector of Sea Customs, privilege leave for two months and eight days.
KELSALL, Mr. J., Godavery District, to act as Collector of that District.
LEMAN, Mr. G. D., to act as Collector of Sea Customs and of the Madras District.
LISTER, Mr. A. L., to act as Head Assistant to the Collector of the Godavery District.
MACKENZIE, Mr. G. T., Acting Head Assistant to the Collector, Nellore, leave for three months.
MACDONALD, Colonel R. M., Director of Public Instruction, leave for three months.
PORTER, Mr. W. A., to act as Principal of the Provincial College, Madras.
RICE, Mr. R., to act as Head Assistant to the Collector of Tinnevelly.
ROW, Baboo T. G., to act as Principal of the Presidency College, Combaconum.
SHEFFIELD, Captain W. R., to act as Superintendent of Police, Nellore.
THOMPSON, Mr. E., to act as Director of Public Instruction.
TURNER, Mr. E., to act as Special Assistant to the Collector of Madura.
UNDERWOOD, Mr. W. G., to act as Head Assistant to the Collector of Coimbatore.

NORTH-WESTERN PROVINCES.

KNYVETT, Mr. R., to Mirzapore.
LAING, Mr. J., to Azimgurh, as Assistant District Superintendent of Police.
MOULE, Mr. H. F. D'O., to officiate as Magistrate, Mirzapore.
NARIAN, Pundit J., Subordinate Judge, Jounpore, leave for three months.
PARKER, Mr. G. G., District Superintendent of Police, Aligurh, two months' leave.
POCOCK, Mr. R. J. M., District Superintendent of Police, Benares, three months' leave.
ROBERTS, Mr. H. C., to be Extra Assistant Commissioner, 3rd class.
SMITH, Mr. S., Officiating Assistant Inspector-General, Government Railway Police, from Allahabad to Furruckabad.
THOMAS, Mr. W. C., District Superintendent of Police, Meerut, two months and 28 days leave.
WIGGENS, Captain F. E., Agra, three months' leave.

PUNJAB.

LAING, Rev. M. S., Chaplain of Rawul Pindee, leave for forty-two days, from 1st July 1875.
ROBERTS, Captain A. S., to be Assistant Commissioner, 2nd class.

COMMERCE AND FINANCE.

FRIDAY NIGHT.

UP to yesterday morning the Money Market remained in essentially the same position as reported last week. The outside demand was principally for accommodation required for taking up the New Loan, instalments of which fell due on the 1st instant; but the accounts published show that the Bank of Bengal had considerably strengthened its position as will be seen from the following figures:—

Treasury balances	decreased	...	...	Rs.	7,92,260,
Other deposits	increased	...	...	„	24,85,944,
Loans and credits	decreased	...	...	„	20,64,990,
Bills discounted	increased	...	...	„	11,23,940.

This shows a considerable falling-off of the public demand, and the Cash Balances exhibit an increase of Rs. 25,13,690. The Directors at their Board Meeting yesterday morning reduced the rates one per cent all round. The minimum rate now stands at 6 per cent, which is still about one per cent more than the Bazar charge. The news from Burmah has not been of an altogether satisfactory character, and there has been a feeling of considerable uncertainty abroad throughout the week. Reports from Bombay evidence no material alteration: business is said to be dull in every department, and prices of shares and stocks are rather more in favour of buyers. The position of the Banks is, however, generally stronger. London telegrams report Bar silver at 55 13|16 per ounce, and exchange on India 1-9⅛ at sight. Discount in the London market is 3⅜ per cent.

With regard to prospects, it is probable that a demand for money will now be lessened, and easier rates will follow.

Government Securities have declined slightly in price during the week in consequence of large sales of the New Loan, which have kept the market weak; these are gradually being worked off, however, and it is not expected that any considerable fall will take place. On the contrary, when these weak hands shall have been cleared, it is likely that the market will become stronger. Rates close at about the same quotations as last week.

Exchange on London is again lower, and rates close at the following:—

Banks Bills at 6 months' sight	...	1-10
„ „ at 3 months sight	...	1-9¾
„ „ on demand	...	1-9½

The share market continues inactive, and the list of transactions is a meagre one; cheaper money will probably lead to an improvement. Prices have not greatly varied, nor has any particular description of stocks been especially in favor. Jute scrips have changed hands at about former quotations. Tea stocks are firm, and there has been a proportionately fair amount of business in miscellaneous shares.

Freights are quiet, and rates are without much change, Seeds being still the chief staple export.

The accounts from all the Indigo districts of Lower Bengal continue favorable, and the reports from Tirhoot, and the North-West are also satisfactory. Eleven thousand seven hundred chests have been declared for the London July sales. Bengal Cotton continues dull and scarcely a single transaction has been reported either for Europe or China. In Jute there has been a slight improvement in the amount of business but at lower rates. Advices frome home are unsatisfactory, and no improvement can be expected until there is more demand for the manufactured article. Business in Bengal rice has been chiefly confined to the Colonial enquiry. Seeds have been more active during the week, owing to an increased enquiry for certain descriptions from Great Britain and America. Castor-oil has also been in increased demand for the Colonies.

The reports from the Tea districts appear to be satisfactory on the whole, although the heavy rains are said to have caused some injury to the young plant in Cachar. There have been no public sales since those of the 21st June until to-day; about five thousand six hundred and fifty packages were catalogued for sale this afternoon, the greater portion of which have gone off at good prices.

LATEST TELEGRAPHIC NEWS.

26TH JUNE.

London, 25th June.

COLONEL VALENTINE BAKER, of the 10th Hussars, has been committed for trial charged with indecently assaulting a young lady in a railway carriage. The Colonel declares the statements of the prosecutrix exaggerated and reserves his defence.

Paris, 25th June.

AT the disastrous inundations at Toulouse, in consequence of the overflowing of the Garonne, 100 persons were drowned.

Berlin, 25th June.

THE Court of Appeal has convicted Count Arnim of having unlawfully removed public documents when he represented Germany at Paris, and has sentenced him to nine months' imprisonment.

Hong-Kong, 25th June.

IT is reported that the steamer *Carisbrooke*, seized on suspicion of smuggling, has been released, security being given of 240,000 dollars, the value of the cargo, pending reference to Pekin.

28TH.

Paris, 26th June.

HEARTRENDING details are to hand of the Garonne inundations from Toulouse. They report that 215 corpses have been found. There has been immense destruction of property, and 20,000 people have been rendered destitute. Marshal MacMahon has gone to Toulouse to afford succour.

London, 26th June.

THE House of Commons has ultimately negatived by 94 to 57 a motion by Mr. Stewart for the gradual relinquishment of opium cultivation. Lord Hamilton showed that this stimulant is best suited to the habits and necessities of eastern nations, and that Government is not responsible for its use; that the deleterious effects are exaggerated; and that the proposed alteration would increase the evil tenfold and cause increased taxation.

30TH.

Berlin, 29th June.

THEIR Majesties the Czar and the Emperor of Austria have had a meeting in Bohemia.

Disastrous floods are reported from Hungary.

Paris, 29th June.

THE recent inundations have extended over several Departments in the south of France. The Assembly has voted two millions of francs for the relief of the sufferers.

2ND JULY.

London, 30th June.

ADVICES from Cape Colony state that the Cabinet there objects to take into consideration the scheme proposed by Lord Carnarvon for a confederation of the South-African States, on the ground of its being premature.

The Americans have won the rifle match against the Irish team, having defeated them by 38 points.

A long debate was held last night in the Commons on the grievances of Civilians in the North-Western Provinces. Mr. Lowe complained that the Indian Government had not kept faith with them, and moved that a Select Committee of Enquiry be appointed to consider the allegations of the Civilians, as expressed in their memorial to the India Office in 1871. Lord George Hamilton, in replying, denied that the Civilians of the North-West possessed any guaranteed rights to promotion under Act of 1861, and protested against this attack upon the Indian exchequer. Continuous concessions had been granted, which Civilians would certainly refuse to surrender for the

advantages expected from Mr. Lowe's motion, and interference in promotion made at the discretion of the Lieutenant-Governor might have prejudicial consequences. He concluded by saying that Government objected to a Select Committee, which usually has no result. Sir George Campbell supported the motion, but he considered that the remedy should not be pecuniary compensation from the funds of the Indian Government. Sir Stafford Northcote said Government admitted the justice of many of the complaints, and would press the Indian Government to provide an adequate remedy, but he thought the appointment of a Committee would be an injudicious interference with the Indian administration.

Lord Salisbury replying to the deputation, urging the necessity of increasing the Indian Episcopate, admitted that its extension was necessary, but deprecated appealing to the Legislative, as the existing law was sufficient to afford the desired relief.

London, 1st July.

Lord Derby, speaking at a dinner given yesterday by the Grocers' Company, said that the policy of England was the maintenance of European peace.

The Budget returns show a total revenue for the last quarter of £18,250,000. Mr. Lowe's motion in the Commons on the claims of Civilians has been ultimately withdrawn.

Alexandria, 29th June.

The Viceroy of Egypt inaugurated here to-day the new International Court of Appeal.

LIFE DEPARTMENT.

The Life Funds are free from any liability to the Fire Department by the Company's Acts 33 and 34 Victoria. Session 1869-70,

Accumulated Funds irrespective of the Paid-up Capital £2,551,589-16-7

Annual Revenue from Premiums and Interest 360,625-18-9

At the last Quinquennial Investigation and Division of Profits for the period ending 31st December 1870, the Surplus Fund divided amounted to £182,274 5 2

The value of the loading reserved for Future Profits and Expenses amounted to £601,554 0 0
Besides which there were reserved for Contingencies, &c. .. 33,925 6 2

Making a Total Reserve of £635,479 6 2

During the five years preceding 1870, the Company transacted the following new business:—

NO. OF POLICIES ISSUED.	SUMS ASSURED.	PREMIUMS.
4,567.	£4,132,141.	£133,279 16 5.

A Bonus was declared upon the Policies of the Company on the Participating Scale, at the rate of £1 5s. per cent. per annum, which in many instances was equal to £1 19s. per cent. per annum, on the original sum assured, the principle of division being to declare the Bonus not only on the original sum assured, but also on all previous Bonus additions.

THE RATES OF PREMIUM are moderate and generally LOWER than those of other Offices.

REDUCTION TO ENGLISH RATES without Medical Certificate or fresh examination, *from the date of leaving Alexandria, or Port Said for Europe.*

NINE-TENTHS OF THE WHOLE PROFITS in the Life Business are divided amongst the assured in the Participating Scale every FIVE YEARS.

THE NEXT DIVISION OF PROFITS WILL BE MADE AT 31ST DECEMBER 1875.

All Policies on the Participating Scale opened on or before that date, will share in the Fund then to be divided, which will consist of the Profits made during the previous Five Years.

The following Gentlemen have been appointed, with all the usual powers, as

Local Board of Directors:

F. S. Collis, Esq., Officiating Administrator-General.

BILLIARD TABLES

are now the only ones appreciated in India, being constructed on an entirely new principle introduced by C. Lazarus and Co.

DENTISTRY.

MESSRS. CORFIELD & CO.,

May be consulted daily upon all cases of Surgical and Mechanical Dentistry.

THEIR IMPROVEMENTS IN

Artificial Teeth and Painless Dentistry

Afford the following advantages :—

First.—Extreme lightness, being completely self-supporting.
Secondly.—Moderate charges, extreme simplicity of construction, the highest class of mechanism, and the best materials.
Thirdly.—Absolute immunity from pain.
Fourthly.—Nature so closely imitated, that detection becomes an impossibility.
Parties residing in Calcutta and the Suburbs attended at their own residences if desired.
Teeth supplied by other Dentists not having proved satisfactory, or old cases that have become out of order through absorption of the gums and other causes, can be remodelled on Messrs. Corfield's system on moderate cost.
Artificial Teeth repaired and returned by following post.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ½ lb. and 1 lb. tins, labelled thus :—

JAMES EPPS & CO.,
HOMŒOPATHIC CHEMISTS,
48, THREADNEEDLE STREET, & 170, PICCADILLY.
Works—Euston Road, and Camden Town.
(Makers of Epps's Milky Cocoa and Cocoa Condensed Milk.)

ESTABLISHED IN 1820.

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.)

CABINET MAKERS, UPHOLSTERERS,

BILLIARD TABLE MANUFACTURERS,

BY APPOINTMENT

To His Excellency the Viceroy and the Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh,

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible, and annoyances and inconveniences are done away with, and the interest in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only *a very limited supply of the* ELECTRIC MARKERS, *but are expecting* fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade Advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persa, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

BLACKSMITHS', CONTRACTORS', and ENGINEERS' Tools of all kinds GAS AND WATER PIPES of all sizes. Steam and Water Valves and Cocks, Gauge Mountings, &c.

VAL DE TRAVERS ASPHALTE for Verandah, Barrack and Godown Floors. This is the same Asphalte that has been used so successfully in the City of London and on the Bombay footpaths, where it has stood the climate admirably.

Francis Morton & Co.'s Galvanised Wire Fencing, Netting, &c.

We have always on hand a large stock of the best kinds of Ironmongery and Brass Foundry, including Brass Hinges, Locks, Oak Door Handles, &c.

We would draw the attention of steam users to a 20 H. P. Roots "SAFE AND SURE" Boiler we have in use at our Iron Works. It is very economical, can be used with wood fuel, is easily transmitted over rough country, as the heaviest part does not weigh over one hundred weights and can be worked to any pressure.

We have lately imported a simple Machine called the VELLIPEQUE ROCK PERFORATOR for drilling blast holes in Rock. In some cases it has reduced the cost of Rock Cutting 20 per cent., and in making the Tunnel for the Toolsee Water Scheme these Machines drilled a 1¼ hole 12 inches deep in 2 minutes.

We beg to draw attention to a length of HODGSON'S WIRE TRAMWAY we have in operation at our Byculla Works. This system is well adapted for the working of Quarries, Collieries, Coffee Plantations, &c., &c.

We are prepared to enter into contracts for the supply from England of all kinds of Iron Work, Bridges, Roofing and Machinery of every description, Artificial Stones Marbles, &c. The gentleman at the head of this Department in our London House is a practical engineer, and all Indents are carefully inspected before Shipment.

BYCULLA IRON WORKS.

This branch of our Iron business is conducted by European Engineers. We have introduced the use of English moulding sand and loam, which enables us to make castings of a superior quality.

We are prepared to contract for the construction of Wrought and Cast Iron Girders, Iron Roofs, and Bridge Work, Pumping Machinery, Mortar Mills, Cranes' Iron Waggons, Road Rollers, all descriptions of Contractors' Tools, Hammers, Drills, &c., and all kinds of general Iron Work. We also make Brass Castings of every description.

BOMBAY SAW MILLS,

AND WAGGON AND CARRIAGE FACTORY.

At our Steam Saw Mills at Tank Bunder we have always in Stock a large quantity of the best Moulmein Teak Timber, in Squares, Planks, and Boards, also Jungle Woods, Pine, and other Timber.

We are also prepared to undertake Railway Waggon and Carriage building in all its branches.

THE FOLLOWING ARE OUR PRESENT QUOTATIONS :—

Best quality Logs up to 30 feet long, and 20 inches square, from Rs. 110 to Rs. 130 per ton of 50 cubic feet. Above these sizes special rates, Boards, from Rs. 110 to Rs. 125 per ton of 50 cubic feet.

Scantlings prepared to specification, of ordinary size, for House building purposes and Bridge Works from Rs. 2-12-0 per cubic foot.

Planing and Plain Framing for Floors, Door Frames, Roofs, &c., from Rs. 0-4-0 per cubic foot.

JUNGLE WOOD.

Scantlings from Rs. 2 0 0 per square foot.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered.

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.

BISSONAUTH LAW & CO.,

DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM

LIGHT-BROWN COD LIVER OIL

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects, I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion on DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL *is sold* ONLY *in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees,* ANSAR, HARFORD AND CO. *A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.*

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

PRINTED AT THE "INDIAN STATESMAN" OFFICE CALCUTTA—BY W. H. TARGETT, PUBLISHER.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2104.] Calcutta : Saturday, 10th July, 1875. [Vol. XLI.

ADVERTISEMENTS.

British India Steam Navigation Company, Limited.

THE following are the movements of the Company's Steamers during July and August 1875 :—

From CALCUTTA for CHITTAGONG, AKYAB and KYOUK PHYOO, 10th and 24th July, 7th and 21st August.

„ AKYAB and RANGOON, 17th and 31st July, 14th and 28th August.

„ RANGOON and MOULMEIN, 17th and 31st July, 14th and 28th August.

„ SINGAPORE, calling at RANGOON, MOULMEIN, PENANG and MALACCA, 10th and 24th July, 7th and 21st August.

„ CHITTAGONG, AKYAB, KYOUK PHYOO, BASSEIN, RANGOON, MOULMEIN, TAVOY, MERGUI, PAKEHAM, KOPAH, JUNKSEYLON, PENANG, MALACCA, and SINGAPORE, 2nd and 30th August.

„ PORT BLAIR and CAMORTA, 12th July, and 9th August.

„ BOMBAY, calling at FALSE POINT, GOPAULPORE, BIMLIPATAM, VIZAGAPATAM, COCONADA, MADRAS, PONDICHERRY, NEGAPATAM, GALLE, COLOMBO, TUTICORIN, ALLEPPEY, COCHIN, BEYPORE, CALICUT, TELLICHERRY, CANNANORE, MANGALORE, and CARWAR, 13th, 20th and 27th July, 3rd, 10th, 17th, 24th and 31st August.

Receiving Cargo for KURRACHEE, GUADER, MUSCAT, BUNDER ABBAS, LINGA, BUSHIRE, FAO, BUSSORAH and BAGHDAD, to be *trans-shipped at BOMBAY to Steamer leaving for the PERSIAN GULF, immediately after arrival of Steamer from CALCUTTA.* BAGHDAD Cargo transferred at BUSSORAH to Steamers of the Euphrates and Tigris Steam Navigation Company, or other Steamers.

From MADRAS for RANGOON, calling at MASULIPATAM, COCONADA, VIZAGAPATAM, BIMLIPATAM, returning to MADRAS, *viâ* same ports, 19th July, 2nd, 16th and 30th August.

„ BOMBAY for KURRACHEE only, 10th, 17th, 24th and 31st July, 7th, 14th, 21st, and 28th August.

„ KURRACHEE, GUADER, MUSCAT, BUNDER ABBAS, LINGA, BUSHIRE, FAO, and BUSSORAH, receiving Cargo for BAGHDAD, 14th, 21st and 28th July, 4th, 11th, 18th and 25th August.

„ CALCUTTA, calling at same ports as the Steamers from CALCUTTA, 15th, 22nd and 29th July, 5th, 12th, 19th and 26th August.

„ ADEN for ZANZIBAR, 16th July, and 13th August.

„ ZANZIBAR for ADEN, 31st July, and 28th August.

„ Ditto, „ MAYOTTE and NOSSI BI and MOZAMBIQUE, 30th July, and 27th August.

Arriving at ZANZIBAR on the return trip 24 hours before the departure of the Steamer for Aden.

From LONDON for LISBON, ALGIERS, PORT SAID, SUEZ, JEDDAH, ADEN, MAKULLA, KURRACHEE, BUNDER ABBAS, BUSHIRE, and BUSSORAH. BAGHDAD Cargo transferred at BUSSORAH, to Steamers of the Euphrates and Tigris Steam Navigation Company, or other Steamers, 10th July, and 7th August.

„ BUSSORAH „ LONDON calling at same ports as on outward voyage, 13th July, and 10th August, touching at KURRACHEE on 25th July, and 22nd August.

Note.—This line connects at Aden with the Steamer for Zanzibar, carrying Passengers, Mails and Cargo for the Steamer from Zanzibar for Mayotte, Nossi Bi, and Mozambique. It likewise connects at Kurrachee with the Steamer for Bombay, carrying Passengers, Mails and Cargo for Goa.

AGENTS AT BOMBAY

MESSRS. W. NICOL & Co.

AGENTS AT MADRAS

MESSRS. BINNY & Co.

Managing Agents, MACKINNON, MACKENZIE & Co.,
CALCUTTA.

Peninsular and Oriental Company.

THE following or other first-class vessels will be despatched for Europe on the undermentioned dates :—

FROM BOMBAY.

Vessels.	*Captains.*	*Tons.*	*H. P.*			
"Indus,"	N. Stewart ..	3,478	500	16th	July	Southampton.
"Delhi,"	G. Lee ..	2,178	400	23rd	„	Suez, &c.
"Deccan,"	J. D. Gaby ..	3,128	600	30th	„	Southampton.

Passengers are booked to Malta, Gibraltar, and Southampton by every mail. The Southampton Steamers proceed to that port direct, but by the alternate steamers passengers change vessels at Suez.

Passengers to Brindisi, Ancona, and Venice, are carried by every Steamer, but proceed by Rail from Suez to Alexandria.

The China Mail Steamers will leave Bombay on 12th and 26th July
The Australian Mail Steamers will leave Bombay on the 24th July.

GEORGE F. HENRY,
Bombay, 15th June, 1875. *Superintendent.*

Overland Route via Trieste.

THE Austrian Lloyd's Steam-Packets leave Alexandria direct for Trieste, in communication with the P. & O. Steamers from Calcutta and Bombay, immediately after the arrival of the Mails and Passengers from Suez :—

The following is the about cost of Passage, first class, for a Lady or a Gentleman from Calcutta to London *viâ* Trieste :—

Passage to Suez per P. and O. Steamer ...	...	£55	0 0
Transit to Alexandria	...	3	0 0
Passage to Trieste	...	12	0 0
Trieste to London	...	12	0 0
		£82	0 0

The Rates of Passage between Alexandria and Trieste are now reduced as follows :—

1st Class	...	£13	0 0
2nd Class	...	9	0 0
3rd Class	...	6	0 0

The undersigned are also authorized to grant to Families of at least three adult travellers, a reduction of 20 per cent. on the amount of the nett passage money.

NOTICE.—Passengers by the above Route are no longer required to have passports in passing through the Austrian dominions.

For further particulars, apply to

BORRADAILE, SCHILLER & CO.,
3, Fairlie Place, Calcutta.

Eastern Bengal Railway Company.
Through service to Chuttuck, Sylhet, & Cachar.

The Steamer "*Queen of Seebpore*" and Flats, plying in conjunction with this Railway, will, until further notice, perform the service to Chuttuck, Sylhet, and Cachar every third week, instead of fortnightly as heretofore, commencing as from Sealdah on Saturday the 22nd current.

Goods for despatch should be delivered at the Sealdah Terminus by 1 P.M. of the Thursday previous.

Full particulars as to the dates of departure, rates and fares, &c., may be obtained of the Enquiry Officer, Sealdah Terminus, or of the District Agent at Dacca and Naraingunge.

AGENT'S OFFICE,
Sealdah Terminus, 10th May 1875. } (Sd.) GEO. LOW CALDER,
Acting Agent.

Eastern Bengal Railway.
NOTICE.

WEEKLY Communication by Railway and Steamer between Calcutta, Dacca and Naraingunge for Sylhet, Cachar, Tipperah and Eastern Districts.

This Company's Steamers leave Goalundo for Dacca and Naraingunge every Sunday morning, returning from Dacca and Naraingunge every Wednesday, reaching Goalundo on the Friday.

Passengers should leave Sealdah by the 7-30 A.M. or 8 P.M. Train on the Saturday preceding the departure of the Steamer, and goods for despatch should be delivered at the Sealdah Terminus before 3 P. M. on the Thursday previous.

Further particulars can be obtained on application to the Company's Enquiry Officer, Sealdah, or the Company's Local Agent at Dacca and Naraingunge.

E. B. RAILWAY, AGENT'S OFFICE,
17th November, 1873. } FRANKLIN PRESTAGE,
Agent.

TO COOLIE CONTRACTORS.

MUNICIPAL NOTICE.

WANTED Sweepers for the Bassein Municipality. The pay is Rs. 12 per mensem. A direct Steamer for Bassein leaves Calcutta once a month.

Tenders will be received by the undersigned.

G. L. WEIDEMANN, SECRETARY,
Bassein Municipality.
Bassein, 14th June, 1875.

ASSURANCE COMPANIES.

STANDARD LIFE OFFICE.

THE DEATH CLAIMS paid by the STANDARD COMPANY, during the past nine years, have been upwards of £1,200 per business day.

THE FUNDS during the same period, after payment of Claims and Expenses of every kind, have increased from £2,600,000 in 1865 to £4,800,000 in 1874.

NEW ASSURANCES, to the amount of £1,000,000 Sterling, have been placed upon the Company's Books in each of the years since 1865—some of them years of doubt and anxiety in the Assurance World. This result, it is believed, has been maintained by no other Office in the United Kingdom, during the same period.

BONUS YEAR 1875.

The next division of Profits will take place at 15th November, 1875.

ANNUAL REPORT 1875.

Copies of the Annual Report, containing the Balance Sheet, &c., may be obtained on application.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

MANCHESTER FIRE ASSURANCE CO.,

Insurances are granted by this Company on nearly every description of property in Great Britain, in Foreign Countries and in some of the Colonies at moderate rates.

Mills, Factories and other hazardous risks will be specially surveyed at the request of the owner.

The duty on fire insurance has now entirely ceased.

KETTLEWELL, BULLEN & CO.,
Agents in Calcutta.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman of the Annual Meeting, 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY,
CALCUTTA.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY,

FIRE AND LIFE.

ESTABLISHED IN 1836.

And specially empowered by Parliament.

OFFICES: DALE STREET, LIVERPOOL,

Cornhill, and Charing-Cross, London.

At the Annual General Meeting of the proprietors, held 24th February 1875, in the Company's Office, Liverpool, the Report of the Directors for the year 1874 was read, and it showed that:—

The Fire Premiums were	£ 1,082,521
The Life do.	244,607
The Annuities payable	59,511
The Invested Funds	4,089,747

For Tables of Rates and full particulars both for Fire and Life Insurances apply to

GILLANDERS, ARBUTHNOT & CO.,
Agents, Calcutta.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, *King William Street, London.*

Insurances effected with or without participation in Profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed,* whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premium,* the sum allotted for Bonuses this year being £37,030.

DR. T. EDMONSTONE CHARLES, 10, Harrington Street. Hour of attendance—10 A.M.

Capital	£500,000-0-0.
Available Funds	£1,012,185-16-8.

The financial position of the Institution on 31st December 1874, was as follows:—

Proprietary Capital		£1,000,000 0 0
Annual Life Income	Premia	76,424 0 0
	Interest	25,594 0 0
Realized and Invested Funds		598,970 0 0

RETIRING PROVISIONS.

Policies are issued by which these may be secured, and at the same time a surviving family be protected in the event of premature death.

ASSURANCES BY TERMINATING RATES OF PREMIUM.

Under this system, Assurances can be effected for the whole term of life, the annual premia for which cease after a given number of years.

FREE POLICIES.

Assurances by this system can never altogether be forfeited by non-payment of Premia.

CLERGY FUND.

One-tenth of the Proprietors' Profits is periodically set aside for the purpose of aiding Clergymen and Ministers to assure their lives for the benefit of their families.

COLVIN, COWIE & CO.

THE "Indian" is a Life Office only, and its Funds are therefore free from the Risks attaching to Fire and Marine business.

INDIAN LIFE ASSURANCE COMPANY, LIMITED.

COMBINING LIFE ASSURANCE AND PENSIONS.

Funds *entirely* in GOVERNMENT SECURITIES AND REMAIN IN INDIA. Policy-holders can appoint an Auditor.

Established 1869

ON NEW, SOUND AND POPULAR PRINCIPLES.

(Preliminary expenses including Establishment of 44 Agencies Rs. 2,066 only instead of Rs. 50,000 and upwards!)

REGISTERED UNDER ACT X. OF 1866.

Capital Rs. 500,000 Fully Subscribed.

Paid-up Rs. 100,000 only (to leave a large surplus to Policy-holders) as advised by the Actuary, J. Hill Williams, Esq., Vice-President, Institute of Actuaries, London.

HEAD OFFICE : MEERUT.

BRANCH OFFICE: BOMBAY.

Advantages of Assuring with this Company.

(1) ECONOMICAL MANAGEMENT. (2)* ENTIRE DIRECTION IN INDIA (3) NO AMALGAMATION. (4) FUNDS in Government Securities only. (5) REDUCTION OF PREMIUMS. (6) POLICY-HOLDERS entitled to appoint an Auditor. (7) REDUCTION TO ENGLISH RATES from date of leaving an port in India, Ceylon or China. The first Company which granted this complete concession. (8) NO RESTRICTION ON TRAVEL. (9) INDIAN RATES of Premium charged while in India. English Rates on leaving for Europe. Assurers who do not contemplate spending a *life time* in India or other tropical climates, will find that the rates of this Company compare *favourably* with *enhanced English Rates*. They have the advantage of *consistency*, as it is *proved beyond doubt* (by the various Civil and Military Funds) that English Life is of less value in India than in Europe. (10) ASSURANCES EFFECTED on lives of EUROPEANS, EURASIANS, PARSEES, AND HINDOOS. (11) CLAIMS PAID three months after satisfactory proof of death. (12) POLICIES for the whole term of life. Short terms of years certain, or payable during life time. ENDOWMENT ASSURANCES combine the advantages of Personal and Family Provisions. They are made payable to the assured themselves on attaining a specified age, or to the representatives at death should that happen sooner. A PROMISSORY NOTE GRANTED for every PREMIUM PAID. (13) HALF CREDIT SYSTEM. (14) NON-FORFEITABLE POLICIES BY LIMITED NUMBER OF PAYMENTS. Should payment of premium not be continued, a paid-up Policy in the form of a Negotiable Promissory Note payable to bearer is given for every Premium paid, which Promissory Note cannot *lapse, and is payable on the death of the* assured or may be converted into cash during his lifetime to the extent of *30 or 40* per cent. of the premium after 1st or 2nd years paid, without forfeiting the balance of the sum assured. Thus, the assured receives full value for his money for although he can only withdraw 30 or 40 per cent. of the amount of his premiums paid, he receives value for the remainder by being assured. In this way he has full control of his money, the Premiums paid becoming to him equal to a current banking account withdrawable at will. (15) LIBERAL SURRENDER VALUES. (16) SUMS PAID under Promissory Notes exempt from all charges. (17) PREMIUMS are payable monthly, quarterly, half-yearly, yearly, in five, ten, fifteen or twenty payments, or on the half credit system. (18) LAPSED POLICIES may be revived at any time on production of approved Medical Certificates and payment of arrears of Premium, with interest. (19) LOANS ON POLICIES. (20) EXCHANGE OF POLICIES by the substitution of Lives. (21) PENSION BRANCH. *The Rates are more favourable than those of any similar Fund in India.*

THE TWO GRAND INDUCEMENTS TO POLICY-HOLDERS MUST ALWAYS BE

Unquestionable Security; and as large Profits as the System of Life Assurance admits.

Forms of Proposal, Tables of Rates, and any further information may be obtained on application to the Company's Agents, or to

D. LANCASTER, *F. I. A.*,
Secretary.

Head Office, Meerut, 1875.

* Extract from Mr. P. M. Tait's Paper on "Anglo-Indian Vital Statistics," read before the East India Association, London, on 28th January, 1874:
"One formidable objection to English proprietary Companies doing business in India is, that the local Directors and representatives of these Companies in India are simply Agents without any substantial power, and removeable at pleasure by the chief authorities in this country."—(England) *Insurance Record, February*, 1874.

PHŒNIX FIRE OFFICE.

ESTABLISHED IN 1872, UNLIMITED.

The importance of this Company's transactions with the public may be judged from the fact that since its commencement it has been able to pay 9,000,000*l.* sterling as losses under insured risks and without a single call on its proprietors whose liability is unlimited.

The undersigned are authorised to issue policies in Bombay and the Mofussil at the tariff rates of all the old established Company, which are as low as the nature of the risks can justify.

The rates on bungalows in the Mofussil, and Residences, Offices, and Godowns in Elphinstone Circle, have been lately much reduced. Particulars on application at the Agency office.

No. 7, ROYAL EXCHANGE, LONDON, E.C.

GOVERNOR,
JAMES BLYTH, ESQ.
SUB-GOVERNOR, EDWIN GOWER, ESQ.
DEPUTY-GOVERNOR, DAVID POWELL, ESQ.
JOHN P. LAURENCE, ESQ., Secretary.
JOHN ANTHONY RUCKER, ESQ., Underwriter.
ARTHUR H. BAILEY, ESQ., Actuary.
THOS. B. BATEMAN, ESQ., Manager of the Fire Department.

LIFE DEPARTMENT.

This Corporation has granted Assurances on Lives for a period of nearly One Hundred and Fifty Years, having issued its first Policy on the 7th June 1721.
Two-thirds of the entire profits, without any Deduction for expenses of management, are alloted to the Assured.
The profits are declared at the end of every five years, and the share of the Policy-holders may be appropriated either in increase of the Sum Assured, or as an immediate Cash payment.
Assurances may also be effected withotit participation in profits, at reduced Rates of Premium.
The premiums have been computed from the most recent information on the subject of European mortality in India, and they will be reduced to the corresponding English rates on the return to Europe of the persons whose lives are Assured.
Premiums may be made payable either yearly or half-yearly.
Policies on lives of Military Officers in civil employ issued at the Civilian Rates.
Risks on Male Parsee and Eurasian lives, under 40, accepted at European Rates.
Medical Fees and Stamps are paid by the Corporation.

For further information and particulars, and for prospectuses, &c., regarding Fire and Life Insurances, apply to

LAWRENCE & Co.,
Agents in Bombay.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example.

		With Profits.
A, aged 30, wishes to Assure Rs. 1,000.		
Annual Premium at Indian Rate ...	Rs.	36 0 0
Annual Premium at English Rates ...	„	23 10 8
Difference ...	Rs.	12 5 4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

D. McLAUCHLAN SLATER,
Fellow of the Institute of Actuaries,
Manager and Actuary.

MOFUSSIL ORDERS will receive immediate attention. Sketches of articles will be sent, on application by letter, to any address, and in cases specially where despatch is of consequence, goods will be selected and sent at once on inspection; when the selection of goods is left entirely to Hamilton & Co., their Constituents may rely upon a choice being made from the newest and most tasteful portion of their stock.

HAMILTON AND Co., in ordinary.

Meadow Street, Bombay.

CALCUTTA METAL MART.

THE undersigned have a large stock of Machinery, Metals, and Miscellaneous Articles of all descriptions, and are prepared to give estimates, or contract for the supply of any materials which they have not in their godowns.

They are also prepared, for a moderate commission, to import any articles from England at actual cost, and are in a position to get the best quality at the lowest possible price.

The following are generally in stock or on the way :—

Portable Engines.

Clayton & Shuttleworth's

Prices, with Single Cylinder .. .. Rs.	4 H. P. 2,700	6 H. P. 3,250	8 H. P. 3,900	10 H. P. 4,500	
Do., with Double Cylinder .. .. Rs.	10 H. P. 4,750	12 H. P. 5,000	16 H. P. 6,250	20 H. P. 7,500	

Reversing Gear.

Extra, at Rs. 200 to Rs. 400, according to size.

Stationary Engines.

Tangye's (suited for Tea Gardens), with vertical boiler mounted on base plates, occupy little room, and are well adapted for use with Tea or other machinery requiring small power. Fire-places are constructed to burn either wood or coal.

Prices .. .. Rs.	2 H. P. 1,400	3 H. P. 1,500	4 H. P. 1,650

Fire Engines.

Holman's, with suction and delivery hose complete.

Centrifugal Pumps.

Gwynne's—are largely used all over the world where a rapid discharge of water is wanted.
A 6-inch pump worked by a 6 H.P. Portable Engine will discharge about 700 gallons of water per minute.
A 7-inch pump worked by an 8 H.P. Portable Engine will discharge about 900 gallons per minute.
An 8-inch pump worked by a 10 H.P. Portable Engine, will discharge about 1,100 gallons per minute.
Prices, with pipes and other fittings complete.

	4 in.	5 in.	6 in.	7 in.	8 in.	10 in.	12 in.
Rs.	460	600	750	900	1,050.	1,300	1,500.

Centrifugal Pumps.

The same sizes, but of slightly different shape, may be had mounted on wheels, and will be found useful by Contractors and Engineers who require Portable Pumps.

Special Steam Pumps.

Tangye's, are very compact and simple in construction.

Disintegrators.

Norton and Hawksley's for grinding to a fine powder artificial manures, ores of all kinds, shale, asphalte, lime, chalk, coal, coke, clays, barks, myrobalans, leather, drugs, sugar, seeds, and grains of all descriptions, besides many other articles.

Prices.

No. 1, Rs. 450; No. 2, Rs. 1,050.

Extinctures.

Dick's—can be carried by one man, and always kept ready for instant use in case of fire. They have proved very efficacious at Home; and in Warehouses, Mills, and Ships; as well as for Private Dwellings, they form a great safeguard against damage by fire.

Prices.

No. 4, Rs. 100; No. 5, Rs. 125.

Charges for ditto supplied extra, at Rs. 4 per tin.

Steam Road Rollers.

Aveling and Porter's, 5 ton and 8 ton.

Stone Breakers,

Marsden's .. .. Rs.	3,000
ALBION DRILLING MACHINES .. .. „	325

Steam Hammers,

3 cwt., with fittings complete .. .. „	1,250

Soorkee Mills,

with 6-feet pan and rollers complete .. .. „	1,025

Injectors.

Giffard's—are much superior to Pumps as Boiler feeders, and are very simple in their construction.

Prices .. .. Rs.	No. 4. 70.	No. 6. 90.	No. 8. 135.	

Wire Tramway.

Hodgson's. These Tramways are well adapted for carrying produce and minerals over hilly ground, or in any country where good road or water carriage is unavailable; and as feeders for railways, their use might be extended.

The undersigned will be happy to furnish Catalogues and particulars on application.

J. NICOL FLEMING & CO.

F. & C. OSLER,

LAMP, GLASS, CHANDELIER AND EARTHEN-WARE ROOMS,

No. 2104.] Calcutta: Saturday, July 10, 1875. [Vol. XLI.

THE CURRENCY OF INDIA.

THE continued fall in the price of silver has set people thinking whether it is, or is not, the duty of Government to prevent the value of its coins from being lowered in this way. It is admitted on all hands that it is immoral for the king to take any active measure to debase the coinage. As Mill says, in biting words: "Profligate Governments have, until a very modern period, seldom scrupled, for the sake of robbing their creditors, to confer on all debtors a license to rob theirs, by the shallow and impudent artifice of lowering the standard—that least covert of all modes of knavery, which consists in calling a shilling a pound, that a debt of a hundred pounds may be cancelled by the payment of a hundred shillings. It would have been as simple a plan, and would have answered the purpose as well, to have enacted that 'a hundred' should always be interpreted to mean five, which would have effected the same reduction in all pecuniary contracts, and would not have been at all more shameless." Every one must agree that this is the proper view to take of the conduct of those statesmen who have, in different countries, reduced the value of the coinage, by lessening the weight of the precious metal employed. But unfortunately money may become depreciated by a falling-off in the value, as well as in the quantity, of the material used. Our rupee is as good to-day as it was in 1864, but it is worth ten per cent. less. This result of economic causes has just the same effect as the action of Government denounced by Mill, for it equally reduces all fixed incomes, and disturbs all contracts. The question arises, Is it the business of Government to check such a downward tendency?

There are many who think that the State should not interfere in such a matter. It is, they say, the duty of the mint to keep the rupee at its proper weight, but beyond that it should not look. If silver falls in price one man gains, another loses—but this in no way concerns Government. We doubt whether those who hold this opinion have considered the amount of injustice and inconvenience which results when money, the measure of all values, itself fluctuates in value. We may suppose the case of the measure of space being variable, as it would be if the standard was a metal yard, which shrunk and expanded with the temperature. The result would be that all expressions relating to distance would be vague and uncertain, and that all contracts for the sale of land would be liable to misconstruction, if expressed in terms of quantity. It would be rather strange to see rents rise because the standard yard had shrunk an inch, although such things happen in Eastern Bengal, when a zemindar snips a cubit off the measuring pole. In such a case it would hardly be maintained that the duty of Government with regard to measures was confined to providing the standard yard, and keeping it free from interference, and that it would be wrong for the State to remedy the effects of natural causes, by substituting a more suitable metal for the iron. Neither would it be maintained that Government should look on with folded arms if anything were to disturb the uniformity of the usual measures of weight. There have been men who held some such opinion with regard to a measure of time. When Julius Cæsar, and at a later period Pope Gregory, reformed the calendar, in order to correct the length of the year, some persons thought that this was an undue interference on the part of Government, and that it would have been better to have let things go on in the old style. These opinions did not, however, receive much consideration.

It seems to us that the duty of Government with regard to the measure of value, is in principle the same as that which it acknowledges as to all other measures. The distinction is only this, that while in other cases it can secure perfect uniformity, in this it must be content with something less. It is bound to neglect no reasonable means of keeping its coinage at the standard value. And in particular we may fairly ask that our own mint shall not, in this respect, fall much behind that of other nations. If a system has been adopted in every other civilized country in the world, which has secured uniformity to a great extent, and our Government by refusing to conform to that system suffers its coinage to be depreciated, then it stands convicted of a plain neglect of duty.

To this charge we believe our mint is fairly open. When we assumed the Government of India, we found a gold coinage in existence, and up to the year 1852 we continued to receive this gold at our treasuries, thereby giving it currency. Since that date we have relied altogether on silver. It is believed that we made this change through fear that the value of gold would decline, owing to the discovery of the Australian and Californian mines. If so, we ran into the mouth of the very danger from which we fled; for, though gold probably did decline in price, silver fell ten per cent. more. In 1864 bar silver sold, on an average, at 61⅛*d.* an ounce, it now averages 55½*d.* per ounce. The rupee formerly cost two shillings to make, it now costs a little over one shilling; and, as we all know, the value of a standard coin is equal to the cost of its manufacture. It thus appears that from a preventible cause, our adherence to a silver coinage when gold was available, every man's income has been reduced ten per cent. This fact is unpleasantly obvious to those who have to make remittances to England. They find that for ten thousand rupees in Calcutta they cannot get nine hundred pounds in London, and all their arrangements for the education of their children and the support of their families, are thus thrown out. It is, however, to be remembered that though we only see the fall in the value of the rupee, when obliged to compare it with the coin of another country, that fall has taken place in India as well. When we make remittances we talk of "loss on exchange," when we buy goods we speak of "the rise in prices"; it would be more correct in each case to complain of the fall in the value of the rupee. A rupee is now worth not two shillings, but one and ninepence, and whether we keep it at home, or send it abroad, it will only buy its one and ninepence worth.

All receivers of fixed incomes are equally injured by this change, but we will refer to some classes which have special claims on Government. In the first place, there are the public creditors, those who own Government securities or the stock of guaranteed railways. These have lent to Government good rupees, worth two shillings each. They are now being paid in depreciated money, with one and ninepenny coin. They were promised five per cent. and they are getting less than four and-a-half. It is as if the American Government were to have paid its debt in greenbacks. And the fact comes home to these investors, because most of them draw their interest in Europe, where it is paid, less the ten per cent. loss on exchange. Let them thoroughly understand that this is not due to any alteration in the balance of trade, or other such temporary cause. The balance of trade is in India's favor, and silver is actually sent out to this country from England. We think that these English fundholders are not the men to submit quietly to what comes to the repudiation of ten per cent. of the national debt. The other class which we would specify consists of the servants of the State. Their salaries were fixed at the rate which was

thought best for the public interests, being neither so large as to be unjust to the State, nor so small as to be unfair to them. It was assumed at the time, that the rupees in which they were paid equalled two shillings each. They now find their pay reduced ten per cent. below what they bargained for, and below what it should be. From the Governor-General down to the office messenger, all public servants share this grievance. And, among others, we have to deal with the soldiers. It has always been considered dangerous to tamper with the pay of troops. They do not get much of it, and they are expected to give a great deal in return, if not in hard work, at least in obedience and devotion. The soldiers perform their part of the contract, and always demand that the State shall hold to its obligation. A direct order to reduce by ten per cent. the pay of all military men, including the mercenaries whom we recruit beyond the Himalayan frontier, would not be received in a friendly spirit. The same thing is now done, and if it does not cause disaffection, it is because the soldiers do not understand the process of reduction. Officers having to make home remittances, or to draw half-pay in London, perceive something of the truth, and they express their feelings in no measured terms.

Such being the grievance, we think that there can be no difficulty in perceiving the proper remedy. The most obvious course would be to restore the value of the rupee by increasing its weight. But the same object can be obtained in a better way; if we were to introduce the English system of buying gold at the mint at a fixed price in sovereigns, of declaring these sovereigns the sole legal tender above forty shillings, and of the value of ten rupees each, the reform would be complete. At first the new coins would be at a premium, and all creditors, including those who have to receive money from Government, would insist on being paid in that form. There would, therefore, be a great demand for gold, and the mint would have to be prepared to do business on a large scale, cashing notes and silver like a bank on which there is a run. This would go on till as much gold in circulation as the wants of the country required, say twenty million sovereigns. The loss of the mint on this issue at ten per cent. would be two millions, against which there would be the set-off of a million a year saved under the head of "loss on exchange." When the rush was over, all large payments would be made in sovereigns. The value of these would depend on the cost of the bullion, and would be in this country about the same as in England, that is, equal to eleven of our present rupees. Every one receiving payment of a debt in gold, would get exactly his due, according to the standard of 1864, and ten per cent. more than he receives now. But the change would be perceived only in the fall of prices, and the rates of exchange. Thus the gold coinage would carry the silver up with it, and ten rupees would do the work of eleven. It is to be remembered that, in England also, the silver coinage is depreciated, but this is not felt because it is upheld by that of gold. As twenty shillings are by law equal to a sovereign, they exchange for it, though considered as bullion they are not worth so much. If we thus restored the gold coinage of India, which we suppressed in 1852, we would do a great act of justice, and for ever put a stop to the grievance of the army and of a large part of the civil population.

It is perhaps well to indicate the collateral advantages of a gold coinage, though we do not rely mainly on them as the inducement to undertake this reform. This metal is now the standard in every civilized country. Those who use it are in relation with the whole trading world, and have an easy way of adjusting exchanges. The sovereign, in particular, is current in England, with which almost all our trade lies, and by using it we would have the advantage of dealing with our principal customer in his own currency. Exchanges would generally be favourable to India, as the country importing bullion, and could not, if the balance of trade turned, rise beyond the cost of sending gold. Government would save, in this item of loss on exchange, a million sterling a year, and also in the cost of remittances from the receiving to the disbursing treasuries. It would gain ten per cent. on all its receipts, and only lose in the same proportion on the part of its disbursements, which are paid in fixed amounts, as the interest on money borrowed, and salaries, as distinguished from the hiring of labourers for public works, and so forth, and the purchase of goods. Private persons would obtain money in a form more convenient to carry, and cheaper to send. We think that if these arguments were urged by all interested in the matter, such a pressure would be brought to bear on Government, that it would have to undertake the labour of this onerous and invidious, but, to a Baring in power, certainly not uncongenial reform.

N.

THE EASTERN QUESTION.

TOPICS which absorb the public attention at home, always more or less have interest for India and its residents; but none blends, as it were, the two countries together in thought and action, so much as any movement in what is called the Eastern Question. Because any reopening of this much disputed subject bears more or less heavily both on England and India and English capital, threatening to sever the immediate communications between the two most important parts of the Empire.

The Crimean war was fought for the safety of the overland route, and if the same policy is to hold good, little else could be expected for the safety of the Suez Canal, if Russia again seeks to interfere in the destinies of Turkey. But, somehow, within the last two or three years a sort of coolness has arisen between the two Governments, and English influence has ceased to predominate at Constantinople. This has been occasioned, it is said, by the fall of the late Grand Vizier, whose enlightened mind had endeavoured, under advice of the English minister, to curtail the wasteful expenditure of the court; to pay the State responsibilities and foreign creditors, without having recourse to other loans; and to make the revenues of the country sufficient for its requirements. Alas! for any one who attempts to accomplish such useful but impossible reforms. The Turk is obstinate: *kishmat*—it is fate! He will continue the same course until he can get no more money, or till fate stops the demand by calling him to settle his account elsewhere.

But as the former contingency is likely to happen before the latter, for the Sultan is a hearty old gentleman, there must come a national bankruptcy, and of course a great crash But why this is to bring about the great conflagration, we do not exactly see, unless something more definite is behind the tapestry. Turkey appears on the best terms with all her neighbours, and what the Sultan does with his money is of very little consequence, we should imagine, to England or Russia, except perhaps to those units of the two nations who supplied him with it and expect to be repaid. The famine in Asia is certainly a cruel thing, and makes one tremble with scorn to see the millions lavishly wasted on luxuries, when so many thousands are dying for want of necessaries. Yet this can be no cause for war. It might lead to friendly remonstrances which would make the Sublime Porte turn sulky, but nothing more. We must confess ourselves for the nonce at fault, although we are aware of many powerful motives, which might make poor Turkey's surrounding friends desire to have the chance to pick her bones.

The first of these is the traditional hope of the Head of the Greek Church, sitting and reigning in the seat of the original empire of the Christian Greeks, as consecrated by Constantine at Constantinople. Russia was not so well prepared for executing her purpose at the Crimean war as she is at present; but the Turk is also in a far better position as regards his defences. He may be worse off as far as active interference on the part of his allies may be concerned; but we are pretty strongly of opinion that he can take care of himself in all things, except money matters. He is like a foolish schoolboy who spends all his pocket-money in loly-pops and reserves none for a future day. Should it, therefore, become necessary for him to act on his own resources, the struggle may be desperate, but will not be long. Let us see now what effect it would have in the communications between India and England, or in what way we here should be at all endangered, should Russia at anytime annihilate the Turkish power in Europe. We presume that, should such a circumstance occur, Egypt would be erected into an independent State, under the guarantee and protection of the great maritime powers, which would secure

BONUS YEAR, 1875.

Incorporated by Royal Charter and Special Acts of Parliament.

NORTH BRITISH AND MERCANTILE INSURANCE COMPANY.

ESTABLISHED 1809.

SUBSCRIBED CAPITAL—TWO MILLIONS.

SPECIAL NOTICE.

THE NEXT DIVISION OF PROFITS, for the Five Years since 1870, will be made on the closing of the Books on 31st DECEMBER, 1875.
ALL POLICIES on the Participating Scale, opened before that date, will share in the Division.
At last Division the Bonus declared was at the rate of £1 : 5s. per cent per annum on all sums assured and the previously vested Bonuses.
During the first four years of the current Quinquennial Period, 3,297 NEW POLICIES were issued, INSURING the sum of **£3,204,135.**

EXTRACTS FROM THE REPORT,

AS SUBMITTED TO THE

SIXTY-FIFTH Annual General Meeting of Shareholders,
HELD IN EDINBURGH ON 2ND APRIL, 1875.

Life Business.

The New Business in the Life Department, for the year 1874, was as follows, *viz.*—

No. of Policies Issued.	Sums Assured.	Premiums Received.
873	£672,177	£21,003 : 13 : 10

The Claims paid during the year, including 5 endowments, were 197 in number, arising under 241 Policies, and the sums amounted, with Bonus Additions, to £240,466 : 17 : 9.

In the LIFE DEPARTMENT, THE ACCUMULATED FUNDS, in terms of "The North British and Mercantile Insurance Company's Act, 1870," are exclusively invested to meet the obligations arising under Life Policies and Annuities, and declared not to be responsible for the obligations in the Fire Business. These *Funds* now amount, irrespective of the paid-up *Capital, to £2,682,513-7-6.*

NINETY PER CENT. of the WHOLE PROFITS is divided among the assured on the Participating Scale. This is as large a share of the profits as is allowed by any office, and larger than that given by most other Proprietary Offices.

The Profits are ascertained and divided every *Five Years.*

The NEXT DIVISION OF PROFITS will take place as at 31st December, 1875.

Intending Assurers are reminded that by effecting a Policy during 1875, *they will, in conformity with the rules of the Company, secure One Year's Bonus at the next Division of profits.*

The TABLES OF PREMIUM are moderate.

The TABLES have been adopted for INDIA, CHINA, &c., whereby a considerable reduction is made on the rates usually charged for these countries.

Policies are indisputable after having been Five Years in force.

In the ANNUITY DEPARTMENT, Immediate, Deferred, and Survivorship Annuities of all kinds are granted on the most favourable terms.

Indian Branch.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ½ lb. and 1 lb. tins, labelled thus :—

No. 2105.] Calcutta : Saturday, 17th July, 1875. [Vol. XLI.

ADVERTISEMENTS.

British India Steam Navigation Company, Limited.

THE following are the movements of the Company's Steamers during July and August 1875 :—

From CALCUTTA for CHITTAGONG, AKYAB and KYOUK PHYOO, 24th July, 7th and 21st August.

„ AKYAB and RANGOON, 17th and 31st July, 14th and 28th August.

„ RANGOON and MOULMEIN, 17th and 31st July, 14th and 28th August.

„ SINGAPORE, calling at RANGOON, MOULMEIN, PENANG and MALACCA, 24th July, 7th and 21st August.

„ CHITTAGONG, AKYAB, KYOUK PHYOO, BASSEIN, RANGOON, MOULMEIN, TAVOY, MERGUI, PAKEHAM, KOPAH, JUNKSEYLON, PENANG, MALACCA, and SINGAPORE, 2nd and 30th August.

„ PORT BLAIR and CAMORTA, 9th August.

„ BOMBAY, calling at FALSE POINT, GOPAULPORE, BIMLIPATAM, VIZAGAPATAM, COCONADA, MADRAS, PONDICHERRY, NEGAPATAM, GALLE, COLOMBO, TUTICORIN, ALLEPPEY, COCHIN, BEYPORE, CALICUT, TELLICHERRY, CANNANORE, MANGALORE, and CARWAR, 20th and 27th July, 3rd, 10th, 17th, 24th and 31st August.

Receiving Cargo for KURRACHEE, GUADER, MUSCAT, BUNDER ABBAS, LINGA, BUSHIRE, FAO, BUSSORAH and BAGHDAD, to be trans-shipped at BOMBAY to Steamer leaving for the PERSIAN GULF, immediately after arrival of Steamer from CALCUTTA. BAGHDAD Cargo transferred at BUSSORAH to Steamers of the Euphrates and Tigris Steam Navigation Company, or other Steamers.

From MADRAS for RANGOON, calling at MASULIPATAM, COCONADA, VIZAGAPATAM, BIMLIPATAM, returning to MADRAS, *vid* same ports, 19th July, 2nd, 16th and 30th August.

„ BOMBAY for KURRACHEE only, 17th, 24th and 31st July, 7th, 14th, 21st, and 28th August.

„ KURRACHEE, GUADER, MUSCAT, BUNDER ABBAS, LINGA, BUSHIRE, FAO, and BUSSORAH, receiving Cargo for BAGHDAD, 21st and 28th July, 4th, 11th, 18th and 25th August.

„ CALCUTTA, calling at same ports as the Steamers from CALCUTTA, 22nd and 29th July, 5th, 12th, 19th and 26th August.

„ ADEN for ZANZIBAR, 13th August.

„ ZANZIBAR for ADEN, 31st July, and 28th August.

„ Ditto, „ MAYOTTE and NOSSI BI and MOZAMBIQUE, 30th July, and 27th August.

Arriving at ZANZIBAR on the return trip 24 hours before the departure of the Steamer for Aden.

From LONDON for LISBON, ALGIERS, PORT SAID, SUEZ, JEDDAH, ADEN, MAKULLA, KURRACHEE, BUNDER ABBAS, BUSHIRE, and BUSSORAH. BAGHDAD Cargo transferred at BUSSORAH, to Steamers of the Euphrates and Tigris Steam Navigation Company, or other Steamers, 7th August.

„ BUSSORAH „ LONDON calling at same ports as on outward voyage, 10th August, touching at KURRACHEE on 25th July, and 22nd August.

Note.—This line connects at Aden with the Steamer for Zanzibar, carrying Passengers, Mails and Cargo for the Steamer from Zanzibar for Mayotte, Nossi Bi, and Mozambique. It likewise connects at Kurrachee with the Steamer for Bombay, carrying Passengers, Mails and Cargo for Goa.

ASSURANCE COMPANIES.

STANDARD LIFE OFFICE.

THE DEATH CLAIMS paid by the STANDARD COMPANY, during the past nine years, have been upwards of £1,200 per business day.

THE FUNDS during the same period, after payment of Claims and Expenses of every kind, have increased from £2,600,000 in 1865 to £4,800,000 in 1874.

NEW ASSURANCES, to the amount of £1,000,000 Sterling, have been placed upon the Company's Books in each of the years since 1865—some of them years of doubt and anxiety in the Assurance World. This result, it is believed, has been maintained by no other Office in the United Kingdom, during the same period.

BONUS YEAR 1875.

The next division of Profits will take place at 15th November, 1875.

ANNUAL REPORT 1875.

Copies of the Annual Report, containing the Balance Sheet, &c., may be obtained on application.

Thomas Barham Foster, Esq. | John Napier, Esq.
Henry Michael Steinthal, Esq.

Insurances are granted by this Company on nearly every description of property in Great Britain, in Foreign Countries and in some of the Colonies at moderate rates.

Mills, Factories and other hazardous risks will be specially surveyed at the request of the owner.

The duty on fire insurance has now entirely ceased.

KETTLEWELL, BULLEN & CO.,
Agents in Calcutta.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman of the Annual Meeting, 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

AGENTS IN CALCUTTA.
GILLANDERS, ARBUTHNOT & CO,

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on the participating scale.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, Quarterly, or Monthly,
at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:

Calcutta, 16th June 1875. (B)

ESTABLISHED 1840.

CHURCH OF ENGLAND
LIFE ASSURANCE INSTITUTION.

Head Office, 9 & 10, King Street, Cheapside, London.

Empowered by Special Act of Parliament, 4 & 5, Victoria, Cap. XCII.

CAPITAL—ONE MILLION.

(A list of Proprietors periodically enrolled in the High Court of Chancery).

TRUSTEES.

The Very Rev. the Dean of Armagh.
Jonathan Hopkinson, Esq.
William Gordon Thomson, Esq.
The Rev. Richard Wood, B.D.

DIRECTORS.

Chairman—The Very Rev. the Dean of Armagh.
The Rev. Edward Carr, LL. D.
William Emmens, Esq.
Charles Harrison, Esq.
Jonathan Hopkinson, Esq.
Richard Nugent, Esq.
Col. Thos. E. L. Higginson.
William Forbes Skene, Esq., W. S., LL. D
Herbert Taylor, Esq.
William Gordon Thomson, Esq.
The Rev. Richard Wood, B. D.
John Ralph Engledue, Esq.
Secretary,—Andrew Francis, Esq.

The financial position of the Institution on 31st December 1874, was as follows:—

Proprietary Capital		£1,000,000 0 0
Annual Life Income	Premia	76,424 0 0
	Interest	25,594 0 0
Realized and Invested Funds		598,970 0 0

RETIRING PROVISIONS.

Policies are issued by which these may be secured, and at the same time a surviving family be protected in the event of premature death.

ASSURANCES BY TERMINATING RATES OF PREMIUM.

Under this system, Assurances can be effected for the whole term of life, the annual premia for which cease after a given number of years.

FREE POLICIES.

Assurances by this system can never altogether be forfeited by non-payment of Premia.

CLERGY FUND.

One-tenth of the Proprietors' Profits is periodically set aside for the purpose of aiding Clergymen and Ministers to assure their lives for the benefit of their families.

COLVIN, COWIE & CO.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example.

			With Profits.
A, aged 30, wishes to Assure Rs. 1,000.			
Annual Premium at Indian Rate	...	Rs.	36 0 0
Annual Premium at *English Rates*	...	„	23 10 8
Difference	...	Rs.	12 5 4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

D. McLAUCHLAN SLATER,
Fellow of the Institute of Actuaries,
Manager and Actuary.

9, ELPHINSTONE CIRCLE, BOMBAY.

H. M. MEHTA,
AGENT,
CALCUTTA.

THE POSITIVE

GOVERNMENT SECURITY *LIFE ASSURANCE COMPANY LIMITED.*

Capital £500,000, with power to increase.

AN UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.

NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.

Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.

POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.

ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.

AS AN OUTER FORTIFICATION TO THE SYSTEM, £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10, 15, 20, 25, or 30 years.

No. 2105.] Calcutta: Saturday, July 17, 1875. [Vol. XLI.

THE SETTLEMENT OF LAND REVENUE IN OUDH.

II

IN the last article we published on this subject, we showed that the settlement of this province had been carried through in a most haphazard way, by a body of industrious officers, of average, but by no means of marked, ability; that they had had to learn their work after they received their appointments, and had had no instructions in the principles of assessment; that, in fact, the Department had worked for years without any system or any knowledge of fixed principles; and that the consequence was, that the whole province had been assessed most unevenly; and while in some pergunnahs, and even whole districts, the Government was suffering a loss by the assessment being too low, in many other parts there was fear of the zemindars being ruined by the demand having been made too high.

The consequences of this inequality are now showing themselves. In about half, or more than half of the twelve districts of the province, the assessments have had to come under revision. Wherever, on inquiry, it is found that the demand has been pitched too high, a proportionate reduction is very properly allowed. But, on the other hand, the Government has no remedy where the contrary has taken place. If the assessment has been fixed too low, it must remain so, until *the completion of the term of settlement*; where Government is a loser, it must continue to be a loser; where the landlord is a loser, Government must give way, and reduce its unfairly high demand. In this way inequality of assessment must come to mean a too low assessment. Equality can only be obtained by levelling down: there can be no levelling up. In some districts, for instance Fyzabad, reductions have had to be made on quite a wholesale scale, and the sums realized for several years from zemindars over and above the reduced *jumma*, have been returned to them. In this way, we fear, that before the much-to-be-desired equilibrium is reached, the sacrifice of revenue entailed will be enormous. Not that we object to these reductions where they are proved to be necessary. The only other course to take would be, to order a revision of the entire assessments in half the districts of the province; and the loss of a good many lakhs by reductions and refunds is preferable to the hundred disadvantages of doing the work all over again. But there ought to be the most conclusive proof, in each case, of the necessity of the reduction, and, we think that there is evidence that the Oudh administration are disposed to go too far back with the returning tide, and have shown considerable weakness in dealing with the opposition of some powerful talookdars to the assessments imposed upon their estates. When some objections are found to be reasonable, and are listened to, it is but natural that many other unreasonable objections should be made, on the chance that they, too, may obtain a favourable hearing. We understand that some talookdars of the district of Kheree, lately prevailed on Colonel Macandrew, the Commissioner of the Seetapore Division, to recommend to Government an entire re-assessment of some nine large pergunnahs in Kheree, assessed by Mr. McMinn, C.S., and Mr. Williams, C.S. The object of the pamphlet adverted to by us in a late issue, is to show that any such expensive and tedious operation is unnecessary. The writer, Mr. McMinn, acknowledges that in consequence of three successive bad seasons, accompanied with an epidemic of fever and cattle-disease, there has been a decrease of population and cultivation, rendering necessary occasional reductions of his assessments; but pleads that anything more than this is not required. We think that Mr. McMinn proves this very conclusively, and that his pamphlet also contains evidence of the statement we have just made—that the Oudh administration (we refer to Sir G. Couper, not to Mr. Inglis) have not, in all cases, known how to meet, with sufficient firmness, large demands for reduction of revenue.

The tract of country, which forms the subject of controversy, consists, for the most part, of large, fertile plains, bordering on Nepal, and comprises the estates of certain talookdars, which were confiscated for persistent rebellion on the reconquest of Oudh in 1859. They were bestowed as rewards for loyalty on various gentlemen—English, Eurasian, Sikh, and some natives of Oudh. These gentlemen have never resided on their estates; they are absentee landlords, whose only connexion with their estates is, that the rents are regularly remitted to them; they have expended no capital whatever on their lands. Population was scarce, and land plentiful, so they could not demand high rents; therefore, immigrants poured in and settled, waste lands were broken up, villages sprang up in the jungle, and, in the ten years between 1860 and 1870, the new proprietors found the value of their estates trebled without the slightest exertion on their own part. It would be difficult to find anywhere a better instance to illustrate Mill's argument regarding the "*unearned increment.*" In 1870, the Settlement Officer enters on this fertile tract, and, very naturally and properly, raises the Government revenue two hundred per cent. Instantly there is an outcry, but the principal argument used by the oppressed landholders seems to be, not that the rise of revenue is unfair or improper, but that it is too great and too sudden for them to pay it all at once. We find that Colonel Macandrew writes: "The enormous increase should have made Mr. McMinn "pause a little." That officer very pertinently replies: "Why "is a large increase here so fatal? Is Colonel Macandrew "aware that there are only twenty proprietors in the entire "three pergunnahs? All but four are absentees,—they live at "Sandila, in England, in the Punjab, in Calcutta; if they "get the out-turn *I* have estimated, it does not matter one iota "either politically or as regards the welfare of the pergunnah, "whether the jumma is raised one hundred or two hundred "per cent." In fact, the argument that a jumma should not be suddenly raised too much, there being no political reasons against it, merely amounts to this: that a landlord should be allowed to continue to pay too low a revenue in the future, merely because he has done so in the past. We find, therefore, some talookdars resisting the enhancement of their revenue on perfectly untenable grounds; and the Oudh administration supporting them in their demands. We also find, secondly, other talookdars declining to accept a favourable jumma, if it be accompanied with the condition that they should grant leases to sub-holders. Mr. McMinn writes: "Similarly, "I was prepared to allow a talookdar a low jumma, "if he would recognize his sub-proprietors, feoffees, and "clansmen, as entitled to a permanent, or even temporary, "tenure, at the favourable rates they paid. When, however, a "talookdar told me, that his brethren and henchman held their "tenures simply at his pleasure; when he refused to give them "even ten years' leases at favourable terms; then I valued their "land for assessment purposes at *assamee* rates (*i.e.*, the rates "paid by tenants-at-will, not possessing any rights). I en-"deavoured, while keeping within the strict letter of the Re-"venue law, to use the assessment as a means of securing "concord, and the comfort of the respectable classes."

Here the talookdars' game is played, on the principle of "heads I win, tails you lose." He voluntarily allows a village held of him on a low, easy tenure by copyholders, at a rent of,

say, Rs. 1,000, to be assessed at Rs. 750, asserting that the village would pay Rs. 1,500 at the rates paid by tenants-at-will. This may be true, but on the talookdar attempting to enhance the rents to that amount, he will be prevented by the Rent Court, if the copyholders can prove their right to the favourable tenure at Rs. 1,000. He will then come into the Revenue Court with a petition, that his revenue may be reduced to Rs. 500, on the ground that his rental is only Rs. 1,000. If, on the other hand, he can succeed in the Rent Court in raising the rent from Rs. 1,000 to Rs. 1,500, he will have succeeded in his object of reducing a body of independent yeomen to the status of mere peasants holding their lands at his pleasure. In either case the talookdar is satisfied. If, however, a *jumma* of Rs. 500 had been assessed on him, on the condition of his granting a lease to his sub-proprietors at Rs. 1,000, he would have been prevented from employing these tactics. Colonel Macandrew is known as a strenuous supporter of the rights of landlords ; and has lately recorded his opinion, that the annual eviction of thousands of tenants by their landlords is merely a normal sign of a healthy agricultural system ; which is the view officially maintained for years by the Oudh Government. It is not impossible that the adoption, by the talookdar, of the tactics above described by us, has been considered at Lucknow as an ordinary feature in a healthy revenue administration. There is yet a *third* instance of the weakness which has, of late years, marked the administration of Oudh affairs, wherever talookdars are concerned. Mr. McMinn states, that he discovered and proved, that the rent rolls, filed in his Court by one talookdar, were false and forged on a large scale. Now, this gentleman was, and is still, a Rajah and an Honorary Assistant Commissioner, and he has not only not been prosecuted for these extensive forgeries, or censured for them ; but he has not even been deprived of his magisterial office, or his title of Rajah, and has been able to secure a favourable hearing to his protests against the assessment of parts of his estate.

We notice a *fourth* point, in which the Oudh administration has failed to grapple successfully with the difficulties of Settlement. The great Mr. Thomason laid it down as a maxim for all Settlement Officers to remember, that their work was to assess not only lands, but men. It can easily be supposed that a large body of yeomen living as a co-parcenary community, cannot so easily adapt themselves to the change of circumstances necessitated by a sudden increase of the land tax, as a single proprietor can do. Nothing is more certain to drive such a body into the hands of the mahajun, and the money-lender, than a jumma suddenly raised ; nor has there been any cause more fruitful in producing those transfers of land from the hands of the old landed proprietors to those of bankers and bunniahs, which both officials and the press have, now for some years, been deploring with consistent unanimity. When, therefore, the revenue paid by a co-parcenary community, must, in justice to the State, be raised, it is expedient that the increase should be gradual, and the full sum only reached after a period of years. It appears that such a course has been recommended by some Settlement Officers in Oudh, but has been disallowed by the Oudh administration ; and that the consequence, in one case at least, has been a quantity of transfers of lands from zemindars to money-lenders. Mr. McMinn shall speak for himself : "I had assessed the *puttedar* bodies of yeomen "proprietors at low *jummas*, for which step a paragraph "in the directions for Settlement Officers, was my sanc- "tion ; but when they were hopelessly encumbered, and the "lands were mortgaged beyond redemption to absentee *bunniahs* "I refused this consideration, or gave them a term of grace, "during which a low assessment was to be imposed ; at the "end of that time, if they had made efforts to clear them- "selves, the authorities of the day could prolong the period "of the low assessment, or, if the *bunniahs* had become the "masters, could impose the full eight-anna demand. These "prospective *jummas* were, I submit, based on sound policy, "and will possibly be found a remedy for the transfer from "the peasant proprietors, which are admitted to be a startling "political evil in Hurdui and Unao. Mr. Williams proposed "a similar plan in Peernugger pergunnah, in district Seetapore. "It was not sanctioned—a light thirty years' assessment *was* "sanctioned. The result is, as the Deputy Commissioner "informs me, that there have been more sales there than in any "other pergunnah. But my plan, which served the interests "of the State, was, of course, opposed by the land speculators, "whom it thwarted, and by the moneyed class, which found dif- "ferential *jummas* a strong obstacle to turning their mortgages "into sales ; and they, no doubt, seemed invidious to land- "holders, who were not so favoured as the yeoman proprietors."

It appears that Mr. McMinn's proposal, that these jummas should be low at first, and should only rise gradually to the full amount, was refused ; and it is not improbable, therefore, that Sir George Couper may be himself responsible for some of those transfers of land *from zemindars to money-lenders*, which he has, in another place, made the subject of sympathetic lamentation. But we are overstepping the limits of our space, and must leave further consideration of Oudh Settlement affairs to another occasion.

THE CZAR AND CENTRAL ASIA.

A FEW weeks since, we offered to our readers some views on this subject, based on the now widely celebrated book of travels and experience in those regions, presented to the public by Sir Henry Rawlinson. It must be admitted, however, that whilst thousands adopt the theoretic views of the great traveller, there are an equal number who, with perhaps less experience, yet with equal anxious watching, consideration, and forethought, look at the same circumstances, as they transpire, in altogether a different light. These latter *savants*—and there are many names among them of no little repute for deep thought and sound judgment —are of opinion, that Russia's steady movement eastward in Asia, has at present for its objects, commerce, civilization, and Christianity. That, whatever were her former ideas, when she first crossed the Ourel mountains, or whatever the ambition of future rulers may demand, for this time, at least, under the rule of the present Czar, her movements are purely pacific.

Alexander II has shown himself, since he came to the throne, a man of strong will and *mighty resolve ; yet, at the same time, of the most kindly disposition, and amiable bearing to*wards all who approach him ; but, above all, as having a will and a desire to advance the welfare and prosperity of his people (and every act of his Government tends to that object) ; and as having a deep impression of the truths and precepts of Christianity. Called suddenly to the throne in time of great peril, he found his country engaged in a war for which, however much desired, it was not prepared ; and, seeing that the carnage was fearful, the resources failing, and debt accumulating, he had the heroism to choose a defeat, and sue for peace. This being established, he commenced his reforms by giving greater freedom to the press, and securing more searching supervision of the Courts of Law ; and then came the greatest of all his acts—the emancipation of the slaves throughout all his vast dominions, a measure which would have cost any other of his predecessors, who had dared to attempt it, not only his crown, but his life. The inquiries instituted by his orders, into the commerce of the country, and a comparison of it with the commerce of contemporary nations, showed that, mighty as was his power, and vast as were his dominions, Russia stood amongst the most humble in foreign trade ; that tea, the almost universal beverage of the lower orders, and which was brought from China by a long and dangerous land transit of six months' in duration, was almost forbidden to the poor ; that the produce of India and the East, which was common to almost every nation of Europe, only approached Russia through the Baltic and Black Sea ; and that, accordingly, his people had cruelly suffered during the Crimean war.

He justly remarked that England, with the largest and the most contented and well-to-do population of any country, and at the same time the most wealthy and prosperous, was made so by her trade and commerce, and not by her armies and navies, brave and trustworthy though they were. He saw the wealth of India, and China, and the East, pouring into England in overwhelming abundance, whilst Russia had to take her principal supplies from that favoured island ; and a feeling of honorable envy suggested the inquiry : "Why should not Russia make a route for herself, establish her

own Indian trade, and introduce amongst her people the silks and spices of the East, in the same manner as they were lavishly poured into wealthy England ?" No war was necessary for this. It was the duty of a good monarch to endeavour to enhance the position of his subjects; and if a part of the trade, which now passes through the Suez Canal, could be diverted through Central Asia to Russia, it would supply the humblest cottier, in the remotest part of the kingdom, with luxuries of which, doubtless, he had never heard. This could only be accomplished by buying or forcing a way through every obstacle to the borders of China and the confines of India;—if it could be obtained by treaty, all the better: if not, it must be taken, *and, when taken, secured. Civilization* and Christianity would be extended, and the nations and tribes, through which the route might pass, would themselves be benefited by its formation. With such views as these, say the advocates for peace and good government, the Emperor set himself steadily to work to accomplish his purpose: we all know to how great an effect in so short a time. And he will proceed in defiance of every obstacle. Without the remotest intention of war or conquest, Russia will advance to Merv as soon as she finds herself established in her new position. Merv is central, and will be an admirable depôt for reserves of every description, and the grand junction of many routes. Russia does not require Herat, or Cabul; but a free and unobstructed thoroughfare must be allowed by treaty for her merchants to pass to and from India. What have the English to fear? Cannot two peoples be on as friendly terms in Asia as in Europe? And, even if the half-savages of Cabul gave cause to be swept out, why should not the boundaries of Russia and England march together as peaceably as those of Russia and Germany? England would lose nothing by a partial diversion of the trade-route; Russian merchants, pouring into India, would enliven and resuscitate trade; besides which, the English merchant fears no competition. Wherever there is trade, he is to be found; and if it is divided between many bidders, whilst contented that others should have some, he manages to get hold of the largest lot.

Should the prognostication of these gentlemen be correct, there can be little cause for alarm, and we certainly think that the adoption of Sir H. Rawlinson's suggestion of a sudden move for the occupation of Herat by British troops, would be an error, both politically and as a military measure. Past experience has proved the difficulty of moving amongst a hostile population, and how little that population is to be trusted, even if professing friendship. It will be under very hard pressure only, that Shere Ali will permit us to occupy his favourite stronghold; and we are not very well assured of his fidelity to our flag when we are there. But should any misunderstanding occur, or the Russian rouble look brighter, or sound clearer, than the English rupee, our army would have a difficult time of it, with the Russians in front, and the sulky Affghans in rear, if it had to reverse its position and make its way to its own frontier. A letter, somewhat corroborative of the above, was received by a gentleman in London, who has a brother in India, from his friend, the *Attaché* of the American Legation at St. Petersburg, who made the tour of Russian progress in Central Asia and published his notes: "Tell your brother," he said, "to have no doubts on his mind about the approach of the Russians, for if they do ever reach India, it will not be for many years yet; and when they do come they will do him more good than harm, and give an impetus to trade that he is always crying out about." If Russia sought a legitimate opening for trade by her new route to India, there can be little doubt that England would benefit by the same, and she would receive every encouragement that a friendly power could afford under treaties of the most favoured nations.

COLONEL SHAW AND SIR GEORGE COUPER.

SIR GEORGE COUPER and his friends excepted, most people are of one mind in thinking that Colonel Shaw had very hard measure dealt him, when he was removed from the Oudh Commission. If, therefore, the *Pioneer* had had any generosity, it would have refrained from appearing for his defence. True, unless our contemporary took this line, it could not justify to men the ways of the "angels." Yet, even their interests being regarded, the case was one in which it seems to us that "only silence suited best." Either Colonel Shaw was fit to hold the appointment of Deputy Commissioner, or he was unfit. The latter proposition was positively asserted by Sir G. Couper, who demanded his removal. The former was negatively admitted by such men as Wingfield, Strachey, Davies and Barrow, who, during fourteen years, had no complaint to make about the manner in which he discharged his duties. Sir George Couper's despotic tendencies are well enough known, and it is, even on the *Pioneer's* showing, more than probable, that Colonel Shaw had been guilty of nothing more heinous than independence of spirit. On the other hand, it can never be said of Sir Charles Wingfield or Sir John Strachey, that they were easily hood-winked, or of a nature unduly prone to mercy. Still, Sir George Couper may be right in his estimate of Colonel Shaw, and his predecessors wrong. The *Pioneer* goes with us in thinking this unlikely; but, with strange logic, declares that Colonel Shaw's restoration "to his position in the Oudh Commission, would be, of "course, impossible after Sir G. Couper's opinion, as to his quali-"fication, had been communicated to the Government of India." It, therefore, suggests that "it would be a graceful and a wise act on "Lord Northbrook's part, if he were to bestow upon Colonel Shaw "some semi-civil, semi-military appointment, which would pre-"vent his suffering any very heavy pecuniary loss." Now, if, on re-consideration of the case, it was found that Sir G. Couper's opinion was not to be relied upon, it seems clear that the least the Government of India could do, would be at once to re-seat Colonel Shaw. If, on the other hand, Sir George Couper was justified in recommending so extreme a step as removal from the Commission, we fail to see what claim Colonel Shaw has for any recompense at all. On this supposition, he is simply to be regarded as an extraordinarily fortunate man, in having retained, for a long period of years, a well-paid appointment, which he ought never to have held. The communication of Sir G. Couper's views has nothing to do with the matter one way or other.

But we think we can understand how the *Pioneer* came to argue as it does. Lord Northbrook, though not willing to run counter to his Lieutenant in Oudh, probably sees that he has been made a party to much injustice. His kindly feelings being worked upon, he wishes to make some *amende* to Colonel Shaw; and the inspired apologist of the 'angels,' receives a hint, that "it would be a graceful and a wise act," &c. &c. If something of the sort were not in the wind, the *Pioneer* would scarcely venture to render advice that might be unpalatable. Not that that advice contains a word of reproof, for all semblance of infidelity to the Government of India, is studiously avoided, and numerous are the disclaimers of any intention to condemn. It was, of course, necessary to cast some blame on Sir G. Couper, and this doubtless cost our contemporary a severe pang. But the wrath of a Chief Commissioner, no longer in the country, could be safely encountered behind the ægis of the higher powers, and it is not often that this kind of divided duty comes to distract the loyal soul of the *Pioneer*. Many of our readers can call to mind an estimable Member of Council, who was so hardened in the habit of writing "I concur," that on one occasion he "concurred" with two opinions diametrically opposed. The *Pioneer* has not yet reached this perfection of art, though there is no knowing what practice may not do.

IN MEMORIAM.

IV.

WE now approach another stage in the progress of the poet's sorrow. The first twenty-one stanzas, we have considered as the expression of the inconsolable sense of loss, when the wound caused by death has not been soothed sufficiently to admit of either the solace of happy memories, or the richer comforts of Faith and Hope. In Stanza XXII, the poet begins to turn away from the blank present, and to muse upon the fair companionship that Death had so soon broken. At once Death, as Death—not as bereavement—arrests his thoughts; the song of Memory is hushed for a time; the strain passes on from Death to Life, Immortality, and the Christian Revelation; and the poet murmurs as he goes along,

"Of comfort clasped in truth revealed."

This brings us to the end of the thirty-seventh stanza, and it is convenient to regard the thirty-eighth as beginning a third stage of progress. The poet returns from the "sanctities" which, as he meekly says, he has been darkening with song, to utter again his own sad grief. But, though his sorrow is still deep, and his sense of loss sometimes so keen, as well-nigh to master his Faith

and Hope, and the voice of the sweet singer often falters in his song, he has henceforth that within him, which gradually quells doubt, and silences the complaints of woe, and turns the wail of sorrow into a sublime song of victory over Death and the Grave. It will be impossible for us to follow him step by step all the way—impossible and unnecessary. Having walked with him thus far, through the valley of tears to the high ground of "comfort clasped in truth revealed," we must now be content to glance along the path he treads, pausing here and there, where his song rivets our attention most powerfully.

Observe, first, that his acceptance of revealed truth does not miraculously change his human nature. We have here no unreal supernaturalism, but a marvellously truthful delineation of the natural workings of the human heart and intellect. And, therefore, we are not surprised that, after his lofty declaration of faith in Life and Immortality, he experiences a natural relapse, and sings as follows :—

"With weary steps I loiter on,
Though always under altered skies
The purple from the distance dies,
My prospect and horizon gone.

No joy the blowing season gives,
The herald melodies of spring,
But in the songs I love to sing
A doubtful gleam of solace lives.

If any care for what is here
Survive in spirits rendered free,
Then are these songs I sing of thee,
Not all ungrateful to thine ear." (*Sec. xxxviii.*)

. . . . . .

"But thou and I have shaken hands,
Till growing winters lay me low ;
My paths are in the fields I know,
And thine in undiscover'd lands." (*Sec. xxxix.*)

Then the fear comes over him that, even in the future life, the distance between them may still remain, and that, though ever following in the path of him who has gone before, he shall be "evermore a life behind." The "dim" fancy is displaced by one as vague, but more comforting. Even in this world his friend outstript him in the race, but unity of place kept them together, and so it may do in the life to come :

"And he the much-beloved again,
A lord of large experience train
To riper growth the mind and will."

Fancies chase each other. Death is, perhaps, a sleep till the Resurrection dawn. There lie the still sleepers like folded flowers, unconscious and unchanging :—

"So then were nothing lost to man ;
So that still garden of the souls
In many a figured leaf enrolls
The total world since life began :

And love will last as pure and whole
As when he loved me here in Time
And at the spiritual prime
Rewaken with the dawning soul." (*Sec. xlii.*)

We confess we are almost sorry, that this conception of the immediate hereafter is to Tennyson but a beautiful fancy, so natural to us appears the wish, after life's labour and its "fitful fever," to lie down murmuring, "Let me sleep a little." But the poet sees a difficulty either way. If, on the one supposition, the dead leave the living far behind ; on the other, the living outstrip the dead ; for "here the man is more and more ;" and in neither case can those who have been separated meet on a footing of equality. Unless, perchance, the sleeping dead may dream, and, in their dreams, some guardian spirits tell them all ! But these are mere fancies in the poet's mind. Not so what follows. It is no fancy, but a faith dear to his heart, that each shall retain his separate individuality in the future. Here the sweet unselfishness of Tennyson manifests itself unconsciously. He rejoices in this faith, not so much because he hopes to preserve his *ego* intact, but because he anticipates, with delight, the opportunity of recognising his friend. Love, not egoism, is ever his deepest and strongest emotion :

"And I shall know him when we meet.

"And we shall sit at endless feast,
Enjoying each the other's good ;
What vaster dream can hit the mood
Of Love on earth ?" (*Sec. xlvi.*)

We must, however, bear in mind, throughout our study of *In Memoriam*, that a fundamental principle in its theology and supernaturalism is, "we have but faith, we cannot know ;" and no sooner does Father Dogma begin to knit his severe brows, than the poet retires, singing such a sweet apologetic strain, that (Sec. xlvii-xlviii) the grim inquisitor must needs put on his spectacles again, and read on more in admiration than in anger.

Section XLIX, is a prayer to the dead, to be near to the weary mourner, when the body is feeble and the soul sick, and he can scarcely look on fair humanity but with a jaundiced eye. Who of us has been fairly prostrated by the fever of life ; has felt his flesh and heart faint and fail ; and has almost wished to die under the slow agony of the dry eye and burning brain ? Let him read this section, and worship the high-born brother, who, when bound to the burning wheel, and crushed by the cruel gods, utters his anguish in strains like these ! Poetry, like humanity, is "made perfect by suffering."

How naturally one thought generates another ! The longing for the presence of the purified spirit, necessarily brings with it the consciousness of imperfection and sin. This brings the thought, that, perhaps, the holy dead may look on our mortal frailties "with larger other eyes than ours," and be thus enabled "to make allowance for us all."

"There must be wisdom with great Death ;
The dead shall look me thro' and thro.'" (*Sec. l.*)

Human sin and imperfection are sad, stern facts, whose existence cannot be ignored, and even the high example of

"the sinless years
That breathed beneath the Syrian blue," (*Sec. li.*)

has not yet lifted us above. Yet the great question about a man, is not, What are the faults that mar his worth ? but, What is the ideal towards which he is struggling ? That is the standard by which celestial eyes must judge poor toiling humanity.

"So fret not, like an idle girl,
That life is dash'd with flecks of sin,
Abide : thy wealth is gathered in,
When Time has sunder'd shell from pearl." (*Sec. li.*)

The noblest qualities of man are born to contend with evil. The human Hercules grapples with the snaky monster in his cradle. Manly valour, which is Virtue, grows by antagonism to evil, and the grandeur of perfected humanity will be its victory over sin. In other beings, other kinds of excellence may exist ; but we know no other human excellence, than that which shines in conflict with the forces of evil. Here, again, we say, "Out of the eater, cometh forth meat"; by the existence of that which we call evil, is necessitated and brought to perfection our highest ideal good. But let there be no friendly truce with sin. It may be necessary that the thoughtless youth should spend some of his days in the camp of the foe, that he may learn to hate and despise him, and spurn his base hire ; but who would teach that it is right, for a moment, to play the traitor :

"Hold thou the good :—define it well :
For fear divine Philosophy
Should push beyond her mark, and be
Procuress to the Lords of Hell." (*sec. lii.*)

Tennyson is the poet of the millennium. His meek and lowly human muse assumes the grand proportions of the goddess, when she sings, as it is her highest joy to sing, of the "far-off divine event,"—the final perfection of the human race. A collection of the passages in his various poems, that predict and paint this glorious future, would contain much of the most exquisite poetry and music in our language. It may be a dream, for "we cannot know," but, to the poet, this lofty ideal is the most godlike thing in the human soul. He will part with many possessions, but with this he will never part. And when the black mystery of sin and death rolls over him at times, and he falters and falls in the great darkness, he has still the faith that he is groping, not at the mouth of the pit, but at the foot of

"the great world's altar stairs,
That slope thro' darkness up to God." (*Sec. liv.*)

One truth is clear to the poet's mind, and on it hang two alternatives. It is the truth which all earnest souls, since the soul of man awoke to intelligence, have seen, and anxiously pondered, —that human life is nothing, if not a battle with the powers of evil. No battle can last eternally. There must be final defeat or final victory. The defeat of man

"Who loved, who suffered countless ills,
Who battled for the True and Just" (*Sec. lv.*)

is a consummation that cannot be contemplated. The poet's divine logic sweeps irresistibly to the opposite alternative—the final triumph of good and God, in man's conquest over Sin and Death. Behind the truth that the life of man is a battle against the forces of evil, lurks, as the poet sees, the shapeless deformity of a falsehood. Man, like the devils in Pandemonium, is not to look upwards. (So counselled Belial.) Let him not attempt to scale the heavens, but rather make the best of his present lot. Let him fight when he must, but make truce when he can. This deathless bravery for a transeendental ideal is but a vanity of vanities. Try a little skilful diplomacy with the devil, and let it be our chief aim and endeavour to be happy, or at least as happy as we can.

The attainment of happiness is the chief end of man. And what is man, then?

"A monster then, a dream,
A discord. Dragons of the prime,
That tare each other in their slime,
Were mellow music matched with him." (*Sec. lv.*)

The song of woe is ended. At last the poet reposes in his dearly-won faith in the final triumph of good, and the perfect satisfaction of Love in the life to come. The possession of Love is God's pledge to man of immortality. That human love is wedded to human sorrow is a union that only death can sever—this is the endless mystery. Solve it we cannot. Its secret meaning lies hidden in the deep purpose of God. This we know, that the highest embodiment of love the earth has seen was the Man of Sorrows, and all His followers have two words of comfort in face of the painful problem "If we suffer with Him, we shall also *live* with Him." "What I do, thou knowest not now, but thou shalt know *hereafter*."

"Peace; come away: the song of woe
Is after all an earthly song:
Peace; come away: we do him wrong
To sing so wildly; let us go." (*Sec. lvi.*)

The dirge is done. Love and Sorrow have embraced Faith and Hope, and the mourner's tears have been wiped away. But his tear-stained cheeks have not been washed in the pool of oblivion; rather, say, in the waters of the river of Life. And so, while the poet fronts the future with lofty anticipation, his heart continues to look back on the past with lingering sadness. Listen to the last farewell that closes, with heart-stirring pathos, the song of lamentation:

"Yet in these ears, till hearing dies,
One set slow bell will seem to toll
The passing of the sweetest soul
That ever looked with human eyes.

"I hear it now, and o'er and o'er,
Eternal greetings to the dead;
And 'Ave, Ave, Ave,' said,
'Adieu, adieu,' for evermore." (*Sec. lvi.*)

Here the poem might not unfitly have ended. Indeed, we surmise that the poet meant, at one time, that it should end here. But he is not under the sole guidance of the artistic faculty, and he must follow the leading of the heavenly Muse. She has toiled *with him through the vale of weeping, and, having just arrived* on the high ground of Hope and Faith, cannot consent to fold her wings with such a prospect beyond. She impels him onward. It is not enough to sing the song of woe. When he has uttered his own sorrow he must not forget, that he is the teacher of his brethren: that it is not enough to lead them to the waters of healing; that he must go forward with them to the high lands of healthy and active life; and sing for them a strong, inspiring march-music as he leads them on. The life and gifts of his departed friend can still furnish thoughts to touch the heart, and lessons of wisdom and strength to encourage the soul and guide the will. And so, to his sweet farewell—

"The high Muse answer'd: 'wherefore grieve
Thy brethren with a fruitless tear?
Abide a little longer here,
And thou shalt take a nobler leave.'"

THE PRINCE AGAIN!

WE notice, with inexpressible satisfaction, that the *Pioneer*, though originally nettled by our remarks about the Prince's dream, now seems inclined to take them in good part, and re-echoes our sentiments in plain and unmistakeable language. "Now, "whatever inevitable drawbacks may attend the splendid pageant "of the Prince of Wales's visit to this land, let us hope, and "express in good time, the desire, that the Indian Press will not be "'too much clouded' with forced and exaggerated courtly writ-"ing—none of us expects the grandson of George III. or the "nephew of George IV to be immaculate." We should think not. The dream itself is thus disposed of: "Some may ask, indeed, "how does it happen that, if this visit to India has been the "'dream' of the Prince's life, we had never heard of it before? "It might suffice to say that, in these days, it is not the custom "for princes to tell their dreams in open durbar before breakfast; "nor is it usual for them to be in any haste to seek the precise "interpretation of such premonitions." It is, indeed, pleasant to find our words turning up again even as bread cast upon the waters. But unfortunately, our Allahabad contemporary 'has heroes,' and is apprehensive lest some rude boy should ask the Prince, on his landing at Calcutta or Bombay, "whether his mother knows he's out?" All such are, therefore, sedulously warned against supposing that the proposed voyage to India is in opposition to the wishes of his parents. This precaution, though in itself praiseworthy, on account of its loyalty, is really quite unnecessary, for the Prince is a Londoner, and well skilled in repartee. We ourselves, however, feel bound to disabuse the mofussil public of an error not unlikely to become popular up-country, because its origin may be traced to Simla. Once upon a time, the Prince got himself painted in a sky-blue cloak, as G.C.S.I., (the N.-W. P. Civilians need not flatter themselves that these euphonious capitals were appended to the cloak by way of compliment to them, for they were not), and had copies of the effigy sent to this country as a sign whereby all men might know him. Now, it is whispered in high quarters, that these works of art have been lost. At any rate, there is some doubt among persons of fashion as to what may have become of them, and the *Pioneer* moving in the highest society, naturally betrays premonitory symptoms of another bad fit of dyspepsia in consequence. We should be sorry to see any one suffer while the remedy is within our reach, and hasten to re-assure all those whom the alleged disappearance of the pictures may concern. Our special correspondent has succeeded in tracing the replicas supposed to be missing. After passing some days in literary convivialities, he found the first hanging over the Gothic archway of one of those palatial residences at Bombay, celebrated no less for their magnificence than for their sumptuous hospitality to strangers. Pursuing his researches with indefatigable perseverance, he discovered the second in another of our presidency towns, adorning the portal of a mansion which local enquirers may easily trace by the name of the Prince of Wales' Arms. When last seen by our "special," both had been embellished by the addition of a crown, probably in anticipation of the *Coming K—'s* approaching visit. Cause for anxiety about the fate of these works of art, consequently no longer exists. But we are informed, on excellent authority, that the Prince *does not* intend to wear the cerulean cloak and crown, with which he is therein decorated, on the occasion of his tour through India. He proposes borrowing a suit of clothes from a distinguished Anglo-Indian journalist, together with a head-dress more suitable to the climate. We cannot say more without breach of confidence:

". . . . Vetabo, qui Cereris sacrum
"Vulgârit arcanæ, sub iisdem
"Sit trabibus fragilemque mecum
"Solvat phaselum."

HIPPOLYTE FLANDRIN.*

HIPPOLYTE FLANDRIN has been called the Fra Angelico of the nineteenth century; yet he was not a cloistered monk. His name is associated with that of the pre-Raffaelite artist, because, for the most part, he worked in religious art, and because the sentiment embodied in his paintings is of the purest kind. His life was quite that of the nineteenth century. He passed through a period of privation and struggle; he became known as the ablest pupil of a leader of art in France; he married; he toiled most devotedly and unremittingly; he died in the prime of life, while seeking a brief repose from the fatigues brought on by his constant labours.

Lyons was the birthplace of the future painter. He was born on March 23rd, 1809. His father too was an artist, but an unsuccessful one. He had hoped to establish himself as a painter of historical subjects, but was obliged to content himself with working as a painter of miniatures. He was able to earn but a scanty subsistence. "So scanty was it, that his children could not be sent to school, and had to be entirely taught at home. Hippolyte and his two brothers—Auguste, older than himself, Paul, younger—early manifested a taste for drawing. They attended the marches and parades of the regiments quartered at Lyons, and spent their evenings in drawing what they had seen. Their mother noted their artistic tendency with dismay. She had little trust in a profession in which her husband had had so weary a struggle. She consented reluctantly for the eldest son to devote himself to art; but she arranged for Hippolyte to be apprenticed to a silk merchant, and for Paul to work at the tailors' trade. And such arrangements, would have been carried out, but for the timely intervention of an artist, who had once been a shepherd in the neighbourhood of Lyons but who had apprenticed himself to a maker of statuettes and had achieved fame as a sculptor. He pleaded for the boys and induced their mother to withdraw her opposition to their adopting art as a profession. Hippolyte and his brother studied for seven years at the Ecole de Saint Pierre, the Academy of Fine Arts of Lyons. They

* *A Christian Painter of the Nineteenth Century: being the Life of Hippolyte Flandrin.* By the Author of *A Dominican Artist.* London: Rivingtons.

all the while strove to secure some earnings so as to lighten their father's burden. They drew small vignettes for the shops where cheap pictures are sold, and worked in lithography for very slender pay. In the midst of all their study and toil they looked forward to going to Paris to carry on their studies there. To enable them to do so, they stored up their sous and centimes, and when their seven years' course at Lyons was ended, they carried out the resolve. They walked all the way. They secured a room for less than three francs a week, furnished it with the barest necessaries, and thought themselves fortunate if they were able to afford two francs a day for their meals. They were sometimes not able to spend so much, and had to content themselves with three sous worth of fried potatoes, divided between the two. They entered the studio of M. Ingres. Hippolyte had to make almost a fresh start; for Ingres had views and methods very different from those of the Lyons teacher. The pupil set himself earnestly to adopt the higher art-tone of his new master. Ingres wasattracted both by this earnestness in study, as well as by the gentleness and modesty of his pupil. Before the close of their first year in Paris, Hippolyte and his brother were admitted to the Academie Royale, the former's competition-picture being "The Recognition of Theseus." Ingres was pleased with their success, and hearing of the straitness of their means, would only accept from them half his usual fees. Their early winters in Paris were very severe ones. At times their draughty fireless attic was too cold to allow them to paint. They would, therefore, spend the long evenings in bed, reading. They thus made up for past deficiencies. They read translations of Homer and Virgil. Few who read the old authors in the original text have their imaginations so possessed with the wondrous stories as the two Flandrins had as the result of their winter readings. In like manner they became familiar with Dante; and no day passed without its readings from the Bible.

Hippolyte devoted all his energies to securing Academy prizes. The greatest prizes of all was what in England would be called an art-fellowship. The winner of it is sent to Rome to carry on his art-studies there. He receives 800 francs for his journey there, and an allowance of 1,000 crowns for five years. Hippolyte cherished the hope that this prize might fall to his lot. His hopes and work were not in vain. He was the first of the pupils of Ingres to whom the "great prize" as it was called, was awarded. He gained it in September, 1832, and early the next year was settled at Rome. There, in the following year, he was joined by his brother Paul. He was known at Rome for his Madonna-like purity and truth. He studied most perseveringly. The frescoes of Giotto and Fra Angelico, which he studied closely, he afterwards declared, should be "the very breviary" of the painter of religious art. He made, too, a diligent study of Raffaele's paintings. He also painted several important pictures,—one of St. Clair, now at the Cathedral of Nantes; one of a scene from Dante's Purgatorio, now at the Museum of Lyons; one of our Lord blessing the children, now at Lisieux. At Rome, his desire to devote his life to painting sacred subjects strengthened. He read such books as the "Pensées de Pascal," believing that one devoted to Christian art should have sympathy with the devout thought of the noblest men in Christendom, and by constant meditation should endeavour to strengthen within himself that spiritualised imagination which enables the mysteries of faith to be discerned as sublime realities. He returned to Paris at the close of 1838. To tell the story of his future life it would be necessary to follow him from one church to another, and to watch him covering their walls with scenes depicting the beauty of Christian resignation and love, the divineness of gentleness and mercy. Ary Scheffer, whose own pictures embody so much tenderness of sentiment, was struck with admiration of Flandrin's work. In his own pictures, he asserted, he could only succeed in letting his intention peep out; but Flandrin's pictures boldly proclaimed the thoughts working within the artist's mind. Flandrin married, in 1842, a lady who had thorough sympathy with him in his art. Almost his only work not of a purely ecclesiastical character, was the painting of the great hall of the château of the Duc de Luynes at Dampierre. The churches at Paris, whose walls were beautified by him, are those of St. Severin, St. Germain des Prés, and St. Vincent de Paul. The work in connection with these extended over many years, and some of it was still unfinished at the artist's death. In 1849 he decorated the Church of St. Paul, at Nimes. The criticism of Monseigneur Plantier, the Bishop of Nimes, well represents the impression produced by his work. "Flandrin," he said, "sought to preach after his own manner; to him painting became eloquence, wherewith he uttered a magnificent profession of faith on the walls of God's temples." In 1855 he painted the Church of Ainay, near his native city, Lyons. The following year he returned to Paris to paint the nave of St. Germain des Prés. With such work as this the years wore on. Now and then he took snatches of artistic travel. In 1863, conscious of failing health, craving rest, and wishing, too, to see Rome once again, and to take thither his wife and children, he re-visited the Eternal City. There, however, he became seriously ill, and in March of the following year he died. His remains were brought to St. Germain des Prés, and a solemn funeral service was performed amid his unfinished work.

The life of the artist, just published, is a record not only of his achievements in art, but also of many touching episodes of the friendships with which his life was enriched. Though a devout artist, and entering upon his work always in the spirit of "Beato Angelico," who never took up brush without praying for divine aid, and accepting all inner promptings as *inspirations from above*, there was nothing maudlin in the devotion of Hippolyte Flandrin. It was of the old Gallic type, unenfeebled by the feminine phases into which Roman Catholicism has of late been led by Ultramontane influences. It was full of sweetness, but of a reasonable sweetness, and such as will secure him many enthusiastic admirers outside the border of the Roman Church. He was a true Christian artist, whose work will serve to hand down to future generations the ideal of Christian love and devotion to God and man, as it has been embraced by the noblest souls in Christendom of the nineteenth century.

LIBERALISM IN EUROPE.

(From a Correspondent.)

LONDON, 19th June, 1875.

THERE is at present a lull in the stormy world of European politics, but everywhere it becomes more clearly apparent that the leaders on both sides are mustering their hosts for the great coming battle between secularism (to use a barbarous word) and ecclesiasticism. The debates, during the past week, in the French Assembly, on the law to regulate superior education, show the sense of this coming struggle in every sentence of them. And here, as in Germany, we find the Roman Catholic clergy, and their supporters, appealing, in support of their propositions, to those principles of freedom which have hitherto been the stock-in-trade of Liberal politicians. The religion of Christ may be said to be shunted out of the way altogether, and as a political farce to "hang quite out of use like rusty mail in monumental mockery." In France, as in Germany, the Liberals are, for the most part, men who have parted with all religious faith, but unhappily not with the old theological dogmatism. They are as eager to force a materialistic creed upon the nations, as the Ultramontanes are one of ecclesiasticism. And this greatly weakens the power of Liberalism throughout Europe—in England not less than elsewhere. Rightly or wrongly, Liberal opinions are supposed to include an atheistical creed, and so the great mass of people, being theists of various shades, are driven into neutrality. The result will be that the Catholics will the get better. They are well organised, and in possession of the principle of continuity. It is essentially the same dogma which they assert from age to age. But Liberalism is split up into almost as many opinions as there are members, and these opinions are themselves in a state of perpetual flux. There is nothing constructive in the programme they put before mankind. "Just help us," they cry, "to destroy this accursed ecclesiasticism, and then there will be no difficulty in getting our grand, new Evangel established, that man and monkey are one and the same." That man and monkey are one and the same, appears to be almost the one point on which Radicals all over Europe are agreed. It is their Shibboleth. Now to the great mass of mankind, it is not worth while to enter upon a crusade against the Roman Church, in order to be greeted with a paternal blessing at the far end, by a gorilla, or some other variety of the ape species. The game is not worth the candle, and they stand aloof, leaving the two extreme parties to fight out the battle by themselves. By dint of sheer persistency after certain fixed ends, the ecclesiastical party is likely to gain the day, and that this contingency is not unguessed at by the Liberals is shown by a recent very remarkable pamphlet by M. Laveleye. The fatal error which the Liberals have been guilty of, is the abandonment of their own weapons to have recourse to those of their opponents. The proper weapons of the true Liberal, the real lover of truth, are

appeals to the reason and the conscience. By dint of these, he has reduced Romish ecclesiasticism from the magnitude of its mediæval power to its recent comparative impotence. He trusted to the reason of men, and he was not disappointed. But impatient of these slow but sure results, he abandons the truth of experience, and seizes on those very weapons which his antagonist had flung aside as useless and out of date. He tries persecution. Of course, he cannot wield it with the practised ferocity of an ecclesiastical Inquisitor. Where the latter exterminated, the Liberal only irritates and arouses. There can be no doubt that we owe to the German ecclesiastical *legislation those defiant notes which are being sounded by the* Roman Catholics in every country in Europe. They know at least this much of history ; that the blood of the martyrs has always been the seed of the church. For those who believe in the power of truth, and the persuasiveness of reason, there could not be a more distressing fact, than this appeal to force by those who consider themselves *par excellence* the servants of truth and the worshippers of reason. It justifies the religious persecutor wherever and whenever he is to be found, and stultifies the martyr as one who, after all, mistook the nature of the power which governs the world.

EDITORIAL NOTES.

THE Czar Alexander has come prominently before the world as a lover and advocate of peace. Our readers will form their own opinions as to the view of his policy, set forth in another part of our columns. They will have observed that the Central Asian question has been recently brought before the House of Commons by Mr. Baillie Cochrane, and that the Government is altogether for friendly relations. "Government had abandoned the policy of a neutral zone, but did not wish to enter into engagements fettering its freedom of action. The relations with Russia were very friendly, and there was every reason to hope for the establishment of more friendly intercourse with Affghanistan." Sir George Campbell "*favoured a policy of masterly inactivity.*"

***

WE, who are chiefly occupied with the secular side of things, will now wait, not without watching, for the practical outcome of the Evangelistic services now being held in this city. We do not need to say, that the great objects the promoters of these services have in view, are objects which we look upon as of paramount importance, and we rejoice to see earnest endeavours being made in our midst to increase and quicken our spiritual life. We are sometimes afraid, that, in these movements that are called revivalistic, there is a tendency to look upon Christianity too exclusively as a means of getting saved with respect to the next world, and too little as the power that enables us to elevate and purify our life here, and rise superior to the strong tendencies that drag us earthward. We submit that a man's Christianity is not to be tested merely by what he calls his religious experiences, but by the piety, humility and charity, which he manifests in his dealings with his fellow-men in the ordinary walks of life. The convert and the active worker in these meetings, will, we trust, be as easily distinguished by the exercise of those virtues in business and in society, as they are by their attendance and demeanour at prayer-meetings and evangelistic services. Honour and honesty in business ; frankness, modesty, and the charity that thinketh no evil, in society ; earnest activity, coupled with humility and a lack of obtrusiveness, in works of piety and benevolence ; these are the results by which the success of such meetings will be tested, and not the large attendances, the apparent impression on the feelings, or the number of professed conversions. These last, we hold, must always, to a great degree, remain an unknown quantity ; but if the results we desire to see, become really visible, those who now look on the meetings with indifference will learn to approve, and those who speak against them, will, at least, be silent.

***

"A GEOGRAPHICAL Day-dream" is the title of a paper in the *Spectator*, which calls attention to a truth that cannot be too often insisted upon. A politician and philanthropist is supposed invested with power to work singular geographical changes. By the depression of a river bed to form a lake, or of an isthmus, or a section of a continent to afford passage or entrance for the sea—by changes such as these, where needed, all regions of the earth are rendered accessible and available for commerce, and for all industries. How would the human race be improved and elevated by such changes and benefits as these? Not in the least, is the answer ; which at first sight seems astonishing enough. But here is the truth that is meant to be taught. Man becomes great and prosperous, not by being happily situated, with all manner of external advantages and facilities about him, but by being surrounded with difficulties and obstructions, which render his life one of ceaseless battle and toil. "The fairest and most accessible island in the world, Ceylon, contains the lowest race, the Veddahs, who live naked in the tree-tops, and have invented nothing, unless it be a bow." "The Tasmanian, as well off geographically as Shakspere, never discovered fire." On the other hand, "Out of the secluded forest, the German ; out of pathless Arabia, the Saracen ; out of the humid, chilly land, where nothing is indigenous but the oak, the sloe, and the crab-apple, the Englishman. We owe to a leprous clan in an arid corner of the Mediterranean, religion"—and so on. It is perhaps not impossible that man may yet learn to apply the principle, that underlies this truth, to a deeper subject, and to know that his best and noblest qualities, as well as his greatest achievements in the material world, are born and thrive only in contest with evil. Were all moral evils eradicated, and all physical difficulties overcome, man's vocation on this planet would be at an end.

***

THE larger proportion of the members of our Anglo-Indian Society, are more or less connected with the ancient Universities ; and many will have read with regret, that the Oxford Commemoration was this year deprived of its grand central institution ; under the excuse of which all sorts of bright festivities have been accumulated, rendering the sombre old ecclesiastical edifices of the University as temporarily gay as horticultural gardens on *fête* days. In fact, *fêtes*, balls and concerts, processions of boats and picnic parties, have caused Oxford during the Commemoration week to be considered one of the most desirable resorts of the pleasure-loving fair sex. Of late years, however, so many villas have been built on the outskirts of the city, and so many more feathered hats and smart petticoats have been seen beneath the grim old battlemented college gateway towers and about the picturesque quadrangles, that it has perhaps scarcely made so striking a change in the appearance of the venerable University Town as formerly. In the days when Oxford was associated with what was called the Puseyite movement, before ritualism had become rampant, and before the *Alma Mater* had also taken to sheltering radicals and materialists beneath her scarlet Prelatical skirts—in the days when those of us were under-graduates who have begun to regard forty as the termination of youth, and who can remember India when travel was chiefly associated with the idea of "laying a dâk," young ladies were ordinarily rare exotics in the University. Now they appear to have obtained so firm a footing just outside the Colleges, that the period of Tennyson's frequently quoted "sweet girl graduates" inside them, really seems to loom ominously, or with happy augury as some will think. But lady visitors at Commemoration are undoubtedly of long standing, and it is to be deprecated that the Sheldonian Theatre, so admirably adapted for the display of their charms, has been this year deprived of the privilege which it has annually enjoyed for more than a century at the least. A fine old print is extant representing the Theatre at a date shortly after Clive won the battle of Plassey, and whilst the English were disputing the possession of Pondichéry with the French. But that the fashions of the non-academical costumes are different, the assemblage in the Theatre might serve for a picture of the Commemoration in any of these later years. Ladies of smiling and coquettish aspect fill their exclusive gallery and even intermingle with the throng of masters of arts and male visitors in the area of the edifice. They are attired in little lace caps, rather low dresses with bodices, and petticoats short enough to exhibit their ankles, while their arms emerge from a cloud of lace at the elbow. The men wear powdered wigs and stiff skirted coats, buckles, and small swords when not in the academical gown ; and they invariably carry canes, while the ladies are as universally armed with fans. The under-graduates in the gallery have stiffly curled wigs, like their seniors, and they wear their gowns with full sized bands ; but their demeanour appears not to have been affected by the greater sedateness of their apparel. They are represented as laughing, vociferating and generally indulging in jests and uproar much as their great-great-grandsons in 1874, at which epoch the University authorities came to the conclusion that these had exceeded the limits of endurance, and put an end to the occasion. This year the founders and benefactors of the University were lauded, the honorary degrees were conferred, and the prize essays and poems, in Greek, Latin, and English were recited in the elegant apartment, under the Bodleian Library, known as the Divinity

School, in the presence of serene graduates and tranquil ladies only. The scene must, however, have been interesting under the delicate fan traceried roof of this admirable specimen of the later English style of architecture; in which it is related that Oliver Cromwell's Ironsides stabled their horses, and in brutal iconoclastic fury, smashed to pieces the painted windows.

***

THE feeling was, we suppose, universal that in the late libel case the *Athenæum* had received very hard measure at the hands of the Scotch judges. We now learn that the Court of Session has reduced the amount of the damages awarded to Messrs. Johnston from 1,275*l.* to 100*l.*

***

THE Rector of St. Mary's, Bryanston Square, the Rev. W. H. Fremantle, accepted an invitation to preach in February last, in the City Temple, a Congregational place of worship. He was required by the Bishop of London to refrain from the step till its legality could be examined. Mr. Benjamin Shaw on behalf of the Bishop, and Mr. Fitzjames Stephen, on behalf of Mr. Fremantle, have given their opinions. They are generally to the effect, that such a step, as Mr. Fremantle contemplated, would be illegal. A clergyman cannot officiate in a Dissenting place of worship, or at a Dissenters' meeting, if the main object be religious; if the main object be charitable, and the devotional exercise be confined to—say, an opening prayer—perhaps he might. But Mr. Stephen thinks he might do so, if he pleased, anywhere out of England, provided he preached no heretical doctrines. Dean Stanley, Mr. Fremantle, and others, have since been speaking, in the City Temple, in condemnation of this law. The Dean moved that these restrictions "are injurious to the fraternal intercourse between the various Protestant Churches of this land, which is imperatively required in the interests of Catholic Christianity." He closed his speech by declaring that, while glad to be among the Dissenters that day, he never lowered his flag as a clergyman who gloried in the "freedom of the freest, the learning of the most learned, and the reasonableness of the most rational Church in Christendom."

***

THE *Church Gazette* is inclined to look leniently on the action of the Irish Church Synod in revising the Prayer-book, and believes that it is only doing openly what a great many of both clergy and laity would do if they could, and are really doing in spirit, by reading their own meaning into the authorised words. At the same time, Irishmen are so "versatile, fickle, and impulsive," that even should they go a little too far at present, there is more hope of their retracing their steps than there would be in the case of Englishmen.

Reading one's own meaning into authorized words, is a performance not confined to any particular Church, nor, indeed, to churches at all. But the language of theology has been dealt with in this way to such an extent, that much of it has become like a long-worn, and loose-fitting garment, which will fit almost anybody. When a man declares his belief in *atonement*, we know as little as ever about the character of his faith. And it would be interesting to know, if it were possible, what meaning the multitudes in the English Church who so often repeat them, attach to the words: "I believe in the Holy Catholic Church."

***

THE *Gazette* fears that Lord Salisbury contemplates increasing the Episcopate in India, not by establishing new territorial Bishoprics, but some kind of missionary ones, which would not exercise control over the chaplains; and thus would arise the caste system and confusion of some of the clergymen of a district being under one Bishop, and some under another. Our contemporary says: "It would be for the best, in our opinion, to cut off a province which is already in itself a political unit, and *start* a Bishop there." *Figaro* will probably ask, if the new Bishop might then be called an *upstart*, or if the *Gazette* has become of a sporting character, and means to hunt up an indigenous Bishop in Burmah or Assam.

***

THE publication of Lord Salisbury's despatch on the Baroda trial, may be considered as the winding up of that unsatisfactory and—as every body seems to admit—bungled business. If the Viceroy had not been at all interfered with from home, he would have made the very serious mistake—if he has not made it, even as the matter stands— of conveying to the native mind the impression, that the appointment of Native Commissioners was nothing but a sham. "The appointment of Native Commissioners," says the Secretary of State, "had little meaning, unless its object was to assure the natives of the equity of the tribunal, and that assurance would have been illusory if the judgment of the Native Commissioners had been allowed to count for nothing in the decision of the issue." The trial itself was probably a mistake; the constitution of the tribunal was certainly so; and the Viceroy's view of its decision was impolitic to an extreme, though he was probably right as to the guilt of the Gaekwar. There remains the one consolation—if it be a poor one—that the remarkable mode of procedure in this case, will certainly be a warning and not a precedent for the future. We blunder along; but perhaps from our very blunders we are slowly learning wisdom. It is sincerely to be hoped that the roll of criminal kings, for whom we have to provide paradises and palaces, is not destined to be increased. But, indeed, it would hardly be too much to say, that when a dependent prince finds himself getting into deep difficulties, and *longs for plenty and slothful ease*, the simplest way for him to gain his object, would be to allow disorders and even commit crimes, so as to win a passport to some terrestrial paradise under the care of the gentle and generous British Government.

***

WE had hoped that there might prove to have been a good deal of exaggeration in the accounts received of the ravages among the Fiji islanders by the epidemic of measles. It appears, however, that they were too true; at least it was admitted by Lord Carnarvon in Parliament that most of the chiefs and a third of the population—say 50,000 persons—have died. No power exists that could compel the natives to submit to proper treatment, but the native constabulary, who are under discipline, and were obliged to take the medicines, recovered.

***

IT appears that the Athanasian Creed cannot succeed in keeping its place in Episcopal Churches, after they have gained the power of self-control. In America and in New Zealand it has been removed from the formularies, and now it is likely to fare badly at the hands of the reforming party in the Irish Church. It has been proposed to omit the more objectionab le parts of it, the distinction between creed and setting being insisted upon. For example, one of the omitted clauses is: "It is necessary to everlasting salvation to believe rightly the incarnation of our Lord Jesus Christ." A proposal is, however, gaining favour, that instead of mutilating the Creed, it should be left *intact*, and liberty given to the officiating priest to *omit the recitation of it.*

***

THE British Government and the British Press, are usually not unwilling for a little fighting, if it can be done some thousand miles from home, and especially if it offers a probable chance of extending or securing our commerce. The question of questions in deciding for or against a war is, as in most other matters, if it can be made to pay, either immediately or in the long run. "Honour is a mere scutcheon," but by commerce we live and move. The English papers have generally been favourable to a war with Burmah, though the puzzling question what we are to do with Burmah, after we have beaten it, has not yet been satisfacto rily answered. There seems a consensus of opinion that we cannot easily hold to our non-annexation policy in its integrity. We must either annex Burmah, or make it a dependent or semi-dependent state. But, as the *Spectator* says, "these semi-dependent Princes, from Cashmere downwards, are nuisances, which, but that the India House keeps its secrets better than any Government in the world, would not be endured by British opinion for a week." And if we annex Burmah, what then? Our difficulties would probably be increased, and our Chinese frontier would be the most troublesome border line about our dominions. Suppose we conquered and annexed Burmah, there is no knowing when or where our wars and annexations would cease. Speculation, on that supposition, could scarcely stop short of a division of all Asia between Russia and Great Britain. And after that?

***

ONE of the principal items of interest to Anglo-Indians brought by the last home mail, is the translation of an article in the *Goloss*, the most popular paper in St. Petersburgh, on "Germany, Russia, and England." Referring to the recent war "scare," the journal thinks it would be unwise to conceal "from ourselves that the recent misunderstandings between Germany and France have caused our friendly alliance with our Western neighbour to be somewhat shaken. Had Russia approved the opinions openly expressed in the highest Berlin spheres, the German regiments at this time would be preparing to invade France. But Russia, seconded by England, did not approve. Berlin voices were silenced in consequence, and a pacific disposition was, at any rate, outwardly assumed. How long it will prevail in the highest Berlin spheres is a question endangering the peace of Europe. It is true

that without Germany's participation or approval, there can be no war in Europe; but it is equally true that, of all European Powers, Germany may be the first to require to make war. Circumstances make her, for the present, the most bellicose power in the world, from whom other countries have to apprehend a breach of the peace. Not long ago we expressed our deliberate opinion, that the alliance of the three Emperors is the best guarantee for the preservation of peace, and that this guarantee extends to members and non-members alike. While Russia, Germany, and Austria, are at one, nobody can make war without their consent. But is not the aspect of things entirely changed when bellicose aspirations arise in the league itself? Russia, indeed, has no wish to go to war anywhere, or with any one. Austro-Hungary cannot *so much as think of attacking anybody; but portions of* German society, *including* persons of high rank, are anything but pacific, and the German Government may not always be in a position to withstand their importunity. Should such be the case, it may be questioned whether the Russo-Austro-German alliance would survive the tension put upon it. Public opinion in Europe has expressed itself highly gratified by that common action of Russia and England, to which we are indebted for the preservation of peace. Their co-operation arose from the similarity of their European interests, and without any preliminary agreement. It suits neither us nor the English, that Europe should be constantly agitated by the fear of war, or that war should be actually made. From the geographical position of their respective countries, from what they have already attained in the world, and wish to achieve in the future, the Russians and the English are the two most pacific nations on the globe. All they desire is to keep what they have got in Europe; to acquire more is utterly indifferent to them. This being so, Russia and England by the natural drift of their policy are called upon to protect the interests of peace on the continent."

***

As to the Eastern Question: "If the English are once satisfied that Russia does not think of invading India, the primary cause of past misunderstandings would be removed, and a perfect agreement might be effected on the principal points of Central Asian politics. We have often contended that we are not the enemies of the English in Asia, and that we may be their friends, if they will only believe in the sincerity of our sentiments, and throw no difficulties in our way. If the English can once be made to understand that Russia's extension to the northern declivity of the hills surrounding India will only strengthen England's hold of India, and do away with all fear of invasion and insurrection, all would be well, and the two nations might amicably and clearly define their respective spheres of action. In all probability England is just as little disposed as Russia to acquire territory on the Bosphorus, the Sea of Marmora, and the Archipelago. If those countries are reserved for those who have the best right to them, all we want is fulfilled. What is material to Russia and England is only this, that the Dardanelles and the Bosphorus should remain open to their ships. We are, therefore, inclined to hold that it must be very easy to effect an understanding between Russia and England respecting the Central Asian and Eastern questions, and that both countries are equally interested in adhering faithfully to the agreement when concluded. This secured, what else could disturb friendly feelings? To Russia circumstances make the English alliance extremely desirable. England, too, is sensible of the necessity of taking up with Russia if she wishes to fulfil her international obligations. We should welcome the revival of the Russo-English alliance with unqualified delight—delight, we are sure, cordially shared by Russian cultivated society at large."

***

THE Marquis of Salisbury is father of an ideal made visible, for the Conservative Government. Here it is, as the Marquis presented it at the banquet of the Merchant Taylors' Company: "As I was coming here this evening I got into what I am afraid the citizens of London are sometimes accustomed to—namely, a block; and I was struck with the gentleness and good humour with which the policeman tried to induce the crowd to move on, and it occurred to me that that policeman was not a bad specimen of the ideal to which a Conservative Government should aspire. (A laugh.) If he succeeded by mild and gentle expostulation, by pointing out the right way, and by facilitating the steps of those he desired to pursue it, he succeeded in clearing the block; but if he had drawn out his baton and had laid it furiously about him, he would probably have got knocked down himself, and most certainly he would not have succeeded in clearing the block. I feel inclined to pray that, in larger things, as in small, we may always continue to be the policeman who says 'Move on,' and not to be the policeman who knocks you down." We have a lively recollection of an old, rubicund and obese preserver of the peace who used to walk "with slow and steady step" backward and forward in front of a certain public building in a large city, with medals on his breast, and a white glove gracefully suspended from his hand, whose frequent "move on," became the only name by which we young folks knew him. As he advanced, with gentle and expected admonition, we used to step aside a pace or two and simply let him pass. *He* moved on, but we didn't. Some more active member of the force was needed, to make the crowds disperse, but when there was no "block," old *move on* was the right man in the right place. When the country has some radical measure it really wants to be carried, we fear our friend Mr. Disraeli must stand aside, and another take his place.

***

BIG Germany has laid itself open to the charge of bullying little Belgium, first, by making it introduce the new criminal law for the punishment of those who, like Duchesne, may offer in writing, or for reward, to commit a crime punishable by death or penal servitude; and again, in the matter of the recent religious disturbances. Germany, it is said, has endeavoured to admonish Belgium of its duty, as to the putting down of the processions and the consequent riots. Whether the charge be true or false, it appears that the Belgian Government, though it took measures with commendable zeal to restrain fanaticism and violence, could not venture to stop, even temporarily, the religious processions, for fear that its action might be construed into a cowardly obedience to Germany. Germany is far fonder of Belgium than the British Government in India is of Burmah, and would eat it up much more willingly than Britain would the latter, given as good a pretext and opportunity.

***

CONTINUING its remarks on the recent failures in London, the *Economist* observes that the absence of panic was owing to a "political accident," for the question of war or peace was seriously under consideration at Berlin, and when such matters come to be really deliberated upon, the decision is always liable to be swayed this way and that. The immediate effect of these transactions, as of every failure of credit, is ultimately in favour of cheaper money. When that failure is very great, there is at first a period of panic, or semi-panic, in which money is very dear; it is not till afterwards that money becomes cheaper than it would otherwise have been. But this time the failure of credit is but slight, and therefore the tendency to a diminution in the value of money will begin at once without any previous great rise. The mode in which a failure of credit produces this effect is very simple—it prevents the trade demand for money from producing its usual effects. That demand depends on the credit of the persons who make it, and on the disposition of those persons to use that credit. Such events as we have just seen weaken both; the amount of confidence is less, and the disposition to use that confidence is less also. There are, in consequence, fewer bills, and there is a greater tendency to distrust bills. We do not say that, on the present occasion, this cause will act to any very great extent; still it will act to some extent, and will for a time tend to depress the value of money.

***

THE Peculiar People is, as is well-known, a sect which believes with the Apostle James that "the prayer of faith will save the sick." It follows that if the recovery of a patient can be obtained by prayer, medical aid is superfluous, and to apply for it would only go to show, that the prayer offered was not "the prayer of faith." On the other hand, if recovery be refused to prayer, it must be because death, or continued disease, is the irreversible decree of the Deity; and to call in medical aid in such a case would amount to impiety and rebellion. The position appears to be logical enough. If, then, a Court of law decides that one of the Peculiar People, who has neglected on these grounds to provide medical attendance for his child, is guilty of a punishable crime, does not this amount to a legal denial of the truth of the Apostolic premise? Is it not pronouncing in the most dogmatic manner on a question of pure theology? The *Pall Mall Gazette* has an interesting article on this subject, suggested by the trial of John Robert Downes. Presuming that the judges will decide unfavourably to the prisoner, the *Gazette* thus concludes: "It would be difficult in the history of thought on religious subjects, to over-rate the importance of such a declaration as this, and yet it will probably attract little or no attention in a 'religious world' too much interested in quarrelling over the shape of a finial, to notice that the very ground-stone of the theological structure is being quietly removed."

ALTHOUGH we have not yet done much to swell the indignant cry of disapproval that has risen among us—and not causelessly—with regard to the reckless dismissal of non-native railway officials, it is not that we have been able to look on calmly while hundreds of our countrymen are being turned out of honest employment, and, in many cases, into a state of almost hopeless misery. We have nothing to say against the propriety of employing natives to fill such posts as they have been chosen for, if it has been shown, or if there be good grounds for believing, that they are as well, or almost as well, qualified to fill them as those they are superseding. And as it may at least be contended that they have not yet been proved beyond a doubt to be unfit, it may be right that the experiment be made. But the wanton disregard of the misery to be inflicted in the process, calls for the strongest reprobation. The experiment should have been made gradually, as vacancies would have inevitably opened up, if the Companies had ceased to engage new European servants. A crying evil has been committed. Many honest men and helpless families have been suddenly and innocently reduced to want or vagrancy, and it will be greatly to the honor of the class of men, if numbers of them are not driven to crime, as well as to degradation. Companies are aggregates of human beings, it is true, but we fear it can hardly be predicated of them, that they bear a heart full of the milk of human kindness. We confess we do not hope much from any appeal to their tender mercies.

***

BUT here, surely, is a daily increasing call for a practical proof of the sincerity and genuine reality of the Christian principles we profess. We may differ about matters of doctrine and systems of Church government, but in one respect we are all professedly agreed. Charity is the broad foundation of Christian morality. To exercise brotherly kindness, to succour the needy, to help the poor and the down-trodden, to rescue our fellow Christians from the jaws of misery and vice, must be our first duty as Christians. If as a community we do not rouse ourselves to perform this duty, if our churches and our missionary associations fail in this, how shall we commend our Christianity to our native fellow subjects, who, whether they can understand our theology or not, have a keen appreciation of the value of charity, and a sharp vision to detect the want of it? "If any provide not for his own and specially for those of his own house, he hath denied the faith and is worse than an infidel." Isolated efforts are quite insufficient to meet the evil. Could we make some wide movement as a Christain community the evil could be met with ease, and such a movement would be the only reproof adequate to the grievous wrong that has been done.

***

CONSCIOUS strength is a possession that needs to be governed by much wisdom and moderation, and is especially dangerous while it is comparatively new. Germany has, since the last war, been rejoicing in the greatness of its military strength, and is ready, if not eager, to exhibit it at any moment in fearful action. Fortunately for Europe, it has for the present been restrained by wise counsels from Russia and England. But it is evident that only a shadow of provocation will be needed at any time, to set the tremendous force of Germany in motion towards France. And though France is, doubtless, better prepared for war than when the last outbreak took place, another German conquest is at least far from improbable, should France enter the contest unassisted. The English press—perhaps also the English Government—has still some respect for what used to be called the balance of power. And had the recent misunderstanding ended in war, there is no doubt that the mass of the English nation would have been in sympathy with France. However gentle Lord Derby's late representation may have been, the vision of a future French and English alliance to preserve the balance of power in Western Europe is not so absurd as it might lately have appeared.

THE WEEK.

A TELEGRAM from Rangoon, dated the 15th instant, states that a rebellion has occurred in Upper Burmah, and that there are disturbances in the neighbourhood of Bhamo.

THE Burmah question seems to be getting more and more complicated. Reuter's Simla agent has apparently been instructed to say that the concession to be insisted upon by our Government relates merely to the passage of "an escort in case of need." But Lord G. Hamilton is reported to have told the House of Commons on the 8th instant that the Government of India had insisted "on the King placing no obstacles in the way of our obtaining redress," in the direction of China, and that the King had refused permission for the passage of British troops through Burmah. What are we to believe? Without being able to answer the question satisfactorily, we are inclined to think that the Home Government has no intention of limiting the demand in the sense suggested from Simla, and that the Government of India has nothing to gain in endeavouring to lead away the public from the main issue. War with China, or with the local rulers of a Chinese province, is evidently contemplated at home, and it is absurd to disguise this fact under the thin veil which Simla seeks to throw over it. The object being, according to Lord G. Hamilton, to obtain redress for the Manwyne outrages, the escort to be sent through Burmah in case of need will be a somewhat larger one than is usually accorded to peaceful explorers and diplomatists. If there be a difference of opinion on the point between the Home and Indian Governments, the policy of the former is that which will be acted upon. A *Gazette Extraordinary* was issued at Simla on Tuesday publishing the history and the results of Sir Douglas Forsyth's Mandalay Mission. It gives the text of the treaty by which the British and Burmese Governments mutually agree to the independence of Western Karennee, 'and cordially recognizes the desire shown by the King to put an end to the existing differences, which the Governor-General trusts are now happily terminated.' A British officer will be deputed to demarcate the boundary in dispute at a proper travelling season. It is stated that after the Envoy had taken leave of the King, a friendly but informal communication was made to the Envoy indicating the King's unwillingness to assent to an escort of British troops accompanying a fresh Mission to China. A further communication on the subject has been made to the King, which, it is hoped, will end in friendly consent to a free passage being given. A later *Gazette* contains a Resolution by the Viceroy in Council, notifying the conclusion of the negotiations which Sir Douglas Forsyth was instructed to conduct with the King of Burmah, regarding the independence of Western Karennee. With reference to the refusal of the passage of an escort, the Resolution notifies that a fresh communication to the King has become necessary, and the Viceroy entertains the confident expectation that such further communication may be so received by the King as to maintain the friendship between the two Governments intact.

THE Burmese Minister satisfied Sir Douglas by telling him that Lee Seh Tahee was the Imperial Ambassador to Mandalay, but it was generally believed in Burmah that the statement was false, and that the Chinese Imperial Government knew nothing about Lee Seh Tahee's movements. But, allowing for the exaggeration of possibly prejudiced people, it is sufficiently evident that nothing has been gained by the Mission to Mandalay, and that the King is now as free as ever to hamper our trade and humiliate our representatives. The mere fact of His Majesty having sent to Sir Douglas, after the completion of the negotiations, an insolent message relative to the question of escorts, shows how little he feared the Power he was dealing with. It may be that the Government of India, having in view complications in the direction of Affghanistan, was anxious to effect an amicable settlement with the King of Ava on almost any terms; but such a policy is radically bad. Political weakness and strength cannot, with advantage to a State, go hand in hand. We must be prepared to oppose a firm front to every foe, and if we are not firm all round, we must be weak all round. The *Englishman* has sounded a note of warning with regard to Russia, which we can hardly suppose our contemporary would have ventured upon without good authority. A few days ago we read in the *Delhi Gazette* some startling particulars respecting the warlike intentions of the Ameer of Cabul, but as Cabul correspondents often supply information which is not subsequently confirmed, we attached no particular importance to the sensational paragraphs. But the *Englishman* now tells us that the Russians are about to encroach on Persian territory, in violation of treaty obligations, and that the Government of India has earnestly protested against the move. "But other and possibly more serious complications have arisen. The Court of St. Petersburgh has shown a disposition to dispute the right of England to station troops in the territory of Khelat; and the Government of India has urged on the Home authorities the advisability of settling the point once and for all by an intimation of their views on the subject to the Russian Government." If there be any danger of complications in the North, it is all the more necessary that the King of Ava should not be encouraged to give us further trouble by a conspicuous display of diplomatic weakness on our part. If the King professes to yield on the point of a passage of troops for "escort" purposes

his sincerity ought speedily to be put to a practical test. Delay and evasion should, above all, be guarded against. In spite of the happy result of the recent Mission, the King is evidently our enemy. For if this be not the case, why is he still so busily engaged in warlike preparations? And why is he so anxious to obtain allies in Europe and America?

IT is reported that the Russian Deputy Governor-General of Central Asia has arrived at Bokhara, where he was received with *éclat*. He was accompanied by a large number of officers, who have been inspecting the surrounding country, escorted by the King's troops. The Meer of Maimena is becoming troublesome, and the Governors of Herat and Candahar have been ordered to hold troops in readiness to march on the rebel. The Meer, it is stated, has been carrying on treasonous correspondence with Abdool Ruhman Khan, and the Ruler of Bokhara.

LORD NORTHBROOK has published what has the appearance of a "justification" of his conduct in connection with the dethronement of the Gaekwar. A second warning was given to Mulhar Rao when Sir Lewis Pelly was appointed to succeed Colonel Phayre. Sir Lewis Pelly, on his arrival at Baroda, described the state of affairs to be very critical, but at the same time he did not suggest that Mulhar Rao should be then deposed. He reported that the Gaekwar professed his readiness to accept his advice—had, indeed, accepted it upon some matters, and, so far as he could judge, sincerely desired to reform the administration. Although, after what had previously occurred, the Government of India could attach but little value to such professions, there were certainly at that time no sufficient reasons for deviating from the course which had before been adopted and announced to Mulhar Rao, namely, that he should still have the benefit of the period of grace originally given to him, together with every assistance which could be afforded by Sir Lewis Pelly. This official soon found that the finances of the State had been grossly mismanaged. The revenue during the past year was found to be 94 lakhs of rupees, and the expenditure during the same time no less than 171 lakhs, out of which sum 40 lakhs had been expended in gifts chiefly made to favorites and courtesans, and 30 lakhs more had been spent in building and repairing palaces and other personal expenses of Mulhar Rao. The manner in which the accounts were kept was most unsatisfactory. In the Baroda state treasury a sum of less than Rs. 2,000 was found when Sir Lewis Pelly assumed the administration, while 40 lakhs were afterwards discovered concealed in the palace, and further considerable sums had undoubtedly been removed. The inquiries that were made respecting the attempt to poison Colonel Phayre naturally led to an inquiry into the circumstances of the death of Bhow Sindia in 1872, which was generally attributed to poison, and as to which some suspicion attached to Mulhar Rao. Depositions taken before officers, who had been charged by Sir Lewis Pelly with the duty, tended to confirm the belief that Bhow Sindia was poisoned. Again, it appeared in the course of the inquiries, which had been carried on at Baroda, connected with the attempt to poison Colonel Phayre, that a man of the name of Govind Naik had met with his death in a manner to induce Sir Lewis Pelly to believe that Mulhar Rao either gave himself, or caused to be given, an order to torture, under which Govind Naik finally succumbed. In concluding his present minute, Lord Northbrook states that, "Throughout all these painful transactions, the Government of India have endeavoured to deal with Mulhar Rao in a spirit of perfect impartiality. Looking not only to the poisoning case, but to his character and antecedents, to the mal-administration of the State of Baroda, and to the measures taken in consequence, I can confidently assert that Mulhar Rao has been treated by the Government of India with the utmost forbearance that was compatible with the duty of the British Government to insist that the person of a British Resident at a Native Court should be respected, and that a State enjoying British protection, the peace of which is maintained by Her Majesty's forces, should be so administered as to secure the people from grievous abuses. That it was both just and expedient to have exercised such forbearance cannot, I conceive, be disputed."

A CONVERSATION said to have taken place between the Ameer of Affghanistan and Yakoob Khan appears in the columns of a contemporary. The Ameer is reported to have told his son, "I am going to do something for you, provided you obey me fully." "I am not your son," replied the Sirdar, "but a slave. As for your releasing me from prison, I do not wish you to do so, until you are prepared to do justice. You did not punish the men who attempted to poison me. Make over the men to me, and also Ursulla Khan, Ghilzaee, who deceived me, and then I will act according to your instructions. As long as you are living, I will be happy to serve you faithfully." It is also asserted, with what amount of truth we know not, that a skirmish has occurred between the Affghans and Russians, in consequence of the latter having crossed the Hamoon. Concerning this Shere Ali is said to have addressed his chiefs in durbar thus: "You all know very well that I have made a treaty with the British for the sake of your interest and for nothing else, and now if the Russians are resolved to annoy us and disturb our territory, we must take steps to defend ourselves and proclaim a religious war. I now ask your opinion on the subject. If you wish to govern in Affghanistan, join me against the Russians, otherwise give me leave and I will go over to some other power."

THE following is the Resolution of the Viceroy in Council on the important subject of the connection with the Press of officers in the service of Government: "Questions having recently arisen as to the extent to which officers in the service of Government are permitted to connect themselves with the press, the Governor-General in Council thinks it desirable that the existing orders on the subject should be clearly understood. No officer in the service of Government is permitted, without the previous sanction in writing of the Government under which he immediately serves, to become the proprietor, either in whole or in part, of any newspaper or periodical publication, or to edit or manage any such newspaper or publication. Such sanction will only be given in the case of newspapers or publications mainly devoted to the discussion of topics not of a political character, such for instance as art, science or literature. The sanction will be liable to be withdrawn at the discretion of the Government. Officers in the service of Government are not probibited from contributing to the public press; but their position makes it incumbent upon them to confine themselves within the limits of temperate and reasonable discussion, and they are prohibited from making public, without the previous sanction of Government, any documents, papers, or information of which they may become possessed in their official capacity. These rules have been hitherto in most cases honorably observed. In case of a departure from them, or if the Government should consider the connexion of any officer with the press to be contrary to the public interests, his liberty to contribute will be withdrawn. The Government of India will decide, in case of doubt, whether any engagements of officers with the press are consistent with the discharge of their duties to Government, Nothing in this Resolution is intended to relax the provisions of any regulations on this subject which now apply to the Army." It is to be observed that the Government will not permit any officer in its service to have any part in the proprietorship, editorship, or management of a newspaper or publication that is not "mainly devoted to the discussion of topics not of a political character." If, therefore, any officers under Government have any editorial connection with political papers, they must at once retire into the privacy of their ordinary official life. The paragraph relating to contributions to the public press appears fair enough, but if officers strictly obey the order not to make public, without previous sanction, any information of which they may become possessed in their official capacity, the press will suffer considerably, and it is probable that many officers will draw the line at information which may be considered confidential in its nature.

SOME curious facts have come to light during the past few days, with reference to the late agrarian disturbances in the Western Presidency. Except in the case of the Supa riots, the disturbances were within well-regulated limits. Their immediate object in all cases was to induce or frighten the money-lending sowcars to be more accommodating in their terms, and where this was found impossible, the peasants compelled the sowcars to give up their bonds and destroyed the evidence of their account-books. In some cases haystacks were burnt down. Generally speaking, beyond frightening the sowcars into giving up their bonds, no injury to their persons or possessions was contemplated or attempted. In a great many cases, the ryots, upon the requisition of the police authorities, returned the bonds, or, where these had been destroyed, passed new ones. The object of the peasants for the most part was chiefly a defensive one, and where these limits were exceeded, as in the case of the Supa riots, it has been established that the people, though in some sense responsible for the disorder, did not actively take any part in the plunder and destruction which followed. At Kulasee, in the Indapore talooka, the ryots came to an understanding, by which it was agreed that no man should have anything to do with Marwaree or Guzeratee money-lenders. "Nobody should buy from them, or serve

them, or receive advances from them. The village barber should not shave them, nor the smith or carpenter work for them." This curious combination has been actually carried into effect, and the ryots in a body presented the agreements to the Government officials. In Lonee, and in several other places, the Marwaree shopkeepers were turned out of the village with all their moveable possessions, and in one case the people subscribed a small sum between themselves for paying the railway fare of an obnoxious sowcar thus sent away. We are glad to learn that the Bombay Government has at last awakened to the necessity for some action with reference to these remarkable outrages on Marwaree money-lenders in the vicinity of Poona. A special officer has been deputed to make inquiries and report fully on the subject, with a view to some remedial measures being suggested to the Government of India.

CHOLERA has burst out again in several parts of the country. In Trichinopoly it is "raging fearfully," and a similar report comes from the Berars. Colombo, too, is still suffering from the same cause. A hundred and sixty-nine deaths have occurred in a single town in South Arcot. The disease is also fatally prevalent in Tanjore.

PARIS GOSSIP.

[FROM OUR OWN CORRESPONDENT.]

PARIS, 19TH JUNE.

THE trial of the "first-class spiritist photographer," Buguet, and his accomplices, Leymaire, Editor of the *Spirit Review*, and Firman, a medium, is curious and comical. Leymaire was in the habit of importing spirit photographs from America, till the idea struck him of being able to manufacture the article in France. He applied to Buguet, who did not succeed, till Firman, as medium, explained the trick. When a client came, he or she was left some time with the cashier, a very wide awake lady, who at once communicated the desired information to Buguet, who selected from collection of articulated dolls—called "the box of ancestors"—something answering to the description. By means of a veil round the head of this mannikin, and a sheet about the body, it was photographed, a musical box being ground in order to work up the "medium fluid." The phantom plate ready, the client was placed in a chair, and his portrait taken along with the ghost plate. Fee, 20*frs*. The operator performed some dervish pranks in addition, and if the head of a grand-father appeared, instead of that of a child, the spirits were capricious, and another sitting, for 20*frs*., was arranged. The *Review* puffed Buguet, and all concerned shared in the profits of the swindle. A certain Comte expended some 2,000*frs*. to have all his ancestors photographed, and might by this have reached Adam himself, only the detectives pounced on the gang. The lady-cashier exposed all, and admitted she did the penmanship for the ghosts. The table of the Court was covered with the articulated dolls, some hundreds of heads, veils, and shrouds—the musical box included, which appropriately rolled off a *Miserere*. Buguet and the Editor were fined 500 francs each and sentenced to one year's imprisonment; Firman was condemned to half this punishment.

The Liberals have been defeated in the Superior Instruction law, thanks to the better organization of their clerical opponents: they are becoming nervous, that, as time flies, none will be left to vote the Constitutional laws before August.

The trial of Tin-tun-ling for bigamy, has been looked forward to with expectation. The Celestial is very well known in Paris, where he has lived for several years, and in literary circles one was sure to encounter him occasionally in his blue satin costume and pigtail. He was the *protégé* of the late Théophile Gautier, and since his death, Tin-tun-ling has not had a bed of roses. He was a "duplicate professor" of Chinese in the College of Oriental Languages; that is, a Frenchman wrote the Chinese for his pupils, and Tin-tun-ling pronounced the words; all went well, till Tin accused the Professor before the whole class—consisting of one pupil—that he neither knew how to write, nor to speak Chinese. Tin-tun was dismissed, and the Professor keeps on the even tenor of his way. A governess—there are some very droll ones—actually fell in love with Tin; her name is Caroline Liegeois. They were married, but after some time, Caroline separated, accused her Celestial lord of bigamy, had him arrested, and then she disappeared. She is said to have joined the Mormons. Now Tin did not deny he had been married, but stated that he had not heard from the girl for several years, though he sent registered letters to her. By the Chinese law, such silence after three years was tantamount to a divorce, and entailed on the wife 50 blows of a bamboo: yet the Orientals sing that a woman ought never to be struck even with a flower. Well Tin, full of *finesse*, demanded an interpreter before the Court well aware that he and his late colleague were the only professor, able to read the hieroglyphics of a tea chest at glance. Thes Public Prosecutor avowed his ignorance of Chinese law, and prisoner's counsel replied that it was his duty to make himself acquainted with it before ordering the trial. *Enfin*, Tin-&c.-&c., was acquitted, and has resumed private lessons on the beauties of Confucius.

The King of Hanover is coming; and the French mint is striking off Hanoverian pieces of money. So long as the metal is good, Parisians care little about the effigy.

The review—a little one—of the garrison of Paris, was a brilliant success. Some 45,000 men were under arms, and Parisians may now congratulate themselves, that their army is becoming such in reality, and that the money voted is being well applied. It must not be forgotten th at most of the regiments have been only lately quartered in and about Paris, having been previously on duty in the provincial town s. A horse-race has a large number of votaries, but a military rev iew attracts all classes. There were 300,000 spectators present, despite the uncertain appearance of the forenoon. The defile commenced and finished with military punctuality; there was no display, no *Vivas*; all was serious and business-like. Nor were there any accidents, save the drenching those persons must have experienced who had to return to Paris on foot. There was no dissenting voice as to the marked and solid improvement in the physique, discipline, and bearing of the troops: the effects of sound and persistent drilling were evident to the merest novice in military matters. The cavalry manœuvred far better than they did last year, and will be still better at the next review. As for the artillery, its manœuvres were perfect; not a fault to be found in the two brigades; the new pieces and their ingenious mountings were admired and cheered. France has reason to be proud of her military re-organization, and the Prussian eagerness to wantonly attack it, before it becomes a real defensive power, can now be understood. But England and Russia will keep even Bismarck in order. Germany having enjoyed the victory, must also take its consequences and anxieties; but she must not indulge in foul play.

The debate on Superior Education is rapidly becoming a struggle between Modern Society and Ultramontanism. In fact the Church, in demanding liberty of education, means by that to have command of University education in France, and to tolerate no system but what it approves. Liberals consent to permit the clerical, like any other party, to teach what science it pleases, but will not consent to the clergy being allowed to acquire property for collegiate purposes, or to possess the right to confer degrees. This latter must be secured to the Sta te, with facilities for every pupil to be examined for his degree. It is rather putting back the dial to allow the clergy to become again corporate bodies.

The laying of the foundation-stone of the new Cathedral on Montmartre, and dedicated to the Sacré Cœur, was a very quiet and religious affair. At one time it threatened to become a question of vast political importance, and certainly would have been a bone of contention, had not the Government prudently and wisely interfered to limit the matter to a ceremony, and not to a manifestation. The only persons of political importance present were the Duc de Nemours, and his son, the Duc d'Alençon: some people were surprised to remark that nobleman there, the son of Louis Philippe, a King who was opposed to Ultramontanism, for this cathedral is the expression, pure and simple, of the friends of that party. The Deputies holding to the Comte de Chambord's views, mustered of course all their strength—about one hundred strong. Many clergymen were present and several in cannonicals. But there were very few ladies, and those present were dressed in sombre toilettes. The directors of the ceremony wore a tin-badge with a bleeding heart painted thereon. The police was as numerous as the invited, and perhaps the whole proceedings were limited to both: there was no crowd. A regimental band, with followers carrying pilgrim-banners, led the way; the Paray-le-Monial chant, of "Save France," was sung; "and Rome," according to some. Not a member of the Government appeared, so it is to be hoped Bismarck cannot find any cause for invading us. The vicar of the parish delivered an address, wherein he hoped the Archbishop of Paris, "would live as long as Moses—120 years—and have as sound teeth;" the Archbishop smiled and passed the compliment on to His Holiness, who sent

his blessing by telegraph. The laying of the stone was like all secular ceremonies, save the benediction, added by every bishop and clergyman present, after which each person gave the stone a tap, and withdrew, in time to escape a thunderstorm. Apart from the object of the new structure, it will be a magnificent addition to the public buildings of the city, and will transform the most villainous quarter of Paris, into a district likely to become fashionable, provided high-pressure religion can be kept up.

The fishing season has opened, and the banks of the Seine are, as usual, lined with anglers; the spectacle is most melancholy; people sit as calm as statues and as resigned as Orientals throughout the day, trying to catch—nothing. Now that the Assembly is perplexed about what ought to be the qualifications *for an elector, it might* do worse than lay down that he should be a fisherman.

A son named Flambard, has been sentenced to eight years' imprisonment and twenty years' *surveillance* by the police; he is only twenty-three years of age, has a head like a rabbit, and attempted to kill his father and mother, because they continued to make soup for him without meat or lard. He was an "officer" in a regiment during the Commune, and is by profession a maker of paper-bags. The police had great difficulty in arresting him, and he asserted before the crowd, that to be a good policeman, a man ought to graduate as a robber; and that his present tormenters would pay for it in the coming revolution.

A man named Halle died in October last at a village in Saint-Hilaire; on his death-bed he declined to receive the last rites of the Church, and repudiated religion, it is said, altogether; the clergyman objected to the deceased being buried in consecrated ground, and the Maire in consulting the Prefect, was directed to bury the remains in that "dishonored portion of the cemetery," reserved for unbaptized babies, suicides, &c. The friends of the deceased have just carried the matter before the Council of State, and this body has decided that the Maire did not exceed his powers. In Paris no distinction is made; all are buried in consecrated ground—except the corners of Père la Chaise allocated to Turks and Jews. Lunatics, idiots, the *débris* of dissecting rooms, and murderers, have, however, a potters' field to themselves, called familiarly the "turnip-garden."

The following are the claims of the French to the *Grand Prix* where the English horse was beaten; the winner's sire and dam are English; the trainer and jockey, ditto, but the owner is French, hence, Waterloo, Crecy, Poitiers, Agincourt, &c., are concluded to be avenged.

THE MUSSOORIE SEASON.

(FROM OUR OWN CORRESPONDENT.)

SINCE I last wrote, the principal events here in the line of festivities have been the second subscription dance, the return ball given by the residents of Mussoorie to the Club, an *al fresco* moonlight dance at the Mussoorie Rosherville, and the masonic ball. The first was slow, the second delightful, the third charming, and the latter brilliant. Still, as I write these lines I can't help crying, *Vanitas, vanitatum, omnia vanitas*—and asking myself why during that portion of the night during which sleep is most refreshing and most health-restoring, I, in company with many others, kept describing circle after circle, and chasseed, balanced, and parteed the whole night through? What savour of the forbidden fruit is there about those hours after midnight, so pleasant that, despite advancing years, locks tinged with grey, and a general want of soundness about the hepatic regions, we sit out or dance through them as gaily as if we were again in our golden youth? I say we, advisedly; the majority of our most determined dancers, and most inveterate seers of the dawning day, are not drawn from the ranks of the Mussoorian youth, but from the middle-aged men. The other night, as, after having danced ten dances consecutively, I looked around the room, I thought how forcibly—with regard to the morrow, judging from their looks—though otherwise not so *apropos*—the lines of Gray were—

> "Alas! unconscious of their doom
> The little victims play."

My doom and that of many fellow-sufferers bring a sense of numbness afterwards and that peculiar feeling of depression which can best be described as not having a word to throw at a dog. What causes this? we ask ourselves. Had we all been ten years younger, a heavy supper and sweet champagne might have caused our woes; but at our age, we are more prudent and eschew both. Can it be the cigar, as we go home? If so, let that also be put off, with the other things of the past. Vain hope! So let us greet the coming rains with "effusion," and thank our stars our late hours are coming swiftly to an end. The insight given by these dances into the manners and customs of the Mussoorians is great. The new arrival, who has called all round and been well received, we hope, appears at the dance and solicits the pleasure of a "fast" with one of the ladies he has called upon. Alas! there are no fasts left, and he has to be content with a square; afterwards, to his surprise, he beholds a succession of "fasts" danced by the lady with one cavalier, who is then for another succession replaced by a second, and so on, till the evening ends. He expresses his surprise, perhaps, to an old *habitué* such as 'your own,' and the secret is then expounded to him. There are a great many ladies who, in the dancing line, wish to emulate Osbaldiston's celebrated ride, and, confident of their own staying powers, they supply themselves with relays, and dance all the evening, comparing notes, as to dances and turns taken, the next day. This is the real reason for this apparently abnormal procedure, and those who are ignorant enough to attribute it to "cliqueism," and to whisper that if you are not a R.E., or a S.C., or a C.S., or some other cabalistic letters, you cannot hope to dance with certain ladies, are entirely wrong. If you can dance fairly, are sound in wind and limb, and can do your ten turns round the room for four "fasts" consecutively, though only a sub-Lieutenant in the 151st, you will cut out Generals, Commissioners, Surveyor-Generals, Inspector-Generals, and even a Lieutenant-Governor himself I verily believe.

The billiard handicap is over, and 'Little Alf' won hard held. There was quite a crowd to see the last games, and it is a pity there was not a little more excitement, as long before the three-quarters post was passed in each game, it was clear that the 'scratch' lot could not be made to gallop even, and so we had no excitement at all.

The legal world are having a lull just now, as the great Bank case, after being fought through the best part of a week, was decided on the 21st instant, the defendants being cast in the suit and costs to the tune of nearly Rs. 1,70,000. The bank has, therefore, won the case, and there is believed to be little likelihood of their losing on appeal; but as far as getting their money goes, that will be "toutafy oter chose," as Jeames de la Pluche says.

And now, having exhausted all local news but the weather, and being much too magnanimous to expatiate to my readers on such a threadbare subject, let me proceed to topics of general interest. My readers would wish to know, no doubt, the subdivision and classes, the strata and substrata, the first flight and the ruck of society up here. Society here is divided, as in most places, into three classes—"proper," "outside the pale," and "improper." The last grand subdivision being rare, and being spoken of only in tantalizing but exquisite whispers, I shall leave you to imagine all that is and may be said on the topic. The second is, as may be imagined, a sealed book to me. The first is divided into many cliques, such as the Bombadiers' clique, the Camel's-back clique, the Koolerie clique, the Haw-haw clique, the Ewe-lamb's clique, etc. etc.,—for their name is legion; and this cliqueism is, on all social occasions, a most unmitigated nuisance to the new arrival. At badminton the cliques marshall under their own banners, like Highland clans, and if a Camel's-back gets into a game of Bombadiers, or a Baalamb among the Ewe-lambs, he or she is made to fret, even if of the most mercurial and lively spirits, very like a fish out of water very soon. And a few days ago, at a large dinner I saw my friend Secundus, of the —th, who belongs to the Kooleries, and who just missed sitting with the belle of his clique, remorselessly forced by the host into the very middle of the Haw-haws. Poor fellow, he hardly got a word out all dinner, and, had it not been for the 'Christopher,' would have been in very bad case indeed. Still, it is better; nay, a right-minded man or woman must belong to one clique, than belong to none. And that insufferable little Clumgeedar who is up here, thinking to belong to the Haw-haws, Bombadiers, Camel's-back, and several others at once, found himself cut by all. Naturally enough, Mrs. Grandairs of the Haw-haws looks down on all the other cliques, and seeing Clumgeedar flirting with Mrs. Titbit of the Ewe-lambs, whom she detests, erased his name from her clique; and mishaps happening to him in all the other cliques, such as throwing over a Bombadier to dine with a Camel's-back, and then taking a Koolerie into supper last ball, instead of a Camel's-back, he became, as far as Mussoorie cliques go, in a similar position to his family godfather, the bat in his relation to the birds and beasts. The bat had still the reptiles and fishes to make friends of, to say nothing of the insect world. Clumgeedar has still the society outside the cliques, but as he has no taste that way, it is to be hoped he will pack up his

traps and betake himself anywhere—anywhere so long as it is out of Mussoorie. Let me give any of my readers who are coming up to Mussoorie a little advice. I cannot tell them for obvious reasons the clique I belong to, and especially for the same reason that induced Major Pendennis to put his nephew up for a Club other than the one he especially affected. I would advise them, if married and fond of society, to belong to the Kooleries ; if married and quiet, to the Camel's-backs ; if unmarried and lively, to the Ewe-lambs ; and if unmarried and retiring, to the Bibliothecumists. Any further information they may wish to obtain regarding these cliques, will be given on their applying to the Editor of the *Friend of India*, by

BLAS EL MATADOR.

OUR LIBRARY TABLE.

The Native States of India.—By Colonel Malleson. This volume, dedicated by its author to the Marquis of Salisbury, is a welcome addition to the shelves of the historical department of a reference library. Such a volume has long been desired both in India and England. During the last few months the information it gives has been especially needed. Newspaper writers, in their comments on the Baroda question, have been compelled to throw the mantle of vagueness over their scanty knowledge of the course of events during recent years in the dominions of the Gaekwar. Dates and names are things that cannot be got at by the light of nature ; and want of exact knowledge with regard to such, betrays itself in a hesitating style, and in remarks of indefinite tenor. Colonel Malleson's book will be hailed as a godsend by all at home who are called upon, with reference to Indian affairs, to dip their pens into the ink of comment and criticism. It will also be accepted as a serviceable book by all writers for the Press in India, and by all, whether at home or in India, who have been wishing to have access to clear and accurate information as to the sequence of events in the Native States up to the present moment. The headings of the various parts of this book, of 400 pages, will give some idea of the arrangement of the work, and of the extent of the information supplied : I, Rajpootana ; II, Central India and Malwa ; III, Bundelkhund ; IV, Western India ; V, Southern India ; VI, Northern India ; VII, Mediatized and Minor Chiefs. Colonel Malleson has thus not grouped the states according to their individual size, but has followed the natural order of the division in which they lie. He begins with Rajpootana, inasmuch as it is " the division containing the oldest monarchies in India, probably in the world." The closing part gives a brief account of " the states and estates which, though under the suzerainty of, are not in direct alliance with, the British Government." Each part has its accompanying map in which the political divisions, river systems, and dividing water-sheds, are clearly marked. Colonel Malleson gives ample acknowledgment of his indebtedness to all preceding writers, from whose books he has gathered the information he has so usefully compiled. He has not lost sight of the romantic, and sometimes tragical, events to be met with in the annals of the native princes. The strangest and saddest incident, of which he gives an account, is the sacrifice of the beautiful Princess Kishna Komaree Bae, by the orders of her father, the Rana of Oodeypore. It seems almost incredible that, within the present century, the claims of rival princes to the hand of a royal damsel, should be settled by decreeing the death of the fair one, even though the rivals had brought war and desolation into the land. The virgin princess, the " Flower of Rajasthan," as she was called, met her fate with a smile ; but her mother died of grief a few days after. Colonel Malleson describes himself, on his title-page, as " Guardian of the Maharaja of Mysore," and, in the chapter devoted to Mysore, he states that his guardianship commenced in the year 1867, when his ward was six years old, and will continue until 1879. A school, he says, was formed in one of the palaces, in the healthiest part of Mysore. To it were invited the sons of the nobility and officers of state, and here the young Raja " is being taught all, with the exception of Latin and Greek, " that would be taught in an English school. He has learned to " ride, even to hunt with the hounds, to play cricket, to drive. He " has manifested a cheerful, steady, and painstaking disposition. " He is punctual and methodical in his habits, and evinces an ami- " ability of character which promises well for the future."

The Madras Jurist.—July. A statement of some importance appears in this journal, to the effect that the local High Court recently had to consider a point which appears never to have been directly decided by the English Courts, involving the question as to the time when a promissory note payable on demand may be said to become overdue, so as to fix the indorsee with the equities attaching between the maker of the note and the first payee. It is clear that such a document does not become overdue as soon as the date affixed to it has passed ; for, it would otherwise be almost worthless, since notes are usually made in that form by way of security for the liquidation, at some future time, of a past or future debt. Thus, in 'Bayley on Bills' (16th Edition) 166, it is stated that " a note payable on demand is intended to be a continuing security, and is current for any length of time, unless there be something on the face of it to show that it is overdue ;" and so Sir J. Byles says (Byles on Bills, 11th Edition, 167) : " a note payable on demand is not to be considered as overdue without some evidence of payment having being demanded and refused, although it be several years old, and no interest has been paid upon it." It will be worth while to notice the chief decisions in England which throw any light upon the question.

Indian Medical Gazette.—July. " Overwork " is the title of the best article in this issue of the above publication. Speaking of sleep, the writer says a mistake is apt to be made. The number of hours one lies in bed by no means represent the number of hours spent in refreshing sleep, nor is the whole period of apparent sleep necessarily one of, so to speak, efficient sleep. Men acquire habits of sleep, moreover, and the time which ought to be devoted to sleep, ought to be measured rather by the feelings than the watch. Most men require eight hours' sleep in India, and happy the man who can really procure and enjoy them. There are two things which ought particularly to be avoided in this country—heavy late dinners, and working after dinner ; and whenever the weather really gets warm, the *punkah* should be resorted to. We are among those who believe in a *siesta*. The morning is undoubtedly the best time for work in this country, and if a man has done a good morning's work, an hour's thorough rest, or sleep if he can get it, after breakfast or tiffin, is of the utmost comfort and value. The long hot weather day is most pleasantly and usefully divided by a thorough rest in a cool darkened room under a *punkah*, and if a man works well during the rest of the day, he need not count his afternoon *siesta* a weakness or even a luxury. As regards diet, stimulants, exercise, and amusements, the word moderation indicates sufficiently the principle which ought to regulate them. It is a principle with many men, more honored in the breach than the observance, more particularly in the Calcutta season. A man who has been out to dinner and the opera on the previous evening, and partaken freely of the viands and wines provided for the occasion, who has found his way home about one o'clock and fortified himself with a strong " peg " before turning in, who is roused by his bearer at six o'clock and, mounting a rough waler, gallops madly round and round the race-course for an hour or two and comes home thoroughly fatigued, has no right to be surprised that he can't apply his mind to his work in office during the day. Physical exhaustion of the body of necessity entails impairment of mental vigour. "There is no lack of holidays of sorts in India, and he is a wise man who avails himself religiously of them. A hebdominal rest has been, by universal consent—a consent no doubt born of experience—acknowledged and settled by mankind as needful for the working man, whether his labour be manual or mental, or both, and, even on the low ground of self-interest, Sunday work is not profitable. 'A want of occupation is not rest,' however, and the periodical remission of labour should rather be a change of the severe and straining occupation which business entails, for some light pursuit making pleasant demands on the imagination, sentiments, or emotions, than an absolute surrender of all mental energy, interest, and excitement. We doubt very much whether two hours' confinement in a stuffy carriage under a blazing sun, interrupted occasionally by ascents and descents of stairs, and painful intermittent efforts to render one's self entertaining, quite come up to the ideal of a Sunday rest ; and we are quite sure that the ponderous Sunday *tiffins* inflicted by some well-meaning persons on *their friends* are pernicious."

Indian Annals of Medical Science.—By Dr. Ewart. At the close of an elaborate essay on the endemic fever in Lower Bengal, commonly called " Burdwan Fever," Surgeon-Major J. G. French gives us briefly and intelligibly the results of his investigations. He is of opinion that the " Burdwan Fever " was a purely malarious or paludal one *without* any typhus element in it. That as its course and symptoms are different and distinct from enteric and relapsing fevers, these diseases may be omitted in the discussion, and dismissed from our minds. That it was not contagious. That its course was not along roads or traffic lines, but chiefly along rivers, *khals*, or streams, sending out lateral extensions from the malari-producing places. That when it attacked a village, it was, as a rule, mild or slight in the first or second year, and that in subsequent years it was severe or fatal. That after raging for an uncertain number of years, it gradually declines or abates. That the fatal type of fever is preceded and followed by the appearance of an unusual number of ague cases, and mild remittents. That the sequetæ of this fever are those of paludal fever, and of no other. That the bad cases which recover in nearly every instance, suffer from *recurrences* of remittent and ague fever. That the dying out process in a village is very gradual, and not sudden ; and that it takes many years before a fever-stricken place returns to its former healthy state. That generally the period of outbreaks is from July to the end of November. That it has travelled in opposition to the natural drainage course of the district. That it has been caused by pent-up sub-soil water, which in a porous soil is, at certain times, subject to high elevations, and rapid retrocessions. These changes taking place beneath a hot sun appear to be the conditions under which malaria in its most intense or concentrated form is produced. That this pent-up sub-soil water is caused by bad drainage, which has resulted from gradual and progressive changes in the rivers, *khals, nullahs*, or streams. That those places in Burdwan which are better drained than others, have suffered very little from the fever, or have altogether escaped it. That owing to better drainage those villages adjacent to low lying *bheels*, or small lakes, are, as a rule, found to be comparatively healthy. That the extension of the fever to the high lands and laterite soils was a lateral one, wafted thither by the prevailing wind from a neighbouring malaria-producing tract.

If engineering knowledge and skill be now invoked, Burdwan, being so well known, ought to be the battle-field of science against malaria ; and possibly improvements in certain directions, by re-opening the silted-up *khals*, clearing or deepening others, or by cutting canals in order to afford a more ready outlet to the pent-up waters may eradicate the production of the poison in many places.

Report on the Calcutta Church Missionary Association.—1874. The introductory chapters of this record of Christian work in the metropolis of India is peculiarly interesting. Referring to the favourite subject of conversation amongst Baboos, the writer says : „Politics is the one absorbing passion of their souls. Subjects

such as high education, the opening of the higher offices of Government to native talent, legislation, jurisprudence, disestablishment of the Church, improvements in domestic policy, the desirability of having an Indian Parliament, *et cætera*, have exercised their minds since the last two years with an increasing intensity. Talk of religion to a Baboo aspiring to a character for culture and patriotism, and the subject will either be dismissed as being 'behind the age,' or listened to with exasperating apathy, accompanied ever and anon with indications of terrible *ennui*. But speak to him of politics, and you observe a marvellous change. Listlessness gives way to eagerness, indifference to pleasure, and you are civilly requested to prolong your visit, or to come again."

Next to politics, the Bengali theatre has engrossed much of the attention of the educated Baboos. "There has been a perfect rage for it during the past year. Even some respectable native Christians have been dragged into the vortex of its sinful amusements. Besides two large ones, the 'Bengal' and the 'National' theatres, there are innumerable theatricals conducted by private individuals. Go wherever you like, huge placards may be seen catering for the attendance of the pleasure-loving Bengali, and even in lanes, whose filth and stench would betoken anything but a taste for theatrical performances, one could observe preparations going on for the fitting up of a stage. Knowing a little of the powerful influence of this institution on the morals of a people, we were led to inquire into the tendency and aim of the Bengali theatre. The answer received was that 'their influence on the spectators was a very dangerous one. For to make these places attractive, the conductors were compelled either to gratify the political cravings of the people, or to pander to the worst passions of men.' Not satisfied with this information, we took up a copy of one of the most popular pieces, and we found the above judgment not only corroborated, but a peculiarity developed which, we must confess, we were not prepared for at all. We discovered that the Bengali theatre was being used for the glorification of Hindooism and the ridicule of Christianity. To give an illustration of the latter, we read, *e.g.*, in the second act of a piece called 'Sharat Sharogini,' of a female character who is introduced with the remark, 'I suppose she has become a Christian?' The answer is, 'Oh! no, how could I assert any such thing. She never goes to Church. Neither does she sit at home and sing such hymns as 'Oh Lord Jesus Christ, save our souls; bring us out of light into darkness!' Some one then affects to correct the coarse joke, but is answered, 'never mind, it is all the same. From light into darkness or from darkness into light, you know, it is as six and half-a-dozen?"' To afford our readers a fair picture of the kind of political harangues made on the Bengali stage, we give the translation of one that occurs in a most popular pieces. The hero is introduced as taking an evening walk in the Eden Gardens, and soliloquising thus: "Oh, how beautiful! But all this we enjoy only through the mercy of the great ones. If it so please these *devotas*, they could order the garden to be closed from 5 to 7 in the evening, and allow none to enjoy it save those who can boast of a white face. Wherever I cast my eyes, I see the marks of foreign usurpation. Before me stares the grim visage Fort William—which is a standing and outspoken reproach to Bengal. It seems to say to the cowardly Bengali, Take care of yourself; never desire, even by mistake, or in your dreams, to be independent. Or, if you do so, never let it be known. Our lords are the conquerors of the world; they have in their hands the lightning and thunder. If, like a flogged dog, or in the posture of a bond-slave, you desire to approach us, you may do so; there is no objection. But never think of coming near in a spirit of disaffection. If you do so, your heated blood will be cooled in a moment, and this delightful field shall be covered with your bodies. Oh Fort William! if we were not such a selfish and sensual nation, if in the least degree we deserved the name of *men*, we should not have borne thy haughty language so long. Thou would'st long ago have been levelled with the ground. There would not now be left one stone upon another. But, alas! there are very few who ponder over the degradad condition of their country. Of those who think of this subject but once during the week, there are so few that you could count them on your finger's ends."

The Chronicles of Dustypore.—In our last issue we noticed briefly this able series of word-photographs of Indian life and scenery. The following description of the Punjab at the time of annexation is too good to be lost: "The new addition to Her Majesty's possessions resembled the Miltonic hell in one particular, at any rate—in being a region of fierce extremes. On winter mornings a biting wind, fresh from its icy home in the distant snow-clad range, cut one to the core; and people clustered, with chattering teeth and blue fingers, round blazing hearths, where great logs worthy of an English Christmas tempered the cruel atmosphere to a genial glow. When the 'rains' came it poured a little deluge. During the eight months of summer the state of things resembled that prevailing in the interior of a well-constructed and well-supplied Arnott's stove. Then it was that the Sandy Tracts were seen in the complete development of their resources and in the fullest glory. Vast plains, a dead level, but for an occasional clump of palms or the dome of some despoiled and crumbling tomb, stretched away on every side, and ended in a hazy, quivering horizon that spoke of infinite heat. Over these ranged herds of cattle, here and there; browzing on no one could see what; or lying panting and contented, in some muddy pool, with little but horns, eyes, and nostrils exposed above the surface. Little ill-begotten stunted plants worked hard to live and grow and to weather the roaring, fierce winds. The crows sat gasping, open-beaked, as if protesting against having been born into so sulphurous an existense. Here and there a well, with its huge lumbering wheel and patient bullocks, went creaking and groaning night and day, as if earth grudged the tiny rivulet, coming so toilfully from her dry breast, and gave it up with sighs of pain. The sky was cloudless, pitiless, brazen. The sun rose into it without a single fleck of vapour to mitigate its fierceness, and pierced, like a red-hot sword, the rash mortal who dared, unprotected, to meet its ray. All day it shone and glistened and blazed, until the very earth seemed to crack with heat, and the mere thought of it was pain. The natives tied their heads up in bags, covered their mouths, and carried their clothes between the sun and themselves. Europeans entrenched themselves behind barriers of moistened grass, lay outstretched under monster fans, and consoled themselves with what cool drinks their means allowed, and with the conviction, which seemed to spring perennial in each sufferer's breast, that the present was by far the hottest summer ever known. Dew there was none. You stepped from your door in the morning into a bed of sand, which no amount of watering could reduce to the proper solidity of a garden-path. As you came in at night you shook off the dust that had gathered on you in your evening stroll. Miles away the galloping horseman might be tracked by the little cloud that he stirred up as he went. The weary cattle trudged homeward from their day's work in a sandstorm of their own manufacture. There was sand in the air one breathed, in the food one tried to eat, in the water that pretended to assuage one's thirst: sand in heaven, and sand on earth—and a great deal of sand in the heads of the officials."

POETRY.

IS THIS THE END?

I TRAVELLED many a long and toilsome day,
And left behind me many a sunny land,
And, though my feet were weary in the way,
I paused not till I reach'd this silent strand.

For I was hurried on—my heart high beating
To weird march-music—while a thunder song
Pealed on my ear, "On, on, be no retreating;
"Nor home, nor heaven, nor hell, nor right, nor wrong,

"Nor aught of sweet or soft, lowly or holy,
"Nor aught of dire or deadly in the way,
"Be barrier from the land, where glory solely
"Is life, and breath, and heaven, and God, alway."

And all the good that rose, beneficent,
To stay my steps in passion's stormy hour,
All influences soft that mercy lent,
Were quelled beneath that song of demon power.

And onward I was driven by stress of doom,
Until, at last, I saw, and reached my goal;
I stood beside a gorgeous, tow'ring tomb,
Upon a shore where silent waters roll.

Vast, sullen waves swell darkly o'er the beach,
But not a murmur ripples on the ear,
Lone wastes of sand to dimmest distance reach,
And loftily, behind, gaunt mountains rear

Their naked summits to a cloudless sky,
Where never sun by day, nor moon by night,
Nor smallest twinkle of a star on high,
Tells whence proceedeth this unlovely light,

Which, waxing not, nor waning, dim nor bright,
Imparts no azure to the wave, nor green,
Nor gold nor purple to the mountain height,
Nor leaves a single shadow on the scene.

And mountain, sea, and sky, and phantom heaven,
In silence wait around the stately tomb,
Above whose yawning door these words are graven—
"HERE MEETS THE LIVING MAN THE DEAD MAN'S DOOM."

Yet, I beheld with wonder one fair thing—
Sole tenant of this realm it seemed to be—
A great, white sea-bird, that, with soundless wing,
Swept round and round the tomb's high canopy.

And much I marvelled at its ceaseless flight,
And listened eagerly to hear it cry,
And watch'd to see it flutter or alight,
Until my longing grew to agony.

And, when no more the silence I could bear,
But, with my own voice, sought to break the spell,
And dared to cry, "O God!" with words of prayer,
An echo, mingled with harsh laughter, fell

Back from the godless heaven; the dismal shore
Took up the echo, and, a moment after,
The mountains multiplied it more and more;
"O God! O God!" they cried, 'mid shrieks of laughter.

Amid the dissonance, I heard a cry,
It was the bird, that, fluttering round my head,
Shot through my soul one glance of agony,
And suddenly before my feet fell dead.

Then, like a maniac's mirth, the laughter grew,
Into a long and frightful wail of pain ;
At last it died away, and then I knew
No sound should ever reach these ears again.

And, though, as in a dream, I yet drew breath,
I crept into the tomb, where now I lie,
And know not whether I may hope for death,
Or whether this can be eternity.

W. R.

THE COW AND THE L.-G.

HEY diddle diddle, I'll read you a riddle,
The cow up the river was rowing,
And Dickie was there—fellow trav'llers they were,
On a mission of charity going.

Though she low'd not aloud, yet the cow wasn't cowed
As she gazed on the ruler of nations ;
And he thought by her eyes, she was taking his size,
And felt chewed by the cow's ruminations.

Then he said "Madam Cow, pray enlighten me now,
What is it of me you are thinking,
For few in this land meet my eye of command
Like you, Madam Cow, without blinking ?"

Then she blandly replied, as His Honor she eyed,
"If the fruit of my thoughts you would gather,
It is this : since you feed the poor Hindoo in need,
I—his mother—pronounce you his father."

W. R.

LETTER TO THE EDITOR.

A HINDOO ON THE ENGLISH PRESS.

To the Editor of the Friend of India.

SIR,—While every other English institution in India is a source of instruction to the Hindoo mind, the one which annihilates the good done by the others is that most important institution—the newspaper. The extravagant opinions, the violent declamation, the almost wilful representations which disfigure the newspapers in India, form the shameful part of the history of British connexion with India. In fact, I, a Hindoo, can hardly believe that Englishmen are really the truth-loving nation they profess to be. I watch their private transactions : I make enquiries, and am delighted to see they do not cheat their butchers, their tailors, or their creditors. I find that they seldom go to Court to perjure themselves, or to forge a document ; they cannot utter an untruth in society, or to one another in private without blushing. I find all these in Englishmen as individuals ; but the moment they take pen in hand and assume the ever-to-be-cursed "we," they utterly forget their habit, and change color so that one cannot trace the resemblance of the companion and teacher of the drawing-room, or the lecture-hall, in the public writer to the papers and the reviews. By the aid of a language copious in ambiguous expressions, truth is twisted and tortured into the shape that the writer is pleased to give it. He seldom is content to tell a plain story in a plain way : it must always have an embroidery, and not unfrequently the small mustard-seed of truth, is lost in this tawdry finery beyond hope of recovery. The curse of the day is the contemptible ambition to produce effective writing.

Every attentive reader in India must have become familiar with the constant recurrence of expressions like these : "It may now be taken for granted ;" "the general understanding appears to be this ;" "public opinion has decided ;" "no body doubts,"—expressions which are unhesitatingly adopted. And yet one is surprised to see the glaring inconsistencies in the views of the different writers ; indeed the gentlemen are so honest that they are not in harmony with each other in the statement of *facts*. The Hindoo however is still expected to revere these public teachers for their truthfulness. The matter has grown so bad of late that there are a few persons—they are not absolute fools—who have an idea that genuine public opinion is not what usually gets into the public papers. If my remarks need an emphatic illustration, the reader has simply to read the papers on the Gaekwar trial.

The example set is a contagious one. The Hindoo has commenced to imitate it and with a vengeance. Take the *Friend* and compare it with the *Patriot*. Reading the discussions on the subject of the Famine, as contained in these journals, one might fairly question whether both can rationally be said to be honest towards the public. Either the "Baboo" or the "Sab" is acting a part ; and yet I am certain that both these gentlemen have the greatest reverence for truth. It is absurd to explain the glaring inconsistencies in the statements of these papers by pleading "differences of opinion"—a phrase, by the way, not known to the Hindoo prior to the British rule in India. We had "truth," we had "lies." We owe to England the modest and fashionable phrase—"difference of opinion," which most handsomely does the work of "lie" without giving the same offence. As regards the discussion on the "Famine," the important fact remains, that the country has paid most heavily but *not* unavoidably, for the successful working out of the policy adopted by the Supreme Government ; and until the *Hindoo Patriot* explains the figures which the *Friend* has lucidly shown us as establishing most undoubtedly the uneconomical expenditure of the relief measures, the verdict will be that the *Friend* is right. The figures of the *Friend* challenge criticism, and they are not pliant.

One word as regards your own Madras Correspondent, Brahma. He is unfortunate in the selection of his name. He is decidedly wanting in the wisdom of the deity. "I do not care to see the Prince, if we are to pay so dear for it" is the remark he puts in the mouth of an imaginary Ramasamy :—No, perhaps *not* imaginary, what then ? A famous M.P. *opposed rather vehemently the grant* of a few thousand pounds to the brother of the Prince when he was coming out, and no body condemned this M.P. for want of morality. Was it his education that made him so immoral as to oppose the grant, standing in the midst of loyal England ? Or is it prejudice, combined with ignorance, that emboldens gentlemen like "Brahma" to talk such trash ? Indeed, the *Friend* himself in page 11, of the issue in which B's letter appears, remarks upon the same topic of expense in a style which might not secure for the *Friend* Brahma's approval, but which every well-wisher of India will certainly value. Perhaps the *Friend* and the whole public are immoral in B's opinion.

"India will ever be the land of sin, corruption, and lies." Yes, for goodness sake, and for the safety of your own soul (have you one ?), and for the attainment of salvation and heaven (do you believe in either ?), leave us. We heartily wish you a happy voyage.

INDIAN INTELLIGENCE.

BENGAL.

THE total number of British troops in the Bengal Presidency is now 37,460. A statement published by the Quartermaster-General shows that 9,058 out of the number are to be located in the hills during the present summer. This includes fifteen men from the Madras Presidency.

WE have been favoured with a good sample of Indian tobacco cured by Dr. E. Brown at the "Poosah Model Farm." The locality selected for the experiment was a peculiarly favorable one, the leaf grown in Tirhoot being of great size ; some specimens measuring 3 feet 2 inches in length by 14 inches in breadth. Although the leaf is tough and strong and adapted for the manufacture of cigars, the flavour and strength of the tobacco are, owing to the method of manuring in the country, not what they should be. The season was too far advanced when Dr. Brown began his curing operations, and the results were, therefore, not as satisfactory as they might have been. A good deal of the leaf was delivered to Dr. Brown in a damaged condition ; but the good leaf, cured by the Manilla process, was valued on the spot by native brokers at from 12 to 16 rupees per maund, being more than double what native-cured tobacco would fetch in the market. The system of cultivation adopted by the natives renders the leaves liable to be covered with dust and mud. The serious injury which the leaf must receive in ridding it of the impurities thus accumulated will be patent to every one to whom the process of curing the leaf is at all familiar. Moreover with the idea of preserving the leaf from blight, the natives greatly increase the evil by sprinkling the leaves, which would otherwise be clean, with dust ; and as they employ but little manure and that of a most inferior kind, the tobacco cannot be considered to have had a fair chance. Nevertheless, the conditions both of climate and soil are so exceptionally good in the place in which the experiment has been tried, that it seems probable that, if due care were taken, and a moderate amount of capital expended, that tobacco might be grown close to our doors equalling some of the best brands which Manilla and Havanna produce. We certainly think that the attempt should be fairly made ; and in order to do this it would be desirable that the seed of some of the finer kinds of Manilla and Havanna tobaccos, as well as the choicer classes of the Virginian leaf, should be made the subjects of experiment. We learn that the climate of Tirhoot is to a great extent very much the same as that of Manilla, and perhaps, therefore, it would be wise to give the Manilla sorts the most complete trial in the first instance, though we incline to the opinion that any climate favourable to the production of one class of good tobacco cannot be unfavourable to the growth of any variety of the plant.

THE *Hindoo Patriot*, commenting on the refusal of the King of Ava to permit the passage of our troops through his territory, makes use of the following argument in support of the King's position : "According to the law of nations, our Government has no right to force the Burman Government to give passage to our troops through its territory. There is no treaty obligation on the subject, and it is therefore in the discretion of the Court of Burmah to render the good office or not. There are also, we believe, difficulties in the way of His Majesty of Mandalay. He is in friendly alliance with both the British and Chinese Governments, and it therefore rests with him how far he is prepared to oblige the one against the other, and *vice versa*. If he chooses to occupy a neutral position, we do not see how he can be blamed for it. It is certainly our interest that he should befriend us ; but should he refuse the wished for good office, would we be justified in coming to an open rupture with him on that score ? If we appeal to the law of nations,

the answer is in the negative." It would be open to us, if necessary, to show that the law of nations—as illustrated by practice or precedent—does not altogether support an argument which, in the abstract, seems plausible enough. But it so happens that the position of the King of Ava is not what the *Patriot* describes it to be. His Majesty cannot be regarded as an independent neutral sovereign, for the simple reason that he has acknowledged himself to be a vassal and tributary of China. A letter from the King to the Emperor of China, recently published in the *Pekin Gazette*, contains the following passage: "Succeeding to your barren and far-off dependency of Burmah, your vassal is impressed with the deep favours conferred by your Heavenly Dynasty when permitting his country to be enrolled amongst the territory of Yu; and in offering up, according to rule, the tribute prescribed, the land of Burmah is thus included in the heaven of Yan." The epistle goes on to state that, owing to recent wars on the borders, communication has long been intercepted, but now that strife has been happily ended, it is fitting the 'humble vassal' of His Imperial Majesty should at once offer tribute. This, it is hoped, the autocrat of the Central Kingdom will 'deign to receive,' and will further 'graciously lend ear to the feelings of obedience, respect, and submission entertained by his vassal.'"

OUR Bhaugulpore correspondent writes: "The Kosee, true to its character, has risen, and already the adjacent lowlands, from the place where the river enters this district to that where it falls into the Ghugri, are flooded. Horses and ponies are beginning to enjoy their usual holiday, for at this season it is impossible to use them, elephants being substituted in their stead, since they can travel where horses could not. It is impossible not to contrast most unfavorably the roads of this district with those of others. Through Tirhoot, for instance, the good grass roads are such that a dog-cart can easily travel from Mozufferpore to Durbungah. Good boats with boarded platforms and railed-in sides make the crossing of the rivers safe and easy. From Durbungah grand roads and handsome iron bridges bring the traveller through the estates of the Maharajah as far as Singhessur. These routes owe their existence to the Court of Wards, and are a benefit to the public, to whom it is not a matter of consequence that *twenty* rupees of the Maharajah's money has been spent where *one* would have sufficed. From Singhessur four miles of a good ferry-fund road leads through the clean little subdivisional town of Madehpoorah to the Government road under the Department Public Works, and here description fails. Over this road all the cart traffic of this district must pass, and all palkee travellers also. The road, originally a huge embankment, raised without a sufficiency of water-way, has long been breached in dozens of places. For years there have been no suitable repairs, and the inefficient sums granted by Government for the purpose are superintended by an unfortunate overseer, who is expected to look after work, which extends over a distance of ninety miles! The little money there is, of course, is both wanted and misappropriated. Water is already flowing over what is supposed to be a good road in eighteen or twenty places. Bridges are a delusion and a snare, for travellers are likely to break their necks over them. Boats are to be had with difficulty, and they are so small and unsafe that one fears to set foot on them. One of the few spots which are high and dry is covered with a cane-brake so stiff that it is difficult to push one's way through it, and as the water lies deep on each side it is useless to attempt to leave the road. For the length of thirty miles there is not a dâk bungalow, or even one belonging to the Public Works, for a traveller to rest in, and as the road has been constructed on the novel and and useful plan of carefully avoiding all the villages, no help or shelter can be obtained in case of necessity. Some person of an enquiring turn of mind once made a calculation as to what became of all the pins which were manufactured in the United Kingdom. An equally interesting enquiry might be made as to what becomes of all the money granted for the Public Works Department. Very little of it is expended in the chief road through North Bhaugulpore."

DACCA has long been famous for the liberality and public spirit displayed by its zemindars and richer citizens. We are informed that another instance of this liberality has recently been given by one of the former, at present, we believe, a resident of Calcutta, who has contributed the munificent donations of Rs. 2,000 to the St. Xavier's College, and Rs. 500 to the Mayo Hospital.

NORTHERN INDIA.

THE number of released convicts in Oudh is steadily increasing. It is believed that there are more than 60,000 released convicts in the province. The jail has lost its terrors for them, and they would not have the least hesitation, on the slightest pressure, of running the risk of returning to prison. It may not be generally known that a home has, at the suggestion of the City Superintendent, been opened for the 5,000 or 6,000 of these men who are said to be in Lucknow. Persons entering this home obtain shelter for the night, but are not allowed to leave till the morning.

A VILLAGE in the Agror Valley, beyond Lahore, was recently attacked by the frontier tribes; the inhabitants, however, with the aid of a few policemen, succeeded in repulsing the assailants.

THE testing of the Railway Bridge over the Ganges at Cawnpore was carried out in a most satisfactory manner. "At 7-30 A.M., three heavy engines were drawn up at the bridge, and brought to a stand over each of the five spans. They were then, at intervals, run off the bridge, back again upon it, and off again, twice at a high speed, until the programme of the test had been fully and very completely carried out. The result of the experiment was considered very satisfactory, and the bridge was declared to be in every respect fit for its work. The engines then passed on to the Company's city station at Cawnpore, and finally up to the junction with the East Indian Railway station." The Bridge was opened on the 15th instant.

IT is contemplated immediately to connect the Kangra Valley with the general telegraph system. This will serve the military stationed at Dhurmsala, Dalhousie and Fort Kangra, and the large tea planting interest in the valley.

NEWS from Peshawur states that "Fort Mitchni was fired into some nights ago by one or two solitary followers, but the scoundrels decamped before the noise of their own matchlocks had died away."

AT the Legislative Council held in Simla on the 15th, the Punjab Laws Amendment Act was passed. Mr. Hobhouse introduced the Telegraph Bill, and presented the preliminary report of the Select Committee on the British Burmah Emigration Bill. Some minor business was also transacted.

AN extensive fire occurred at Sreenuggur lately. Nearly two thousand houses and shops were destroyed, together with "hundreds of shawls." The damage is put at two lakhs of rupees.

BOMBAY.

THE following narrative of the ruin of a ryot is taken from a paper written by a distinguished Bombay official: A tolerably substantial ryot with a holding of 30 acres, assessed at 50 rupees, and with an average annual income of Rs. 400, wants Rs. 200 for a wedding. He goes to a Soukar and executes a bond for Rs. 200 bearing interest at 2 per cent. per mensem, principal and interest to be repaid by four half-yearly instalments. If one instalment is not paid, the whole amount of the bond to be immediately recoverable (a very common stipulation). He receives Rs. 175 in cash, 25 being deducted for stamp, premium, and other expenses. He pays two instalments, but omits to pay the third, as he is not asked for it and his crop is bad. At the end of the two years, it is still not convenient to pay, and indeed he has not money to pay his assessment. He goes to the Soukar to ask for an extension. The latter points out that he has made default and is liable for the whole Rs. 200 with interest and threatens to sell him up. Finally, as a great favour, the Soukar consents to give him another Rs. 50 (from which stamp is deducted) and to cancel the first bond on his executing another bond for Rs. 300, with interest at 30 per cent., payable in a year. He is to admit at registration that he has had the Rs. 300 cash. By the end of the year he has managed to scrape together Rs. 190 which he pays. The Soukar then sues him on the bond for the balance, Rs. 200. He cannot but admit the bond, and knowing this probably does not appear, and a decree is passed with costs on defendant. The creditor threatening to take out execution, the debtor to avoid this signs a third bond for Rs. 300 on the former terms. At the end of the year he can pay Rs. 100 only; he is sued for the balance Rs. 200, and the decree partially executed by sale of his household furniture for Rs. 100. The judgment creditor might now complete execution by sale of the land and buying it in, probably much under its value, might keep on the ryot as his tenant-at-will. But he would then become responsible for the revenue; he therefore threatens the ryot with the sale of his land and offers at the same time to make him an advance of Rs. 50 to buy back some of his things, and thus induces him to execute a fourth bond, mortgaging his land for a sum of Rs. 400. This amount is entered in the bond as Rs. 220 balance of decree and costs, the rest cash, but the ryot gets only Rs. 50, the balance being represented to him as premium for the renewal of the loan and on account of the loss which the Soukar has sustained by his different defaults. The mortgage is foreclosable at any time, and half the nett (*i.e.*, deducting seed and assessment) produce of the land is to be paid as interest. The ryot is to deal with the Soukar for his necessaries. The Soukar has thus advanced in all less than Rs. 275 to the ryot and perhaps Rs. 40 more for stamps, etc., and has received in cash about Rs. 532, besides a bond for Rs. 400 on which he receives as interest produce worth on an average Rs. 200 yearly. After a year or two, there is of course a heavy book balance against the ryot for necessaries, for which a decree is obtained, to be held over him *in terrorem*. His condition is now quite hopeless, and he is a mere prædial serf of the Soukar who takes from him every thing but the barest subsistence. For even if he wished to throw up his land and to begin again as a labourer, the Soukar would prevent this by threatening to imprison him in execution of the last decree. This case is by no means an exceptionally bad one. The ryot really made default in payment of the instalments of the original loan. Sometimes payment is tendered and the creditor makes some excuse to evade receiving it; or even he takes the money and does not give a receipt. The ryot received (deducting premium) the sums the Soukar undertook to lend; often a Soukar will evade advancing the whole loan.

CAPTAIN COUSSMAKER has supplied the Supreme Government with a valuable report on tussur silk. After detailing the satisfactory result of the enquiries he made in England, Italy and France, with the object of discovering if there were any possibility of converting his cocoons into unreeled and reeled raw silk, Captain Coussmaker recommends Government to make the attempt to rear the worms on a large scale, which he asserts could be easily done, inasmuch as the insect feeds upon common trees requiring no special care or irrigation, and are consequently inexpensive; and he proposes that, at the proper season, the collectors and forest officers of the districts selected should be "supplied with specimen cocoons to be given to their mamledars and overseers, directing them to show them to the villagers, and inform them that there was a demand for similar cocoons, and to find out at what price they could be collected, say, 200 or 300 for the rupee." He further suggests that a central depôt should be established at Satara, and that the officer in charge should "periodically visit the mamledars and the villages where the cocoons might be collected between the months of December and April, pay for the cocoons, take them to the depôt, sort them, and select those which were to be kept for breeding purposes, those which were to be converted into unreeled raw silk, and those which were to be sold

in the bulk." Satara is named as the depôt, as being most central, and also as having great quantities of the "Nandrook" (*Ficus Benjamica*) tree planted about it, the leaves of which Captain Coussmaker declares to be well suited for food for the worms. It is during the period of rearing, that is to say, between the months of May and December, that he thinks efforts should be made to clear the cocoons of the cement, as thoroughly as possible, as soon as it is seen oozing through the silk: this he considers preferable to trusting entirely to the cleansing process at the time of manufacture. That the cocoons should be finally baked, until the worms were thoroughly desiccated, when they might be stowed away for the winter. The supply obtained might be worked up for the first few years in England and Italy, but after the experiment had proved thoroughly successful, the Captain expects that the manufacturing processes could be carried on in India.

THE Dresden Press has lately made mention of a sister of the Sultan of Zanzibar, now residing on the continent. Her history is thus given by a home journal: When she was quite a girl, a young German—a clerk, we believe, in a merchant's house at Zanzibar—managed, in spite of the restraints to which women are subjected in the East, to win her affections. In order to be united to him she escaped to Aden, and there she was married to her lover, and was also baptized. The brother of the present Sultan was then on the throne, and he and her other relatives were, of course, incensed at her elopement, at her change of religion and her marriage to a Christian, and wholly disowned her. She accompanied her husband to Europe, and they resided at Hamburg till he met with an accident about 1870, which caused his death. His widow, who had become a highly-educated and accomplished woman, removed to Dresden for the education of her children. Her noble character, her beauty, and her romantic history have attracted the attention of many people of influence in Germany, including, we understand, some members of the Imperial family, and when the Sultan's visit to England was arranged, it was felt that an opportunity was presented for effecting a reconciliation between her and the brother from whom she has been so long estranged. With a view to this she has gone over to London, and is at present staying in the house of a well-known Member of Parliament.

COLONEL WIDDICOMBE, Judge of the Kurrachee Small Cause Court, has committed suicide by cutting his throat with a razor. He had been advised to resign on account of the work being too much for him, and had sent in his resignation, and asked to be placed on general duty at Mhow. Death was instantaneous. The event has caused profound grief throughout Kurrachee.

A SERGEANT of the 56th Regiment at Kurrachee is in custody on a charge of attempting rape on the wife of another Sergeant.

THERE has been a small panic in the Bombay share market caused by speculators, but it has subsided.

WHEN the Bombay Factory Commission was appointed, the Bombay special correspondent of the *Pioneer* carefully analysed its constitution, and pointed out that nearly all the members of the Commission were more or less interested in factories. We are not, therefore, surprised to learn that the Commission having duly weighed and considered the evidence on both sides, is of opinion that no legislative action is called for.

IT appears that the Bombay Bank will be behind neither of the other Presidency Banks, it being, we understand, proposed to pay a dividend at the rate of 10 per cent. per annum, to carry 2½ lacs to reserve, to write off Rs. 20,000 on property, to strengthen the bad and doubtful debt account, although no losses have been sustained, and to carry a fair sum forward.

A TELEGRAM has been received by the head of the Freemasons in Bombay to the effect that the Prince of Wales, during his stay in that city, will meet the District Grand Lodge of England, with the Provincial Grand Lodge of Scotland, and the representatives of Masonry generally in Bombay. There will be no ball or banquet.

MADRAS.

No less then 826,000 plants of *Cinchona succirubra* and *Cinchona officinalis* collectively, were distributed from the Hakgala garden in Ceylon during the year 1874. So great an abundance is there of stock plants from which suitable cuttings can be taken, that, with favorable weather for striking them, there is little probability of the supply falling short of the expected demand for young plants. Many planters are now forming on their own estates nurseries of young plants, raised from seeds and cuttings, and every necessary information is given at Hakgala to enable them to do so. *Cinchona succirubra* and *Cinchona officinalis* continue to be in most demand, as they are known to succeed so well, and are so easily propagated by cuttings. *Cinchona calisaya* is not readily propagated by cuttings and recourse must be had to seedlings, which are not likely to be so constant in character as cuttings, owing to the chance of their turning out hybrids. For those planters, however, who wish to try *Cinchona calisaya*, plants are being raised from seeds, and Dr. King, the Superintendent of the Calcutta Botanic Garden, has promised all that can be spared from a valuable variety of *Cinchona calisaya*, cultivated in the Darjeeling Government plantation. Cultivation is progressing most rapidly in the island. Extensive clearings of forest land have been made in different directions for forming plantations even up to considerable elevations upon the hills. Planters are generally obtaining their seeds from India, but a good many plants and seeds of both Assam hybrid and China tea have been distributed during the past year from the two local gardens. The plantings of the Assam hybrid kind are being extended both at Hakgala and Peradeniya, in order that good fresh seeds may be availabe for distribution to those not willing to incur the risk of getting so perishable a seed from India. Plantations which have already been formed of cocoa, have come on so well in parts of the island too hot for successful coffee cultivation, that it may be expected there will soon be a good deal of land devoted to the production of cocoa. More than forty thousand seeds and plants have been distributed from Peradeniya during the year, and demands have been made for seeds of the coming crop.

THE Duke of Buckingham has appointed as his Private and Military Secretaries Mr. Hankin, R.N. (brother of Colonel Hankin, Joint Magistrate at Ootacamund), and the Hon'ble Cornwallis Maude, only son of Viscount Hawarden. Lady Mary, his Grace's eldest daughter, will perform the honors of Government House.

THE building of the new break-water at Colombo, which is now progressing rapidly, has given birth to hopes at that port of a considerable transfer to itself, of the tonnage at present resorting to Galle, taking place on its completion. The good people of Galle are, on the other hand, naturally a little alarmed at the prospect of losing a portion of a profitable trade, of which they have hitherto had almost the monopoly. An amusing illustration of the extent to which this feeling has been carried occurred at an entertainment lately given at Galle, when a local song, from which we cull the following verse, was most enthusiastically received:—

Don't imagine the folks of Colombo,
Will e'er be the lords of the sea:
Don't imagine that Galle is extinguished,
Or we their breakwater shall see:
Do not fancy the steamers will leave us,
Or other good moorings will take:
Don't imagine they'll call at Colombo at all,
For that's where you make the mistake:
Don't imagine the Company's agents
Their present arrangements will break;
Or book themselves through to a patched-up old port,
For I that's where you'll make the mistake.

THE quarrel among the Moors at Trincomalie is still undecided. The mosque regarding which the altercation occurred is locked up by order of the Police.

THE funeral of the acting Governor of Pondichéry, a notice of whose death lately appeared in our columns, took place on the 1st instant. The Pondichéry *Moniteur* of the 3rd instant says: "A gun was fired every hour as a mark of respect for the deceased Governor's memory. The bells of the churches were tolled. The flags on the principal Government offices and of the ships in the roads were hoisted half-mast high, and the ships' yards were crossed. The pupils of the Convent of St. Joseph de Cluny and of the College marched in front of the funeral procession, followed by the members of the clergy belonging to the Mission Church and the Cathedral, the latter officiating. The battalion of sepoys, headed by the band, and commanded by Captain Corin, paid the military honors. The coffin, with the insignia of the grade of Commissaire de la Marine, was carried by sepoys. The pall-bearers were Messrs. Bernard de Sigoyer, Procureur-Général and Acting Governor, the Acting Ordonnateur, the Acting Procureur-Général, and the Mayor. A crowd of Europeans and natives followed, the Judges in their robes, and the other functionaries in full dress with crape around the hilts of their swords. The British Consular Agent was present in military uniform. As soon as the coffin entered the church, fifteen minute guns were fired: and another salute of fifteen guns was fired at the conclusion of the ceremony. The Acting Governor delivered an address after the coffin had been lowered into the grave."

THE Hyderabad Assigned Districts are suffering severely from cholera. During the fortnight ending 8th instant, of 5,710 persons attacked, 2,494 died.

THE Princess of Tanjore is building and endowing no fewer than eight girls' schools in the city and the villages of Tanjore.

BURMAH.

MR. MARK FRYAR, after an exhaustive survey of the country, gives it as his opinion that little gold can now be drawn from British Burmah. Of the iron deposits, however, he speaks very favourably. "We went first to Yongdine, a place about six miles from Shwegyeen on the road to Toungoo: in the jungle, less than two miles east from the Yongdine *zayat*, we were shown by natives an iron ore deposit and the remains of small furnaces, where, some years ago, metallic iron was made by native smelters." Among the Karens there are several men apparently well acquainted with iron smelting on the small scale practised by natives of this and other eastern countries, and the jungle of Yongdine must, at one time, have been a scene of busy industry in the art of iron-making for local markets. Replying to some inquiries which Mr. Fryar made on the spot, an intelligent Karen said that they had discontinued making iron when it was found that English iron could be procured more cheaply than the native smelters could produce it. Thanzeik is about twelve miles from Shwe-gyeen on the Toungoo road. The name of this place is suggestive of trade in iron: *than* being the Burmese name for that metal, and *zeik* meaning wharf. About two miles from the river iron ore has been quarried out from several spots. The ore here is simply a highly ferruginous laterite. At Yongdine it is a red hematite, some of which is slightly magnetic. It appears to be in laterite, but its mode of occurrence and extent are entirely obscured by jungle. Here and there small holes have been dug for the ore, and in one of these it is seen in massive lumps. A large tract of laterite seems to extend eastwards from the road between Yongdine and *Thanzeik*, and the ores from both places are probably nothing more than this material, rich in iron. Youdine, however, appears to be a more likely place for good iron ore than is *Thanzeik*.

THE King of Burmah really possesses several regiments of infantry and cavalry, who live in regular barracks, and are at

regular periods of three or four days drilled by a French naval officer. When they are not being drilled, their services are availed in one or other of the many workshops belonging to His Majesty.

THE concession refused by the King of Burmah is not the passage of British troops through his territories, but the passage of an escort in case of need. Such an escort would naturally be a strong one, in view of past experience. This is what Sir Douglas Forsyth was instructed to ask, and compliance will be insisted on by the Government of India.

A CORRESPONDENT, signing himself *Viator*, writes as follows to the *Rangoon Gazette*, as to the final interview between the King and Sir D. Forsyth: "This morning they paid the King a farewell visit, and H.M. received them in the Summer Palace. The King was dressed in the ordinary Burman costume, and Mr. Peter Camaratta acted as interpreter. H.M. looking at Sir Douglas, expressed the hope that the Envoy had been pleased with the result of his visit to Mandalay, and the attention paid him; to which Sir Douglas replied that he was highly gratified with all that took place, and that it would be his great pleasure as well as duty to tell this to the Governor-General of India. The King then went on to say that it was never his intention to go to war or quarrel with the English, but the reverse; but he was sorry to find that he had been grossly misrepresented by our people in some quarters, and that he hoped Sir Douglas would do all he could to put public opinion right. Sir Douglas said that it would afford him much pleasure to do this. Here the King noticed one of the English party restless, shuffling about apparently trying to get his legs stretched out. Looking at Sir Douglas, H.M. naïvely remarked somewhat to the effect that he supposed he and his friends were likely to feel uncomfortable, sitting in the position in which they were, that this being the case, he would not detain them any longer, but would retire. Thereupon he rose and disappeared, and the members of the Embassy retired also, but to witness an entertainment close by which had been specially got up for their benefit. This took the form of a Pooey, where the maids of honor took part, but as *Viator* is a married man with a young wife of the Caudle type, he will allow the members of the Embassy to tell for themselves as to the galaxy of beauty which they witnessed there and the pleasing feelings which they experienced on being bowed off the Royal but political stage! The subject of munitions of war has not been overlooked on the occasion of the visit of the present Envoy, and Sir Douglas Forsyth has granted the King permission to import 10,000 stand of arms, and they have been already ordered.

ASIA.

BY the recent Treaty, in virtue of which Russia cedes the Kurile Islands to Japan in exchange for all the Japanese rights to Saghalien, the dispute between Russia and Japan as to the ownership of this islands, now lasting for more than half a century, has at last been happily terminated. The voyages of La Perouse in 1787, and of Krusenstern in 1805 had made the world acquainted with the general shape of the Island of Saghalien, but Krusenstern, following Broughton, supposed it not to be an island, but to be connected with the mainland at a place now called the Tartar Gulf. Although a Japanese navigator, whose account was afterwards published by the naturalist, Siebold, subsequently sailed through the Straits, yet the fact that Saghalien was an Island was not generally recognized until the expedition of Captain Nevelsky in 1849. Up to the middle of the last century Saghalien was in the nominal possession of the Chinese, and after they had abandoned it, Japanese fishermen and colonists went there as early as 1780. The Japanese in the statements of their claims to the island assert, on the basis of obscure passages in their annals, that they had visited the island as long back as A.D. 650, and subsequently in 720, and it is indisputable that in 1786, and for many years after, Japanese Government officials were sent there to take charge of colonists. In 1807, after the voyage of Krusenstern, the island was visited by the Russians, and Lieutenant Khrostof annexed it to Russia, but a few years later, during the imprisonment of Golodnin in Japan, the Russians officially gave up all claims to the island, and declared the act of Khrostof to have been without authority. In 1853, when, after the occupation of the mouths of the Amoor, a Russian expedition discovered coal mines on the island, Russian posts were established there in various places, but were subsequently withdrawn on account of the Crimean War. The discovery of coal gave Count Putiatin, then on a mission to Japan, an idea that the island might be important to Russia, and in the negotiations for a Treaty of Commerce at Simoda, in 1853 and 1854, he endeavoured to induce the Japanese, whose rights to the island were thus recognized, to agree to a boundary line between the Russian and Japanese settlements. The Japanese Commissioners proposed the fifteenth parallel of latitude, thus cutting the island in halves, but Count Putiatin was unwilling to give more than the Bay of Aniva in the south and the Island of Iturup (one of the Kuriles already in Japanese possession). No agreement being reached on this point, it was established in the Treaty of Simoda in 1855 that the Island of Iturup should belong to Japan and Urup and the rest of the Kurile Islands to Russia, while "as concerns the Island of Kurufto (Saghalien), it shall remain undivided between Russia and Japan as it had theretofore been."

NOTWITHSTANDING that Europeans have been trading with the Malay Peninsula, and in possession of a portion of it during the last three centuries nearly, it is not a little curious how small is the amount of information in print regarding its interior topography, and how vague existing maps are even regarding its coast line. Its rivers may be said to have been entirely unexplored by Europeans, their existence being almost unknown until within the last year. Certainly the size and capabilities of several of them, as for example the Bernam and the Perak rivers, were unsuspected until they were explored, or shall we say discovered and reported upon by the British Residents recently appointed to the different States. When H.M.S. *Lapwing*, Captain Wiseman, was visiting the different States on the west coast, at the beginning of the year, the native pilot on board is said to have professed utter ignorance of the Bernam River, one of the largest, if not the largest river of the Peninsula, with a course of something like 200 miles and navigable by steam launches for nearly 100 miles. The Perak river is said to be about the same size. There is one meagre little map in existence, and only one, so far as we are aware, which might have been a creditable production by the Governor General's office fifty or sixty years ago, but which it certainly is not now. It gives the names of the different States, sticks a mountain and a village down here and there, also a river or two, and professes to trace the boundaries of the State, but it is worthless for any practical purpose, except perhaps for use in an elementary school, and it should be enlarged and amended without delay.

THE latest volume of Consular Reports presented to Parliament includes one from the French colony of Saigon, supplying recent information respecting it, but we are unable to accept the advanced date printed at the foot of the Report, which is "Saigon, January 10, 1876." Acting-Consul Tremlett, in this Report, observes that the minutes of a treaty with the Kingdom of Anam were signed last year, the chief conditions of which were, shortly,—1, opening three ports in Tonquin; 2, liberty for Europeans to reside therein; 3, liberty to travel in the interior under passport from the French Consul; 4, leave to pass Chinese productions through Tonquin; 5, freedom in regard to the Roman Catholic faith; 6, payment to Spain by Anam of $1,000,000; 7, cession by France to Anam of five steamers of 500-horse power, 100 canon and 1,000 stand of arms; 8, obligation that French protection be called upon in case of disturbance. The Consul states that there are but five British subjects of European birth registered in the consulate, and the total number in the colony does not exceed ten; but there is a considerable number of Chinese and Indians. He says that a concession has been granted to an English firm for a railroad from Cholon to South Fort, a distance of six or seven miles, but that a complete revolution in native ideas of transportation must be effected before such a road can meet with success. The production of cotton is decidedly on the increase, and the same may be said of silk; but the chief staple of the colony is rice. The famine in India diverted a considerable quantity of rice to that quarter last year, about 41,561 tons, and a speculative demand in Europe led to a shipment of nearly 20,000 tons; but the chief export is to China. The total export of rice from Saigon in 1874 amounted to 3,059,210 piculs or 182,120 tons, of the value of about $4,252,000. The quality is described as the worst ever known, but steps have been taken for securing a better quality. There are large imports of wine, spirits, and French manufactures of various kinds every year, but there are no available statistics. The import of opium in 1874 was about the usual quantity of 50 chests per month. British piece goods are imported by Chinese, with whom it is not possible for foreigners to compete; the trade is out of European control. An epidemic of cholera in June, 1874, carried off above 10,000 in the city of Saigon and its immediate neighbourhood. The new Governor, Admiral Duperré, arrived at Saigon on the 28th of November last; it was understood that his tenure of office would be of longer duration than that of his predecessors.

THE Smyrna correspondent of the *Levant Herald* writing on the 25th May, says: "Some particulars have at last come to hand regarding the late earthquakes in the district of Ishikli. It appears that hardly 50 houses are left standing in the whole district. At Zivril, a village of some 2,000 inhabitants and noted for industry, not a house escaped, and nearly 500 bodies were dug out of the ruins. In the town of Ishikli several hundred persons perished, and out of above 1,000 buildings only 15 houses and two mosques are left. Among the villages that suffered less severely, are Carayapli, Sevasli and Yaka. At a short distance from Zivril the earthquake produced a fissure in the ground from which there now issues a spring of hot water."

THE *Goloss* of St. Petersburg is very anxious to promote an alliance between Russia and England. The only impediment in the way of a complete *rapprochement* is the causeless jealousy of England as regards Russian movements in Central Asia. *Apropos* of this, the *Goloss* innocently observes: "If they (the English) could only be persuaded that an extension of the Russian dominion in Central Asia up to the summit of the snow mountains which divide it from India, would strengthen the English rule in India, and free them for ever from the dread of insurrections, the great problem would be solved, and the two nations would assist each other to enlarge the spheres of each other's influence." If we could only be pursuaded!—but unfortunately, the Anglo-Saxon is incapable of soaring to Muscovite heights of beautiful simplicity and touching confidence, and it may be that our statesmen are unable to grasp the idea of the command of the Himalayan mountains and a strength to English rule in India and a safeguard against insurrection.

THE Emperor of Japan ordered last year, through the Japanese Consul at Milan, from the Italian painter Ugolini, the life-size portraits of all European emperors, kings, and presidents, for the adornment of his residence at Tokio. At the same time, portraits of the Mikado and his wife were ordered, and their photographs sent to Italy for the purpose. The work is now completed, and a dozen or so of the pictures are exhibited in the permanent Art Exposition at Milan. The portrait of the Mikado and the Empress have been already sent to Japan, and have given such satisfaction there that it is resolved to found in Japan an Italian school of painting, and to call a number of Italian artists as professors.

IT has hitherto been customary to permit the Shinto priesthood to raise money by the sale of *ofuda* (cards upon which the names of gods or deified emperors were printed), which they forced upon the chief men of the wards, who in their turn compelled the house-

holders to purchase them. This mode of supporting a priesthood has, however, become very unpopular of late with those upon whom the charge has fallen, and it is announced that the Japanese Government has now resolved to put a term to the practise.

MR. WADE is pushing the Chinese very hard with regard to Mr. Margary's murder. The sum of 175,000 taels has been offered by Government as compensation, but Mr. Wade says he will enter into no money matters until the murder has been acknowledged by the Government and the crime avenged.

THE withdrawal of Mr. Shaw from Kashghur, alluded to in a recent telegram, is a delicate way of showing the Russians that we have no intention of interfering with their interests or protecting our own in the direction of Central Asia.

LITERARY.

THE *Illustrated London News* will probably send out Mr. Simpson, in connexion with the visit of the Prince of Wales to this country; whilst the *Graphic* has already, it is understood, secured the services, for the same purpose, of Mr. Kipling, Superintendent of the Bombay School of Art.

SPEAKING of the Rev. J. Long's 'Oriental Proverbs in their Relation to Folk-Lore, History, Sociology,' the *Athenæum* calls it a very interesting work, but the pamphlet has a terribly "heathenish" look. On the next page to the title-page the reader is invited to pay adoration to Ganesa. Mr. Trübner gives a picture of an idol of the divinity, the scroll on the pedestal of which invites, in Sanskrit, "adoration to the sacred Ganesa." The pamphlet is thus a queer mixture of two very distinct religions.

THE adjudicators of the prizes for the best essays on the opium trade, are now giving their decision. The prizes were offered by Mr. Edward Pease, or Darlington, and the adjudicators are Sir Charles Trevelyan, Sir Bartle Frere, and Sir Louis Mallet. In all about fifty essays were sent in, and of these eighteen or twenty were written by Chinese. The latter have been translated by the Rev. Joseph Edkins, the well-known missionary and Chinese scholar. Most of the translated essays are slight, but some are said to contain evidence of literary ability.

THESE are the names of the Bengali authors who have suffered more or less in consequence of the new school-course issued by Sir Richard Temple: Pundit Iswar Chunder Vidyasagur, Baboos Rajendro Lall Mitter, Bhoodeb Mookerjee, Kanye Lall Dey, Nilmony Bysak, Radhica Persaud Mookerjee, Krishna Chunder Roy, Tariny Churn Chatterjee, Jodoo Gopal Chatterjee, Raj Khrisna Mookerjee, Raj Krishna Roy, Nilmony Mookerjee, Nursing Chunder Mookerjee, and Ram Gutty Nyaratna. We believe most of these gentlemen were invited to Belvedere and *Rhotas* parties by Sir Richard himself, as being authors with whom His Honor felt it a pleasure to become acquainted and to associate; and these authors on their part, we are sure, were much pleased with the honor that was done to them. Little did they, however, know at the time the significance of these honorary invitations. It never entered their heads that so soon after so much joy there would be occasion for so much grieving. It will be a pleasure to Sir Richard to know that by a single stroke of his pen he has injured, and probably thrown adrift, so many of Bengal's talented sons.

SIR MADHAVA RAO intends issuing an official organ, to be styled the *Baroda Gazette*.

ECCLESIASTICAL.

THE following figures show the numerical growth of the various Missions in India during 1874: Indian Home Mission to the Santhals, 1,650; S.P.G. Mission in Chota Nagpore, 1,500; Church Mission in South India, 739; American Methodists in North India, 250; London Mission in South India, 200; American Madura Mission, 182; American Marathi Mission, 126; Orissa Baptist Mission, 93; Basel Evangelical Mission, 84; Delhi Baptist Mission, 62; 8 other Missions, 143. Since considerably less than half the Missions are here reported from, and yet among these, full 5,000 accessions were made, "we cannot," says the *Lucknow Witness*, "resist the conclusion that the year 1874 was one of unusual prosperity in Mission work. And we should not be surprised if, when all the facts were gathered up, it was found that not far from 10,000 were brought into the Christian fold last year within the bounds of Her Majesty's Indian domains."

ACCORDING to the last report of the Palestine Exploration Committee, the season's field work was resumed last October in the hill country south of Judah, a little-known but most important part of Palestine. By the last accounts, received a few weeks back, very nearly the whole of the south country, including Philistia, is now completely triangulated. Since the last anniversary 1,500 square miles have been added to the map. The survey has not been confined, however, to map making. Among the more important identifications arrived at or confirmed by Lieutenant Conder are those of the hill of Hachilah, the rock of Maon, Zanoah, Aral, Maarath, Chozeba, Beth Zetho, the Levitical city of Debir, the Cave of Adullam, the tower of Ader, the forest of Hareth, the wood of Ziph, the altar of Ed, the ford of Bethabara, &c. During the spring alone 1,000 square miles have been surveyed, and 1,067 local names—a very large number of them previously unknown—have been collected. In his last letter Lieutenant Conder reports 30 new identifications, although it must be understood that this kind of investigation is over and above the real work of Lieutenants Conder and Kitchener, which is the great map of Palestine. Two of the most valuable discoveries of the year are due to M. Clement Ganneau, The first is that of the boundary of Gezer. He has found *in situ*, and absolutely for the first time, the actual inscriptions which marked the limits of a Levitical city. There are two of these carved on the rock, in Greek and square Hebrew, pointing, probably, to the time of the Maccabees. They contain the word Gezer precisely as written in the Bible. Casts of the inscriptions have been sent to England, and a full account of the discovery will be found in M. Ganneau's new book, which may be looked for shortly. The fact that the place is still called Tell Jezer is a further illustration of the vitality of the Bible names. The second discovery is that of the city of Adullam. The name had been found and the place visited by M. Ganneau in 1871, and again in 1874. It was first mentioned in Captain Burton's "Unexplored Syria." Lieutenant Conder has now, acting on M. Ganneau's information, visited and examined the site in the course of the survey. The total area already surveyed is 4,430 square miles, leaving 1,500 to be still filled in, to which must be added the reconnoissance of the Negeb, or south country, to complete the survey of Western Palestine. It is confidently reported that a map of the whole country this side of Jordan will be taken to England in the autumn of 1876 and given to the world a year later, on a scale of an inch to the mile. The total income of the Fund last year was £4,179 18*s.* 11*d.* The cost of the expeditions in Palestine has been £3,500, and the heavy debt with which the year commenced has been already cleared off.

MILITARY ORDERS.

BATSON, Lieutenant A., to England, to appear before a medical board.
CHRISTIE, Lieutenant G., ditto.
CONOLLY, Lieutenant A., promoted to the rank of Captain.
DEKANTZOW, Major C. A., to Kumaon, from the 15th July to the 15th October.
FINLAY, Major H. M., to remain at Mussoorie, from the 20th June to the 15th August.
GORDON, Lieutenant R., to Murree, from the 22nd June to the 22nd October.
NEWMARCH, Major G., to Europe, on furlough for one year.
O'HARA, Major R., to England, to appear before a medical board.
ROSS, Brigadier-General C. C. G., brought permanently on the Establishment.
VANRENEN, Major A. D., promoted to the rank of Lieutenant-Colonel from 7th July 1875.
WARREN, Major D. S., to be an Assistant Adjutant-General of Division on the Establishment.
WESTERN, Captain J. H., to Europe, on furlough for six months.

CIVIL GAZETTE.

IMPERIAL.

BRADFORD, Mr. G. A., three months' leave.
GARTH, Sir R., to be Chief Justice of the High Court of Judicature at Fort William in Bengal.
HUME, Mr. J. K., to officiate as Assistant Superintendent of Police in British Burmah.
MATHER, Mr. J., appointed Superintendent of the Rajcoomar College in Bundelkhund.
ROSSENRODE, Mr. W. C., to officiate as a Deputy Superintendent of the 2nd grade.
WHITE, Mr. G., four months' leave.

PUBLIC WORKS.

BEATTY, Major J., to act as Superintending Engineer, 3rd grade.

BENGAL.

BIRCH, Mr. B. J., to have temporary charge of the District Police of Nuddea.
CAMPBELL, Mr. F. J. G., transferred to the Sudder Station of Monghyr.

JENNINS, Mr. C., to act in the fourth grade of District Superintendents of Police.
JUGGODISH, Baboo N. R., to act in the third grade ditto.
KNYVETT, Mr. A. V., to act in the fifth grade ditto.
PRATT, Mr. W. D., to act in the third grade ditto.
SHUTTLEWORTH, Mr. E. J., to act in the first grade ditto.
SKINNER Captain R. M., ditto.
SMITH, Mr. W. F., to act in the first grade of Assistant Superintendents of Police.
WHITE, Mr. J. D., Deputy Magistrate, Southal Pergunnahs, leave for two years and four months.
WILCOX, Mr. F., to act in the fourth grade of District Superintendents of Police.

MADRAS.

BRADSHAW, Mr. J., to be a Fellow of the Madras University.
HARRIS, Surgeon-Major W. H., to be a Fellow of the Madras University.
LOWRY, Mr. R. J., Executive Engineer, three months' leave.
MACKENZIE, Mr. G. T., to act as Head Assistant to the Collector of Coimbatore.
RABAN, Rev. R. C. W., leave for two months.
SMITHWHITE, Rev. G., to be Chaplain of Cannanore.
STEPHENSON, Rev. W., to be a Fellow of the Madras University.
UNDERWOOD, Mr. W. G., to act as Head Assistant to the Collector of Nellore.
WALKER, Rev. G. M., to be Chaplain of Poonamalle.

NORTH-WESTERN PROVINCES.

BARRY, Mr. W., leave for two months and nineteen days.
BONNAUD, Mr. W., to officiate as Head Master, Zilla School, Moradabad.
BOULDERSON, Mr. A., six weeks' leave.
MUIR, Mr. J. W., one year's furlough on medical certificate.
PHILLIPS, Mr. E. A., to officiate as Head Master, Bareilly College.
SMITH, Mr. S., District Superintendent, Police, to officiate in the 3rd grade.
THOMPSON, Mr. J. B., one month's leave.

PUNJAB.

DUFF, Mr. G., to be Deputy Conservator, 2nd grade.
FORREST, Mr. E., to be Assistant Conservator, 2nd grade.
LEMARCHAND, Mr. F. O., to be Assistant Conservator, 2nd grade.
REID, Mr. H. G. G., transferred to the Umritsur district.

COMMERCE AND FINANCE.

FRIDAY NIGHT.

SINCE our last there has been greater ease in the bazaar, where money has become still cheaper, but no change has been made at the Bank of Bengal where the minimum rate is still 6 per cent. In the bazaar, loans can be obtained on Government Notes at 4 per cent. per annum. Pending the publication of the half-yearly accounts of the Bank of Bengal, now due, the usual weekly statements are not issued, but there can be no question that the public demand is less pressing. At the same time, it must be remembered that the Government balances are heavy, and there is likely to be a considerable call upon them on account of the Jodhpore loan before the end of the month. The reports from Bombay are not more encouraging; business is depressed in every department, and quotations for Shares and Government Paper, if changed at all, are rather lower. Telegrams from England report money easy, the rate being 3 per cent in the open market. Exchange is lower than we last quoted it.

	s. d.
Bank bills on London at six months' sight are now ...	1-9 7/8
Six months' bills	1-9 5/8
The demand rate is	1-9 5/16
The demand rate in Bombay	1-9 7/16

The market is very quiet. There is nothing in prospect at present which appears likely to cause any improvement in the above rates. The Government paper market has been comparatively inactive. There have been transactions throughout the week of small amounts, but yesterday and to-day the demand has improved and rates are rather higher. In 4 per cents., prices have ranged from Rs. 101-14 to Rs. 102-2, which is the closing rate. 4½ per cent. paper of 1872 is quoted at Rs. 103-2, and 5½ per cents., at Rs. 108-12.

There has been rather more animation in the share market, but prices exhibit very little alteration. Bengal Bank shares have been bought at Rs. 1400 ex-dividend, and National Banks are in demand at Rs. 121 for time bargains. The prospects of Jute shares are more encouraging. Gunny bags have advanced in price, and there are large orders in hand for the Australian market. Tea stocks are all in good favor. Bishnaths are in good demand to-day, and all other tea scripts maintain a good position. The want of accommodation is still a great obstacle to business.

Freights are dull. The only produce offering in quantity being seeds and grain.

The accounts from the Tirhoot and adjoining Indigo districts continue favorable, and the weather in the North-West is also satisfactory. In Lower Bengal, however, the reports are less favorable, and much depends upon the weather during the next week or two for the result of the manufacturing now in progress.

Sales of Indian Teas, aggregating 9,700 packages, were advertised for this afternoon.

LATEST TELEGRAPHIC NEWS.

10TH JULY.

London, 9th July.

THE Commons last night went into Committee on Supply, when Mr. Disraeli made a statement respecting the visit of the Prince of Wales to India. He said that the simplicity which would be suitable in case of the Prince visiting the Colonies would be quite unsuitable as regards a visit to India, and that, though the Viceroy had intimated that the custom of ceremonial presents need not be observed, yet still the Prince must be placed in a position to exercise generosity and display splendour; but upon this point it would be undignified to enter into a discussion. The Prince starts from England on the 17th of October, and the period of his absence will extend over six months. The transport *Serapis* and the yacht *Osborne* are placed at his service. He will be escorted by a detached squadron in command of Admiral Lambert, which, during his stay in India, will be stationed at Bombay.

The naval estimates are put down at £52,000. On arriving in India the Prince will be the guest of the Viceroy, who strongly counselled the visit. The expense to the Indian Government will be confined to the exercise of the rights of hospitality, which will probably cost £30,000. His Royal Highness will not visit India as the representative of the Queen, but as the heir apparent, and will hold an Investiture of the Star of India, without, however, encroaching on the position of the Viceroy. His Royal Highness will be placed in a position to impress the people of India with his real dignity and influence. It is estimated that £60,000 will suffice for his personal expenses; and the presents accounts will be audited by Sir William Anderson. Government will submit estimates to Parliament next Thursday. The Marquis of Hartington approved of the estimates. Mr. Fawcett thought it would be preferable if the Imperial Exchequer bore the sole charge. Sir George Campbell considered that the expenses were fairly divided. Messrs. Macdonald and Burt, working men's members, opposed the estimates.

London, 9th July.

IN the Commons last night Lord George Hamilton, replying to a question put by Mr. Grant Duff, said that the earlier matters in dispute with Burmah had been satisfactorily settled, but that the murder of Mr. Margary and the cordial reception lately granted by the King of Burmah to the Chinese General Lee Seh Tahee had caused the Indian Government to insist on the King placing no obstacles in the way of our obtaining redress. Permission had been refused for the passage of British troops through Burmah; but he, Lord Hamilton, hoped and believed that the King would yield to the demands made by England, and that no collision would occur. In conclusion His Lordship said that as negociations were pending, the communication of the papers at present would be deterimental to the public service.

London, 9th July.

IN the Lords last night, the Marquis of Salisbury, replying to Lord Middleton, said that the class of Uncovenanted Civil Servants for whom the Duke of Argyll contemplated an extension of furlough was extremely small. The correspondence on the subject, he said, was nearly completed, but he could not give hopes of any large extension.

12TH.

London, 10th July.

TURKEY is sending an embassy to Pekin in furtherance of the interests of Mahomedans in China.

In the Commons last night, Mr. Bourke stated that Government was uninformed respecting the decision of the Chinese Government concerning the establishment of consulates and legations in Europe. Mr. Wade, the British Consul, was absent from Pekin; but advices were shortly expected from him.

Disastrous floods are reported from Normandy.

Madrid, 10th July.

THE news of the Carlist war is confusing, but the cause of the Alphonsists, engaged now in close pursuit of the retreating Carlists, appears to be progressing.

Major Cadwallader Adams, unattached, has been gazetted a Lieutenant-Colonel.

13TH.

London, 12th July.

THE Spanish armies of the North and the Centre are successfully advancing; the Carlists are retreating.

Prince Humbert is visiting London incognito.

The floods in Normandy have subsided.

14TH.

London, 12th July.

THE heavy Mails, which left Calcutta, 8th June, arrived at Southampton yesterday.

The steamer *John Tennant* has been lost off Cape Finistere. The passengers and crew were saved.

London, 13th July.

IN the Commons last night, Mr. Disraeli in replying to Sir Wilfrid Lawson, said that the communication of the correspondence which passed between Lord Salisbury and the Viceroy relative to the Prince of Wales's visit to India was inexpedient, as the correspondence was strictly confidential.

Lord George Hamilton, in replying to a question relative to Mulhar Rao said, that the political circumstances render a certain restraint towards him necessary, but that the Secretary of State for India, after consulting the Indian Government, had decided to allow his legal advisers to have access to him, provided their business was previously stated, and that Mulhar Rao wished to see them.

15TH.

London, 14th July.

IN the House of Commons last night Mr. Fawcett gave notice that next Thursday he will move that no part of the expenses of the Prince of Wales's visit to India be charged to the revenues of India.

Lord George Hamilton in replying to a question said that Mr. Shaw was instructed to return from Kashghur when the negociations for a Commercial Treaty were completed, and that under this treaty no power existed to appoint a Political Agent in Kashghur.

London, 14th July.

THE Official Turkish budget shows a deficit of four millions sterling.

The Carlists are being closely pressed by Alphonsist troops.

Paris, 14th July.

THE Assembly have annulled by 330 against 310 votes, the election of the Bonapartist Deputy, M. Bourgoing, for the Department of the Niebre.

16TH.

London, 14th July.

THE Homeward Mails, *viâ* Brindisi, which left Calcutta, 15th June, and Bombay 18th, were delivered on Monday.

HIGH COURT:
Calcutta, 17th June, 1875.

F. S. COLLIS,
Offg. Administrator-General.

BONUS YEAR, 1875.

Incorporated by Royal Charter and Special Acts of Parliament.

NORTH BRITISH AND MERCANTILE INSURANCE COMPANY.

ESTABLISHED 1809.

SUBSCRIBED CAPITAL—TWO MILLIONS.

SPECIAL NOTICE.

THE NEXT DIVISION OF PROFITS, for the Five Years since 1870, will be made on the closing of the Books on 31st DECEMBER, 1875.
ALL POLICIES on the Participating Scale, opened before that date, will share in the Division.
At last Division the Bonus declared was at the rate of £1 : 5s. per cent per annum on all sums assured and the previously vested Bonuses.
During the first four years of the current Quinquennial Period, 3,297 NEW POLICIES were issued, INSURING the sum of **£3,204,135.**

EXTRACTS FROM THE REPORT,

AS SUBMITTED TO THE

SIXTY-FIFTH Annual General Meeting of Shareholders,
HELD IN EDINBURGH ON 2ND APRIL, 1875.

Life Business.

The New Business in the Life Department, for the year 1874, was as follows, *viz.*—

No. of Policies Issued.	Sums Assured.	Premiums Received.
873	£672,177	£21,003 : 13 : 10

The Claims paid during the year, including 5 endowments, were 197 in number, arising under 241 Policies, and the sums amounted, with Bonus Additions, to £240,466 : 17 : 9.

In the LIFE DEPARTMENT, THE ACCUMULATED FUNDS, in terms of "The North British and Mercantile Insurance Company's Act, 1870," are exclusively invested to meet the obligations arising under Life Policies and Annuities, and declared not to be responsible for the obligations in the Fire Business. These Funds now amount, irrespective of the paid-up Capital, to *£2,682,513-7-6.*

NINETY PER CENT. of the WHOLE PROFITS is divided among the assured on the Participating Scale. This is as large a share of the profits as is allowed by any office, and larger than that given by most other Proprietary Offices.

The Profits are ascertained and divided every *Five Years.*

The NEXT DIVISION OF PROFITS will take place as at 31st December, 1875.

Intending Assurers are reminded that by effecting a Policy during 1875, *they will, in conformity with the rules of the Company, secure One Year's Bonus at the next Division of profits.*

The TABLES OF PREMIUM are moderate.

The TABLES have been adopted for INDIA, CHINA, &c., whereby a considerable reduction is made on the rates usually charged for these countries.

Policies are indisputable after having been Five Years in force.

In the ANNUITY DEPARTMENT, Immediate, Deferred, and Survivorship Annuities of all kinds are granted on the most favourable terms.

THE numerous testimonials received by C. Lazarus and Co. tend to prove that their

BILLIARD TABLES

are now the only ones appreciated in India, being constructed on an entirely new principle introduced by C. Lazarus and Co.

DENTISTRY.

MESSRS. CORFIELD & CO.,

May be consulted daily upon all cases of Surgical and Mechanical Dentistry.

THEIR IMPROVEMENTS IN

Artificial Teeth and Painless Dentistry

Afford the following advantages:—

First.—Extreme lightness, being completely self-supporting.
Secondly.—Moderate charges, extreme simplicity of construction, the highest class of mechanism, and the best materials.
Thirdly.—Absolute immunity from pain.
Fourthly.—Nature so closely imitated, that detection becomes an impossibility.
Parties residing in Calcutta and the Suburbs attended at their own residences if desired.
Teeth supplied by other Dentists not having proved satisfactory, or old cases that have become out of order through absorption of the gums and other causes, can be remodelled on Messrs. Corfield's system on moderate cost.
Artificial Teeth repaired and returned by following post.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ½ lb. and 1 lb. tins, labelled thus:—

JAMES EPPS & CO.,
HOMŒOPATHIC CHEMISTS,
48, THREADNEEDLE STREET, & 170, PICCADILLY.
Works—EUSTON ROAD, AND CAMDEN TOWN.
(Makers of Epps's Milky Cocoa and Cocoa Condensed Milk.)

HOBSON AND COMPANY'S

FRAGRANT ROSILINE MOUTH-WASH.

A DELIGHTFUL preparation, invaluable for cleansing the mouth, preserving the palate, and purifying and sweetening the breath. It readily dissolves all tartarous incrustations on the teeth and causes their firm adhesion to the gums, at the same time imparting to the teeth a pure and pearl-like whiteness.

PREPARED ONLY BY
H. C. HOBSON & Co.,
London Dispensary, Umballa.

DISSOLVED PERUVIAN GOVERNMENT GUANO,

PREPARED BY

OHLENDORFF & Co.,

LONDON, ANTWERP, HAMBURG, AND EMMERICH-ON-RHINE.

GUARANTEED TO CONTAIN

Nitrogen equal to 10 per cent. of Non-Volatile Ammonia.

20 „ Soluble
4 „ Insoluble } Guano Phosphate.

Price £14 per ton for 30 tons and upwards.
„ £15 „ under 30 tons.

Delivered Free at any of their Depôts in the United Kingdom.

TERMS.—CASH.

THIS Manure is prepared from *genuine Peruvian Government Guano.* The result of its special treatment is, that the Ammonia is fixed, the Phosphates in the Raw Guano rendered soluble, and the Manure brought into the condition of a free dry powder.

It loses nothing from exposure to the atmosphere, or to the heat of the sun. It is offered to the Planter with a *Guarantee* of its composition, and is, in fact, the richest, and, considering the quality, the cheapest *Guaranteed Manure* at present in the market. Its fertilizing properties are such as will enable the consumer to derive the greatest economical advantage from the use of Guano.

APPLICATION OF DISSOLVED PERUVIAN GOVERNMENT GUANO TO COLONIAL PRODUCE.

INDIGO.

Dissolved Peruvian Government Guano will give the plant greater strength to resist unfavourable influences and the Planter in thus developing the crop will be amply repaid the cost of the manure by the increase and superior yield of Indigo.

Dissolved Peruvian Government Guano is a highly concentrated Manure offering a large and guaranteed percentage of fixed ammonia and soluble immediately available phosphate of lime, and may therefore be recommended with the utmost confidence for Indigo plantations. A quantity of about 3 cwts. per acre will be found materially to benefit and increase the crop. This quantity may be increased with advantage if the land be impoverished by previous crops.

RICE.

We would strongly recommend the use of 2 to 3 cwts. per acre for Rice; for, although irrigation is generally solely relied upon as a means of producing a good crop of Rice, there can be no doubt that, in addition to irrigation, 2 or 3 cwts. of Dissolved Peruvian Government Guano per acre will be highly beneficial.

TEA.

We are confident that Dissolved Peruvian Government Guano will be highly esteemed as a Manure for Tea, and we recommend, say, 3 cwts. per acre, mixing the Dissolved Guano first with vegetable ashes or dry soil so as to secure its uniform distribution. If the land is very poor, and exhausted by previous cropping, more Guano may be used with advantage.

SUGAR-CANE.

Dissolved Peruvian Government Guano produces heavy crops of well-matured Canes, rich in juice, yielding a high percentage of crystallizable sugar, without detriment to the soil. From 3 to 4 cwts. of Dissolved Peruvian Government Guano per acre is a good dressing for Sugar-cane. A few trials of Dissolved Guano in comparison with other manures will soon convince the Planter that no manure yields so large a profit in the increased production of sugar as Dissolved Peruvian Government Guano.

COTTON.

Dissolved Peruvian Government Guano meets the requirements of the Cotton Plant, inasmuch as it furnishes all the elements of fertility which are calculated to promote the luxuriant growth of the same. If the increase in quantity be made the chief object, 4 to 5 cwts. of Dissolved Guano per acre will prove most advantageous; but if greater care be given to the fine quality of the Cotton, the use of 2 to 3 cwts. of Dissolved Peruvian Government Guano, together with 2 to 3 cwts. of mineral superphosphate, per acre, will be found to answer better.

JUTE.

3 to 4 cwts. Dissolved Peruvian Government Guano cannot fail to materially increase both the quantity and quality of this crop which is becoming of more commercial value every year.

RAPE AND LINSEED.

Colza and Flax exhaust the land very rapidly, and for this reason require liberal treatment with manure. Experience has shown that Dissolved Peruvian Government Guano, is the most efficacious manure that can be used. Mixed with diluent as we recommend sow the Dissolved Guano broad-cast, and harrow it in with a light harrow about a week or a fortnight before the rape or linseed is sown. 4 cwts. of Dissolved Guano is a fair dressing per acre on land of average fertility. On poor soils 5 to 6 cwts. will give a more profitable return than a smaller dose.

AGENTS FOR

MESSRS. OHLENDORFF & CO.

ESTABLISHED IN 1820.

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.)

CABINET MAKERS, UPHOLSTERERS,

BILLIARD TABLE MANUFACTURERS,

BY APPOINTMENT

To His Excellency the Viceroy and the Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh,

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible, and annoyances and inconveniences are done away with, and the interest in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

ever impported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade Advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persa, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

Prepared only by MESSRS. E. J. LAZARUS & Co. at the MEDICAL HALL, BENARES, from the original receipt of EDWARD JOHN LAZARUS, M.D., and sold by all Medicine Vendor

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered.

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.

BISSONAUTH LAW & CO.,

IMPORTERS OF IRONMONGERY AND EVERY DESCRIPTION OF HARDWARE.

2, LARKIN'S LANE, CALCUTTA.

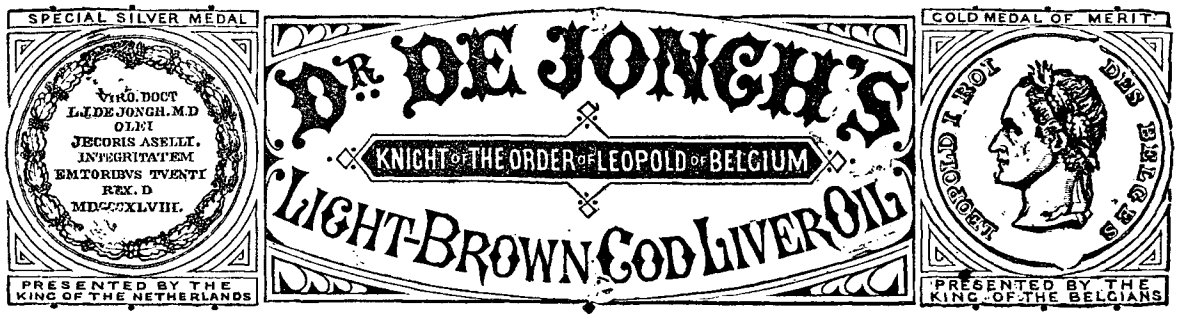
Both of these Wines in Pints at Rs. 3 per 2 dozen case extra.

Any Goods not approved, may be returned.

Detailed List of Wines and Stores on application.

G. F. KELLNER & Co.,

13, *Government Place, Calcutta.*



The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried *in vain*. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion or DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets*, from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

This Company's Steamers leave Goalundo for Dacca and Naraingunge every Sunday morning, returning from Dacca and Naraingunge every Wednesday, reaching Goalundo on the Friday.

Passengers should leave Sealdah by the 7-30 A.M. or 8 P.M. Train on the Saturday preceding the departure of the Steamer, and goods for despatch should be delivered at the Sealdah Terminus before 3 P. M. on the Thursday previous.

Further particulars can be obtained on application to the Company's Enquiry Officer, Sealdah, or the Company's Local Agent at Dacca and Naraingunge.

E. B. RAILWAY, AGENT'S OFFICE, } FRANKLIN PRESTAGE,
17th November, 1873. } *Agent.*

ASSURANCE COMPANIES.

STANDARD LIFE OFFICE.

THE DEATH CLAIMS paid by the STANDARD COMPANY, during the past nine years, have been upwards of £1,200 per business day.

THE FUNDS during the same period, after payment of Claims and Expenses of every kind, have increased from £2,600,000 in 1865 to £4,800,000 in 1874.

NEW ASSURANCES, to the amount of £1,000,000 Sterling, have been placed upon the Company's Books in each of the years since 1865—some of them years of doubt and anxiety in the Assurance World. This result, it is believed, has been maintained by no other Office in the United Kingdom, during the same period.

BONUS YEAR 1875.

The next division of Profits will take place at 15th November, 1875.

ANNUAL REPORT 1875.

Copies of the Annual Report, containing the Balance Sheet, &c., may be obtained on application.

GEO. LUCAS KEMP,
Secretary, Calcutta Branch.

MANCHESTER FIRE ASSURANCE CO.,

ESTABLISHED 1824.

98, *King Street, Manchester;* 96, *Cheapside, London;* 35, *Castle Street, Liverpool*; 80, *Buchanan Street, Glasgow*; 12, *Bennett's Hill, Birmingham.*

Sir Edmund Buckley, Bart., M. P. | Wm. Henry Houldsworth, Esq.
John Chapman, Esq. | Alfred Lowe, Esq.
Thomas Barham Foster, Esq. | John Napier, Esq.
Henry Michael Steinthal, Esq.

Insurances are granted by this Company on nearly every description of property in Great Britain, in Foreign Countries and in some of the Colonies at moderate rates.

Mills, Factories and other hazardous risks will be specially surveyed at the request of the owner.

The duty on fire insurance has now entirely ceased.

KETTLEWELL, BULLEN & CO.,
Agents in Calcutta.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if, when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the Royal Ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman of the Annual Meeting, 7th August,* 1874.

Terms of Proposal, Tables of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY,
CALCUTTA.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY,

FIRE AND LIFE.

ESTABLISHED IN 1836.

And specially empowered by Parliament.

OFFICES: DALE STREET, LIVERPOOL,
Cornhill, and Charing-Cross, London.

At the Annual General Meeting of the proprietors, held 24th February 1875, in the Company's Office, Liverpool, the Report of the Directors for the year 1874 was read, and it showed that:—

The Fire Premiums were	£ 1,082,521
The Life do.	244,607
The Annuities payable	59,511
The Invested Funds	4,089,747

For Tables of Rates and full particulars both for Fire and Life Insurances apply to

GILLANDERS, ARBUTHNOT & CO.,
Agents, Calcutta.

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, King William Street, London.

Insurances effected with or without participation in Profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed*, whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premium*, the sum allotted for Bonuses this year being £37,030.

NEW PLAN

BY THE

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED,

For the SAFE Assurance of European and Native Lives in India at ENGLISH RATES, with 80 per cent Invested Solely for Policy Holders.

Example.

		With Profits.
A, aged 30, wishes to Assure Rs. 1,000.		
Annual Premium at Indian Rate ...	Rs.	36 0 0
Annual Premium at English Rates ...	„	23 10 8
Difference ...	Rs.	12 5 4

The "ORIENTAL" charges (*A*) the English Premium of Rs. 23-10-8 *only*. The Extra Premium for India, Rs. 12-5-4, is considered a debt on his Policy. Should (*A*) live until the amount of his Premium with *Compound* Interest at 3 per cent is equal to the sum assured, *this debt is then cancelled*, and he will be in the same position as if he had been *resident in England* instead of India.

THE DIFFERENCE OF PREMIUM BETWEEN THIS AND ALL THE OTHER LIFE ASSURANCE COMPANIES IN INDIA IS FROM 10 PER CENT [THE LOWEST] TO 103 PER CENT [THE HIGHEST] IN FAVOUR OF THE "ORIENTAL" RATES. This speaks for itself!

From no other Office can greater Security and such Benefits be obtained.

Applicants in the Mofussil can effect Assurances without personal attendance in Bombay, Calcutta, or Madras. The Medical Adviser's Fee is paid in every case, whether accepted or declined.

Prospectuses, and Forms of Proposal can be obtained from any of the Agents, or from

D. McLAUCHLAN SLATER,
Fellow of the Institute of Actuaries,
Manager and Actuary.

9, ELPHINSTONE CIRCLE, BOMBAY.

H. M. MEHTA,
AGENT,
CALCUTTA.

THE POSITIVE

ALL BILIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepatic or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in the Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depression of Spirits, Oppression after Meals, Nervous and General Debility, Restlessness, Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S

ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liver has already been proved, *beyond all doubt*, by the 97,500 cases in which it has been tried. It has already saved *thousands* of valuable lives (*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*), and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has, with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of* is capsuled, and bears on its labels the facsimile of our signature.

THE GRAND INDIAN ALTERATIVE TONIC.

DR. E. J. LAZARUS'S

ESSENCE OF HEMIDESMUS.

THIS preparation of the INDIAN SARSAPARILLA UNUNTAMUL is equal, if not superior to the more costly Jamaica or Honduras Sarsaparilla. INDIAN MEDICAL AUTHORITIES, both European and Native, with one accord bear testimony to its valuable alterative tonic, diuretic and diaphoretic properties, pronouncing it a most efficacious remedy in all those diseases arising from an *impure state of the blood*, and most strongly recommend it in SCROFULOUS COMPLAINTS, BOILS, PIMPLES and BLOTCHES of the SKIN, CONSTITUTIONAL DEBILITY, CACHEXIA, especially of Children, CONSTITUTIONAL SYPHILIS, CHRONIC RHEUMATISM, certain diseases of the Skin, &c. &c.

Prepared only by Messrs. E. J. Lazarus & Co., Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by Medicine Vendors at Rs. 2-8 per bottle.

ELECTRO-SILVER PLATED WARE, GLASS WARE, STONE, CHINA AND PORCELAIN WARE, CUTLERY, &C. &C.

Table Glass Ware.

The following elegant patterns are especially recommended to notice: they can be sold in any quantity required, to suit the convenience of purchasers:—

The "MILAN," pattern. The "WINDSOR," pattern. The "BELVOIR," pattern.

The "GRECIAN," pattern. The "STAR," pattern. The "CHATSWORTH," pattern.

The "VINELEAF," pattern.

A Full Set for 12 usually comprises—

12 Sherry glasses	12 Goblets	12 Jelly gls.
12 Claret "	12 Liqueur glasses	12 Finger "
12 Champagne "	12 Custard "	12 Tumblers

The following articles can also be supplied *en suite* with each Set if required.

Wine Decanters, Claret Jugs, Water Jugs, Water Carafts, Sugar Basins, Milk Jugs, Butter Coolers, Preserve Jars, &c.

Glass Dessert Services.

In cut and engraved glass; also in moulded glass neatly frosted and relieved with bright scrolls and lines.

A Set for 12 comprises—

A Centrepiece.

2 6-inch, 2 8-inch, and 2 10-inch Compotiers.

Round and Oval Dessert Dishes

TO MATCH THE DESSERT SETS,

ALSO

Ice Plates, Ice Bowls, Biscuit Jars, Glass Flower Stands for the Dinner Table, Glass Flower Baskets, Flower Troughs, Single Flower Glasses, Flower Vases, &c. &c.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2106.] Calcutta: Saturday, July 24, 1875. [Vol. XLI.

A CRY FROM MYSORE.

THE arguments are exceedingly singular, by means of which the Governments of India escape the disbursement of their monies. Any excuse to countenance a retrenchment, or avoid a payment, will satisfy the elastic conscience of an Indian Financier; whence, no doubt, the groans one hears, from time to time, about the economies of the State. We have heard of a story at Bangalore, which offers a pretty fair example of the line of argument officials can take up, when indisposed to commit themselves to anything that costs money. It appears that Bangalore is one of those paradoxical places, that is a cantonment and is not a cantonment. It boasts of a Cantonment Magistrate, and is one of the largest military stations in Southern India; but it is free from the jurisdiction of those cantonment laws that, in some places, allow a military man to turn a civilian out of his house should the first have an inclination to occupy it. Civilians and soldiers live cheek by jowl in Bangalore, and, no doubt, with all the harmony that belongs to the situation. There are, however, in Bangalore, certain military "lines" of ancient date, wherein, with the liberty and enlightenment now belonging to the place, any man, whatever his occupation, may dwell; but as the houses of these "lines" are generally reported to be of antique structure and in a ricketty condition, it would appear that they are not in much favor with the residents, either civil or military. They are spoken of as saturated with the accumulated filth of many generations of *Anglo-Indians, and as bringing* death upon children, and disease on their elders. Under the circumstances, *it is only natural* that the officers should desire to quit such an unpromising locality, and that they should yearn to cast their lines in pleasanter places. And they act accordingly. They scatter themselves all over the cantonment that is not a cantonment, and, as a matter of course, are much at the mercy of landlords who can charge *them* according to pleasure for house-rent. In military lines, we understand that extravagant charges of this nature are impossible. Houses are registered at fixed rents by the military authorities; and a landlord cannot exceed these under certain pains and penalties. Now, the situation at Bangalore is this, that, whereas, if there were military lines fit to live in, and under martial law, an officer residing there could get a house for thirty rupees or so a month, he is, under existing circumstances, compelled to pay thrice or four times that rent to house-owners whom the military law cannot touch. Bangalore house-rent, like Poonah house-rent, is very dear, and we are told *that a house of moderate* accommodation, is let there at a rent of one hundred or one hundred and twenty rupees a month. Of course, house-rent on this scale becomes a serious drain on an officer's purse, at no time overburdened with the effigies of her most gracious Majesty in gold or silver. But this is not all. The cup of military grief at Bangalore is not yet full. To add insult to injury, as it were, the *militaires* above the Ghauts see their comrades *at* Madras enjoying a special allowance for presidency house-rent, although it is reported that the houses at Bangalore are quite as dear, and as hard to rent as those at Madras itself, This is clearly an anomaly, and we are not surprised to learn that representations on the subject have been made to the Government over and over again; but only to elicit the reply that the Government did not seem to see what was so very evident to the officers. Probably, the man who has to pay Rs. 120 for a house, is more clear-sighted in such an affair as this, than the official who pays nothing; but, however that may be, it is unquestionably the fact, that, although rents at Madras and at Bangalore are on a par, as regards price, the officers at Madras obtain a special allowance of a liberal character to meet the additional expense, whereas those at the other place receive nothing. But now comes the most extraordinary part of the story. It is said that the reason for what appears so paradoxical is this—that the climate of Bangalore compensates for the loss of special allowances! We have heard a number of funny arguments in a lifetime; but none more entertaining than this. Its gist absolutely is that a good climate is a fair substitute for provisions, clothes, beer, tobacco, and all those commodities of every-day consumption that we are accustomed to associate with rupees—and with a good number of them. Climate at Bangalore has the atmospheric phenomena belonging to it of clothing the naked and feeding the hungry, and is worth to any officer, if not to any other man, the money value of one hundred and twenty pounds a year, or the cost of Bangalore house-rent! Now, if military men had their choice of residing at Bangalore or elsewhere, something might be said in favor of an allowance for climate; but as the contrary is the case, and officers have to reside there with their regiments upon duty, it is hard to see how the climate argument can be dragged into the question effectively. It seems to us that an officer at Bangalore has claims as *strong* for a special allowance for house-rent, as his comrade at Madras; nor can we at all recognise the justice of the argument that renders climate for a poor man a compensation for money. Curiously enough, the Madras Government, which principally resides upon the Neilgherry Hills, is, in itself an instance in point, since the officers of Government all draw their full salaries in the delightful atmosphere of Ootacamund, and in no wise act on the aphorism, that climate is a compensation for special allowances.

It is a curious circumstance that this Bangalore grievance is nearly as old as the place itself. Under another form, the grievance was rampant in the days of John Company. It appears that Honorable John, in his commercial wisdom, used to draw a circle round the Presidency town of Madras, which rendered all military cantonments within its radius of two hundred miles, what were called "half batta" stations, or stations where there were no extra allowances as at other places. Now, the story goes that Bangalore is over 200 miles by the road from Madras, and consequently without the provisions of this Act. However, the Honorable Company, or its no less Honorable employées, were not to be done out of a few rupees if they could help it; and one of the latter, more clever than the rest, hit upon the brilliant idea of measuring the distance to Bangalore "as the crow flies." In short, according to the flight of that bird of ill-omen, Bangalore was discovered to be only one hundred and ninety eight miles from Madras, though in what manner the crow was made a member of the Public Works Department, and a Government Surveyor, is a thing unknown to us. The most important part of the affair, was the loss of income endured by the Bangalore officers, and this "half batta" business was always we are told a sore subject with the military residents of the place. At present it is house-rent that vexes their spirits, but whether the crow has any thing to do with this, also, we know not.

Doubtless the fairest and readiest way of making things pleasant at Bangalore, would be to acknowledge the similarity of the situation to Madras, and grant the officers at one place the allowances they receive at the other. There is the alternative of building quarters for the officers, or of lending them public money wherewith to build houses for themselves; but these are troublesome expedients; and it would be easier to give a monthly allowance at once. We are told that the military authorities of Bangalore have more than once

recommended that the allowance should be granted, but with no result, owing, perhaps, to the curious theory mentioned above, of climate being money, or its equivalent. This house-rent question is one of great interest to Military Officers everywhere; for rents have risen, and are rising in all parts of India, and to such an extent too, that officers generally may be said to be 60*l.* a year worse off now, than they were when houses were at one-half the rents at present charged for them. It is, unfortunately, little things of this sort that render an income in India to-day altogether deceptive, and cause, we believe, much discontent with the country. It is of very little service to give a man a salary of one thousand pounds a year, if its practical value is only about five hundred, but this is what we are coming to in India now that incomes are as naught in comparison with expenses. The whole question is only too sug gestive of the colonies, where if meat is but five pence a pound, a cook's wages are one hundred pounds per annum to dress it.

THE NEW RENT BILL.

ALTHOUGH the new Rent Bill deals only with exceptional cases, and is not meant materially to alter the existing laws, it is, of course, a powerful argument against the present law, that exceptional legislation should have been found necessary to deal with any class of disputes coming under the category of rent suits. The very able minute of the Lieutenant-Governor shows clearly, that cases of disputed measurement, and of disputes arising from increased and decreased value of land, cannot be as satisfactorily decided by the Moonsiff's Court, as they can by the Revenue officers. And, once this point is established, the case against the advisability of continuing Act VIII, 1869, is clearly made out; for there, and there only, are the questions which present any difficulty in rent suits; and it was presumably with the object of adequately dealing with them, that the procedure of Act X of 1859 was altered. When once it is shown that these cases can be more expeditiously and satisfactorily dealt with by the Revenue Courts, even in exceptional instances—as Sir Richard Temple clearly shows—the presumption that this theory would generally apply, may naturally arise. At present, both zemindar and ryot are harassed by the unavoidable delay and expense attending Civil Court legislation, and there is consequently more room for the abuse of "the longer purse winning." With the habits of activity so essential to any Collector who aspires to rule his district well, delays would be obviated by local enquiries; and the same course would naturally tend to decrease the influence of the pleaders' eloquence, and substitute for it the evidence of the senses of the investigating officer. Another argument, also, suggests itself to us on this subject, and that is the desirability, in cases where an irritating quarrel is seething, of having the Judicial and Executive offices combined in one person. As a matter of fact, the Executive loyally supports the Judicial officers in cases of obstruction to the execution of their decrees; but where there is bad blood between the parties to the suit, it is perhaps advisable that the turbulent zemindar or ryot, as the case may be, should know that there will be no necessity to call in the aid of another Court, should they resist the orders given; but that the Court giving the order, will there and then enforce it, and punish any infringement of it. The general advantages of a Collector having a knowledge of the actual condition of the tenures in his district, have been too often discussed to need repetition. We would draw attention to two branches of the business of a Collector's Court, which would be especially benefited by a recurrence to the old system. In *Settlements*, would it not be a material help and guide for the Settlement Officer to know the character of the zemindar with whom a settlement is proposed to be made, in order to know whether he encourages improvement, or fights his ryot for the benefits arising from improvements made by the ryot's industry? Nothing could show this more than an acquaintance with the class of rent suits brought by him; and in petitions for remission of rent, the Collector would have, at his hand, the exact condition of the estate for which remission is sought. We throw out these remarks, not with any pretence of novelty, but simply with a desire that, now that so great an authority as the Lieutenant-Governor has struck the key-note to a change, the subject may not be dropped till the discord, which began with Act VIII of 1869, is changed to the harmony inaugurated by Act X of 1859. Meantime, we are thankful for the promised instalment, and are glad to see that the Lieutenant-Governor will not quietly allow the provisions of Act VIII, 1869, to operate to the prejudice of peace and good government.

REVISION AND DIVISION IN THE CHURCH IN IRELAND.

THE greatest excitement prevails in England, as well as in Ireland, on account of the important, and to some, it appears, appalling, changes, that the General Synod of the Irish Church is making in the Prayer-book. Many who were intensely interested in the progress of the Disestablishment Bill through Parliament, and whose interest never slackened till the cords, that bound the Church in Ireland to the State, were finally severed, have since then given less heed to the phenomena of life and action in that Church, than their importance and interest perhaps demand; and we suspect we must include ourselves among the number. But the angry discussions that are at present going on, have arrested our attention, and we think it worth while to try to awaken the interest of our readers. Many of us have a distaste, perhaps not altogether inexcusable, for mere ecclesiastical squabbles, and hold the opinion that, while discussions, divisions, and changings of raiment, are doubtless of immense importance to clergymen and such as live by the Church, the great world rolls on its course on wheels which the ecclesiastical movements of the day can do little either to accelerate or retard. The time has gone by, it is believed, when either the springing up of a new Church, or any division or reformation of an old one, can mark an era in history. Some indeed, who dwell in "the centre of indifference," and others, whose spiritual constitution enables them to live in the attenuated air of rationalistic speculation, can afford to look upon all ecclesiastical and religious movements with scorn or apathy; and are perhaps impatient for the day to dawn, when the religions of the world shall be rolled up like scrolls, and vanish from the earth, not leaving a wrack behind. Such, we in sober earnest believe, is the consummation devoutly wished for by some philosophers of to-day, and their more or less numerous schools of disciples. The Infinite God shall be resolved into the "Universal Order" of the world; immortality into a shrinking from death; and all beliefs in the supernatural into superstitions—the mere brood of Ignorance and Fear. Truly has it been said, that "knowledge comes but wisdom lingers." "The tree of knowledge is not that of life." The deepest thing in the heart of man is his religion; the history of its religions is the greatest thing in the history of the world. Science herself, though she too often claims, in our day, the right to supersede religion, is, and ever must be, her willing or unwilling handmaiden. And, while we acknowledge the vast importance of the scientific investigations of the age we live in, and listen with interest to every speculation which has any considerable basis of ascertained fact, we are of opinion that seldom, if at any time, have the religious movements among the churches and nations, presented a field, or we might say a forest, of study, of such overwhelming interest as at this present time. Imperfect as our Mission schemes are in their methods of working, and in their results, it is yet clear to unprejudiced observers, that Christianity in one form or other, is in course of either converting, or in some sort influencing, the whole world. Meanwhile, Christianity itself is in the strangest state of convulsion. Pope Pius at one extreme, and the Huxley-Tyndallites at the other, with all schools of theology, constructive and destructive, between them, are shaking it from its deepest bases to its highest heights, so that had it not been framed like the world itself, by the word of God, we might think that the day of its destruction was at hand. And we verily believe that the old framework is in progress of demolition, but when fragment after fragment with huge noise and tumult has fallen and sunk into invisibility, it will be found to have been the scaffolding of the new Jerusalem, and the City itself will shine forth in eternal grandeur and perfection. If this be no vain dream, and we think it is not, the religious, and anti-religious phenomena of our times, ought to possess for us all an enormous interest. And, as we have already indicated, the two centres of motion which we must watch with ceaseless attention, are Vaticanism, with its infallible Pope, and Materialism, with its illustrious group of philosophers; which latter scarcely, perhaps, dream of the gigantic service they are,

unwittingly as we believe, rendering to Christianity. With these two centres of motion, all the others in the Church will be found to be in some way connected. How this is, it would be beside our purpose, and doubtless beyond our ability, to point out clearly. We wish only to indicate the connection between Vaticanism and the dissensions about the Revision of the Prayer-book in the Irish Church. Observe, first, the two remarkable phenomena so striking in the whole Christian Church—the extraordinary tendencies to schism with the actual dismemberment that already exists, and, on the other hand, the fundamental principle of unity which all parties, in some sense or other, acknowledge, with the actual efforts that have been made from time to time, and are especially energetic at the present, towards union. These are the centripetal and centrifugal forces of Christianity, whose orbit, it must be confessed, more resembles the orbit of a comet than that of a planet ; we have *hitherto seen it moving towards aphelion, which* it has probably not yet reached, though to some of us there appear symptoms at present of a stronger assertion of the centripetal force. In 1833, as is well known, there came into existence a party in the Church of England which manifested a strong yearning for union with the Church of Rome. Doubtless, the desire for union was, and is, repudiated ; and revival and reformation in the Church of England were the conscious aims of the Tractarian party. But the wish was by no means concealed, that some corresponding reformation in the Roman Church might, in time, render union possible and right ; and, strange as it may seem, we believe that this party movement in the Anglican Church, originated in the yearning for unity that exists, or ought to exist, in every section of the Christian Church. But though here and there individuals—with a Newman among them—went over to the Church of Rome ; to the party, as a party, it has now become abundantly evident, that the late eccentricities of Vaticanism, have rendered union with Rome, for a long time to come, impossible. But the same eccentricities have given rise to what we may, not very improperly, call a New Church—new in its individuality though it claims to be the Old Catholic Church. Towards this Old Catholic movement the eyes of the English Ritualists are drawn, and a union with it, and perhaps also with the Eastern and American Churches, is not unhoped for. Meanwhile, what is the Church in Ireland, unfortunately, doing? Canon Liddon, Dr. Pusey, and their friends, see, with sorrow, the disestablished Church in Ireland laying violent hands upon her ritual, and initiating changes, which, while they are looking for union abroad, threaten them with dismemberment at home. If the proposed revision of the Prayer-book be carried out, communion between orthodox members of the Church of England and members of the Church of Ireland, will, in the opinion of these men, become impossible. And hence the debatings and dissensions—unfortunately loud and angry—to which we referred at the outset. We may seem to have wandered far from our subject ; but that, we suppose, arises from the fact that we are so far outside of these things, and, viewing them from a distance, desire to take as broad a view of them as possible. Minute information may be more easily and accurately obtained from other sources. We shall merely indicate the nature of some of the changes the Church in Ireland proposes to make, and the opinions of the opponents of those changes.

A letter in the *Guardian* from the pen of Dr. MacDonnell, some time Dean of Cashel, gives a brief account of the origin of the General Synod which is now engaged in the revision of the Prayer-book. The Irish Church Act, by the repeal of all laws which prevented the holding of Synods, enabled the Synods of Armagh and Dublin to meet at St. Patrick's in 1869. This Convocation drew up, as its chief work, a scheme for a new representative assembly to take the place of itself. In accordance with this scheme, a clerical assembly was elected, and met, along with representatives chosen by the laity, in a new "Assembly called the 'General Convention,' which was convened by the Archbishops, for the purpose of drawing up constitutional laws for the Church in Ireland." Accordingly a permanent constitution was drawn up by this Convention, and by it the legislative government of the Church was committed to the present General Synod. How this General Synod has proposed to deal with the Prayer-book, and how the conservative party in the Church look upon the changes proposed, may be partly seen by the following extracts. The first is from a letter to the *Guardian* by Mr. Beresford Hope, and gives a summary of the changes which he thinks especially objectionable. After referring with horror to the excisions from the Athanasian Creed, the summary is as follows :—

> The abolition of the direction for the daily use of Morning and Evening Prayer on the part of the clergy, which in harmony with the immemorial order of the universal fold our Church retains—the reduction of the Catholic and primitive rite of confirmation to the rank of an optional ceremonial—the excision of the recommendation to hallow the marriage service by communion—the omission of the direction for the threefold annual communion of the laity, in which our theory is so conspicuously superior to that of the Roman Church, which only directs its members to communicate once a year—the erasure of the thanksgiving in the Burial Service—the wilful severance of overt historical associations with the ancient Church following on the omission of the Black-letter days—the repudiation of the traditionary practice of the Christian Church since patristic days, supported by the Thirty-nine Articles, of reading selected portions of the Apocrypha for the edification of the faithful in the public services—the rejection of the oblation of the bread and wine as an integral portion of the "Offertory" at the Holy Communion,—coupled with an unequal apportionment of toleration and restriction, which is not ashamed to join the permission of railsful administrations and of evening communions, with the excision of the Ornaments Rubric and the limitation of the celebrant's position to the north end, regardless of the distress of those who attach value to the liberty of standing "before the table."

We next quote a pretty strong passage from another letter signed "Malcolm MacColl," and shall then leave the subject with our readers, for the present. "I am prepared to contend that some of the proposals of the Irish Synod merit formal excommunication, and would unquestionably have exposed any Christian body to that penalty in those 'best and purest ages' to which the Church of England appeals. I will confine myself to three such proposals :

1. Confirmation is left optional for clergy and laity. It is recommended, not enjoined.

2. The Holy Communion ditto, in the case of the laity. That is to say : no Irish clergyman or layman need ever be confirmed, and no Irish layman need ever communicate.

3. The Irish Synod declares 'the opposite views of baptism to be equally tenable.' In other words, the Irish Synod deliberately tells every clergyman in Ireland that immediately after 'acknowledging,' in the language of an Œcumenical Creed, 'one baptism for the remission of sins,' he may go up into the pulpit and denounce that article of faith as a fiction and a blasphemy."

OLD INDIANS.

IT is an old saying, that one-half of the world does not know how the other half lives—an aphorism that is peculiarly significant of the relations between Indians and retired Indians. Whither old Indians betake themselves ; in what manner they perform that conjuror's feat of the day—making ends meet ; is a puzzle to many of us in the East ; although no doubt Westbournia and Cheltenham can account for a considerable mumber of Major-Generals and Indian widows *en retraite*. Numbers homeward bound for the last time, appear to sever their connection with the Orient at Brindisi, and are thenceforth lost in the great crowd of humanity, until such time as they may appear in the obituary of the overland mails—always considerate enough to give their names, but not their places of abode. It is odd how few distinguish themselves in another sphere. 'Once an Indian, always an Indian,' seems as good a proverb as 'Once a soldier, always a soldier' ; and it is, we fear, nothing less than a melancholy fact, that business men at home entertain but a poor opinion of the capacity of old Indians for business. There have been too many remarkable failures in the line. When men of the political prominence of Lord Lawrence or Sir Charles Trevelyan degenerate from their Indian high estate to no better occupation than that of unpaid correspondents of the *Times*, it is hardly to be expected that the great ruck of Indian pensioners should hustle themselves into fame and fortune ; but even the effort to do so is often wanting, and it strikes us that too many an old Indian leaves India but to die. It is a lugubrious mission to accept certainly. It is all very fine to talk of laying one's bones in one's native land, when the prospect of doing so is distant and uncertain ; but to shake hands with the sexton over one's own yawning grave is more than sentiment ; and it is not a little surprising with what resignation some very old Indians will face the situation. So far as Brindisi, at any rate, and specially so in the Red Sea, we will find the old *Qui hye* of forty years' Indian service "prattling of green fields," like Falstaff moribund, and asking nothing better than the country turf and wild flowers for his humble monument. Do his views change in the Cenis tunnel, or when he leaves his Indian companions for good? Certainly, we have heard old *habitués* of the St. James' Square club, discoursing [illegible] mortality.

But, to return to the business capacities of our *convives* now in the West, it is to be feared that the novelists and playwrights have much to answer for in taking the bread out of the jaws of old Indians. Thackeray has painted the race as simple in the extreme. Colonel Newcome was a babe at business. Jos Sedley was an ass. These two remarkable characters of fiction are great and living facts for thousands of cockneys, who see in the retired Indian only a dupe or a despot. The stage Indian is still what he always was—a nabob and peppery. No sensible man would entrust a lucrative business to a person who could order "more curricles,"

or call his Richmond villa "Hydrabad Bungalow"; but this is the type of Indian that runs in the heads of our countrymen at home along with royal tigers, mango fish, and Dacca muslins. The artists have made so much of us that they have left us nothing, not even reputation; and we believe it is a fact, for it has come even to this, that of all names that a promoter cares least for on a dubious Direction, is that of an old Indian with an address at Bath or Bayswater. Nevertheless, a few of the fraternity get upon Boards of Companies as Directors, and a pretty hash they make of the business occasionally. It is pleasant to get a guinea, now and then, for attendance, with something to do, which is even better; but this commercial and agreeable distraction for the club-man is no longer what it was. Promoters, we repeat, are shy of the man whose business experiences have been all among the blacks hitherto.

Many Indians of a certain social position out here, have an immense ambition to enter Parliament. The Chief of the Docket Office, for instance, pines in silence for the time when his great gifts as an administrator will be properly appreciated and rewarded in the British Legislature. He lays by rupees for election expenses, and in return for them he gets dead cats and rotten eggs in a Scotch or Irish borough. The free and independent don't recognise an Indian's gifts on the hustings. They would much rather have beer than Baroda, and baccy than Burmah. The unsuccessful candidate curses their ignorance in his heart, and economises in France for the savings he expended upon a patriotic emotion. Probably, he will meet several of his compatriots on the Continent in curious holes and corners, where education and sausages are both cheap, and the wine of the country goes a long way for little. France, Belgium, and Germany absorb old Indians extensively, and, in comparison with the other sons of Albion, they are favorites of the French—a people that still adores the memories of Bussy, Labourdonnais, and other Indian heroes. The intelligent offspring of these Continental Indians, grow up a curious amalgamation of France, England, and Hindostan; and possibly help to preserve the *entente cordiale* in remote districts where even an Indian's paltry pension is something in the eyes of a *légume* feeding population. The old Indian who, on leaving India for good, took up his residence in a lighthouse on the Shetlands, must be regarded as of a morose and unique character; and yet his life, perhaps, was hardly more lonely than that of the old Indian in a London lodging-house, who is too old to make new acquaintances and too ancient to have many of his old friends left. We have often marked such a one, whose sole occupation seemed to be his dinner at a chop-house, and his exercise an everlasting perambulation of Regent Street and the Strand. For recreation he had the hard wooden benches in the parks; and for conversation the seedy man who sits on them, and who will talk by the hour for a cigar, or even a light for his pipe. A more sociable, though possibly a no less fretful existence, is that of the old Indian who settles in his green old age in a Colony, and adopts farming as a pursuit or distraction. There was a time when the old Indian was made much of at the Cape, and in Australia or Van Dieman's Land. That was the period when colonies were young, and an Indian gentleman was a great catch for a fair Waler. The pleasant villas on the Swanee river opened their hospitable doors to the Duck, the Mull, or the Qui Hye, indifferently; and Indians who went there with an idea of breeding horses, bred families, very much, we presume, to their astonishment. But times have changed. The Indian and the Australian meet at Galle now, instead of on Colonial land, and neither, if the truth must be told, thinks very much of the other. Colonel Crawford's "Castra" indeed, will browse a few old Indians on the pastoral location of Gunn's Plains; but the old Indian's aspirations do not usually point towards the bush and the backwoods; but to centres of civilization, where, alas! for human vanity, he hopes to take one of the first places in a vast crowd. He goes home with the fancy of being a Minister of War or a Chancellor of the Exchequer before he dies; and he ends, by great good fortune, as the manager of a monster hotel, or the secretary to a mining swindle. There is very little or no active employment for old Indians out of India, and it is to be regretted that the Civil and Military Services of Great Britain cannot open their bosoms to receive and nourish many an Indian veteran with a good deal of valuable work still left in him. It is for want of work he sickens and dies. An idle life among strangers has no interest for him. He sighs, even amid the Kent orchards, for the stuffy cutcherry in which his best days have been passed, and loses his health and his temper together, in execrating the dearness and the doleful gentility of chilly Cheltenham. The old fellow who misanthropically took to a beacon, had at least the daily occupation of trimming the lamps; as for his *con frère*, who retires to live on a pension, life has nothing left for him but to trim his own toe-nails.

Naturally, the ladies bear the burden of retirement better than the men. It is man's mission to suffer; but it is woman's to suffer and to smile as well. Our terrestrial—we will not say worldly—angels, grin with mutton at fourteen pence a pound. They titivate their bonnets, with the baker's bill in their pockets all the time; and they dance and sing right merrily, even with the school bills coming due, and the exchange at one and eightpence halfpenny the rupee. But they have their sorrows on pension—who has not? Fond memory revives the departed glories of mofussil balls, the joys of mutton clubs, the superior society at Simla, and the good qualities of those attentive Indian servants, deemed beasts and beastly in the olden days. It is our impression that under the stimulus of such vain memories, the retired Indienne takes to novel-writing in despair. Some of these retired dames, have had success in the art, and then any one can write a novel; the only trouble is to publish it. Perhaps, a better future may some day dawn for the mob of pensioners this Empire throws upon the wide, wide world. They may not for ever be condemned to the purgatory of limited means in the Channel Islands, or elsewhere; and, for our own part, we shall heartily welcome the change that enables old Indians to live less like those once fashionable hermits, who were paid a shilling or sixpence a day for dragging on an eremitical and most miserable existence in the midst of the best English society.

GOETHE'S "FAUST."

WE are not unlike the managing company of Goethe's imaginary strolling theatre. The poet is, of course, "in a fine frenzy"; his soul is bursting with great things which he is gasping to utter; he feels that his heart is big with Orphic melodies; and imagines that he need but to sing, and not only the herd of men, but even the woods and rocks should have ears to rapture! But our responsible manager, who finds the funds, and perhaps appropriates most of them, asks: "Will it pay? Your poetical moonshine is exceedingly sublime, after one has dined, but it won't do continually. We want poetry, of course, but we want a thousand things besides, —endless variety, to please the public." Here friend Merryfellow interposes, "All right, gentlemen, you are both right—so far; but you are both too desperately in earnest. Let us display our genius by all means, and let us fill the house, that is, our pockets; but if we strive too seriously we shall defeat ourselves. Try a judicious mixture of folly, and we shall not only amble along with more ease and jollity, but we shall more certainly gain our ends."

In applying all this to ourselves, we are only afraid that in our case, the folly may be too genuine an article. Yet we hope to please our readers, and to benefit both them and ourselves by urging, entreating, or even, if need be, coaxing, them to read Faust again and yet again. It would be little short of impudence to assert that we have anything entirely original, or unusually profound to say on the subject of this greatest of modern poems. Learned or exhaustive criticism we shall, for very good reasons, in no wise attempt. But we shall have done some service, to Anglo-Indians especially, if we succeed in making lovers of Faust return to its perusal with new appetite; in persuading some who have dipped into it, and found it unintelligible, as many do, to try again; and others who have never known it, to attempt to make its acquaintance now. We name Anglo-Indians advisedly; for it seems to us that the lives of most of us here are peculiarly fitted to create the need to which Faust addresses itself, and to fit us for understanding and relishing this divine drama. The books we are most of us deep in, may be blue or buff; no matter whether they are bound in paper, cloth, calf-skin or sheep-leather: are we not all over head and ears — if not immersed heart and soul — in some eager pursuit, which tries to their utmost the nerves and sinews of our being; and do not most of us at times suspect, that, as regards anything fit to be called a summum bonum of human life, we have been but catching at a shadow; or interminably hunting, from room to room, a flying figure, of which we but occasionally catch a hint, in a flitting perfume or the rustle of a curtain? And to engage in this breathless chase how much have we given up and left behind us! Have we not bartered many of our dearest things—some of us, mayhap, our all—for the *something* that we are striving for, and have not got? Let us confess that sometimes, when alone in the cool verandah, under the all-beautiful moon, when

> "Solemn thoughts within us rise,
> Too holy for the garish light,"

we feel within us the "secret, unknown smart" the infinite yearning that India or the whole world could not satisfy; and the great

problem of life, as to what is really worth living for, and how to attain it, rises up and craves solution. Of this problem, Faust is one of the sublimest statements; it is unfortunately a statement without a solution; for, however easy it may be to prate about it in endless platitudes, it remains a fact, that no complete and final solution of it has yet been published; for each man of us must solve it for himself, and success or failure is in the fullest sense a matter of life or death. So fearfully and wonderfully are we made! Much however has been gained, if we have learned to state the problem wisely; much, if we can intelligently comprehend the statement of it by one of the great and wise. Goethe's statement of it in Faust, has more than once been ably summarised; but such summaries are of little use, till we have read deep into the heart of the poem. Let such as may not have done so, attempt to do so now; in the original if possible; if that may not be, in the prose translation of Hayward and the poetical version of Blackie.

The crowning greatness of this poem lies perhaps in this: that it sets before us, with unequalled clearness of truthful delineation, and with rare vividness and magical power of dramatic action, at once the secret inner life of an individual of lofty nature but misguided instincts, and the outward life of the world in which he lives—acting upon him indeed, and acted on by him, yet on the whole moving in its own destined course, by no means understanding him, and scarcely heeding his anxieties and his labours—very far, at least, as he imagines, from fitly rewarding them. It seems perfectly evident that all attempts to pourtray the inner life of a man, must be failures, more or less, if we have not along with them a full and living vision of his outer environment. Goethe has given us both in this poem, with almost unexampled skill. But, whereas, in this consists the great excellence of Faust, in this also lies the difficulty of readily comprehending it. We must comprehend at once the nature and development of Faust's inner life, and the strange and to us unfamiliar world in which he lived; and these are so different from each other and yet so inextricably entangled. Faust, like each of us, is in great measure, the creature of his time and of the circumstances in which he was placed, and yet, perhaps, the poem leaves no impression stronger on the reader's mind than the singular loneliness of the man, no matter where we find him; whether in his silent gothic chamber among books, parchments, skulls and phials, alone with midnight and the moon; in conversation with his drivelling fellow-doctor; walking among the merry holiday-makers; in Anerbach's wine-cellar with beer, tobacco, and bacchanals about him; even in the company of Margaret; even in his converse with the devil, Faust is ever the solitary man. No one, not even Mephistopheles, understands him. He has yearning emotions, a life within him, that are incommunicable. He is in the world, but not of the world. This inner, solitary life, the poet's genius reveals to the reader, giving at the same time, with all the colour and motion of life, a picture of the man's outer world. Nowhere can we see more distinctly than here, the Me and the Not-me; nowhere, but in our individual lives. And we live in such a whirl of business—we and all things around us are so full of labour, that it is only at certain seasons that the truth strikes us forcibly, that each of us has a hidden life which, not only the outside world, but even our nearest and dearest never fully know. A man looks across the table to his boon-companion—his fast friend, with whom he is hand and glove, as the saying is—and the thought comes across his mind: Ah, my friend, you think you know me thoroughly, and can read off all my little peculiarities at sight, but how little you really know of my secret feelings, desires, and aspirations; I am not altogether the man you take me for. The souls of David and Jonathan are knit together, but there is in David a depth of baseness as well as a height of spiritual endeavour, which not even Jonathan has seen. Portia is dear to Brutus

"As are the ruddy drops,
That visit my sad heart,"

and yet she complains, perhaps with more cause than she dreams of, that she dwells but in the suburbs of his mind. We feel a self within us that is not fully comprehensible by others, partly because we have not yet fully comprehended it ourselves, and partly because it is too weak to stand forth in its true form, unbent and undisfigured by the uncongenial forces that hem it round. And hence the old-world maxim "Know thyself" is as needful as it is true that others know us not. And as it is of the utmost importance to know our own hidden selves, it is of surpassing interest as well as the utmost value to know the secret life of others, especially of remarkable men. It is also true that the inner life is only to be understood by viewing it as it acts upon outward things, and is acted upon by them. Now, Goethe has here, in the most wonderful manner, set before us a remarkable inner life, placed in most remarkable circumstances; And to understand the poem, we must study the man Faust and also try to understand, as well as we can, the strange German world of the sixteenth century, with its philosophies, religions, and marvellous superstitions. The ordinary English reader will find a good deal to help him in respect of the latter, in Professor Blackie's introduction to his translation of Faust; and as for Faust himself, he who has deeply studied the wants, aspirations and weaknesses of his own inner-self, will understand him and sympathise with him, if he can but patiently study him. And on studying Faust he will study Goethe, who, it is well-known, has here depicted a phase of his own spiritual experience; and the value of that experience is priceless, whether in the way of example or of warning, it matters not at this stage to enquire. Here, at least, is, as we have said, one of the sublimest statements of a problem which every man must solve, if his life is not to be a miserable failure; and if we have not also a clear solution of the problem it may not be unimportant to know that certain methods of solving it are false and dangerous.

One or two features of "Faust" we hope to be able to consider, not without profit, at a future time.

PEACOCK'S WORKS.*

WE know of no richer intellectual treat that we can recommend to Anglo-Indians, wearied with the monotonous details of every-day existence, than a perusal of these volumes. Though more than half-a-century has elapsed since a great portion of their contents was first published, time has done little to rob their humour of its charm, or their satire of its point. The Editors are entitled to the gratitude of all true lovers of literature, for having rescued from oblivion and presented to a generation which had scarcely heard his name, the works of so brilliant a writer as Thomas Love Peacock.

Our author was not unconnected with this country, having been employed from 1819 to 1856 in the Examiner's Office of the East India Company. It was the publication of his earlier novels, that introduced Peacock to the notice of the Directors, who, in 1836, promoted him to the chief post of Examiner of Indian Correspondence, on the retirement of James Mill. It is remarkable that, while most of his stories were written in the prime of life, he should have produced his best work, as many critics think, at the age of seventy-five, after an interval of nearly thirty years' silence. *Gryll Grange* was published in 1861, and, in 1866, Peacock died, at the ripe age of fourscore years. There are few living men, we fear, who could lay claim to his versatile accomplishments. Poet, musician, scholar, humourist, above all, as Lord Houghton says, a man of letters, he seems to have adorned everything he touched, and must have been a delightful and unconventional companion. His stories or novelettes are *sui generis*. They have little or no plot. A parcel of people "perfectibilians, deteriorationists, "statu-quo-ites, phrenologists, transcendentalists, political econo-"mists, theorists in all sciences, projectors in all arts, morbid "visionaries, romantic enthusiasts, lovers of music, lovers of the "picturesque, lovers of good dinners," thrown together in a country house, arguing strenuously in defence of their different hobbies—these form the staple of most of his tales. But how amusingly they talk! How cleverly the follies of the day are laughed at and satirized! Every page sparkles with genuine humour and healthy, if at times severe, satire. The quotations in learned languages, though often recondite, seem never pedantic; and the most abstruse discussions are diversified by the most charming lyrics. In the first volume are contained "Headlong Hall," "Melincourt," and "Nightmare Abbey," which were published between 1816 and 1818. "Melincourt" will probably be voted the dullest of Peacock's stories. It is too long, and the conversations get rather prosy. Still, there is much that is amusing in the idiosyncrasies of the suitors of the heroine, the fair Anthelia; in the discussion on "the truth of kings;" in the account of the election for the rotten borough of one vote, and in the description of Cimmerian Lodge and its ridiculous inhabitant, Mr. Mystic, the transcendentalist, who can see only in a thick fog. The "rustic wedding," too, is a very comic scene. "Headlong Hall," is full of rollicking fun, and "Nightmare Abbey" is a truly admirable farce. The hero of this is Peacock's friend, Shelley (the poet), under the name of Scythrop, and Coleridge figures as Mr. Flosky (a lover of shadows). Scythrop and his father, Mr. Gloury, live in a dreary mansion on the coast of Lincolnshire, and form as gloomy

* The Works of Thomas Love Peacock, including his novels, poems, fugitive pieces, criticisms, etc., with a preface by the Right Hon. Lord Houghton, a biographical notice by his grand-daughter, Edith Nicolls, and portrait. Edited by Henry Cole, C.B. in three volumes, London: Bentley, 1875.

a pair as can well be imagined. Even their servants were all chosen by one of two criterions—a long face or a dismal name:—

Mr. Gloury had christened Scythrop from the name of a maternal ancestor, who had hanged himself one rainy day in a fit of *tedium vitæ* and had been eulogized by a coroner's jury in the comprehensive phrase of *felo-de-se*, on which account Mr. Gloury held his memory in high honour and made a punch bowl of his skull.

Scythrop devours romances and German tragedies with Mr. Flosky, and seeks to reform the world. He publishes a transcendental treatise, of which only seven copies get sold. Seven, however, he holds a mystical number, and thinks the omen good. He falls in love with his cousin, Marionetta, to the great disappointment of his father, as she is far too merry and cheerful for his taste. Scythrop fills his ancestor's skull with Madeira and threatens to drink the contents if Mr. Gloury oppose his wishes. "Mr. Gloury who took the Madeira to be some deadly beverage, gave the required promise in dismal panic. Scythrop returned to Marionetta with a joyful heart and drank the Madeira by the way." Scythrop, however, is a great deal too devoted to mystery to love his cousin like an ordinary mortal. Marionetta thinks him unhappy and consults Mr. Flosky on the subject, who makes the matter still more mysterious, adding, that his transcendental reputation would be ruined forever if any person living could report that he had obtained any information on any subject from him. Marionetta and Scythrop make up their differences; Mr. Gloury is reconciled to the necessity of their making each other miserable, and is about to fix the day for their union, when Scythrop tells him he is too precipitate, which naturally makes his cousin very angry. She takes refuge in her room, and Scythrop stalks gloomily to his tower, where he finds a young lady of dazzling grace and beauty dropt as it were from the skies. She calls herself Stella, has purchased one of the seven copies of Scythrop's treatise on Philosophical Gas, and is mysterious enough to suit him capitally. Still he loves Marionetta, and his perplexities between the two young ladies, are highly diverting. Stella keeps to her rooms in the tower, unknown to the rest of the inhabitants of the house, until unearthed one day by Mr. Gloury paying an unexpected visit to his son.

This is a truly comic scene. The lady, who turns out to be the daughter of Mr. Gloury's friend, Mr. Toobad, on finding that Scythrop is engaged to his cousin, renounces him, and Marionetta does the same.

Scythrop knew not what to do. He could not attempt to conciliate the one without irreparably offending the other, and he was so fond of both that the idea of depriving himself for ever of the society of either, was intolerable to him. He therefore retired to his stronghold of mystery; maintained an impenetrable silence, and contented himself with stealing occasionally a deprecating glance at each of the objects of his idolatry.

In the end, both the young ladies leave Nightmare Abbey. Scythrop calls for a pint of port and a pistol, but substitutes a boiled fowl and Madeira, and on his father undertaking to bring back to him in a week one of his flames, Scythrop consents to live for seven days. Just before the expiration of that period he makes the butler put back the clock, and Mr. Gloury returns alone bearing letters from Marionetta and Stella to the effect that they are both engaged.

Scythrop tore both the letters to atoms, and railed in good set terms against the fickleness of women.

"Calm yourself, my dear Scythrop," said Mr. Gloury, "there are yet maidens in England."

"Very true, Sir," said Scythrop.

"And the next time," said Mr. Gloury, "have but one string to your bow."

"Very good advice," said Scythrop.

"And besides," said Mr. Gloury, "the fatal time is past, for it is now almost eight."

"Then that villain Raven," said Scythrop, "deceived me, for he said that the clock was too fast: but as you observe very justly, the time has gone by, and I have just reflected that these repeated crosses in love, qualify me to take a very advanced degree in misanthropy, and there is, therefore, good hope that I may make a figure in the world. But I shall ring for that rascal, Raven, and admonish him."

Raven appeared. Scythrop looked at him very fiercely two or three minutes, and Raven, still remembering the pistol, stood quaking in mute apprehension, till Scythrop, pointing significantly towards the dining-room, said "Bring some Madeira."

Thirty years intervened between the publication of "Crotchet Castle" and "Gryll Grange," and it is difficult to say which better deserves the palm of excellence. If the former is the more amusing, as its satire is certainly fiercer, Peacock's wrath being particularly directed to his three *bête noires*—Scotchmen, policital economy, and Lord Brougham—the latter is a much better constructed, and exceeding graceful story. *Lenit albescens animos capillus*, and advancing years rendered Peacock more tolerant and more genial. In each of these tales, we have an admirable portrait of the old school of clergyman, equally fond of learning and good dinners, of Greek, poetry, and Madeira. The Rev. Dr. Opimian, of Gryll Grange, is a refined copy of the Rev. Dr. Folliott, of Crotchet Castle, and we would give a great deal to meet either of such scholarly and sensible parsons in these degenerate days. What can be more brilliant than the talk round Squire Crotchet's dinner-table, on different schemes for reforming the world; what more humorous than Dr. Folliott's expostulation with his host, on the propriety of his "Sleeping Venus?" Then the different theorists, all mounted on their hobbies, and riding them to death, make us die with laughing. "Gryll Grange" contains two of the best of Peacock's ballads, "The Death of Philemon" and "Youth and Age." The hero is Mr. Falconer, a young gentleman living alone, and waited upon by seven young women, all sisters and models of propriety. His enthusiasm for Homer and Pindar is the bond of union between him and Dr. Opimian, who introduces him to Miss Gryll at the Grange. With her he soon falls in love, but is perplexed, not only by rivals, but with what to do for his seven *fair attendants*, as he knows his wife could not tolerate such an establishment. These, however, find husbands of their own; Miss Gryll accepts his addresses; they enact an Aristophanic comedy, and all ends happily. It is a charming story, and the underplot, containing the courtship of Lord Curryfin, and Miss Niphet, is particularly pretty.

Space fails us to do more than mention two of Peacock's tales of a different description to those we have enumerated. The first of these, "Maid Marian," is a prose idyll of the days of good King John, when might was right, and we are transported to forest life and the dark ages. Robin Hood is the hero, and the story contains some admirable lyrics, notably the ballad of the Damsel at the Ferry.

The "Misfortunes of Elphin" was written to bring in Peacock's translations of Welsh bards, and deals with the mythical times of King Arthur. Here figures Seithswyn, "the immortal drunkard," and here occurs the famous war song—"the quintessence of all the war songs that ever were written,"—beginning—

> The mountain sheep are sweeter,
> But the valley sheep are fatter,
> We therefore deemed it meeter
> To carry off the latter.

Seithswyn's drunken speech in praise of "venerable antiquity," is a capital parody of one of Canning's orations, but we will not discount our reader's enjoyment by quoting it.

We have spoken in high praise of these tales, and we have no hesitation in saying, that *they are the best things of their kind that have been published for a long while.* They will bear reading and re-reading, and every time some new pleasantry will be discovered. We have not attempted to criticise Peacock. Our readers must do that for themselves; but we are confident that they will thank us for having indicated such an inexhaustible fund of wit and humour, as is at hand for any one who can appreciate such qualities, and is willing to lay out a few rupees in purchasing the three volumes that form the collected works. We will conclude our notice by quoting from "Headlong Hall" the pretty stanzas on Love and Opportunity—

> Oh! who art thou so swiftly flying?
> My name is Love, the child replied:
> Swifter I pass than south winds sighing
> Or streams through summer vales that glide.
>
> And who art thou his flight pursuing?
> 'Tis cold Neglect whom now you see:
> The little god you there are viewing
> Will die if once he's touched by me.
>
> Oh! who art thou so fast proceeding,
> Ne'er glancing back thine eyes of flame?
> Marked but by few, through earth I'm speeding,
> And Opportunity's my name.
>
> What form is that, which scowls beside thee?
> Repentance is the form you see:
> Learn, then, the fate may yet betide thee;
> She seizes them who seize not me.

BARTON'S BENGAL.

(Continued.)

THE chapter on the Antiquarian *Relics* of Bengal is an exceptionally good one, and will amply repay a careful perusal. In the opening paragraph the following sentence occurs: "Of real history of the olden times, the reminiscences in Bengal are very indefinite; but such as they are, they will be best understood with the aid afforded by the antiquarian remains still extant, and the two together may enable the general reader to form some precise idea *of the amount of civilization which was attained, and which has now gone by.*" There are two distinct propositions implied in the above. That the antiquarian relics of a country are a great help in unravelling its by-gone history, we do not feel disposed to bring into question; but the other proposition involved in the lines we have italicised.

does not, on the face of it, bear such an inviolable stamp of truth as to be accepted without reservation. If Mr. Barton wishes us to accede our unqualified assent to the inference he deduces, *viz.*, that the antiquarian remains of a country are a safe index of its civilization, without taking into account the actual condition of the mass of the people comprising its population, we cannot help differing from him in his hastily drawn conclusions, as all the teachings of the past tend to refute his views of the subject. From the earliest times of which we possess any authentic record, we find that the upper classes of an Indian community monopolized its wealth, while the tyranny of centuries prevented the birth of a middle class, which is the natural buffer in society, and reduced the majority of the lower orders of the people to a state of the most abject poverty. The latter not participating in the wealth, which their labour helped to accumulate, lived from hand to mouth, merely providing for the exigencies of the hour, and continuing in a condition of apathetic degradation to which "the oppression of ages had taught them implicit submission." Political power they had none, for the stringent laws against the despised Sudras prove beyond doubt, that they had no share in the enjoyment of those civil rights and immunities which the twice-born classes were entitled to. Hence we are at a loss to determine of what their civilization consisted. Looked at from a distance, nothing appears in a more favorable light than this so-called civilization of the Hindoos, hallowed by the veneration of antiquity; but when we attempt to analyze its component parts and submit it to historical tests, we find it to have had the semblance, without the reality, of one; and that it was all hollow, and a mere empty sound devoid of the signification which the moderns attach to the term. It is true there did exist a literature, and schools of philosophy scattered all over India; but the repositories of learning then extant, were confined to a limited number among the upper ten, who had both the time and the privilege of indulging in such luxuries. But in regard to the generality of the people, who were deprived even of the liberty of reading their religious works, all the wisdom of their countrymen was as a sealed book. In support of our assertion we will quote a short paragraph from the Transactions of the Royal Asiatic Society, Vol. I, p. 482. Writing half a century ago, Mr. Glyn says: "The nations of Europe have very little idea of the actual condition of the inhabitants of Hindustan; they are more wretchedly poor than we have any notion of. Europeans have hitherto been too apt to draw their opinions of the wealth of Hindustan from the gorgeous pomp of a few emperors, *sultans*, *nawabs*, and rajas; whereas a more intimate and accurate view of the real state of society would have shown, that these princes and nobles were engrossing all the wealth of the country, whilst the great body of the people were earning but a bare subsistence, groaning under intolerable burdens, and hardly able to supply themselves with the necessaries of life, much less with its luxuries."

It would be a mere waste of time to multiply instances from the history of the Aztecs, the Incas, and other nations of the American continent, to show, that the possession of immense wealth and power by a few, to the prejudice of the rest of a community, does not by itself argue a high state of civilization; but a parallel in the history of Egypt is so striking that we cannot help making a passing allusion to it. From the time of Herodotus down to the present day, the pyramids, and other monuments of art, stand conspicuous among the wonders of the world, and all who have seen them speak in raptures of the stage of enlightenment which their builders must have reached, in order to produce such lasting memorials of their conception of the beautiful and the grand. But with some this admiration is changed into a feeling of disgust, at the recollection of the almost incredible waste of human lives in the erection of these useless works, when they hear that "two thousand men were occupied for three years in carrying a single stone from Elephantine to Sais; that the canal of the Red Sea alone, cost the lives of a hundred and twenty thousand Egyptians; and that to build one of the pyramids required the labour of *three hundred and sixty thousand men for twenty years.*"

Almost every district in Bengal has some spot or other consecrated to the mythology of the Hindoo Pantheon, of which the most famous is Gyah, where every Hindoo, anxious to secure the admission of his ancestors into heaven, must repair at least once during his life for the benefit of their souls. "The story about it is, that, in the Satya Jug, there was an infidel of the name of Gyah, who, by his sanctity and mortifications, obtained power over the gods, and compelled Vishnu to grant him the boon of being able to send up every enfranchised soul to heaven, on devout application being made to him for its redemption. As this very materially reduced the authority of Yama, the king of Hades, a complaint was filed by him before Brahma, who, having determined to outwit Gyah, besought him to allow a great feast to be given on his pure body, the touch of which secured salvation. The giant agreed, and lay down at the place now called after him. The feast was given; but the infidel was never allowed to get up again. All the gods, with the assistance of large rocks, held him down, and he is believed to be so held down still, the rocks placed above him being alone visible to mortal men. The old virtue of touching his body still remains; and offerings by votaries, for the relief of their ancestors, at once throw open to them the portals of heaven." It appears that while the mortal combat was raging, the foot of one of the gods seemed to have stuck hard and fast in the stone: "The most celebrated and elegant building extant, is known by the name of Vishnupad, and was erected by Ahalye Bye, a Mahratta princess, who also rebuilt the temple of Benares. The *mandir* (shrine) ever the object of worship (namely, the footmark left on stone by Vishnu in his struggle to hold down Gyah) is an octagonal pyramid about 100 feet high."

One Bhim Sing appears to have played the part of Hercules in the traditions of Bengal:—"At Uphroul there is a monolith called Bhim Singh's *lathee*, supporting a lion carved in stone. Its depth below ground has not been ascertained, but is believed to be great. The height of the pedestal is 21 feet, or including the top of the lion's head, 30 feet above ground." A being who could carry such a weight, in the shape of a walking stick, without incommoding himself seriously, deserves to have his name coupled with the following adventure: "Near Monghyr are the ruins of the fort, in which Irasandha is said to have held 80,000 princesses (!) in confinement, intending to sacrifice them to the gods, but who were released by Bhim when Irasandha was slain." Of the famous temple of Pooree, Mr. Barton says: "In Orissa the most important monument is the temple of Juggernauth the site of which, says the fable, was indicated by a holy crow, as being the place most highly favored by heaven. The temple has the reputation of having been erected in the Satya Jug, or Golden Age, by Rajah Judradyama, a King of Dogein. At a subsequent era it was entirely buried in sand by a terrific storm, but was restored by Rajah Anang Bheem Deo, in A.D. 1198."

In Eastern Bengal the Dacca division is famous for its ruins. The most important of these is a Hindoo Temple, in the suburbs of the city, dedicated to the goddess Ishwari. In its palmy days no less than ten buffaloes and fifty goats were daily sacrificed at its shrines. It is said to have been erected by Bullal Sein. The next in antiquity is the ruined fort and palace at Lall Bagh, which "have a picturesque appearance, with romantic old walls and battlements, and a beautiful mausoleum, erected by Shaista Khan to the memory of his daughter Beebee Pari." It is rendered memorable from the circumstance of a skirmish having taken place there, on the 23rd of November 1857, between the Naval Brigade under Lieut. Lewis and the mutinous sepoys of the late 73rd N.I., in which the latter were completely defeated. The paucity in the Mahomedan element of the population as compared with the Hindoos in Behar, is accounted for by "the sword-in-hand proselytism of the conquerors, who found more converts among the timid races of Lower Bengal, than among the people of Behar and Chota Nagpore, who were able to repel it. . . . The majority of the former are descendants of converts from the lower castes of Hindooism, and may be said to have no religion or rule of life, being completely ignorant of even the elementary doctrines of the Koran. They are divided into communities, according to the occupations they follow, many of the divisions being quite as exclusive as the Hindoo caste, in regard to marrying and eating with each other."

As to the people of Behar, "Education is not much sought after by them, and no partiality whatever is shown for English education, which is rather avoided as one of the principal causes of irreligion; they being strongly attached to the old fashioned religion and worship of their ancestors. The general name borne by them is that of Hindustanis, the language spoken being the Hindi, which is also the language of Upper India." In one short and pithy sentence he disposes of the commonly received opinion on the mendacity of natives: "They are all, Hindoos and Mahomedans alike, generally characterized by cunning and deceit, and have for ages retained their untruthfulness." Alluding to the conservative propensities of the Ooryahs, our author says: "They will adopt no change whatever, however convenient, and even to the present day use date-leaves as writing-tablets, and write on them with a sharp iron style—ignoring the use of pen, ink, and paper." Speaking of the hill tribes of Bengal, use

says: "The Khariahs are a hardy race, stoutly made and muscular, but as a rule short-lived. All the rest are frontier hill-tribes, most of them brave and warlike; but, like all savages, treacherous, revengeful, and untrustworthy. Might is right with them, and war, murder, and rapine, their delight. But they have many good qualities, and are susceptible of improvement." Mr. Barton is greatly exercised by the two peculiarly striking facts connected with the province—"namely, the sickness of the country and the poverty of its inhabitants." He attributes this to the character of the native government under which the people have lived. With solitary exceptions, the rule of the Hindoo rajahs was an oppressive one, but "the Mahomedan era was far worse than the Hindoo period. Even in ordinary times, it was one of anarchy and confusion; and in extraordinary times, which was its most frequent phase, there was no end of troubles. The quarrels between the Affghan and the Moguls were incessant." The chiefs were the heads of their own police, and where the wolf was the guardian of the flock, little mercy, as might have been expected, was shown to the innocent. The picture he draws of the lawlessness of the times is harrowing in the extreme: "With all these elements of unrest, was it possible for the people to be anything but poor? Accustomed to all sorts of oppression, liable to be deprived of their hard earnings almost by anybody who considered it worth his while to rob them, was there any inducement for the ryot to work to lay by? All he cared for was to provide himself with the immediate necessaries of everyday life. Capital he dared not accumulate, for to do that would have been to court his own destruction. Even the surplus of his raw produce he could not lay by without exciting the cupidity of evil men, against whose outrages he had no protection. Scarcities and famines were of constant occurrence, happening whenever there was a deficiency of crops by inundation or drought; the poor had no surplus either of store or money to tide over the day of trouble. The consequence was, that when the crops suffered, the people died."

With the advent of the English rule, however, things did not mend so rapidly as might be imagined, for very obvious reasons: "Up to 1790 that administration was as bad as it possibly could have been, for it was in truth even worse than that which had immediately preceded it. All the evils culminated during the first days of the English rule. The officers of the Government were corrupt, and their perquisites exceeded the booty of highway robbers; the zemindars followed the profession of robbers by choice, and levied a sort of blackmail from the ryots; even the ryots themselves were obliged to turn plunderers, and fell upon those of themselves who were least able to resist. Dacoits went about in gangs of from three to five hundred men, and even bodies of a thousand men were not unknown. Towns were plundered, manufactories burnt; and there was no police, no courts of justice, civil or criminal, to protect or afford redress. When we remember that this was actually the state of things for years, do we not find the poverty of the people, in the midst of milk and honey, accounted for?" Besides these, there were other extraneous causes in operation which may have assisted in reducing them to the lowest depths of poverty: "(1) The law regarding the sub-division of property as it operates in Bengal; and (2) the inordinate expenses the people of all classes unnecessarily incur in *poojahs*, marriages, and funerals." Mr. Barton seems to think that the ryots of Behar are better off in pecuniary and other matters than their brethren of Bengal, as the following comparison will show: "Both are always more or less in debt; but the debts of the former are generally petty, while those of the latter are often very considerable, the interest they have to pay to the money-lender eating up their substance. The former being more robust than the latter, and addicted to the use of arms, are also less troubled with illegal exaction, against which the latter have perpetually to contend. An illegal tax can, of course, be contested in a court of justice, but the zemindar has the power of enhancing rents; and this, which would be perfectly legal, would be felt by the ryot as far more oppressive. In Behar the landlord is afraid to do either one or other, as he knows the demand is sure to be refused and contested, not in a court of justice, but by force. But in Bengal a zemindar is able to enforce almost anything that he has a mind to, and the ryot has no refuge except in his forbearance. There is not much love lost between the parties in either place; but in Behar the zemindars and their tenants respect each other—a feeling which is not inimical to mutual attachments, and a confederation of interests in case of need, which accounts for the devotion of the people of Jugdespore evinced for Kooer Singh and Urmour Singh during the mutiny of 1857, the like of which it would be very difficult to evoke from the ryots of Bengal, whose feeling towards their zemindars is one of unmitigated distrust."

EDITORIAL NOTES.

THE war scare in Europe was no sooner over, than every one seems to have renewed the cry of "Peace, peace" louder than ever. Germany never meant anything but peace; France dreaded nothing so much as war; Russia and England would not brook a disturbance of tranquillity on any account. Spain, of course, has its internal troubles; but on the whole all the States want to be at peace each with his neighbour. Russia has seen it a favourable moment for renewing proposals for a Conference of the Powers at St. Petersburg, whose object "will not be a formal treaty, but simply a protocol, enumerating the principles of international law, and a declaration, in which the signing Powers would announce their readiness to follow as closely as possible the principles it set forth." The home papers characterise the proposal as a new kind of chaff. Perhaps it is, and yet we do not quite see that anything in the conduct of the Czar Alexander hitherto, has belied very strongly the sincerity of his professed desire for peace all round. Certainly it is for his interest to cultivate peaceful relations with his neighbours, and among them; and though it does not follow that his proposed Conference is desirable, or likely to be useful, there appears no good ground for supposing that any sinister purpose underlies the proposal. Still there is a class of prophets who, from a too loud and eager profession of peaceful intention, would augur war. Before the late Franco-Prussian war, many good people were beginning to hope that the battle-flag would soon be furled

"In the parliament of man, the federation of the world,"

It is often when the song of peace is loudest, that it is suddenly broken in upon by the voice of the trumpet.

***

HERE in Asia, at least, we are not, in outward appearance, nearly ready for a millennium. It will not be known for some time yet whether we shall have to fight Burmah at present or not. The probability is, that if we do not do so now, it will simply be relegated to the not distant future. Our relations with China, too, are ominous enough. And some would have us present a sterner front to Russian protrusiveness on the banks of the Atrek and elsewhere. No one can object to the Foreign Office being kept wide awake as to the movements of our active neighbours in these quarters; and when a treaty is made it ought certainly to be adhered to, or not broken without consent on both sides. But we believe Russia has a destiny in Asia, which we cannot resist, and which need cause us no panic, as it does not, we think, at all interfere with our own.

***

IT is time to enquire seriously what, and what quality of, results, are being obtained from the system of house to house visitation, as carried on by the zealous agents of Zenana Mission schemes. While no one doubts the zeal and excellent motives, and other high qualifications of the ladies who are employed in this work, we believe there is nevertheless a growing feeling of dissatisfaction in well-informed quarters, with the success of the efforts put forth, when looked at from an educational point of view. When we speak of well-informed quarters, we, of course, speak relatively, for one of the main difficulties connected with the system is the impossibility of obtaining anything like exact or reliable information. That which we are anxious to point out, is, that the system of house to house visitation, which is exceedingly praiseworthy, if nothing better can be done, is never likely to afford any important practical result, so far as the education of Hindoo females is concerned. What real education can be imparted by a weekly visit to a zenana, of an hour or an hour and-a-half's duration, especially when the several ladies supposed to be taught, may attend during the teacher's visit or not, as they or their husbands please? The self-denying ladies who are engaged in the work, are glad of every opportunity of doing good, however limited it may be, and often, we understand, teach a whole household of ladies in this way for a fee of one rupee per month for the house. Now, as the chief aim of these lady-visitors is to do their pupils a religious, rather than an intellectual, benefit, we do not deny that even such small opportunities may afford the possibility of making a religious impression. And, doubtless, even such brief contact with the pious and intelligent minds of the visitors may produce an effect, independent of the amount of instruction actually imparted. But the educational results of the system are, and must continue to be, extremely imperfect, and it can only be persevered in, and supported by churches, societies, and by Government aid, on the ground that it is the best attainable method of reaching the minds of our native sisters. We believe it will soon be superseded, to a great degree, by a school system. There are

schools already in existence attended by Hindoo girls of the class that is reached by house to house visitation. One such school we know, conducted by an excellent lady belonging to one of our Zenana Missions, and we believe she has usually an attendance of about fifty. It is believed that no great difficulty would be experienced in getting a sufficient attendance at such schools, if care were taken to locate them in very retired situations. Government should give its attention to this subject. It has shown no unwillingness to aid the present system of zenana labour. It would find a far more satisfactory result from a school system, especially if it would go into the scheme with some heartiness, and not only give grants-in-aid, but provide, or help to provide, trained teachers for the work. There would doubtless be at first some objection to inspection of these schools, except by ladies, but that is a difficulty which would, we think, be shortly overcome. As we said at the outset, we think it is at least time that the present system should be tried on its merits, and we believe it will be found not to be the best that can be adopted.

***

TENNYSON'S drama of "Queen Mary" has appeared, and, as usual, almost simultaneous criticisms of the work have been published by the London papers. An author like Tennyson, whose works are the product of immense and protracted labour and study, must feel a little chagrined to find the offspring so painfully delivered from his brain, taken up in this off-hand manner, hastily glanced at, criticised, and instantly assigned its position among its brethren and fellows. It must be equally unsatisfactory to him to learn, on the one hand, that his dramatic power is next to that of the author of Henry V. of whom he is a worthy successor; and on the other hand, that his work is a careful and praiseworthy study of the time of Mary, but that it is utterly destitute of dramatic power; that his humour is weak, and his characters mere talking ideas. We must reserve our judgment. Though we should not have supposed that the Laureate was highly gifted with the peculiar genius of the dramatist, it would yet be painful to be obliged to concur at once in the sudden judgment, that, in the full maturity of his powers, he has deliberately hazarded his fame in the highest sphere of the poetic art, and has utterly failed. Such, however, is the verdict of the *Athenæum*, though some critics differ.

***

ANGLO-INDIAN Society can scarcely feel flattered by the criticisms occasionally cast upon it by English writers. It is not pleasant to be told that you are absurdly exclusive and make preposterous pretensions to gentility; that you are at the same time dull and frivolous; not too intellectual, and not by any means too moral. The charges would be particularly unpleasant if we felt that they were at all true; but fortunately there is no need to come to this mortifying conclusion. Indian society has its faults, like all other societies that we have ever heard of; but fairly judged these may be generally considered consequent upon the peculiar conditions of the life we lead in this country. Our conventional existence is a trifle monotonous, it must be confessed; and there is a want of that variety of *personnel* which gives life and vigour to social intercourse in Europe. Officialism is apt to be too exacting; we have something too much of "shop"; there are more demands in the way of calls than is consistent with the climate; our dinner parties are too much like one another; and meeting the same people is apt to impress with a gentle melancholy those who have been accustomed to society seasoned with strangers. But what then? Whoever knew officialism anywhere to be otherwise than exacting when it was in a position to take the lead? Whoever knew "shop" to be abjured when men of the same profession or pursuits were gathered together? And as for such matters as calls, they sit very lightly upon most of us and are got over without much ceremony. The requirements once complied with, people in India are more free and familiar together than they would be anywhere else upon short acquaintance. There appears to be a general understanding that when they once meet no time is to be lost if they are to know one another. Dinner parties are sometimes distressing, but we should find them more distressing still were we left out of them; and we must make our minds to meet the same people if there are no other people to meet. We hear complaints of cliqueism; but there is cliqueism everywhere, and it would be difficult to find a state of society in which a great many people do not consider themselves a great deal better than a great many other people, and do not care who knows it. We have only to look at home if we wish to find examples of this kind, and watch the jealousy with which social pretensions are canvassed among our countrymen, and the care taken to make the investigation of "who's who" as unpleasant as possible. Here at any rate there is no pushing: in England there is so much of it that people worth knowing have more than enough to do in keeping off intruders. Above all there is no inordinate homage paid to wealth. People who are able to be hospitable get more attention paid to them than people who are not, as will happen in the best regulated societies; but we know of nothing worse than this, and if people who cannot keep pace with other people receive fewer favours, it must be remembered that at home they are altogether left out in the cold.

***

THE Prince of Wales will leave London for India in the early part of October. A writer in the *Bombay Gazette* informs us that many friends of the Prince have made attempts, so far in vain, to induce him to go from India to Philadelphia, *viâ* San Francisco, and there witness the inauguration of the centennial exhibition. Indeed a special request that His Royal Highness might favourably consider the proposal has been made by the English Commissioners to the Exhibition. The arrangements for the Prince's comfort on board the largest of the Anglo-Indian troopships, the *Serapis*, are on a scale of exceeding grandeur, "The ship will, indeed, not only externally but internally resemble a magnificent floating palace. The Prince's bed-room, an airy chamber, is being constructed on the starboard side of the vessel on the saloon deck. The part of this deck which hitherto has supplied the long mess-room for officers going through the Suez Canal, has been divided by silk curtains into three separate chambers. The first of these and the principal apartment of the ship, is a state reception room." The Flying Squadron, under Admiral Sir Rowley Lambert, C.B., with Lord Charles Scott, son of the Duke of Buccleuch, as Flag Captain, will meet the royal convoy at Aden, and thence conduct H.R.H. to Bombay.

***

AN esteemed correspondent referring to a visit to the Positivist School in London, says: "I was astonished, not, I mean, by anything startling or eccentric in the ceremonies I saw, but at their extraordinary dullness. Comte, as everyone knows, legislated in true French fashion for the entire globe, with Paris as its capital and the residence of the Great Pontiff of Humanity who is to guide the intellectual aspirations of the whole race of men. From these visions it is a somewhat deep descent to be ushered into a small room in Chapel Street, Red Lion Street, ornamented with a few plaster busts and tenanted by about twenty men and women, several of whom in all probability are not Positivists but attracted like myself by curiosity. The religion of Humanity cannot be said to be flourishing, nor did I wonder at this when I came away from the service. It consisted merely of a long and rather dull lecture on Joan of Arc. The endeavour of the lecturer, of course, was to get rid of what he termed 'the mystic element' in Joan of Arc's character, and to show that her achievements were due principally, if not altogether, to natural nobility and elevation of character. This was a hard thing to attempt, and the lecturer was candid enough to admit that it could not be done successfully. But I never felt more clearly than here, when the attempt was made to treat it as a matter of small account, what a tremendous lever a theistic belief is for the elevation of humanity. This belief, as the lecturer acknowledged, had raised an illiterate peasant girl to be the deliverer of her country; had given her a dignity and purity of character which had enabled her to pass unstained through the licence and the crimes of a corrupt Court and a savage camp; had given her fortitude in persecution, and hope and even joy in the agony of a cruel death—and then having said all this, the lecturer was compelled to turn round and declare that this belief was a pure hallucination fed by nothing external to itself. If this be not a reduction *ad absurdum*, I should like to know what is. It seems to me as reasonable as to say that a dinner eaten in imagination only will refresh the body as much as a material one eaten in the regular way. But the Positivist creed requires that the element of faith should be assiduously whittled away from the great characters of past ages, and humanity thus mutilated presented to its votaries as the true idea of man. There must be something inexpressibly dismal and depressing in adopting a creed which compels you to treat all history in this negative fashion, and to eradicate from your own mind the thoughts, hopes, or aspirations which have lightened the hearts and brightened the paths of the generations which have gone before you. I cannot imagine that anybody can be stimulated to follow Joan of Arc's example by learning that she acted and suffered the victim of a fiction. And this perhaps accounts for the very small congregation assembled in the Positivist school."

***

WHATEVER form the redress of the Civilians' grievances may take, it seems pretty certain that there will be no pecuniary

compensation. It is generally admitted that there has been pecuniary loss, and probably if any class of men at home—although of much less importance to the State than Indian Civil Servants are—had suffered equally, through default of Government, compensation could not have been avoided without odium. The feeling in this case, will be strong enough certainly, but chiefly within the limits of the class that feels the injustice, and of its immediate friends. There will be no vengeance of public opinion for an injustice confessed and not atoned for. Sir Charles Trevelyan is, we doubt not, a good and honourable man—"so are they all, all honorable men"—but the ring of the metal sounds "cracked and thin," when the reason he gives for not compensating the Civilians is, that the burden of doing so, would fall upon the "hundreds of millions" that the Deity has confined to our care; and that we ought not to do justice to those who govern because the governed are not yet in the happiest possible condition. We are not arguing, at present, in favour of pecuniary compensation. We suppose better reasons against that could be given by such men as Sir George Campbell, than have been given by Sir C. Trevelyan. It is against the altogether irrelevant arguments of the latter excellent gentleman that we speak. As far as the "suffering millions" are concerned, we are of opinion that one of the wisest steps the Government could take to secure their general well-being, would be to treat with fairness if not with generosity, the men who are their immediate Governors. Human nature is weak, and it will be found that even a C.S. will do his work better, at any rate more cheerfully—which usually amounts to the same thing—when honorably dealt with, than when he bears, among other burdens, a load of discontent on his mind.

***

THE Government appears to have have done its duty, by desiring the Board of Agency of the East India Railway Company to discontinue the wholesale dismissal of its European servants. The only thing to be regretted, is, that the evil had gone so far before the attention of Government could be directed to it. It would be interesting to know what proportion of the men, who have been dismissed, are men who were imported by the Company, and what proportion of them were engaged in India. In the case of the latter, the fault on the part of the Company seems less grievous. Many of the men, we have been told, were persons already out of employment in India, and who were engaged by the Company on the understanding that they could be dismissed at a month's notice. Such men have received the benefit of employment for a time, and, on being dismissed according to agreement, are simply in the position they were in before. It is with regard to the servants imported from Europe, that the Company is clearly culpable, and to know the weight of the charge against the Company it would be necessary, as we have said, to know the proportion of these to the whole number of those who have been dismissed.

***

EXACTLY two centuries ago—in 1675—France, then at the height of her greatness under "La Grand Monarque," began to suck in the deadly poison of scepticism and other intellectual and moral evil. She has had, since then, two centuries of sinning and suffering, in both respects beating the whole world. She is now in a very low state indeed, though the first of the better days have dawned upon her. A growl or two of muttered thunder about the region of Berlin, makes all France tremble. But let those who love France—and they are many—rejoice. The day of her redemption has come at last. We, of course, could not have known this of ourselves; but our infallible neighbours have helped us to read the book of France's destiny. Exactly in that same year—1675—the year in which began the disease—was planted the seed of the remedy, and strange, indeed, are the ways of Providence, as read to us by infallible eyes. The vision of the Sacred Heart then appeared to Margaret Mary Alacoque, the humble nun of the convent at Paray le-Monial. "To her was given the antidote which was to save France and the world." Pity it is that France was not sooner aware of it. But better late than never. [illegible] and the foundation-stone of an Expiatory Church to the Sacred Heart, at Montmartre. This "spontaneous act of repentant France" is the thing that was needed to let the antidote take effect. And so, as we say, the new day has dawned on France, and the two centuries of sin and suffering are ended. Wicked newspaper correspondents write of it as simply "a splendid *fête*," and "the people of Paris have had one more grand spectacle." But, happily, our eyes have been opened, unless—which is unlikely—the *Indo-European* is speaking "like one of the foolish women."

***

Is true Liberalism culpable in the matter of the late Belgian riots? The *Indo-European's* "Special" is furious at the *Time s* and the *Saturday* for sophistically answering No; and snorts like the war-horse to resume the fray. Why should not the Catholic world take to its fists and beat the Liberals into silence? Because of the Sermon on the Mount forsooth! Must we, then, pull down our cuffs again and turn round the other cheek, because of the said sermon? Foolish Liberals who say that, forget that Christianity is no longer a grain of mustard seed, but a mighty tree, and though it was exceedingly sensible to bid us not strike back so long as we were unable for a stand-up fight, the precept is out of date at the present day. This is an exceedingly liberal interpretation of the Sermon on the Mount to come from such an anti-liberal source. Our Catholic friends are being *developed* fast.

***

THE same "Special," however, makes a suggestion which should be noticed. There is, as we have heard before, at Ghent, a "Beguinage—a little town of old maids rather than nuns." It is walled-in, has its streets and tiny houses, and its own church. The Beguines live there, some in convents, and the others, who have spent the allotted time in a convent, live in separate houses. They receive visitors of either sex, they go and come at will, and can leave the Beguinage if they desire. They seem to live a very privileged life, and a scandal is a rare occurrence. The suggestion is that every town in Europe should have its Beguinage, not necessarily in connection with conventual life, but simply a little old maids' quarter. We suppose certain privileges and immunities would be conceded to them, and they could live a tranquil and industrious life. Such Beguinages "would meet a very obvious want in almost every civilized country, but we doubt if they are possible out of Belgium." We doubt it indeed.

***

SO conflicting have been the reports received in this country as to the true nature and tendency of the Evangelistic movement of Messrs. Moody and Sankey in England, that it is difficult to form an unbiassed opinion with regard to it. The weight of the evidence appears to show, that amid many eccentricities, and probably a few imprudences, the spirit and effect of the movement have been excellent. At all events, it seems to have been a silly alarm that wast expressed by certain Peers in the Lords, and created so much feeling elsewhere, as to lead the authorities of Eton to prohibit the meetings proposed to be held there. It would appear to be the opinion of some people that religion is the one thing in connection with which all enthusiasm is to be diligently avoided. Every other kind of extravagance may be tolerated, but do not on any account be "too religious." If you will be religious, as of course it is very right to be—at least don't get excited about it. We fear much that is meant for sober wisdom and calm good sense in connection with this subject, has a good deal of stupidity in it, if nothing worse. The services were ultimately held in a garden at Windsor, and no serious evil is reported as the consequence!

***

THE Evangelistic meetings in this city, to which we referred last week, were, we believe—as far as such meetings can be judged from outward and immediate signs—fairly successful. Considering the bad weather, they were well attended. They were conducted in an earnest, impressive manner, and the evidence of feeling, such as they aimed at evoking, was not altogether wanting. At the same time there was an absence of excitement or extravag nce,—a fact which gratified some and perhaps disappointed others. We have no hesitation in saying that the general effect has been good; only, in as far as these meetings were an imitation of Moody's, they must be pronounced weak; and we suspect, too, that the want of one master mind to guide the procedure and the feeling, accounts for their coming short of the expectations that some may have built upon them.

***

THE House of Commons passed the flogging clause in Mr. Cross's bill for amending the law for offences against the person, by a majority of 185 to 18. The *Spectator*, which has its doubts about the wisdom of the clause, notices, as the curious fact about the vote in its favour, that this large majority was obtained in spite of the most conclusive reasoning against it. "Mr. Henley, who is not a sentimentalist, showed, that within the last forty years violent crime had decreased with the mitigation of punishment, the number of cases being nearly the same, though population had increased fifty per cent. Mr. Lefevre argued very justly that the wife-beaters, were the worst brutes among us, and that they could not be flogged unless we were prepared to grant divorce, for the wives would not give evidence. Mr. Taylor proved that garotting had been put down before the Flogging

Act was passed; that flogged prisoners always re-appeared in the prisons; and that while 'floggable crimes' had steadily increased from 1863, non-floggable crimes had as steadily diminished." The International Prison Congress held last year in London, and composed of officials and experts, was more unanimous against flogging than upon any other subject. Yet, it appears that the "collective wisdom," of Great Britain is not always guided in its decision by pure reason, but is sometimes guided by natural feeling and instinct. In this case the public, we think, will sympathise with it, and probably the result will show that it is right.

***

As the heart knoweth its own bitterness, so every time, as well as each class, knows its own grievance—and perhaps magnifies it a little. We are oftener disposed to descant on our grievances than on our privileges, and there was surely never a time when Anglo-Indians had such a host of grievances of an aggravating kind as now. There is the grievance of the Civil Servants, who have been unfairly treated and cannot get redress; the grievance of gallant officers from supercession, and other serious wrongs; the furlough grievance of the Uncovenanted Service; there are commercial grievances, and grievances ecclesiastical; there is the really serious grievance of railway employés; each class has its special burden; and not to mention the tyranny of climate, the enmity of disease, and the attacks of mosquitoes—these being common to all ages in India—we have the wide general grievance of a depreciated currency. We get less money than formerly, and can do less with it. That surely is the crowning grievance. It must be presumed that we do not all flee the country at once, simply because we cannot; for not many of us pretend that we are here for the salvation of the native, without regard to our own happiness and prosperity. Surely if the sad estate into which we have fallen, were known at home, the Canal steamers would begin to come out empty as they should go home full; and the regeneration and elevation of India, would soon be left to B.A. Babooism and Brahmoic inspiration. Or can it be, after all, that we have advantages peculiar to our day, as well as grievances, and that when the two are weighed against each other, the advantages are not found wanting? But British human nature is so constituted that it would be less easy, and even less pleasant, to make a list of these.

***

Almost the only class among us—a perpetually changing one, but one on which we greatly depend, and which we profess to regard with the kindliest feeling—which cannot utter its grievances, nor attempt to get redress, is the sailor class. We do not disregard Jack entirely, it is true. There is a Sailors' Home, and there is a Floating Church and Library; and we could name men in Calcutta who do a good deal with a view to benefit the sailors who come and go, and who, by making them abstainers, and in other ways, do an appreciable amount of good. And no doubt if Jack could be saved from self-inflicted woes, the bulk of his miseries would be removed. And yet his helpless condition, added to his own recklessness, subjects him to an amount of ill-treatment that it would shock many people among us to hear of. When we glance at the multitude of cases in which he is so rigorously treated for being absent without leave, and for similar offences, we think it is a pity that it must be so, but that probably it really is his own fault, and a necessary severity. Yet we know that there are ships and Captains that have been coming and going among us for many years and never, or very rarely, bring a sailor into court, or put him in jail. That suggests the possibility, that the fault may not be so completely on Jack's side after all. Then Jack is reckless with his money no doubt, and no one suffers so cruelly as he from the currency grievance. A rupee is advanced to him in Calcutta for two shillings of his pay, and some Captains make a discount over and above the rate of exchange. Then Jack will swagger along the Strand in the foolishest manner, and in sheer fun will jostle an irate chowkeydar. And what is the result? He is captured, hauled down to the ship, and the officer in charge pays a sum of money to get back his man, and deducts it, of course, from the poor fellow's pay. The chowkeydar grievance is perhaps Jack's heaviest one. The European policeman is no less hard upon him. Nothing is easier than to get Jack into a scrape; he is then easily brought into connection with the policeman's well worn coat, which, in the simplest manner, gives way in Jack's grasp, who is thereupon fined well-nigh the price of a new one. Some sailor friend ought to enlighten us a little about Jack's grievances, and perhaps something might be done to lighten them a little.

***

"The British Army—that great branch of the Society for the Propagation of the Gospel." There was a good deal of wit in that jest of Sir Wilfrid Lawson, and yet the name was not quite a misnomer. Commerce and adventure lead the van; war follows in their track; and then comes the healing power of the Gospel of peace. Not always, and yet not seldom, is this the order of events. War has frequently opened up the way for the clergyman and the missionary. It was neither Peter nor Paul, but Cæsar that was first the missionary to Britain, and the cause of the Gospel in India owes a good deal to Clive and the British Army.

***

Russia wants a little conversation with the other Powers upon certain points of international law, and Britain has hitherto shown a disinclination to enter into any such Conference. We have no doubt that, in any such Conference, there would be certain difficulties more easily raised than settled. International morality is, even at this day, in a somewhat vague and undefined state. What, for instance, could Russia say to Britain about the binding nature of treaty obligations? She, it seems, has somewhat peculiar opinions on that subject, and in spite of the goodwill we bear her, we cannot but perceive that her moral position with regard to the keeping or disregarding of treaties, is that might is right, or that a Power cannot be bound by any treaty—especially by one that has been drawn from it by compulsion—longer than it sees what it considers an imperative need for breaking it in its own interests, and feels that it can do so with impunity. If a private individual is driven by external force to take an oath against his conscience, he breaks it as soon as he has the power, and moralists justify him in so doing. And Russia seems to think, that when she is forced to agree to a treaty against what she conceives to be her interest, she may justly depart from it when she thinks it right and safe to do so, without waiting for the consent of the other parties to the contract. She has done so in the Black Sea, at Khiva, and, recently, it is reported, on the Atrek. It is plain that, with the friendliest intentions, there are points of international policy and morality which would prove disagreeable matter for discussion between England and Russia; and probably Lord Derby is wise in wishing to avoid such discussion at present, at least in a Conference such as Russia desires.

***

The *St. Petersburg Journal* and the *Moscow Gazette* both object, as we learn from the *Overland Mail*, to the views of the *Goloss* as to the desirability of an Anglo-Russian alliance. They assume that an alliance with England means a loosening of the triple alliance, and there is no jealousy among the three Emperors. The *Goloss* in reply "denies that it has ever suggested a rupture of the triple alliance of Russia, Germany, and Austria; but it contends that Germany mistrusts Russia, and is not sincere in its professions of friendship, and that there is room in the alliance already framed for a fourth power, which it believes should be England." Such a monster alliance is a project not likely to find favour in many quarters, and least of all in England. It could but lead to a monster war some day. The natural ally of England still seems to be France, and, notwithstanding her late disasters, the time for such an alliance will come again, we expect, before long.

***

The *Guardian's* French correspondent points out the great importance attached by the Ultramontanes to the dedication of the new Church at Montmartre. Its object is not "only an act of atonement and expiation, and the erection of a monument which should be commemorative at once of the national tribulation and contrition;" it is meant to be "a crowning of the edifice which had been raised by the decree of the Immaculate Conception and the Infallibility, and the promulgation of the Syllabus and Encyclical." It shows that "Catholic France adheres in heart and soul to the purest and most complete orthodoxy, in making this worship of the Sacred Heart her own peculiar and national worship ... A people which has arrived at this degree of faith in Christ and submission to the Church, is truly and solidly grounded in Catholicism. 'A semi-rational religion may put up with [illegible] in India Christ, but it needs the whole faith to believe in the Saere Cœur.'"

***

The discussion of Count Cantelli's "Public Security Bill," in the Italian Chamber of Deputies, led to most extraordinary disclosures with regard to the *Mafia* in Sicily; and the charges brought by Signor Tajani against the executive, with regard to its secret relations with this association, caused immense excitement, and almost led to a ministerial crisis. Nobody seems to be able to give a very definite description of the *Mafia*. It seems to be a monstrous league of all the villains in Sicily, combined together for purposes of robbery and intimidation, and abetting and shielding each other in

the commission of the most daring crimes. It is not confined to any grade of society, but includes all ranks. There is, indeed, a *bassa* and an *alta Mafia*, but the high rests upon the low, and one league includes both. "They possess the means of mutual recognition. To a certain extent the lower class adopt a similarity of dress and language, and there is a uniformity in the ways and means by which they attain their ends. When necessary they meet together, concert a general plan of action and co-operation to carry out some particular undertaking, or achieve some special object. When they have accomplished the crime intended, or achieved the *Mafiose* result, the plunder is divided, and they separate as strangers to recognise each other again only when united action becomes necessary or desirable." Prior to the *Mafia*, there existed a similar association in Sicily, called the *Camorra*, but the *Mafia* has succeeded in exterminating the members of its predecessor, even following one of its chief men to America and assassinating him there. Such a bold, extensive, and open (yet secret) combination of scoundrelism, is almost incredible. Yet the Italian executive has been charged not only with winking at its existence, "but of even bribing its promoters into quiescence," and, as an instance, it was stated that the Questor of Palermo having been attacked by one of the leading *Mafiosi*, offered his would-be assassin a post in the guards, which that gentleman declined as not good enough for him. An inquiry into the disclosures made by Signor Tajani was resolved on.

***

THE *Examiner* is very severe on the manner in which Syed Burgash was received in England. "It is not given to all foreign Sovereigns—more especially if they be German princelings, with rerritories about as extensive as Russel Square—to come up the Thames in something a little larger than a penny steamer, to be moved to a coal barge until the military band—which attends every Horticultural Flower Show throughout the kingdom—condescended to put in an appearance, to be received by an Under-Secretary of State in the uniform of a two penny postman, attended by two Government Clerks in morning dress, who had languidly strolled down to smoke their morning cigar, and finally, to be driven off to a dingy hotel in a carriage hired from an adjoining livery stable." Our irate contemporary is inclined to think the scant courtesy with which the Syed was received, is a blunder which we may one day regret. The Sultan as a reigning sovereign, with whom we were anxious not long since to enter into alliance, and with whom we recently concluded a treaty, deserves to receive at least as much respect as the Prince of Hohenstiel-Schwagan, or the hereditary Grand Duke of Eppen Wallstadt.

***

THERE are 1,251 Europeans and Eurasians living in Calcutta, who have no incomes at all, and it should be chiefly amongst these that cases of real pitiable destitution should be sought for. Many a single London parish has a hundred times more of the absolutely destitute than the whole of Calcutta and its suburbs, and if our numerous churches and chapels cannot find sufficient organization to search out and make known every individual case of real destitution, considering the comparatively small number of poor altogether, it would be indeed a strange thing. That such cases do exist cannot be denied; that they are comparatively few cannot be denied; that they have only to be made known to be relieved, need not be doubted either. If all real cases of willingness to work, and of inability to obtain work, were in due form represented to Government, it cannot be questioned but that some steps would be speedily taken to remedy the evil, and to provide a proper sustenance for such families in the meanwhile. The fact that lately some of these unemployed people of Calcutta, have petitioned Her Majesty's Government for work, and that at once the Viceroy has caused enquiries to be made after them, speaks for itself. So far as Calcutta is concerned, clearly the 'poor whites' difficulty might be readily removed, both as to the destitution of parents and the education of children. It might be so also in other places. If the magnitude of the evil in Calcutta itself, on investigation can be shown to be not very great, not incapable of being overcome, it ought to be smaller and easier of conquest in other places. By taking each place one by one, the "poor whites" difficulty would not be so puzzling as many deem. In many places the Government pensioners form the great bulk. When a family-man from the army, we will say, retires on a pension of from 10 to 15 rupees a month, it is easy to understand, especially if the family be large, the depth of poverty he may soon sink into, if he cannot get some employment. We have heard of many cases in which whole families of these pensioners, have existed from week to week by buying cigars from a public reading-room on credit, and then selling them in the bazar at a small reduction—having anticipated their pensions one month—a very improvident and wrong act of course. The only possible way they could find to get bread was by getting the next month's pay advanced at a reduction in this way. Yet many of them—most of them—are intelligent, active men, quite ready to work, if work they could get, but who are forced, as they say, to try and forget their misery and that of their families in "*drink*," and it is not much to be wondered at. A little care, a little arrangement, and all these cases of poverty and misery might be removed by providing work of some suitable kind.

***

PATRONAGE having been abolished in the Church of Scotland, that Church has been endeavouring to make the way back to the fold as easy as possible for the erring children of the Disruption of —43. But the Free Church will by no means limit the application of their fundamental principle of spiritual independence to the single matter of patronage, and their position was thus humorously illustrated by Dr. Wallace of Greyfriars Established Church, Edinburgh, in a speech before the late General Assembly: "Dr. Wallace thought that those friends who differed from him on this point might be conceived saying to the Free Church: 'Well, you quarrelled with us 30 years ago, because you complained that we had been deficient in self-respect in allowing our noses to be pulled by the State. We agree that we submitted to that indignity; but we have gone and got our noses amputated, and there is no possibility of pulling them any more; and surely you will shake hands with us and be friends with us now that we have no noses.' (Loud laughter.) But he thought that the Free Churchman with shrewdness would answer, 'But then, my friend, unfortunately you are not all nose. There are other parts of you; and the man who is fit to pull your nose contumeliously, is fit to treat you otherwise contumeliously. You have got a head and skull that may be cracked—at least cracked in an additional place. You have got attributes in which you may be kicked, and, until you can assure me that your friend is pledged to keep his hands off you all round, I must still be in the position of being unable to forgive you for occupying a place where you may be insulted when it suits him.'"

***

FEMALE infanticide has almost ceased in the large province of Kattiawar. Unfortunately, however, the number of girls remaining unbetrothed and unmarried is unusually increasing, while "successful measures to remedy this growing evil have yet to be devised." The evil arises principally from the fact, that no Rajpoot tribe in India, following the dictates of its own caste, will take a wife from its own proper or paternal clan. Towards its mitigation, the attempt should be made to get the tribes furnishing wives to the Jadijas to accept, in larger numbers than they do, Jadija daughters for their sons! The lessening of marriage expenses on the one hand, and the increase of dowry to daughters on the other, have already been attempted, and should still be kept steadily in view. It is consistent, Dr. Wilson of Bombay writes, "with my own observation and inquiry connected with the Rajpoot States to mention, that the disposableness in marriage of Rajpoot females is to a considerable extent dependent on the character, as well as on the status, of the tribes to which they belong. The Jadijas, notwithstanding their high lineage, were injured, in general Rajpoot estimation, by their practice of infanticide, and occasional intermarriage with Mahomedans. As the Jadijas in Kattiawar have discontinued infanticide, and but rarely form connubial alliances with Mahomedans, they will perhaps soon regain their position with their compeers." The reports from Cutch are by no means so favourable as those from Kattiawar. The number of Jadija females compared with that of males in this province was in 1873 as 4,272 to 8,371, a proportion far below what it should have been, though in 1840 the proportion was only 335 females to 4,912 males. The conclusion is obvious, that the measures hitherto adopted in Cutch for the suppression of infanticide, though substantially the same as those resorted to in Kattiawar, have failed as yet to accomplish complete success.

***

THE *Lucknow Witness* complains, and perhaps not without some reason, that the Indian papers have not furnished their readers with intelligence about the doings of Mr. Moody in London. "We note the singular omission in the *Home News* and *Overland Mail*." The *Witness* believes that as many readers are interested in the news of such religious movements, as care for an account of the vagaries of Dr. Kenealy, or of the "Criminal occurrences, including such items of news as a case of cat-stealing, a cock-fight, an elopement, &c." Such is probably the case, but on the other hand, there are religious pub-

lications that make it their business to report such matters, and those who wish for information can find it there, whereas the small class who take an interest in cock-fights and elopements, would pine for lack of such news were it not to be found in the ordinary newspapers. Still, to speak seriously, we cannot but admit that "the insertion of all these trashy items is anything but a high tribute of respect to the taste of the readers." Does the demand cause the supply, or does the supply create the appetite?

***

SOME pretty hard things have recently been written in Calcutta with respect to the Jesuits, and the *New York Observer* is equally unsparing of that Order. Referring to the fact that it has often been thought necessary to expel them from different countries, this paper goes on to say: "But when nominally expelled, it is never known *how many are left behind, for the secrecy of the masonic institution*, which Romanism affects to abhor, is public when compared with the sepulchral darkness in which Jesuitism does its work." The Americans seem to be getting alarmed at the political movements of the Roman Catholics. The *Evening Post* says: "Americans are jealous in this business. Their jealousy is sleeping now, because they are a magnanimous race. But let them become alarmed; let the Roman Catholics of this country seek to extend their peculiar doctrines outside of their churches; *let them cross never so slightly the strict boundaries of conscience and the moral world*, and they will find that they have awakened a foe compared with which Bismarck will be like a gentle girl."

***

THE mercantile community of Germany is at present very much disturbed by a resolution taken by a Committee for the Reform of Civil Law, which had been entrusted with reforming the Civil Law process, and the organisation of Courts of Justice in the Empire. This Committee proposed doing away with Commercial Courts of Justice as independent institutions. These Courts are of French origin. In order that both the proposal of the Committee and the opposition it excites, may be better understood, we must say a few words of explanation. Up to the year 1848 an immense number of codes of law existed in Germany; side by side with the Prussian "Landrecht," the Roman and Private German law existed; in Bavaria alone, for instance, there were 53 separate Codes (*Particularrechte*), for the different districts. There was no hope under the old German Diet of ever setting to rights all this confusion, so that it was regarded as a great boon when one law for bills of exchange was instituted for all Germany. At the same time Commercial Courts of Justice were established in several of the States, intended to secure to commerce more freedom in its movement, and above all a chance of bringing its lawsuits more rapidly to an end, such suits having lasted sometimes thirty years. Thus the commercial class enjoyed a special privilege, which consisted in their practices being judged less severely than they would have been by an ordinary Judge. Now there is no reason for such a privilege, which has to be done away with, like those of the aristocracy, &c., no longer in existence since 1848. It is since 1870 that a Code of Civil and Penal Law as well as of Civil and Penal Process for all Germany, is being instituted. The latter Code, of Penal Law, is already in full action.

***

WITH reference to a statement in an article on the Settlement of Land Revenue in Oudh, which appeared in our last issue, Mr. McMinn writes:

> I am referred to as having reported to Government that the rent rolls filed by a certain Rajah and Honorary Assistant Commissioner were false and forged. I beg to state that I never hinted at any personal complicity on the part of the gentleman in question, who was absent at the time, and had been deceived by his agents. I would also state that the so-called "pamphlet" was a mere memorandum written one Sunday in 1873, touching some technical points of assessment. A few copies (I think under ten) were sent to officers who had official dealings with the Kheri assessment, *or whose settlement experience would be valuable*. I *make this explanation, because I would not like the Rajah*, who is personally a worthy man and good landlord, to think I had any share in this reference to him; and I would hint that the publication of this statement, which *was scored out* in the copies distributed by me—I know in some, I think in all—although perhaps not libellous, is rather scandalous, because only two gentlemen in the district were both Rajahs and Honorary Assistant Commissioners at the time, and the reference must be to one of them. I think the writer probably now regrets the insertion of the passage, as I do the frequent tacking of my name to hasty and crude passages never intended for publication.

In the first lines of this letter there is an inference which our remarks did not warrant. We stated that the "rent rolls filed in Mr. McMinn's court by one talookdar were false and forged on a large scale"; but we did not state, as Mr. McMinn would suggest that the landholder himself had forged them.

THE WEEK.

COLONEL EARLE, the Military Secretary, is now in Calcutta making arrangements in connection with the visit of the Prince of Wales, who will arrive in Bombay on the 8th November. The Viceroy will proceed there a day in advance to welcome his royal guest. It is decided that the Prince will visit Ceylon after Bombay, the flying squadron accompanying him. About Madras nothing is positively settled. Mr. Robinson proposes Tuticorin as the point where the Prince should land, especially as it will very shortly be connected with Madras by rail. It is stated that Madras, at certain seasons, is difficult to reach, and that a run from Colombo to Tuticorin, and journey across the Presidency with views of the extreme South, would be interesting. His Royal Highness will arrive in Calcutta about the 23rd of December, and a grand investiture of the Star of India will take place about the 31st. The Upper Provinces' tour has been approved of.

THE Government Resolution on Sir Douglas Forsyth's mission asserts that the original instructions of Government were strictly limited to the Karennee question; the interests of British trade and the position of British representatives at Mandalay being evidently matters beneath the notice of any one at Simla. As, however, questions regarding the attack on Colonel Browne's party and the reception of Lee See Tahee cropped up subsequently, references on these subjects were considered necessary. Before Sir Douglas started, Lord Northbrook had satisfied himself that there was no evidence to implicate the King in the Manwyne outrages, and the Envoy was merely instructed to allude to arrangements to be made in the event of a fresh mission being sent to China. The news of Lee See Tahee's visit and honorable reception reached Simla after Sir Douglas had left Rangoon for Mandalay, and instructions were sent to him to ask for an explanation from the King before dealing with other matters. The explanation given, and accepted as satisfactory, was that Lee See Tahee visited Mandalay as an Ambassador from the Chinese Government. There is now every reason to believe that this explanation was false. It has been stated that the Chinese Government knows nothing about Lee See Tahee's movements, and unless that Government were prepared to go to war with us immediately, it would hardly depute as Ambassador to Mandalay the very man it would have to punish for the Manwyne outrages. We quite believe in the possibility of an understanding between Burmah and China, but think that China is anxious to gain time; for if she were prepared to defy us now by making an Ambassador of Lee See Tahee, she would have no motive for pretending to respond to Mr. Wade's urgent demands for satisfaction. It is evident that Sir Douglas Forsyth was prepared to accept an explanation on this point from the King of Ava; for although the King's Minister in his reply alluded to a letter from the Chinese Government, of which Lee See Tahee was said to be the bearer, Sir Douglas did not attempt to satisfy himself of the truth of the statement by asking to see the document referred to. There is, however, a blot in the negotiations which is hardly atoned for by the frank acknowledgment which appears in the Government Resolution. "Sir Douglas Forsyth was instructed to add that, in the event of a fresh mission being sent to China, it would be necessary that a sufficient escort of British troops should accompany it in order to protect it from insult or attack. Having made this communication in writing, to which he was not directed to request a reply from the Burmese Government, as there was no reason to anticipate any objection on their part, Sir Douglas Forsyth was directed to proceed with his original instructions upon the Western Karennee affair." The Government of India thus directs a most important communication to be made in writing, and, not anticipating any objection, does not ask for or expect a reply, but proceeds with the Karennee business, on the principle that silence on the part of the King of Ava means consent. But the King of Ava was not content with giving no reply. He acknowledged the written communication of our Envoy by an informal communication from his Minister. "After Sir Douglas Forsyth had concluded the agreement on the subject of Western Karennee, and had taken leave of the King, an informal, but friendly, communication was made to him from the Minister, indicating disinclination on the part of the Court of Ava to assent to an escort of British troops accompanying a fresh mission to China, but offering a Burmese escort." How have the mighty fallen!

COLONEL BROWNE'S official report of the attack upon the Yunnan Expedition was, according to a statement made by the Supreme Government, received some time after the Burmese Ambassadors had left Calcutta. As rumours existed that the Burmese Government were implicated in the attack upon Colonel Browne's party, the Viceroy investigated all information bearing on the subject, and in the

meanwhile the mission of Sir Douglas Forsyth was postponed. The Governor-General in Council thinks it but just to His Majesty the King of Ava to announce that no evidence whatever has either then or subsequently been brought forward to show that the Burmese Government or officials were concerned in the attack, excepting a Burmese anonymous letter which had been sent to some Kachyen Chiefs on the lower route between Burmah and China (which was not the route taken by the mission) desiring them to have no friendly intercourse with the foreigners. An official enquiry and explanation regarding this letter were requested from the Burmese Government. The letter has subsequently been reported to have been written by a Burmese priest, who has been punished for the act. The King of Ava had expressed to Captain Strover, the British Political Agent at Mandalay, His Majesty's readiness to aid in the despatch of a fresh mission to China, if the British Government should determine to send one.

THE following is the reply of the Foreign Minister of Burmah to Sir Douglas Forsyth's questions with reference to the late reception at Mandalay of our avowed foe, Lee See Tahee: "When the Taqui Li-Si came down to Mandalay, he personally was not the object of the grand and ceremonious reception given, but in the same manner as there exists a true and lasting friendship with the Kingdom of Great Britain, so also has existed for generations past a true and lasting friendship with the Empire of China. Accordingly, when once in every ten years an Ambassador with a Royal letter and presents is despatched from one kingdom to another, it is customary to do honor to the occasion by meeting and receiving the Embassy in a proper manner. Also, if within the ten years, in consequence of a change of Government, or other circumstances, an Ambassador is despatched from one country to another, it is the custom to receive the Embassy with all due ceremony. The British Resident is aware that in the month of Taboung 1235 (February, 1874) an Embassy consisting of Yan-Lui-Shive arrived at Mandalay from the Chinese Empire, and, in conformity with established custom, was received with all State ceremony. In a similar manner, in the month of Kasong 1237 B.E. (May, 1875), subsequent to the death of the Chinese Emperor Hton-kyee, a Royal letter, notifying the accession of the younger brother Tsike-tui to the throne, was brought to Mandalay by Taqui Li-Si (Lee See Tahee), and, in accordance with the custom in connection with the reception of Royal letters, &c., from the time of the Royal ancestors, as regards both the Burmese and Chinese dominions, and as in the case of Royal letters, &c., from the English, Italian, and French Rulers, a grand and ceremonious reception was accorded."

THERE is important news from Cabul. At a recent Durbar, the Meer of Maimena counselled his sovereign to declare a "religious war." The bellicose chief is said to have couched his advice in these words: "You are always talking about a religious war, how can you expect us to join you in that expedition until you have altered your manners and customs? Your people are habituated to commit great crimes, that is, dacoity, slavery, and others, and then you want to make a religious war? Wait a while, and I will do something for you." It is also stated that "Persian troops have marched from Mushhed towards Tukka and Yamoot. All sorts of rumours are prevalent about the movements of the Persian army. Some say that the Shahzada of Mushhed has sent these troops to guard the frontier; others have it that the Shahzada has sent the force to assist Ayoob Khan, brother of Yakoob Khan, in retaking Herat." Nowroz Khan is now willing to come to terms, provided that no garrison be stationed at Lalpoora. It is expected that if this condition is not allowed, the consequences will be serious, as the surrounding chiefs are highly incensed at the presence of the Ameer's troops.

IF Sir John Strachey can write a resolution ruining the character of an indiscreet officer, he can at least write with equal energy when the *Gazette* is to contain praise instead of blame. In the official account of the final destruction of the outlaws led by the celebrated Rundheer Sing, it is stated that "Mr. Finn has already been promoted, and the Lieutenant-Governor feels that the Government and the public cannot acknowledge too fully the excellent service which he has rendered. Head-constable Nathi Khan (at the time officiating as Sub-Inspector) behaved with much gallantry, and orders have been already given for his promotion and reward. His Honor the Lieutenant-Governor desires also to notice prominently the services of the Duffadar and three troopers of the Central India Horse who accompanied Mr. Finn; and has observed with special satisfaction the loyal conduct of the Thakoors who joined the Lullutpore Police, and to some of whom Mr. Finn was indebted for the information which led to the surprise of the outlaws. Separate instructions will be issued as to the distribution of the rewards offered by this Government and by the State of Gwalior and Tehri for the capture of Rundheer Singh, Jangi, and Bholaiju, for the promotion of the members of the Police force who have distinguished themselves, and in regard to the family of the constable shot in the fight." Rundheer Singh was an escaped convict. Henceforth the Lieutenant-Governor will hold officers who may permit offenders of this class to escape, while under their charge, personally responsible.

ONE of the most satisfactory results of the Baroda Commission is to be found in the *rapprochement* which it seems to have brought about between the three native members, who failed to see in the evidence any sufficient reason for the conviction of Mulhar Rao. We recently alluded to preparations for the reception of the Prince of Wales which were being made by His Highness of Jeypore; but we now learn that the guest to whom the Maharajah is at present anxious to do honor is his brother of Gwalior, who is about to pay him a ceremonial visit in great state. Sindiah further intends to visit Ajmere, and is now entertaining Sir Dinkur Rao, who, since the Baroda meeting, has been on friendly terms with the Chief who was previously inclined to be displeased with his former servant.

THE *Rangoon Gazette* says: "The last letter from our Mandalay correspondent described the present state of affairs between ourselves and the King of Burmah as an 'armed truce.' Information which reaches us from Mandalay attests the truth of that description. Although the permission to import Sniders was never accorded to the King, nor indeed asked for by him, he is doing his best to provide himself with artificers, to manufacture on the spot such weapons as he is in want of, and a number of men are coming from Italy for that purpose. Some French and Italian officers are also to take the Burmese raw material in hand, and there is but little doubt that a fair amount of drilling and good arms will in time enable the King's troops to make a respectable appearance in the field. The Burmese, as we know, can fight desperately on occasion."

A FEW months ago it was expected that the year 1875 in India would be marked by an extensive cholera epidemic. This belief has so far proved true, for we weekly hear of the appearance of the disease in portions of each Presidency. The recently reported outbreak at Kussowlie is said to have been caused by beer manufactured in the hills. This liquor is in the cold weather undoubtedly beneficial, but in the hot season authorities on the subject say that it is highly prejudicial to health. "If officers and civilians feel it necessary to refrain from drinking hill beer and similar beverages, and take to something more congenial and better suited to health at this season of the year in the hills, is it at all unreasonable to suppose that the British soldier is so differently constituted as not to require such a change?" Cholera has also appeared at Simla, where sixteen natives are reported to have been dying daily, while hundreds of persons are dying in the South from the same cause.

LONDON LETTER.

(FROM OUR OWN CORRESPONDENT.)

JUNE 25TH, 1875.

A CERTAIN Paris journal—the *Spiritual Review*—conducted by a man of the name of Leymarie, after having made frequent allusions to the spiritual photographs obtained in America, announced, at the close of 1873, that a photographer of the name of Buguet established in the Boulevard Montmartre, and endowed with the attributes of a medium, had achieved similar results by means of the supernatural intervention of the spirits. Since that time, every number of the journal—which is or was a monthly one—contained a (so-called) spiritual likeness obtained by Buguet, generally accompanied by a letter of thanks from a client who affirmed that he recognized in the photograph the lineaments of some deceased friend or relative. Twenty francs paid in advance were charged for six copies of each photograph, *carte-de-visite* size; but Buguet was sufficiently sagacious not to guarantee the identity of the spirit evoked. Whether or not the precise spirit appeared whose picture was required, was a matter over which he (Buguet) had no control. It depended mainly upon the degree of faith existing in the mind of the person soliciting the spiritual likeness. But the process of getting a spiritual photograph being one exceedingly exhausting to the medium, twenty francs would be charged

for all spiritual likenesses of whatever sort obtained. The reason of this exhaustion is given in detail in the *Spiritual Review*. On the 29th May, 1874 (I translate from the *Review*), "M. Buguet was very ill. After having made some photographs in the presence of Mme. Bourdin, M. Lafitte, and M. Leymarie, Mme. Bourdin took a glass of water, and during a new pose she saw and dictated what follows: "I see M. Buguet; a very curious process is going on in him: I see the spirits materialising themselves; they appear to rub themselves against him, principally against his chest and shoulders; in this manner they draw forth his vital fluid, that force which regulates all the functions of the organism and preserves their harmony. The fluid which issues from the body of M. Buguet has not a distinct form; it is a light mist, by means of which the spirits reconstruct their faces they had when on earth, and weave for themselves in haste a kind of veil of indeterminate form. During the evocation the blood of M. Buguet circulates very irregularly; after the pose the spirit disengages itself from the vital fluid which becomes a part of the atmosphere, and M. Buguet, deprived of a portion of that force which feeds and sustains life, finds himself exhausted and depressed for an indeterminate time."

It appears that the spirits might, if they so pleased, restore this vital fluid to M. Buguet, but they are unacquainted with the laws which govern the mechanism of the human frame. They seize upon the fluid as a means of materialising them, and thinking nothing of M. Buguet, as soon as they desire to return to the normal state of spirits, they merely throw away as worthless the muddy vesture of decay which grossly hems them in. Under these distressing circumstances, it became necessary that the medium Buguet should attach to his person a familiar spirit possessing sufficient magnetic influence to immediately supply the quantity of vital fluid abstracted by the spirits and then wasted by them in their thoughtless fashion. Otherwise, as the *Review* points out, M. Buguet would soon have fallen a martyr to his exertions for the good of humanity. Prayers were put up to "*le bon esprit*" to assist M. Buguet in his mission, and they were responded to by no less a spirit than Göethe, who put in a writing to the effect that he would for some time abandon the joys of the spiritual world in order, as a faithful friend, to watch over, M. Buguet. "Let him," says this writing "have confidence in me; I will think of all that can be of service to him spiritually and materially." There seems, nevertheless, to have been some remissness on the part of Göethe, or the other spirits were too quick for him. At any rate M. Buguet continued to complain of severe pains in the head after obtaining a spiritual photograph. To rectify these a healing medium, Mme. Plombe, was always present to make magnetic passes over him, and so extract from him the bad fluids of which he complained. After these passes M. Buguet declared himself greatly refreshed.

The business flourished greatly. One enthusiast, the Count of Bullot, presented M. Buguet with a musical box, as the spirits were considered to be easily drawn together by the attraction of music. After a time he announced that in the production of spiritual photographs, it was not necessary that the person desiring such a picture should himself come to the studio. All that was needed was that he or she should send her own photograph with a description of the person whose likeness she wished for, and the payment in advance. M. Buguet then wrote back to say the hour and the day when the invoking of the spirits would take place, in order, he said, that they might unite their prayers with his own for a favorable issue of his endeavours. Working with M. Buguet was an American gentleman by name Firman. He and his wife between them evoked spirit forms as M. Buguet did spiritual photographs. Clients were passed on from one to the other, and *vice versa*, accordingly as they wanted photographs or the veritable spirit. A certain M. Delia thus recounts his experiences in a private letter which was afterwards published in the *Spiritual Review*: "You know that at M. Buguet's I could obtain no portrait of my poor wife, nor could I recognise that of any friend or relation. But at Madame Firman's I have been amply recompensed. . . . . As you are aware the first part of the *séance* passes in darkness. After having made the chain the objects placed on the table were seized by invisible hands, and a drum struck us all on the head. We had also felt an icy wind pass by us; but I will not linger over such matters. The wind had barely ceased when Madame Firman, addressing herself to me, said, 'I see the spirit of a woman approaching you.' She described it; it resembled the portrait of my wife. Suddenly I felt as though a fluid approached my cheek, and I felt a warm completely materialised face pressed against it which kissed me three times in the most affectionate manner. I was deeply moved as you can imagine." This spirit could not speak beyond ejaculating the word "Yes" when asked if she was really his wife; but when, kissed a third time, M. Delia ventured to return the salute, "the impression he received was as if the spiritual head was absolutely living," which, seeing that Madame Firman enacted the part of the ghost, is not very surprising. Another achievement of these eminent mediums was to produce a little black spirit clothed in white known as "*le petit Indien*." The "*petit Indien*," it was remarked, could not be evoked unless Madame Firman was present, and M. Firman retired behind a curtain. This excited the suspicions of a Madame Huguet at whose house the performance took place, who falling unexpectedly upon "*le petit Indien*" found him to be M. Firman himself with a black mask and walking on his knees to give the appearance of shortness. Musical instruments, too, which played in the neighbourhood of M. Firman when that gentleman was bound hand and foot, were found to be deeply indented with the marks of teeth. A man playing on the accordion with his teeth must, I should think, produce a very singular kind of music; but I fancy this very singularity was an evidence to the noodles who attend these *séances* that it came from the spirit world. However, notwithstanding the detection of "*le petit Indien*," the trade of these gentlemen remained very prosperous. One person indeed, a young girl, demanded back her twenty francs, on the ground that the spiritual photographs tendered to her were not in the least like her father, whose picture she wanted. These M. Buguet returned, threatening her at the same time with legal proceedings in order to recover his dues. But the victims were in general quite passive and inconceivably credulous. The persistent trumpeting of the *Spiritual Review* at last had the effect of attracting the attention of M. Lombard, a police officer well versed in all the processes of photography, and he came to the conclusion that there must be two operations in this matter, and that the spiritual photographs could not be produced, as the sitters imagined them to be, at the same time as their own portraits. He obtained the requisite authority to make inquiries into the matter, and detect imposture if he could, and accordingly, in company with three other police officers, paid a visit to M. Buguet's studio. One of the police officers introduced himself as a client desirous of obtaining a spiritual photograph of his deceased father, and M. Buguet at once intimated his readiness to go through the requisite processes. He showed them up into his studio, then after an absence of some minutes returned with the photographic apparatus. He placed the police officer in focus, requested him to think earnestly of his father, and then, as his wont was, reclined his face against the wall, pretending to make the necessary invocations. At this moment M. Lombard interfered, revealed himself in his true character and the purport of his mission, and demanded if the spiritual photograph had not been obtained during the few minutes that M. Buguet was absent from the studio. So it turned out. On going into an inner room they found in a sort of half daylight a lay figure robed in a black garment, and instead of its head a photograph life size, representing an old man in a white beard. This of course was the spirit of the police officer's father. At a small distance stood the photographic apparatus, and at the request of the police officer M. Buguet produced a spiritual likeness upon the spot. Two boxes were discovered in this inner room, containing more than three hundred photographs, life-size, of men, women, and children. These had been aggrandised from *cartes-de-visite*. There was also a smaller lay figure which came into use when portraits of deceased infants were asked for, the large cartoon of a mask representing the head of a dead man, wigs, false beards, a lyre, a guitar, and other theatrical properties. M. Buguet detected, made no further attempt to conceal the mysteries of his craft. The production of spiritual photographs is, it

appears, a regular branch of the photographic trade in Paris. The half-light in which these spiritual photographs were obtained, and the indistinct drapery which veiled the lay figure, gave to the impression just that shadowy and ghost-like character that was required, the likeness of the living person being afterwards taken on the same plate. And as M. Buguet took the precaution of throwing the onus of producing the likeness desired on the faith of the client soliciting, he had no further trouble in the matter. He produced a spiritual photograph; he did not undertake to produce the correct one. Well, one would think this exposure tolerably complete and satisfactory. But it has availed nothing to shake the faith of the faithful. Three French Colonels, among other witnesses, entered the witness-box to avouch their unimpaired trust in the attributes of M. Buguet as a medium, and the truth and reality of spiritual photography. The Count of Bullot, who presented him with a musical box, retains his belief unshaken. His faith, he says, rests upon the testimony of the senses. He evoked the spirit of his sister; she appeared, and the Count is convinced; the present rascally conduct of M. Buguet cannot affect a fact of this kind. Another witness had recognized his wife. She had her hair cut short just as it was when she died. It was impossible not to be convinced after this. And so it went on—"*une nombreuse quantité de témoins*," to quote the *Journal des Débats*, came to affirm their faith in spiritualism. The whole trial is an additional proof, if any such is needed, that a period of materialism will always be one of superstition too.

OUR LIBRARY TABLE.

The Balwant Nâmah, translated from the Tulifa-i-Taza of Fakir Khair-ud-dîn Khân.—By Mr. Frederick Curwen. The Balwant-Nâmah has been long known to scholars as a document of great interest and importance, for the light it sheds on the history of Benares, and of the province generally, in connexion with the Rajahs of Benares and the British Government during the last century. An excellent translation of the work from the original Persian has been lately made by Mr. Frederick Curwen, under the auspices of the Government of the North-Western Provinces. The author, Fakir Khair-ud-din Khân, was intimately associated with the characters about whom he wrote. His treatise is a matter-of-fact production, singularly free from passion and rhetoric, and exhibiting throughout remarkable caution in its statements and criticisms.

The present family of the Rajahs of Benares dates from a comparatively modern period; and bears no relation to the Hindoo dynasties which in ancient times ruled over that part of India. Its founder was Mansarâm, a Bhuinhar Brahman, who, in the reign of Mahomed Shah, by industry, perseverance, and the exercise of great business talents, gradually rose to be the actual ruler over the four sircars of Benares, Jaunpore, Ghazepore, and Chunar, their nominal ruler being Mir Rustam-Ali Khân, who governed them in the name of the Nawab of Oudh. Yet by far the most important work done in the establishment of the family, was performed by his son, Balwant Singh, for whom the title of Rajah had been obtained from the Emperor through the influence of Mansarâm, who was too modest to accept the title for himself, although offered to him. The first Rajah received the title in the year 1739. Balwant Singh was a man of incredible daring and of boundless ambition. On the death of his father he began a system of shameless depredation on the estates of his neighbours. Free from restraint, and only nominally acknowledging his subordination to the Nawab, whose orders he refused to obey, Balwant Singh soon made himself the terror of the country. With or without pretext, he invaded the estates of rajahs and other great landowners, attended by a large and formidable band of fighting men, attacked their forts, seized their possessions, and appropriated them to himself. On one occasion, the Nawab of Oudh, attempting to reduce to submission his refractory vassal, came to Benares with a force sufficiently large to accomplish his purpose. The Rajah at once fled to one of his forts on the other side of the Ganges, where he remained until the Nawab departed, refusing to be entrapped by the promise of a pardon if he would present himself in person to his chief. The latter, wearied by delay, having effected nothing, departed; and strange to say, confirmed the Rajah in all his newly acquired possessions, and privately sent him a *khillat*, or robe of honour, as evidence of reconciliation. The truth is, that with Mahrattas on one side, and the Affghans on the other, the Nawab could ill afford to be at open feud with a man who had shown such remarkable talent for warfare, and who was sufficiently powerful to bid defiance, when he chose, to his suzerain. After this, Rajah Balwant Singh carried on his work of spoliation more fearlessly than ever. He crushed and subdued every other native chief throughout an immense tract of country. He may be regarded as a marauder, robber, and bandit, to whom the lust of money and land was an insatiable passion, and who, to gain his end, could commit the most horrible cruelties and enormities. Thus by plunder and rapine he made himself master of ninety-six *pergunnahs* or large baronies. An important turn in the fortunes of Balwant Singh occurred after the battle of Buxar when the Nawab's army was put to flight by the British troops. The Rajah had been summoned to the battle by the Nawab, and actually came with two thousand horse and five thousand foot. But as his loyalty was suspected, he was not allowed to take part in the conflict. Instead of fleeing with the Nawab, however, he simply retired to Benares, where he subsequently met Major Monro, and henceforward became a staunch friend of the British Government. The Major introduced the astute rebel to the Emperor, who was then a captive in the English camp, by whom he was confirmed in the possession of his vast territories. Commenting on such wonderful good luck, well may the native historian remark, that Balwant Singh, "rejoicing and covered with favour, returned to Ramnâgar," his fort, in Benares. The Rajah gave substantial proof of his loyalty by raising eight lacs of rupees, which sum was distributed among the English troops, who had been without pay for three months. Having thus gained the good-will of the British Government, he was thenceforward treated with special consideration. In the year following the Nawab of Oudh made peace with the English, and did his utmost to induce the Government to allow him to destroy the Rajah, but without success. Lord Clive, who met the Nawab at Patna, was too much alive to the good services rendered by Balwant Singh, who, instead of opposing the British on their march to Benares, had received them cordially and administered to their wants, to cast him off at the solicitation of one who, until lately, had been the avowed enemy of the British Government. Clive begged the Nawab to pardon the Rajah for his protracted rebellion against his authority, and to receive him into favor again. After much controversy, it was agreed that Balwant Singh "should pay the Nawab an increase of three lacs of rupees on his former revenue of twenty and a quarter lacs; and a covenant guaranteeing non-interference on the part of the Nawab with Balwant Singh's income was signed and sealed, Clive, General Carnac, and the other English officers, affixing their signatures as witnesses to the deed." Thus the British Government became the protector of the Rajah of Benares, who was singularly fortunate in having such a powerful and steadfast friend. Had he been left to the tender mercies of the Nawab, he must have been ruined. When the province of Benares came into the possession of the Government, a few years after the events just described, the Rajah of Benares became a feudatory of the English Crown. Hence it was that when Warren Hastings demanded of him substantial help both of men and money to enable him to carry on the war with the Mahrattas and Tippoo Sahib in the South, he had, as representative of the British Government, a perfect right to do so. Had this been properly understood at the trial of the great statesman, the argument of Burke and Sheridan, the counsel against him, would have lost much of its force. The Balwant-namah contains a detailed account of the rebellion of Cheit Singh, son of Rajah Balwant Singh, and of the prompt and decisive measures taken by Warren Hastings to subdue it. The sucessors of the rebel Rajah are still to be found in the neighbourhood of Agra: and the head of the family is styled Rajah by his friends, and, strange to say, receives a small pension from the Government. The present Rajah of Benares is a descendant of a daughter of Balwant Singh, the female line superseding the male line, with the consent of the British Government.

We cannot too highly praise the translation of Mr. Curwen, which is simple in style and thoroughly idiomatic. The Government of the North-Western Provinces should secure this gentleman's assistance in the translation of the Jounpore-namah, a brief manuscript in Persian giving an historical account of the city of Jounpore, and written by the author of the Balwant-namah.

The Indian Evidence Act.—By H. S. Cunningham. The object of this work is to present in as concise a form as possible such a view of the Evidence Act as may be intelligible and interesting to law-students and others, who have occasion to make themselves acquainted with that enactment. However simple in arrangement and comprehensive in detail an Act may be, it cannot supersede the necessity of some previous acquaintance with the subject for which it provides, with the objects and reasons of its requirements and with the principles on which it proceeds; and though the free use of illustrations supersede, to a large degree, the commentator's task, there must still be many points to which a student's attention may be usefully directed, mistakes against which he may be warned, and difficulties in which he may be glad of assistance. Nothing either in the Introduction or the Notes can lay the least claim to originality. The Introduction is grounded on the Reports of the Select Committee, and on the speeches in the Legislative Council in which, at various stages of the Bill, Mr. Stephen explained its principles and arrangement. In the notes, Mr. Cunningham has merely endeavoured to explain the connection of one section with another, to clear up any obscurities of expression, and to point out the respects in which the present measure differs from the English Common Law, or from that previously in force in Indian Courts. He has occasionally introduced some of the more familiar English rulings, wherever it seemed that they would assist in the understanding or application of a section, and in the Appendix he has collected a few measures connected with the subject of Judicial Evidence, which legal practitioners may find it convenient to have at hand.

Report on the Naga Expedition.—By Captain J. Butler. Our readers are already acquainted with the work and results of the troops sent to avenge the death of Lieutenant Holcombe. Captain Butler gives a detailed history of the affair. This we need not notice, but his closing paragraph is important and interesting. As to the real reason for the massacre, "had no opportunity been given," he says, "no massacre would have occurred, notwithstanding any number of messages or any number of plots. For, as I have repeatedly said before, as an open and declared foe, the Naga, as

a rule, has such a dread of firearms, that he is simply contemptible before any force thus armed, whatever he may be when fighting against his brother Naga." The very story of Captain Badgley's able retreat, with a mere handful of men, who must have been more or less demoralized by what they had undergone, hampered with wounded, and laden with ammunition, most clearly proves this to be the case. It is curious to note that the "sulky" demeanour, followed afterwards by more peaceful overtures of the Nina men, noticed by Captain Badgely, is very similar to the demeanour and conduct of the Wokha men towards Captain Butler; and "I feel quite convinced now, that, had I allowed those men of Wokha to come into camp there, with their arms in their hands, as they wanted to, we too should in all probability have met as sad a fate as those who fell at Ninu. Then, again, if it be asked, why should they seek for an opportunity? I would reply,—Long use has made it second nature to the Naga to seek for human heads, which he simply looks upon as the no blest trophies of the chase, with which either to decorate his ancestral halls or to adorn the walls of his assembly-rooms, according to the custom of the tribe to which he belongs." In like manner, as the civilized man thinks it only fair and right to kill or capture the wild beasts of the field by any and every stratagem, so, the savage considers that he may circumvent and capture or kill not only the wild beast, but his fellow man as well, by any and every kind of means that lie in his power. What we term "foul treachery," he looks upon as "skilful strategy." Notwithstanding what we occasionally hear about the "truthful savage" and his "good faith," Captain Butler's own experience has been that, with few exceptions, savages in their natural state do not know the meaning of these terms as we understand them. "I must do them the justice to say that they can easily be taught their significance, and learn thoroughly to appreciate and admire the virtues which they even then find it difficult to practice. I must beg that it may be clearly understood here that I am not stating these facts with any view to the utter condemnation of the savage,—far from it, for I have often known and proved him to possess many most noble and endearing qualities. I consider the highland savage of Assam, with all his faults, to be a more manly, loveable being than many of his lowland neighbours."

The Colonial Intelligencer.—June. The abolition of slavery throughout the territories of the British Protectorate on the Gold Coast has been carried out very thoroughly, as well as judiciously, by Governor Strahan. No attention was paid to the remonstrances of the slave-holding portion of the community, who, feeling no gratitude for the benefits which England had conferred upon them, were anxious to perpetuate their rights of property in their pawns and domestic slaves; and who succeeded in obtaining the signatures of six of the kings to their selfish petition. The policy of emancipation has been abundantly successful. It has occasioned neither widespread discontent, industrial disorganization, nor social inconvenience, and there is reason to believe that even the revenue will suffer no disturbances from the changes which are taking place. The Rev. T. B. Freeman thus describes some of the advantages likely to result from the abolition of slavery on the Gold Coast: "The worst feature of the pawn system is, the facilities which it furnishes for the very worst of all the usages which afflict and debase the pagan populations of these regions, namely, that of 'Customs for the Dead': a usage which involves heavy expenses, so much in excess of the pecuniary means of thousands of families, that one member of each of such families, at the least, has to go into bondage as a pawn, to provide the means for paying the heavy debts thereby incurred. In all pagan families it is held as a time-honored and indispensable usage to hold expensive and extravagant drinking feasts in honor of deceased relatives, first, in immediate connexion with the funeral, and in many cases, frequently to repeat them in *early after-days*. The custom commences as soon as life is extinct, and generally continues on, day and night, with only brief intervals for rest and sleep; sometimes for more than an entire week. These feasts are attended by all the pagan friends of the deceased person's family, both bond and free; and, in many cases, the quantity of ardent spirits, ale, porter, wine, and other expensive drinks consumed on such occasions, is something frightful to contemplate. The consequences frequently are, that many families are greatly impoverished, and more still are so far ruined as to pecuniary means of life that, as I have already stated, one or more of the surviving members have to go into bondage as pawns. Now while I am writing, there is a feast of this kind in process here in this town. The grandmother of the family—a family in tolerably easy circumstances—died a few days back; and, according to custom, the drinking commenced immediately, and still continues. Besides other drinks, they have consumed one entire puncheon of rum and have commenced another, which they will probably finish also; and thus the expenses, for rum alone, may be about 43*l.* sterling. A few weeks hence they may perhaps repeat this drinking, and a year hence they may repeat it again, and they will thereby gain, in the public pagan mind, increased applause for doing the thing so well. It is not unusual for a poor family having scarcely a pound to call their own, to be impelled by this destructive public prejudice—fearing to be laughed at and despised should they not do so—to incur pecuniary liabilities amounting to ten or twelve pounds, or more, for these feasting purposes; and then, one of the sons or daughters is placed in pawn for the amount. Some one who has ready cash to spare, and who may wish to increase his or her number of dependents, advances, or rather, furnishes the sum required—say, for argument, *ten pounds*—and then the native usage allows an addition of fifty per cent. on the sum supplied; and thus the *pawn* goes into bondage, as representing security for the sum of 15*l.*" The pawn then passes entirely into, and under, the power of the pawnee; has to work like an ordinary slave or labourer, or servant, as the case may be, and has a claim on the pawnee for bare subsistence and ordinary clothing, but for no pay whatever. This bondage, then, continues as long as the debt of 15*l.* remains unpaid; and should the pawnee die, the head of his family has either to pay the debt, or place another person in pawn. Should the pawnee, at any time, wish to close the transaction, he can hand back the pawn and demand, and, if necessary, enforce payment in the native courts of law. There are many thousands of persons of both sexes, and nearly all ages, who are in this state of bondage from pawning; and it may be fairly assumed that, in the greater number of cases, they are the results of these mischievous and desolating customs for the dead.

POETRY.

SONG OF THE MAIDEN BY THE SEA.

THE hunting is over, the horns now are still,
The dun-deer has sobb'd out his life on the hill;
Let the chief and his clansmen ride homeward with glee,
But let my gallant huntsman come hither to me.
Hither to me, come hither to me,
Harold, brave Harold, come hither to me.

This night will old Ranald high revelry hold;
The quaigh for the vassal, for Ranald the gold;
For both Ranald and vassal the ale flowing free,
But for golden-haired Harold love's new wine with me.
Hither to me, &c.

The echoes of laughter on lonely Lochmore
Will startle at midnight the coot on the shore;
In the hall of old Ranald wild wassail will be,
But the warm lip of love will feast Harold and me.
Hither to me, &c.

This evening the maids in the cloister will tell
Their beads to the Virgin, when summons the bell;
While down under the cloister the murmuring sea
Will sing a sweet vesper to Harold and me.
Hither to me, &c.

The hunting is over, the evening begun;
Now ale for Lord Ranald, now beads for the nun.
The red sun is dipping his rim in the sea,
And my own love come over the heather to me.
Hither to me, come hither to me,
Harold, brave Harold, come hither to me.

W. R.

INDIA.

(After Alg-rn-n C. Sw-nb-rne.)

1

ARE the days of thy greatness forgotten, the days
When rose thy sons of the race of the moon and the sun,
Fighting like giants, seen now in historical haze,
Hast lost all knowledge of them, and the deeds by them done?

2

Dasrat and Yudishthir, Arjun and all of the race!
Men of heroic form, who courted glory and death!
Women of fairest mould, decked with ineffable grace,
Who breathed out honour and love with their every breath!

3

Fighting, and slaying, and dying, and leaving a name:
Dying and leaving no sons with the spirit *they* breathed:
Flesh of their flesh: but a spark of the soul not the same:
Theirs in the vapours of night gathered upward and wreathed.

4

Menu! The spirit of law, in a land of chaos and night:
A single and star-like brightness seen in the eastern sky:
Menu! The star to a nation that needed the light:
That guided the sons of the dawning, they knew not why.

5

Say why the Goddess of Liberty slumbers so long!
Where is the couch on which rested her delicate form?
Sleeps she the sleep of the dead or the sleep of the strong?
Say, is it only the lull that precedeth the storm?

6

Chains and fetters of iron that enter the soul!
When will it break, the dawn that shall set her free?
Tend we slowly or swift to the final goal,
When she shall rise, a sea-maid out of the sea?

7

Fair and chaste, as the snow of her mountain-peaks,
Pure from the fire of the tyrannous ages past,
Crowned with a new crown of liberty, India speaks,
Clasping, in fancy no more, the Goddess of Freedom at last.

UMBRA.

LETTER TO THE EDITOR.

DISESTABLISHMENT.

To the Editor of the Friend of India.

SIR,—I hope you can allow me space to ask a question or two of the Rev. James Ross, with reference to his letter in your columns on the Disestablishment question. I do not propose to controvert any of his principles, since for the most part I agree with them, and have long been a supporter of Disestablishment at home. But having learnt in a profession where immediate failure waits on the disregard of facts, not to follow principles blindly without reference to circum-

stances, I feel that I have a right to ask him, on a matter relating to his profession, the first question I should ask myself in my own—"What are the practical measures you suggest, and how will they "work under the various circumstances they will meet?"

Mr. Ross, during an experience of some years in India, has resided, I think, exclusively in Calcutta, and sees from one point of view. I have lived as exclusively in the mofussil, and have seen from another. And I wish to know how he thinks that without Government aid, which he opposes, any form of Christian ordinances could be kept up among a scattered and changing handful of people. He will refer me to Christian willinghood. I have been trained in the utmost respect for the principle, but still I know that there may be a load too heavy for the most willing shoulders,—and all are not willing. Take the case of an ordinary Civil Station, with its Judge, Collector, Assistant, and one or two more on fair pay, and the few other Christian residents on low pay that hardly keeps their families and does not allow them to send them home for education, and suppose the Chaplain withdrawn. The Christian residents may be of two or three denominations, but suppose them all agreed, and all willing,—how can they keep a minister? He must be had from England; he must be a man of education; we know that he will require certain comforts; a house, a horse, his passage paid, perhaps his wife's; occasional furlough, his life insured, or provision for a pension, and a covenant for a term of years. All this we admit to be perfectly reasonable on his part. But who *can* guarantee them to him. The mere expenditure would be too heavy to men not overpaid and now burdened with a heavy income-tax from a depreciated currency; but if we would undertake that, which of us could be sure of remaining in his present station for six months—at a day's notice we may be sent hundreds of miles away. And as to any church buildings—for Mr. Ross would not let Government provide these either or any purchased property—what permanent Christian residents are there in any place who could become trustees?

I fear that Mr. Ross's principles would deprive mofussilites of all Christian teaching; and also would make us appear to the heathen as having *no religion*; for to the Hindoo, religion is not *conduct*, but *observances*. Is this desirable? Then there are certain Christian ordinances required, such as Baptism and the Communion, and some times a marriage. Even setting aside the preference the majority would have for receiving these from the minister of a particular church, or from a man episcopally ordained—which I acknowledge to be a strong feeling with many, though I do not personally share it—how could these be had at all? Possibly Mr. Ross may refer me to the missionaries. Well, missionaries are rather scarce in the interior. I have been nearly twenty years in the country, and have not been for a year of that time within reach of a missionary. But suppose there were a missionary at hand, what would his supporters at home say if they found that he was preaching weekly to the English residents, and leaving his schools and going forty miles into the interior to marry a planter's daughter or baptise his child? They would say "we sent you out to preach to the perishing heathen."

As it is, though sixty miles from the sudder station, we do see and hear once a month, not without some payment on our own part, a clergyman, which inspirits us to keep up, though of almost as many denominations as we are neighbours, some service on the Sundays when he is absent. But I am not sure that this would be so if he never came. How would Mr. Ross propose to meet the case of European troops? Would he deprive them of their Chaplains unless they provided them by voluntary subscription? Perhaps he will say theirs is an exceptional case, brought out here by Government, with no choice of station, teaching must be found for them. Well, we mofussilites are in the same condition; we have no choice of station, we are removeable at any moment;—true, we are individually better paid, but then there are far fewer of us in any place, and we have families dependent on us. Mr. Ross seems to think it unjust to pay Christian ministers from general taxation. I do not wish to object to the principle in theory, but I do not think it is so felt by the people. They object to taxation in general, and may equally object to paying troops who are meant to keep them down if necessary. But we tell them that the troops are for their good, and that our rule is for their good, if they cannot quite see it yet; and that the troops must be paid, and that we who rule them must be paid, and that we prefer to take our pay partly in the form of a station doctor, and partly in that of a station chaplain, since we could not personally provide either, for reasons given—and I do not think that the latter touches any native's conscience unless an English voluntary has shown him how he is oppressed, more than the former.

I have not controverted Mr. Ross's principles, which I will generally grant him; nor do I profess myself satisfied with things as they are. But I hold that circumstances alter cases, and that we should know and consider the effect of the practical measures proposed before rashly following the principle. If Mr. Ross thinks otherwise, if he would say as Robespierre, "*Périssent les Colonies plutôt qu'un principe*," no more remains to be said. But if not,—what is to be substituted for the present system, and how will it work?

MOFUSSILITE.

INDIAN INTELLIGENCE.

BENGAL.

THE Government of India has desired the East Indian Railway authorities to discontinue dismissing men in the manner they have been doing, and suggests that if further reductions are necessary they should be effected amongst heads of departments. If native employés are equal to Europeans, why, it is argued, was the rapid extension of traffic at the time of the famine not taken advantage of to recruit entirely from the abundantly supplied native labour market?

LORD COLERIDGE recently asked, in a certain breach of promise case, whether it was worth while cross-examining a gentleman who confessed to telling a lie and fabricating a letter. It is probable that certain judicial authorities in Calcutta will ask whether such a gentleman is fit to be a member of the local Bar.

ALTHOUGH the visit of the Prince of Wales to India will be doubtless productive of much benefit to England, the prospect of the event has already had an opposite tendency. We learn—not from the Foreign Office, however—that much of the weakness apparent in recent negotiations with Burmah is due to the fact that the Government of India has so set its heart on the realisation of the project that it absolutely dreads any complication that might afford a plea for the postponement of the visit. In order to carry out the programme successfully, it is necessary that the Temple of Janus should be closed till after the Prince quits these shores. If war with Burmah or any other Great Power were to intervene, it might act as a wet blanket on the contemplated festivities, or possibly induce the Home Ministry to recommend a more convenient season for the visit. Lord Northbrook's hold on the Viceroyalty is not a firm one, and to be the Prince's host is the great object of his present ambition, to which all other political considerations are to be postponed. It was for this reason, we are told, that he did not wish to press upon the obstinate old barbarian of Mandalay more than one demand at a time, knowing full well that, if he did, war would be forced upon him by a flat denial on the part of His Majesty. Consequently, no reply to the modest request for permission to furnish an escort to China was to be asked for, and other important matters were allowed to stand over to a more convenient season. By sending an informal refusal to Sir Douglas on the subject of escort, the King unfortunately spoilt this little game; but the diplomatic resources of the Indian Government are so varied and extensive, that we have no doubt the difficuty will be overcome somehow; and by eating a little more of the dirt we have lately been so liberally fed upon, we shall be able to say, when the Prince comes in November next, that "*l'Empire, c'est la paix*," though the price we shall have to pay for the privilege will probably be a heavy one.

THE last annual return of the shooting of the Calcutta Volunteers does not bear very favourable testimony to the efficiency of the corps in this particular respect. A. and F. companies made excellent averages of 71·42 and 70·78 respectively; but the rest were, so to speak, nowhere; the company averages ranging from 43·85 down to 12·63. It is evident that ball cartridge is altogether wasted on E. company, and the general bad shooting of so many of the companies goes to show that the officers are more interested in the numerical strength of the corps than in its efficiency. There is no accounting for the detestable shooting recorded, except on the supposition that half the men in some of the companies can neither see a target nor hold a rifle correctly. This should not be. Recruits should go through a complete preliminary course of target-practice before shooting with their companies, and those who are proved to be unable to hit haystacks at a hundred yards should not be passed into the ranks at all. Such men merely waste good ammunition, and are not, as volunteers, worth the annual Government capitation grant. We believe it is a fact that many of the so-called effective volunteers are of too feeble *physique* to keep their rifles steady when aiming from the shoulder. The remark does not apply to A. and F. companies, which, we believe, consist almost exclusively of Europeans; but we feel sure there are many volunteers on the rolls of other companies who are utterly unfit to do real duty for even a single day; and to admit such men into the ranks is to cheat the Government in the matter of head-money, and seriously impair the efficiency of the corps as a whole.

THERE will certainly be no lack of amusement in Calcutta during the forthcoming season. We are now promised or threatened—whichever may be the more appropriate term—with three theatres all going at once: Mr. English's company at the old Opera House, the company at the Corinthian, and, as we now learn, Mr. Lewis may also be expected to open the Theatre Royal. Letters from Melbourne tell us that he will leave that city in August for Calcutta *viâ* Bombay.

A MEETING was lately held at Nongsawlia, Cherra Poonjee, for the annual prize distribution of the Government institutions there, at which Colonel H. S. Bivar, Deputy Commissioner, Khassia and Jyntea Hills, presided. The Colonel addressed the young people, males and females, assembled in the school-house, as follows: "It has given Colonel M'Culloch and myself much pleasure in responding to the Rev. Mr. Roberts' invitation, to be present at the distribution of prizes. The goodly number of pupils of both sexes in attendance is cheerful; and raises a hope that this ceremony is an earnest that the efforts of the British Government, so well carried out by your able and energetic professor, the headmaster of the Normal School, for promoting the intelligence of the inhabitants of Khassia Hills, are not without result. It is now many years that the Nongsawlia School has been established, and though progress has been attained, yet, owing to the scholars being too easily satisfied, to their disinclination to continue their studies, until they thoroughly understand what has been taught them, improvement has been and is still slow. The scholars who have this day obtained rewards as an acknowledgment of their industry, must not place too great confidence on their success. Doubtless their efforts are meritorious, but they must remember, that the distinction they have earned should be an incentive to them to still greater application, and it is to be hoped that the example which they have set, will stimulate others to imitate them. We know that a little knowledge is a dangerous thing. It may be likened to the case of a person acquiring something without understanding its uses. For instance, if any one of you became possessed of a horse without knowing how to manage it, the acquirement might be dangerous, for if such a one endeavoured to ride the animal, he might get a broken

head. A pupil, before he terminates his studies, should thoroughly understand what has been taught him, and thus be able to use his knowledge to his own advantage, and to the benefit of his fellowmen. A man who benefits by education, will learn his duty towards himself and his neighbour. He will rightly realize his position in the social state. He will be intelligent, and useful, a good man and a good subject; but, on the other hand, the man who has but a smattering of knowledge, will be dangerous to himself and others, for not having understood what he has been studying, he will imagine that he is better than his fellows. In fact he will have gained but little knowledge—as I have already said, a dangerous thing. Mr. Roberts tells me that he is well satisfied with the manner in which you have all attended to your classes, and this is very hopeful; if you are attentive to the teachings of your master and persevere until you understand what you are learning, progress must follow."

A SPORTING Correspondent writes: The prospects of racing all over India seem very much brighter than the most sanguine resident at Calcutta would have thought possible at the close of the disheartening meeting of last December. Already the races at Wellington on the Neilgherries, have proved a success. Everybody who is anybody at Madras and Bangalore was present. Fields were large, lotteries good, and numbers of really well-bred new maiden walers put in an appearance. They were notable, moreover, as the first run under the revised Calcutta scale, which reduces the weight of English and Colonials, Country-breds and Arabs, running together without any other class, 7lbs., and thus admits of winners carrying their penalties without being absolutely crushed, as heretofore. 9st. 7lbs. 9st. 10lbs., is, in all conscience, enough to burden any race-horse with, however good, in this trying climate, and over the adamantine Indian courses; and, if accumulative penalties bring the weight to exceed it, there should be a rule to reduce them all round, so that in no case can 10st. be exceeded, as in the weights for the Governor's Cup at Madras. The heavy subscriptions and fees which owners have formerly been charged in Calcutta have been been abolished; and the entries reduced to suit the wishes of gentlemen of limited means, wishing to run a horse or two, but unable to afford, or unwilling to risk, the larger sweepstakes of other days. This reduction is, to a certain extent, advisable, but it, of course, makes a winner's prize so much the smaller, and at an important meeting like Calcutta, there should be at least one valuable stake each day. Formerly an owner winning the Colonial, Derby, or Viceroy's Cup would receive, with the old entries and starting stakes, as much as Rs. 5,000 and often more. Now, with twenty first entries and ten starters, he would get but Rs. 2,100, a sum insufficient to induce an owner to bring a good horse from the Madras or Bombay Presidencies. Besides, there is unfortunately no Viceroy's Cup, and no valuable prize in its place, at weight for age with moderate penalties for all horses, to induce first-class ones to come from a distance. The penalties in the Burdwan Cup bring the weight such horses would have to carry up to 10st. 5lbs. even with the reduced scale, and may be considered prohibitive, whilst the Merchants' Cup is a handicap—the best thing it could be *if merely a handicap*, but it is encumbered with penalties for horses winning after the publication of the weights on the 2nd of December, which will tell very hardly on those who may happen to run anything on the first, second, or third days at Calcutta. Still, these drawbacks notwithstanding, good sport may be anticipated. The planters of Tirhoot, all genuine sportsmen, are talking of sending horses. The Nawab of Dacca is to send his great horse, *Satellite*; Baboo Mohiny Mohun Dass will have Sir William, and there will be a fair lot of maiden walers.

ON Thursday evening a very pleasant party of gentlemen assembled, at the invitation of "Caro," in the Dalhousie Institute, where they were kindly allowed a private view of the "Calcutta Pantheon", containing sketches of about a hundred and twenty of the principal citizens of the metropolis. The artist has excelled himself in this wonderful work of art. Every head is drawn with the accuracy of photography, while the likenesses, even where caricatured, are most striking. "Caro" has during the past year presented India with a series of most clever sketches, but in the Pantheon he has shown himself to be capable of still greater things.

SIR RICHARD TEMPLE has returned to Belvedere, but only for a few days, as he intends visiting Darjeeling again.

NORTHERN INDIA.

THE United Service Institution of India intend to hold an exhibition of military drawings at Simla during the month of September.

IT is stated that the hill beer has been the main cause of the cholera attack at Kussowlie.

CAPTAIN MOLLOY'S Diary from Ladakh of the 28th of June says: "News was received the other day of the death of the Grand Lama of Lhassa, the Bhoodist Pope. The Hierarchy of Lama at Lhassa is, *as is probably known, a perpetual incarnation.* The *human form perishes, but* the spirit is at once revivified in some other birth. It is related that a boy born in one of the Ladakh monasteries was transported some years ago to fill the post of Dalai Lama at Lhassa. On the present occasion it is not yet known on whom the succession devolves, but the question is, according to ancient usage, determined by the consultation of some oracle, or Lama, who assumes some supernatural form, and declares the new birth."

BOMBAY.

THE scheme for the acquisition of the Bombay Water Works by a public company, to which we referred some time ago, has not received the sanction of the Secretary of State for India.

THE death of Dr. Narayen Daji, is announced from Bombay. He was well known as the brother of the late lamented Bhow Daji, who is said to have left the secret of his supposed cure for leprosy with Dr. Narayen. Whether this has been lost entirely with the death of Dr. Narayen remains to be ascertained. Dr. Narayen came prominently before the public last year, when he was appointed Sheriff of Bombay, which post he filled with credit to himself and benefit to the community.

MR. NANA MOROJEE, one of the Town Magistrates, has now been appointed Sheriff.

MADRAS.

A SUB-MAGISTRATE of one of the Southern Districts, lately sent up the head of a sheep, which had been severed from its body some three months previous to the sessions, with a view to its being identified as the head of the animal forming the subject of the theft! This absurd proceeding was not allowed to pass unnoticed, and on the Sessions Judge bringing it to the notice of the District Magistrate, the latter official took the opportunity of reading his simple Sub a lecture which we hope has duly benefited him. "The Sub-Magistrate," says the District Magistrate, "evinced an utter want of discretion in sending up this sheep's head, as he must have known, as remarked by the Judge, that it would be so decomposed before the commencement of the trial of the accused as to be beyond the possibility of identification." The District Magistrate has also taken this opportunity of inculcating a lesson on all the other Subs in his District, to whom he has issued a circular directing them to "use discretion in sending up to the Court such things as decomposed sheep's head, decomposed human bones, decomposed vegetables, and other similar property, in cases committed by them for trial; all the above having, at some time or other, been sent up to the Sessions Court."

THE Alpha Gold Mining Company have their crushing machinery all erected and in working order. Several of the Directors are on the spot, and regular crushing will be commenced at once. The prospects are believed to be very good.

THE Madras Volunteers lately received intimation that their services would probably be required in the Fort, should the regular troops be wanted in Burmah or China. On the morning of the 3rd instant, Lieutenant-Colonel Coleman inspected the corps, and suddenly addressed the regiment as follows: "Officers and Gentlemen of the Volunteer Guards,—At a time like the present, when a war with China seems imminent, I have thought we might exhibit our feelings of loyalty by tendering our services to perform any local duties that the Government may be pleased to allot to us during the absence of the regular troops on foreign service. Those of the corps who are ready to do this will signify the same by holding up their hands as a mark of their decision." In an instant, every hand of the gallant Volunteers was raised, and the Colonel expressed his satisfaction by saying that he would forward a letter at once to Government containing the resolution. There are at present in the corps about 600 rank and file.

NO news appears to have been received of Mr. Broughton, the Government Quinologist at Madras, who disappeared mysteriously at the beginning of this year; and the local Government has issued an order about the disposal and care of the property he left behind him.

IN an important judgment lately given by the Supreme Court of Colombo, upon the question whether loans in Ceylon could legally carry more than 12 per cent. interest, Mr. Justice Caley held that interest in excess of 12 per cent. was usurious and illegal, and although he was overruled by the other judges, who held that the Court was bound to recognise agreements for interest above 12 per cent., we still think that a point is gained by the attention which this division of opinion on the Bench must draw to a serious defect in the existing law.

THE Princess of Tanjore has, it is reported, made up her mind to visit Madras with her consort, to be introduced to the Prince of Wales.

BURMAH.

THE British troops at present in Burmah comprise five brigades of Artillery, the 5-5th, the 6-5th, the 7-5th, the 7-6th, and the G-9th; two British Regiments, the 1-21st Fusiliers and the 67th; the C Company of Madras Sappers and Miners; four Native Regiments, the 6th, the 15th, the 17th, and the 39th M. N. I.; and a wing of the 4th Regiment Madras Infantry. Presuming that the Corps are all of them "full strength," we have thus a total force of 6,176 men in Burmah.

THE entire line of the Rangoon and Irrawaddy Valley State Railway, as determined upon at present, will, when completed, show a length of 371 miles—Rangoon to Prome 161 miles, Rangoon to Tounghoo 170 miles, Prome to the frontier 40 miles. The section from Rangoon to Prome is expected to be completed in 1877-78 at an estimated expenditure of £900,000.

THE *Rangoon Mail* says: "There was a great demand for dorians lately. The King of Burmah's agent was in the market *purchasing largely for His Majesty*, and the King's steamer left on Wednesday with a goodly supply of this delicious fruit. We believe Rs. 2,500 worth was bought on Tuesday by parties acting for the King, which would not represent more then 2,500 dorians. Had Sir Douglas Forsyth threatened to cut off the supply from Mandalay, we might have got more favorable terms in our agreement or treaty. We question if the King would not give up the monopoly of teak timber rather than that his palace should be deprived of this delicacy."

THE notorious dacoit, Nga Poung, connected with the death of Colonel Hamilton, has been sentenced to transportation for life. His last sentence was for ten years' rigorous imprisonment.

THE following conversation is stated to have taken place between the King of Burmah and Sir Douglas Forsyth: *Q.*—How long is it you have left Rangoon? *A.*—Fifteen days. *Q.*—Are H.M. the Queen and the Royal family well! *A.*—Owing to the "Myitta" (friendship) of Your Majesty, the Queen, and all the Royal family

are quite well? *Q.*—Is the country prosperous and the people well? *A.*—Owing to the "Myitta" of Your Majesty, the rain and weather are regular, the country prosperous, and the people well. H.M. then left amidst a flourish of trumpets: and a repast of roast fowls and ducks, without knives and forks, was laid before the Envoy and officers.

A RANGOON journal hears from Bhamo that the native policemen who are supposed to guard the British flag at that station, but who have now been for months without a European officer to head them, recently had an altercation with some of Lee See Tahee's Chinese. The latter wanted to come inside the British stockade, but were refused admittance. They contented themselves with remaining outside, and flinging a volley of stones at the policemen. The jemadar who commanded, reported matters to the Bhoma Woon, and the Chinese dispersed quietly.

WE must protest against the manner in which the *Pioneer* makes Sir Douglas Forsyth responsible for a failure, the sole honor of which can be claimed by the Government of India alone. Our contemporary, however, in striving to lay the blame on Sir Douglas, contradicts itself most wofully. In one place it speaks of the Envoy to Burmah being kept "in leading strings, as the confidential instructions clearly show"; and in another it remarks: "Lord Northbrook has stood by his incapable delegate with but too characteristic loyalty. We honor his readiness to make the best of a bad bargain." No attentive reader of the Resolution could possibly have failed to perceive that Sir Douglas had no discretionary power in the matter whatever. Whilst the negotiations were going on at Mandalay, the telegraph was constantly at work between Simla and Mandalay, and definite instructions were given from Simla on every point that could be called at all important.

ASIA.

THE *Turkestan Gazette* announces that the members of the Hissar expedition arrived at Karschi on the 29th of April, and were received by the Ameer in the most friendly manner. No obstacles stand in the way of exploring the country, but the expedition has been warned of the insalubrity of the climate. The explorers intended starting on the 5th of May from Baissuna for Ketilabi and Baldjuna. On leaving the mountains of Hissar they would proceed *viâ* Oba to Mundung.

THE Duke of Wellington is reported to have said, referring to the efficiency of the Chinese army, that with one regiment of British troops and a couple of field-pieces he would undertake to keep at bay the whole of the forces of the "Celestial" Empire, provided he had a strong position where he could not be easily attacked in flank or rear. Judging from a story told by our Allahabad contemporary, the forces of the Chinese Emperor seem to be still deserving of the high opinion the great Captain pronounced upon their efficiency. The Russian newspapers state that a Chinese garrison at Shikho, which had been trained by its leader in the Russian system of discipline and with Russian words of command, was lately led out against a small band of Tunganee marauders. Arrived in sight of the foe, the gallant Mantchoo deployed his army into line, put them through their musket drill, and gave the word for an incessant fire of real genuine Russian hurrahs! For a while the Tunganees stood astonished, as well they might, at the unwonted clamour. Then recovering their nerves, or perhaps their gravity, they rushed to the fight, and in five minutes the parade was broken up, and 200 out of 500 men fled back to Shikho; the rest were disposed of after the fashion of the East.

THE semi-official *Journal de Saint Petersburg* has the following upon the article in the *Times* commenting on the Anglo-Russian alliance project recommended in the *Golos*: "The *Golos* must feel exceedingly flattered at being treated as a political power by the *Times*. It was the *Golos* and no one else which a few days ago had the strange idea to propose that Russia should exchange the German alliance for an English league. But even this is saying too much. All the *Golos* really asserted was that should Germany ever endanger the peace of Europe, which there is absolutely no reason to expect, the continuance of peace might be secured with the assistance of England. However, the *Times* is quite right in holding that Russia is in no need of fresh alliances. The alliance cemented in 1872 is perfectly sufficient to secure peace, none of the Powers composing that alliance belonging to the number of those habitually jealous of German success. The object of that alliance being exclusively pacific, it may be subscribed to by any Power actuated by similar intentions. No such adhesion can modify or change an agreement the main purpose of which is to adjust in a friendly manner any misunderstanding that may arise."

LITERARY.

DR. BIRDWOOD has published a paper "On certain Documents in the India Office recently brought to light by him," in which he describes, at considerable length, the nature and importance of many of them. They are contained in an old box, which was handed over by Sir John Kaye on his retirement, to Dr. Birdwood's department, and do not appear to have been examined for a long time. These documents, which we made mention of some weeks ago, relate to the old East India Company, and, in many instances, still have the great seals of James the First, Charles the First, Oliver Cromwell, Charles the Second, Queen Anne, and George the Second attached to them. From others, of the reigns of James the Second and William the Third, the seals have been cut off. Among these documents are licences for the exportation of English and foreign bullion; commissions to commanders of the East India Company's fleets; for inquiry into the disbursements of the moneys collected towards the suppression of the pirates of Algiers; a warrant from Oliver Cromwell as Lord Protector, for the repayment of 50,000*l.* lent to him by the Company; a mandate from the Duke of York (afterwards James the Second) for sale of a Dutch prize-ship; acquittances to the Company for the sale of other prizes, two of which were sold "for the accommodation of His Majesty's occasions", with the notice and details of many loans made to different monarchs by the Company. The most interesting document is the original roll, on fifteen skins of parchment with the names of the subscribers attached, for the raising the sum of two millions, at 8½ per cent., "for settling the trade to the East Indies." Each name is followed by the amount subscribed, one being as much as 20,000*l.*, another as little as 100*l.* It is a matter of regret that many of these documents have been purposely mutilated, while some of them are now almost illegible from the effects of damp. Neither Mr. Mill, Prof. Wilson, nor even Mr. Thornton, nor Sir John Kaye, would seem to have made any use of the contents of this box, or indeed, to have in any way referred to them.

THE Russian traveller, Pachino, who was some time ago stopped at Lahore in his way to Cabul, has recently turned up at Teheran through which city he passed *en route* to St. Petersburg, in the dress of a Turkish Hajji. He proposes to write a book of travels, but his most interesting experiences will probably be confided to the private ear of the Head of the Secret Intelligence Department.

THE International Telegraph Congress sitting at St. Petersburg has decided in favour of the retention of the twenty-word message as the normal length of telegraphic despatches. Above that length, however, additional words are to be counted by fives, instead of tens, as at present; and a twenty-five word message will be charged only five-sixths of the price of a thirty-word message. The conference has also resolved upon the adoption of the franc as the standard of value in framing the tariff, and the unit in international telegraph accounts.

ECCLESIASTICAL.

THE Rev. Dr. Mullens who visited Madagascar last year, gives this description of one of the places where the persecuted Christians used to meet to read the Scriptures: "About fifteen months ago I was in one part of the country, and was asking the missionary who resides there whereabouts it was that the martyrs used to gather. We had often heard of those gatherings, and one of his native evangelists who stood by, said, 'Why, it is just here. I can show you the spot.' And we all went with him, and he led us to a great group of enormous boulder rocks. He pointed out a little opening between those rocks. It was about two feet from the ground; and we crept into it, and then looked around, and on the left, beneath a big boulder, the biggest of all, we found that there was a little space of about 14 or 15 feet long, and about 3 or 4 feet wide, and about 2 feet high—just such a space as we might find beneath a rather long dining-table. He said, 'We used to meet here—ten, or twelve, or fifteen of us—on the Sabbath-day, to read the Word of God. On some occasions we were as many as forty in this little cave. We could scarcely see. The light came in only just at the end. We have met in the evenings. We had only our Bibles, or pages of the Bible, and pages of the *Pilgrim's Progress*, and little hymns printed. And we were particulary glad in our meetings when it rained, because we knew that the soldiers would not be coming after us, and that they would rather let us alone on those unpleasant evenings. And then, what with the noise of the rain and the fears of the soldiers, we felt assured that we could enjoy singing for once in our worship, and so we sent up our thanksgiving before God.' The man who told us the story was one of those who had done it. He has been a most faithful friend to these people—his brethren in the faith. He is looked up to as a father by them all. He saw his own relations—the men and the women that had lived around him, and had worshipped in the boulder cave with him—led out to be burnt or to be thrown over a precipice. He saw many of them sold into chains; he saw many of them at work, in after days, in the iron works at Mantasua. Everywhere he had testimony of the hatred of the authorities against the Word of God; but he stood firm through it all."

THE semi-annual session of the Rohilcund District Conference of the M. E. Church was held in Moradabad, July 1st—5th. Missionaries, native Evangelists, Pastors and Catechists of the various stations from Shahjehanpore to Bijnour were in attendance and took part in the work of the session. The proceedings of the Association comprised lectures, essays and discussions, mainly in theology and social science, preaching, and other devotional services. A great part of the time was taken up in discussing the betrothal and marriage of native Christians. Many of the village converts are disposed, says the *Lucknow Witness*, to resume the old practice of early betrothals, and even employ the services of a heathen priest for the ceremony. The members of the Association were by no means unanimous regarding the manner in which the difficulty should be met. One or two of the Missionaries, a few native Christians by birth and one or two Mahomedan converts, were rather disposed to wipe out all vestiges of heathenism and require rigid adherence to established Christian custom. But the majority of the Missionaries and the native preachers who had themselves sprung from among these villagers, felt the necessity of great gentleness and caution in dealing with the question, and it was finally recommended that betrothals be not entirely disapproved and that the native pastors themselves should conduct the ceremonies, preserving as far as possible the customs of the people without encouraging anything like idol worship.

MILITARY ORDERS.

COX, Lieut. G. F. F., furlough for twelve months.
GLEIG, Captain C. F, to be Deputy Assistant Adjutant General for Musketry.
GRAVES, Colonel J. C., to have a good-service pension.

ROSS, Surgeon R. E., to act as Fort Surgeon, Fort St. George, with Port and Marine duties.
SIBTHORPE, Surgeon C., to act as Surgeon of the General Hospital, and Professor of Surgery in the Madras Medical College.

PUNJAB.

BURNE, Captain J., leave for forty days.
O'CONNOR, Mr. T. A., to officiate as District Superintendent of Police, Montgomery.

COMMERCE AND FINANCE.

FRIDAY NIGHT.

THE money-market during the week has been easier, and accommodation has been obtainable in the Bazar on Government securities at call for 3½ per cent. The Directors of the Bank of Bengal at their meeting yesterday morning reduced the rate of interest and discount and the margin on Government paper one per cent. all round. The minimum rate is now 5 per cent., and as there is no prospect of any heavy demand upon the resources of the Bank, it is quite possible that the rates will be still lower. The Bank of Madras has also lowered its rate one per cent., since our last. From Bombay the reports are much the same as last week. Business is inactive, but Government paper is quoted firmer.

The Bank of Bengal half-yearly accounts, closed up to the 30th June, were published yesterday, with a report of the Directors. The net profits for the half-year amount to Rs. 13,89,550-11-3, which, added to Rs. 40,566-1-3, brought forward from the previous half-year, makes a total of Rs. 14,30,116-12-6. Of this sum Rs. 2,00,000 have been transferred to the Reserve Fund, and Rs. 11,00,000 will be divided on the capital at the rate of 10 per cent. per annum. Rs. 75,242-4-9 will be carried forward to profit and loss account, and the remainder set aside to provide for depreciation in the Bank's investments in Government securities and for bad and doubtful debts. The balance of the Reserve Fund is now Rs. 18,04,775-23-1.

Exchange on London has shown very little fluctuation, and rates close as follows :—

Bank Bills' six months' sight...	...	1-9⅞ *a*
Ditto three ditto do. ...	...	1-9⅞ *a*
Ditto Demand ...	...	... 1-9 5/16 *a* 1-9⅜

Business has been quiet both here and in Bombay; six months' Bank Bills in Bombay are quoted *1-9 15/16*, and the demand paper *1-9½*. *In this market sovereigns* are quoted at Rs. 11-1.

The Government paper market has been more firm and the enquiry has been rather more important. Although money is easier, there does not appear to be any desire for speculation, and while rates have advanced the business done has not been in very large amounts. 4 per cent. paper is now quoted at Rs. 102-6, but buyers hold back their offers for one anna less ; the quotation is very firm, however, and it is not likely that sellers will part with their paper for less: the tendency is rather towards a slightly higher rate. 4½ per cent. securities of 1872 are quoted at Rs. 103¼ to Rs. 103⅜ ; 5½ per cents are almost nominal at Rs. 109¼. In Bombay 4 per cents are quoted at Rs. 102⅜ to Rs. 102½. The latest Reuter's telegraphic reports from London quote 4 per cent. in enfaced paper at 91½, Exchange in London on India 1-9¼. In the share market there is but little improvement to report ; the heavy losses of the past twelve months still hang like a depressing cloud over the market, and forms the chief impediment to more extensive operations. There is a large amount of money absolutely locked up in Jute stocks and other shares which it is impossible to release at present. Investors are for the most part full, and speculators having lost their margins are unable to work. There is nevertheless a much better feeling, and Jute stocks are already beginning to look more hopeful. There have been transactions reported in Barnagore's, Seebpore's, Howrah and Budge Budge Jutes, all at slightly better prices, and there is a fair demand for all these stocks to-day. Bengal Bank shares have several times changed hands at Rs. 1,410 ex-dividend. National Bank's are suffered to decline and are now offering at Rs. 115. Allahabad Bank scrip has been sold at Rs. 132, Oude and Rohilcund Railway stock at Rs. 125, Scinde Punjab and Delhi Railway at Rs. 235. Tea shares generally still hold their position. Singell's have, however, considerably fallen in consequence of the low prices realised for the teas, and they are now quoted at Rs. 115. Bishnath Contributory's are wanted at Rs 103, Punkabarree's are reported at Rs. 112, Chota Nagpore's Rs. 108. East India's Rs. 85, Durrung's Rs. 80, Dehing's Rs. 61½.

Public auctions of Indian Teas were held on the 16th instant at which 9,795 packages were offered and 8,300 sold. There was a fair competition and prices generally were in favour of sellers.

The Freight market has been less active, the principal demand being for seeds and wheat. As the jute season is now approaching rates may be expected to improve.

The reports from the Tirhoot and North-West Indigo districts are still satisfactory, the weather being favorable and the produce good. From Lower Bengal the accounts are not so good.

The home markets for Jute and Bengal Cotton are still discouraging to shippers, and business for Europe is consequently extremely quiet. In other produce, business is dull and there is nothing special to comment upon.

LATEST TELEGRAPHIC NEWS

17TH JULY.

London, 16th July.

A DEBATE was held in the Commons last night on Mr. Fawcett's motion that no part of the expenses of the Prince's visit should be charged against the Indian Revenues. Mr. Fawcett urged that the present was a favorable opportunity to make amends to India for the paltry manner whereby the Indian Exchequer was made to defray the expenses of the visit of the Sultan of Turkey to England. Mr. Hankey seconded the motion. Mr. Disraeli said he opposed the motion, as the Prince was not going as the representative of the Queen, which would have entailed a vast expenditure, whereof part would have been borne by India, but was going as the Viceroy's guest, and would have an excellent opportunity of visiting the ancient sites and viewing the scenery of India, and also of becoming acquainted with her various peoples, their history, literature, and customs. He (Mr. Disraeli) insisted that the right course had been taken, and believed India would have reason to complain if deprived of an opportunity of showing her hospitality. He concluded by saying that this visit would be an event in the history of the Empire, and would be attended with inestimable benefits. Mr. Gladstone supported the views of the Government, which were fair and just. He quoted, as an instance, the Prince's visit to Canada, which colony voluntarily assumed the charge of £53,000, and said India, if it had popular representation, would do similarly.

19TH.

Paris, 16th July.

A DEBATE has taken place in the Assembly on the motion brought forward by M. Buffet with reference to the Bonapartist intrigues. M. Gambetta attacked, and the Left rejected the motion. The Right had confidence in the Government and approved of it. The union between the Left and Government is destroyed, and the Bonapartists are exultant.

London, 16th July.

IN the House of Commons Mr. Bourke, replying to a question, said that during his stay in England the Sultan of Zanzibar had signed a fresh treaty, which would result in the full execution for the future of the treaty of 1853.

The Sultan has left England for Paris.

Incessant rains and disastrous floods are reported from *Wales and the West of England.*

Berlin, 16th July.

THE Emperors of Germany and Austria have had a cordial interview at Ischel in Austria.

London, 17th July.

IN the House of Lords, Lord Derby said that two gentlemen, selected by Mr. Wade and approved of by Government, would start about the end of August to investigate the murder of Mr. Margary.

A public meeting has been held with Mr. Disraeli as Chairman, when it was resolved to erect a statue to Lord Byron in London by national subscriptions.

The floods in the West of England and South Wales are subsiding. Further inundations are apprehended if the rains continue. The Lord Mayor is receiving subscriptions for the relief of the sufferers.

21ST.

London, 20th July.

IN the Lords, Lord Stanley of Alderley called attention to the abuses which existed in the Indian coolie traffic. Lord Carnarvon replied that he had already pointed out the abuses in the treatment of coolies in the Straits Settlements, but that coolies in the West Indies were well treated. Two Englishmen had been leniently punished for a case of flogging in the province of Wellesley, but he was determined to prevent, by legislation, any future miscarriage of justice. Earl Longford moved for copies of the correspondence which had passed between the India Office and the Indian Government relative to the Indian prize money. The motion was agreed to. Lord Salisbury regretted the delay which had occurred, but would do his utmost to effect a speedy settlement of claims.

Obituary—Lady Franklin.

22ND.

London, 21st July.

AN insurrection has broken out among the Christian peasantry in Herzegovina, a province of Turkey. A number of troops have been sent by the Porte against the insurgents. An Austrian force is marching upon the frontier.

In the Commons last night Mr. Hardy stated that the estimates returned by the Army Purchase Commission for the present year, included a sum for carrying out the recommendations of the Commission relative to the grievances of officers.

Appointments gazetted: S. F. E. Annesly and G. V. Watson to be Lieutenant-Colonels, 24th Regiment; F. C. D'Epinay Barclay to be Lieutenant-Colonel, 66th Regiment. Brevet, in consequence of the death of Major-General Muller, J. H. Wingfield to be Major-General; F. M. Birch to be Lieutenant-Colonel.

23RD.

London, 22nd July.

RENEWED rains have occurred in the Midland and the Western counties of England, attended by inundations. Extensive damage has been done to the crops, of which despairing accounts are received from almost everywhere.

William Collie and Alexander Collie have been arrested on a charge of fraud and consigned to Newgate; the London and Westminster Bank are prosecuting. Russia has abandoned the continuation of the conference upon the Code of War at St. Petersburg.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

56, 59, 60 & 61, *BENTINCK STREET,*

CALCUTTA.

THE numerous testimonials received by C. Lazarus and Co. tend to prove that their

BILLIARD TABLES

are now the only ones appreciated in India, being constructed on an entirely new principle introduced by C. Lazarus and Co.

DENTISTRY.

MESSRS. CORFIELD & CO.,

May be consulted daily upon all cases of Surgical and Mechanical Dentistry.

THEIR IMPROVEMENTS IN

Artificial Teeth and Painless Dentistry

Afford the following advantages :—

First.—Extreme lightness, being completely self-supporting.
Secondly.—Moderate charges, extreme simplicity of construction, the highest class of mechanism, and the best materials.
Thirdly.—Absolute immunity from pain.
Fourthly.—Nature so closely imitated, that detection becomes an impossibility.
Parties residing in Calcutta and the Suburbs attended at their own residences if desired.
Teeth supplied by other Dentists not having proved satisfactory, or old cases that have become out of order through absorption of the gums and other causes, can be remodelled on Messrs. Corfield's system on moderate cost.
Artificial Teeth repaired and returned by following post.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"BY a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctor's bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourishing frame."—*Civil Service Gazette.*

MANUFACTURE OF COCOA.—"We will now give an account of the process adopted by Messrs. James Epps and Co., manufacturers of dietetic articles, at their works in the Euston-road, London."—See article in *Cassell's Household Guide.*

Made simply with boiling water or milk.

Sold only in ¼ lb. and 1 lb. tins, labelled thus :—

JAMES EPPS & CO.,
